"Simon Pokagon was a remarkable man, possessing the passionate love of nature and of freedom which characterizes his people; but, unlike most of the red children of the forest and plains, he early became a lover of books, a student and a dreamer as well as a hunter. When between twelve and fourteen years of age, he entered Notre Dame School, at South Bend, Ind., where he diligently pursued his studies for three years. From thence he went to Ohio, where he spent one year at Oberlin College, and subsequently two years at Twinsburg. During these six years of faithful study he acquired an excellent knowledge of English, French, and Latin, and enough Greek to enable him to read his New Testament in the original tongue. He was a man of deeply religious nature, unusually thoughtful and serious, tho in his letters there was frequently displayed a vein of dry humor which would have done credit to a Scotchman. The terrible curse of liquor on mankind in general, and its fatal influence on so many promising youths among his own people, led him to become an ardent champion of temperance. His influence over his people from the time he became chief, in 1841, was uniformly good. He was a positive moral influence, a leader whose first thoughts were always of duty and right.

"I became acquainted with him in 1855, through the publication of his little prose poem entitled 'The Red Man's Greeting,' which was printed on white birch bark and bound with ribbon into a neat little booklet. From that time until about two weeks before his death, the latter part of January of the present year, we corresponded at short intervals. His letters were always thoughtful

and pervaded with a spirit of noble altruism which not infrequently suggested the old Stoic philosophers."

Pokagon possessed the poet's soul, says Mr. Flower, and his imagination and senses were always on the alert to detect the aspect and spirit of a scene. One of the quaintest and most charming portions of the book is his naive account of the way in which he met his fate. During a youthful trip to the Indian country he had noticed another inhabitant of the forest, whose comings and goings began to be a matter of breathless interest to him:

"Near the summer's close, while living there, a little maiden every now and then appeared across the stream, with waist of red and skirt of brown, with raven tresses floating in the breeze, following up but never down the stream. She was always singing as she gayly tripped along in mimicry of the music of the birds. . . . At times a snow-white deer about the maiden played in circles like the lamb; and again after she had passed along and out of sight like a dog hunting for his master he would follow on her track. At first I felt impressed that she must be from the happy hunting-ground beyond; and how it was that she could mimic woodland birds and throw her voice across the stream and so deceive my ears was to me a hidden mystery."

He made a bark canoe to carry him to the other side of the river, and attired himself in native style:

"As I neared the other shore all was still. No breeze disturbed the glass-like surface of the stream; every leaf was motionless and quiet as the morning air. . . . Another step and now before me stands the maid so close that I can see her bosom swell at every breath. A single rose with opening buds adorns her hair. Perfect she appears in make and mold of body and of limb. Her ruby lips stand just apart exposing teeth of perfect make and white as snow. Her dark eyes full of soul beam forth surprise. She sees the newly made birch canoe—the boatman sees. Softly, on tiptoe, she turns about, moving noiselessly away. With struggling heart pressed in my throat, I step from out the boat upon the open shore, saying, 'How do you do?' Then I said with trembling voice, 'Nic-con' (my friend). With modest smile, almost suppressed, from her dark eyes, she greeted back, 'Nic-cou,' with voice so winning and so bland my heart-strings vibrated with her tones. I now felt more at ease, for well I knew that she was flesh and blood, and understood the language of my tribe. Quietly and slowly I stepped toward her, when backward she withdrew, saying by look and deed, 'Please, sir, no nearer come.' I stayed my steps, and she again stood still, but watched me with suspicious eyes. Backward a space I stepped, as if to take the boat, and asked, 'Fair girl, who art thou?' Reluctantly and low, with downcast eyes, she said, 'Lo-ni-daw.' I then asked, 'Where dost thou live?' 'Beyond the hill,' she replied, pointing to an abrupt headland toward the rising sun. I then asked, 'Who is thy father?' Soberly she replied, 'He is dead.' 'Dost thou live alone?' I asked. Shaking her head, she said, 'No, I live with my mother.' I then asked 'Have you any brothers and sisters?' Shaking her head she replied 'No.' She then started off, walking faster and faster until she gained a run, passing out of sight among the trees."

But the youth was still a schoolboy, and with the coming of winter he had to return to his lessons. Yet he did not forget Lonidaw. Springtime found him making his way over the melting snows to the land of the Ottawas. Each night his bed was moss and evergreen boughs. "Undisturbed save by the distant howl of wolves and hooting owls close by," he writes, "I passed the nights in fondest dreams in company with the one whose loving image was deeply impressed on my heart." Finally he reached the hut of the fair one. He thus tells the story of his wooing:

"There I stood, just outside the door, with my heart fluttering like a wounded bird; and she just inside, so pale I doubted if it were her. I finally stammered out, 'How do you do, my friend'; retiringly she repeated back the greeting which I gave, then said, 'Come in.' In I walked, and asked, while shaking hands, 'Is your mother in?' She replied, 'No, she is in the sugar camp making maple molasses, but will be soon home.' The walls within the room were lined with mats of different make and size with colors gay, while from the ceiling hung baskets great and small of curious make, adorned with artificial leaves and flowers,

inwrought with shreds of bark and various-colored quills. In one corner of the room bundles of rushes, sweet grass, and flags were snugly stored away, richly perfuming all within the room."

Some small Indian boys were present, and it required some diplomacy to secure their departure, but finally this was accomplished in a manner that proves that in the wiles of love as well as of war the red man is an adept. He continues his narrative thus:

"The darling of my heart and I were now left alone. I knew it was a golden chance, and, summoning all my courage, I said, 'Lonidaw, my heart has mourned to meet with you ever since we parted at the river's side last summer-time. I have sought you for four days, through rain and shine, through ice and snow, not only to tell you that I love you, but also to say that I am anxious you shall be my bride.' Pale and surprised the maiden looked at me, but not a word she said. And going on I said, 'Lonidaw, I am no ogler, but boldly speak my honest heart's desire. If you can not now consent, tell me, fair girl, if there is room for hope. Statuelike she stood, and for a time as dumb. At length, most pathetically, she said, 'You call me girl, and well you may, for so I am; but alas, sir, my mother says a hunted race like ours should never wed.' I replied, 'Dear one, I have lived for years with the pale-faced race; they have always used me well.' 'Yes,' she said, 'I learn that you have, and you can talk well with them in their tongue, and read their books, but I am but a wild child of the woods, wild as the birds that gather round to hear me sing the songs they chant, as I pass along our woodland trails. I can only speak my mother tongue. With my mother and our people I am happy; but, should we wed, I fear you would soon tire of my native woodland ways, and crush this childish heart of mine.' 'No, no, not so,' I said. 'I would forsake the white man's land, and live the life that you have led. Your people should be my people, and we would live as our fathers lived before the white man came among us.'"

Pokagon and Lonidaw were wedded, and, better still, "remained true lovers after the ceremony was performed." Beautiful children were born, and the sad tragedy came in later years to take Lonidaw away, the noble Algonquin ever remained faithful to her memory. He gave himself up to work for his race, especially in behalf of temperance, and his articles in *The Forum*, *The Chautauquan*, and other journals are well known. Mr. Flower says of him:

"He was a man of great moral strength. His appetites and passions were always under the control of an awakened conscience. There was also something of the woman's tenderness and sweetness in a nature that could be stern when wrongs were to be denounced. He was a poet, orator, and philosopher. In his orations there not infrequently flashed forth much of the fire and impassioned eloquence which for generations had marked the great chieftains of the Algonquins, and which not infrequently suggest the old prophets of Israel when they fearlessly denounced wrong and injustice. With his death there passed from view one of the noblest children of the red race—a man whose life, thought, and deeds proved how closely akin are the noble natures of all races, ages, and times."

ARE THE REWARDS OF LITERATURE ATTRACTIVE?

WE recently quoted some utterances of Sir Walter Besant (see *THE LITERARY DIGEST*, August 5, also July 29), concerning the opportunities now open to new writers, particularly in the magazines. A writer in *The New Century Review* (London, August) thinks, however, that Sir Walter is unduly optimistic. His career as an author, we are told, has been rosier than that of most of his contemporaries, and it is natural that he should endeavor to persuade the young writer that "the bugbear, poverty," need no longer deter any one who recognizes his innate capability for literature.

The writer in *The New Century* continues:

"Undoubtedly, there are many writers who, by dint of rigorous

industry and a peculiar knowledge of the literary mart, contrive to earn what is called a very respectable income. There are also some authors who 'enjoy as much social consideration as a bishop,' and an equally good financial award. On the other hand, there is a struggling crowd of able men who do not earn by their pens more than the wages of an average mercantile clerk throughout the whole of their lives. Mr. George Gissing's picture of 'New Grub Street' is, unfortunately, only too true to the experiences of a large number of competent and even brilliant authors."

Not only does Grub Street still exist, but, according to this writer, the man who does the best work is the longest in "arriving" and the poorest paid in the long run after he has "arrived." This applies especially to philosophic authors, scholars, and historians, whose incomes "can only be estimated as paltry." In conclusion, he says:

"If a young man has set his heart upon literature as a profession, let him find a friend who will provide for his necessities during the ten years of his novitiate. For, unless uncommon fortune falls to him, he will assuredly require such assistance. Let him prepare himself for a period of repeated disappointments, slights, the contumelious pity of friends, the *malaise* of a sedentary life, and the sickness of hope long deferred. Let him be content, after many years of strenuous labor, with the earnings of the man whose mechanical routine of occupation involves but slight thought and little wear of the brain and nervous system. Let him delight in art for art's sake, and find his consolation in the reflection that he is doing the work that he loves. But let him not be duped by promise of an adequate competence in his prime and expectation of a provision for old age. Such reward may come; the chances are that it will *not* come."

A NEW EDITOR OF THE "ATLANTIC."

THE announcement is made that Mr. Walter H. Page has resigned the editorship of *The Atlantic Monthly*, with which he has been connected during the last four years, and that he will accept a place as literary adviser in the New York office of Messrs. Harper & Brothers. The change is regarded as one of

the first fruits of the new Harper-McClure alliance (see THE LITERARY DIGEST, June 24).

Mr. Page has been in editorial work for ten years or more, and has made an enviable record as editor of *The Atlantic*. He is a North Carolinian by birth, and is in his forty-fifth year. He was educated at Randolph-Macon College and Johns Hopkins University, his first editorial work being on *The Forum*, from 1890 to 1895. He has also lectured upon literary subjects, and is well known to the public through his frequent contributions to the

MR. BLISS PERRY,

The new Editor of *The Atlantic Monthly*.

magazines. The most important part of his new duties, according to the *Boston Transcript*, will consist of editorial supervision of the new Harper-McClure encyclopedia.

Mr. Page's successor on *The Atlantic* is to be Prof. Bliss Perry, who has held the Holmes professorship of English literature at Princeton University since 1893. Mr. Perry was born in

1860, at Williamstown, Mass., where his father was professor of history and economics in Williams College. He was graduated at Williams in 1881, and held the chair of English there from 1886 to 1893. Among his literary productions are editions of several English classics for school use, "The Broughton House" (his first novel, published in 1890), "Samuel Kittredge and Other Stories," and "The Plated City."

The *Boston Transcript* says of the new editor of *The Atlantic*:

"His whole life has been passed in a literary and scholarly atmosphere, and his training has been of a character to develop both the critical and constructive faculties. His literary tendencies were conspicuously indicated when, as a student and younger than most of his mates, he was one of the board of editors of the college paper, and, as the editor-in-chief said, 'contributed the best matter of any of us.' The authorship and editing have been rather avocations than vocations, he has shown much talent and industry along those lines."

Since the first appearance of *The Atlantic* almost forty-two years ago, it has had, including Mr. Perry, eight editors, as follows: Francis H. Underwood, James Russell Lowell, James T. Fields, William D. Howells, Thomas B. Aldrich, Horace Scudder, Walter H. Page, Bliss Perry.

MCCARTHY'S REMINISCENCES OF SOME FAMOUS AMERICANS.

FEW books are more quotable than Justin McCarthy's recently published "Reminiscences," and the literary journals continue to give copious excerpts from it, throwing new light on the personality of famous men of letters whom McCarthy knew. He first came to America in 1868. Naturally Boston was one of the first places which he visited. One of the earliest acquaintances Mr. McCarthy made there was Lowell, to whom he was introduced by James T. Fields:

"Lowell, it is hardly necessary to say, was intimately acquainted with English literature, and, indeed, with the literature of most European countries; and I am satisfied that it would not have been easy to find in the Cambridge at home any one who had a more complete knowledge of the great English classics. If we happened to talk of some book, English or continental, Lowell was sure to go to one of the shelves of his library and take down the volume, and turn to some passage which bore upon the subject of our talk, and expatiate on it with all the fresh delight of one who loved it so well that he could find something new to charm him in its most familiar lines. He had a wonderful gift of conversation, and his discourse was all conversation, and not talk; at least, he did not talk at his listeners or stream away as if he were pouring out words for talking's sake. I have heard men more brilliant in conversation than Lowell; but I have heard no man who seemed more gifted by nature with the happy faculty which can respond to the thoughts of his hearers, and bring out their best thoughts in answer to his own. I remember that he once began to tell me by chance of some rare and precious gift of wine that had been sent to him—wine the value of which it would be hardly possible to estimate by any extravagance set out in a price list; and then he wandered on to descant upon the impossibility of such a treasure being adequately appreciated by a quiet literary worker like himself, and on this thread of idea he hung so many curious conceits, such gems of phrase, such chaplets of fancy, that we seemed to have iridescent bubbles of fantasy sent floating before our eyes and before our minds by every chance breath from the worker of the magic."

Mr. McCarthy also met Emerson during this visit to Boston:

"What first struck me and charmed me in Emerson's conversation was the absence of any of that sort of air which we are apt to associate with the professor of a certain school of thought who always seems to be discoursing to his disciples. Emerson talked in the bright, easy way of a man of the world, and discoursed of men and things as well as of books and transcendental theories."

He had not long before been visiting Europe; and he had a strong friendship for many English writers, especially for Carlyle. He spoke with great regret of the course Carlyle had taken as regarded the American Civil War; but he spoke kindly, tenderly, and lovingly, in the manner of one who could not bring himself to judge harshly the intellectual error of a friend. I spoke to him of Walt Whitman, the talk I had had with Bryant on the same subject recurring to my mind. I knew that Emerson had been the first great patron of Whitman, if one could use the word patron in describing the influence exercised by a man of Emerson's simple, exalted nature. Emerson told me that he had had and still retained a strong faith in Whitman as possibly the first poet to spring straight from the American soil without foreign graft or culture of any kind. But he explained that Whitman had an artistic creed of his own, which it was difficult for any one else to accept—a creed which denied the right of artistic exclusiveness, and even of artistic selection—a creed which held that everything that was found in nature was entitled to a place in art. I believe that Whitman carried this theory so far as to startle and shock in ordinary conversation those who were not yet quite prepared to admit that art may frankly and undisguisedly deal with everything that it finds existing in life. Emerson spoke with gentle, amused deprecation of Whitman's theory, but frankly owned that it made Whitman almost an impossibility for ordinary social life."

Speaking again of Emerson Mr. McCarthy says:

"I had many opportunities of meeting Emerson, and never met him without a certain curious feeling of wonder that a man of his profound thought and of an intellect which might have seemed to be lifted so much above the ordinary concerns of life could bring himself so readily into the most unaffected congeniality of companionship with every-day men like myself. The last time I ever saw him is filled with the most melancholy recollections for me. I am passing over a large number of years at a step to come to a visit which I paid to Emerson on the occasion of his last visit to Europe. He was then staying in one of the hotels in the Waterloo Place region, and was quite broken in health. His memory had long begun to fail him. I had heard of his sinking health, but did not know that it had sunk so far, or I would not have thought of disturbing him by the useless ceremony of a visit. His daughter was with him; and he received me with all the old friendliness of manner and with an evident desire to show that he was friendly, and that he had not forgotten me. I asked, rather unluckily, after one or two of the friends I had made in Boston—men of celebrity who belonged to Emerson's own most intimate circle; and I soon found that their names conveyed to him no manner of idea. His daughter showed the most tender address in at once acting as his interpreter and not allowing him to see that there was any need for such an office."

One of the most interesting passages is his account of Longfellow:

"Longfellow's Boston friends used to say that he was the only American citizen born since the Declaration of Independence who positively could not make a speech on any subject. I am not, therefore, rash enough to affirm that he did make a speech at the London dinner; I can only say it was believed at the time that his admirers had actually prevailed upon him to deliver an after-dinner oration. But, as a talker in the ordinary intercourse of private life, Longfellow was a fitting companion for Emerson, and even for Wendell Holmes. At the time when I first visited him in his Cambridge home he told me that he had lately had the good fortune to meet George Eliot, and that he was charmed with the friendly ease of her conversation. Like many another stranger, he had expected to find in the great English novelist a woman of cold, rigid, and self-assertive manner; and he was most agreeably disappointed. I told him in the course of our talk how much I and many of my friends owed to him for the art with which he had brought us into sympathy and intellectual companionship with some of the minor German poets. I told him that in my boyish days and in my Irish home the translations which he had given in 'Hyperion' first taught us to appreciate Uhland and Salis and Chamisso, and many another German poet whom we might never have thought out for ourselves. . . . I had many meetings with Longfellow during the time of my first day in America, and the general impression I derived from my

intercourse with him was that the man, on the whole, was greater than his books. Now, I am not sure that I can very clearly describe what I should wish to convey, and what is in my own mind upon this subject. I am old-fashioned enough to be still an admirer of Longfellow's poetry, and of 'Hyperion,' and of 'Outre-Mer.' I am told that this is not the right sort of thing to say at the present moment; and I believe that to the immense popularity which Longfellow once enjoyed in England there has succeeded the familiar period of reaction, and that it is now thought the thing to cry him down as it was once thought the thing to cry him up. I do not, however, profess to be particularly bound by the laws of fashion in poetry, and I hold to it that Longfellow was, in his way and within his limits, a genuine poet. A stream is a stream tho its flow be not broad or deep; and Longfellow's was a genuine stream of song. But what I desire to convey is that, if I had met Longfellow personally before I had read his poems and his prose books, and had had a chance of talking to him such as I did actually enjoy at various times, about nature and scenery and books and the impulses, thoughts, and deeds that inspire books, and about the life and the heart of man, I should have expected to find in his printed works the stamp of a literary order higher than that to which, according to my judgment, the author attained."

Dante as a Business Man.—Baron de Renzia, the Italian Ambassador to England, recently was announced to speak before the London Dante Society upon "Dante as a Business Man." It turned out that the title had been misquoted, however, and the baron repudiated the notion that Dante had any aptitude for business. He said, as quoted in the *New York Times*: "Dante was an exceedingly bad business man, and he was bitterly opposed to the accumulation of wealth, which he regarded as a symptom of the decadence of his beloved city of Florence. He had a passion for poverty, which he idealized until he used language in speaking of it of almost amorous admiration and devotion. For the sinful and erring he had a tender heart; his malediction, when it was uttered, was always accompanied by forgiveness. But for avarice, fraud, simony, usury, he had no pity, and when he had exhausted all the vehemence of his invective in denouncing those who were given to these vices, he directed against them that irony which was his greatest and most formidable instrument. In Dante form and thought were alike great; he was the high priest of truth and beauty. While he was a pure Catholic, the weapons from his arsenal were those by which the papacy had been most severely scourged. He had the sweetest, purest, and best of thoughts, but no one had ever been able to surpass the force and incisiveness of his invective."

NOTES.

RUSKIN'S great influence over the world of readers with artistic tastes was shown lately at the Turner exhibition in the Guildhall, London. Over 240,000 people visited the galleries, an average of more than 300 an hour. The *Springfield Republican* attributes this almost wholly to Ruskin:

"It was difficult to persuade the directors that the public would take any interest in a Turner exhibition, and the result was gratifying, tho perhaps hardly surprising to any one who considers how deeply Ruskin's worship of Turner has been ingrained in the reading public. There is much in Turner's pictures, too, to appeal to intelligent people who have no technical knowledge of art. The wonderful coloring, which, alas, is fading so rapidly, and the poetry with which he infused every landscape, especially the poetry of distance, will be appreciated by those who know little of technique."

CONCERNING Zola's recent exile in London a prominent English weekly relates the following story: "Zola has been in London, and now we have Mark Twain. The former spent the best part of a year in endeavoring to conceal his identity—at least so it appears from Mr. Vizetelly's daily contribution to *The Evening News*. The most amusing incident of Zola's stay in our midst that has so far occurred in Mr. Vizetelly's narrative relates to a visit paid to 'the saloon bar of the York Hotel,' a hostelry in the Waterloo road which abuts on that famous 'Poverty Corner,' so much frequented by ladies and gentlemen of the 'halls,' when, sorely against their inclinations, they are 'resting.' Here it appears that M. Zola, owing to his 'extremely prosperous appearance, his white billycock, his jewelry, and so forth, coupled with the circumstance that he conversed in French with Desmoulin, had led some of those present to imagine that he was a continental music-hall director on the lookout for English 'artists.' One bold spirit actually approached Mr. Vizetelly with a view to secure an engagement, but was politely informed that M. Zola was 'quite full up.' Subsequently the fugitive and his confederates never ceased laughing all the way up the incline into Waterloo Station."

SCIENCE AND INVENTION.

PNEUMATIC TIRES AND WHAT IS IN THEM.

EVERY one knows that the tire is the most faulty part of a cycle and yet the most indispensable. This being the case, it is well that it has become the subject of scientific experiment, which, we may hope, will end in the discovery of some improvements. Recent investigations by M. d'Arsonval in France have for their object the determination of the action of various gases on the rubber of the tire, and his conclusions are very interesting. They are described in popular language by M. Henri de Parville, the editor of *La Nature* (Paris, July 29). Says M. de Parville:

"It may be asserted that the extraordinary development of the bicycle is due chiefly to the pneumatic tires, which have lessened the effort of traction and softened the disagreeable vibration of the older machines. Unfortunately rubber tires become deflated in time even when they do not lose their air from puncture or other accident. Where is the cyclist who has not cursed his pneumatic tires? . . . It has been thought that the problem might be solved by inflating the tires with some other gas than air, and carbonic acid has been suggested. This would also do away with the pump, since carbonic-acid gas under high pressure can be obtained in commerce. It would suffice to lead the gas directly into the valve of the tire to inflate it to any desired degree."

But, the writer goes on to tell us, M. d'Arsonval, professor at the Collège de France, has recently investigated the behavior of carbonic acid in contact with rubber, and finds that bits of rubber tubing left in gaseous carbonic acid under a pressure of 50 atmospheres swell, sometimes to ten or twelve times their former size, and become gelatinous and less elastic. The gas, moreover, passes very rapidly through rubber tires. M. d'Arsonval also endeavored to analyze the gas contained in ordinary pneumatic tires. We quote again from *La Nature*:

"Air is pumped into these tires. We should therefore find that they contain air. Is this so certain? We know that oxygen attacks india-rubber; the composition of the air would be modified by this fact, and, besides this, mixed gases do not pass through a porous partition at the same rate. For this reason the air in a pneumatic tire must undergo a change of composition. In fact, the air that we pump in is air no longer at the end of a certain length of time. M. d'Arsonval says that all cyclists agree that a newly inflated tire under a pressure of two to six atmospheres becomes deflated little by little even when it shows no loss when placed under water. One can not see how the air gets out. He finds that this mysterious deflation is not continuous; it becomes slower as the air is pumped in again and the pressure maintained constant. If the gas in the tire is analyzed at this moment, it will be found that it is almost entirely deprived of its oxygen. It is almost pure nitrogen. Thus we are manufacturing nitrogen merely by pumping up our bicycle tires. The oxygen is absorbed in part by the rubber and partly escapes through it. As air is a mixture of 21 parts of oxygen and 79 of nitrogen, it follows that the tire loses about a fifth part of its inflation more or less quickly, according to the composition of the rubber used in it.

"We know also, from the phenomena of dialysis, that when air is filtered under pressure through a very thin membrane of rubber, the oxygen passes much more quickly than the nitrogen; there is collected in the receiver a gas containing about forty per cent. of oxygen."

From these observations, M. de Parville thinks, we may deduce the following practical consequences:

"It is useless to seek to inflate pneumatic tires with carbonic acid; it would never succeed. With air, we must expect a slow deflation whose duration will depend on the nature of the rubber. All cyclists know that there are some tires that 'hold the air' and others that do not. On the contrary, it would be a good plan to inflate with nitrogen, for which the rubber is only slightly permeable.

"Where shall we get the nitrogen? It can very easily be man-

ufactured under pressure. Nitrogenized waters, that is, waters charged with nitrogen gas, as seltzer is charged with carbonic acid, are already sold. Before we know it, we shall be inflating our tires with the simple turn of a stopcock.

"It would evidently be an ideal plan to be able to inflate directly with compressed gas, without the use of a pump. . . . It may be remarked that the nitrogen is manufactured automatically in the interior of inflated tires, as has been explained above. Consequently, by replacing the loss of oxygen a sufficient number of times by the addition of air, we shall end by having only nitrogen in our tires. And the inflation will then be more and more permanent, provided the valve is tight.

"In short, never, if possible, let your tire be entirely deflated, and it will be slowly filled with nitrogen in a purer and purer state.

"Who would have thought that a bicycle tire is a nitrogen manufactory?"—*Translation made for THE LITERARY DIGEST.*

CAN WE USE THE ELECTRICITY OF THE AIR?

THAT the air is full of electricity—rather too full at times—no one who has seen a good thunder-storm need be told. Ever since Franklin's day, inventors have been grieving over this loss of energy, and sporadic efforts have been made, without success, to harness it. Scientific men have come to look with considerable skepticism upon plans for using atmospheric electricity. But Prof. Alexander G. McAdie, of the United States Weather Bureau, is of the opinion that we shall be using this electric energy of the air for running machinery before very long; in fact, he has already so utilized it on a very small scale. Says Professor McAdie, as quoted in *Electricity* (August 2):

"We are near to a realization of Franklin's plan for harnessing the electricity of the air. The twentieth century is likely to develop a practical method of utilizing this atmospheric energy for mechanical and industrial purposes."

Attention is called by the same journal to the fact that the electric spark can easily be obtained from the atmosphere under certain conditions. Franklin so obtained it, and modern kite-flyers have drawn it from a perfectly clear sky. In France, poles crowned by spikes, connected with underground conductors, are set up in some fields that the soil may be electrified, with the idea that the growth of vegetation will be thereby improved. This and other uses of electricity in agriculture have received extended notice in these pages. But this device, says *Electricity*, "is very crude compared to the mechanism employed by the Weather Bureau for determining the pressure and amount of electricity in the atmosphere." To quote further:

"In the latter case a gage provided with an aluminum needle attached to the wire conductor of a box-kite registers at the surface of the ground the amount of electricity present in the atmospheric layer where the kite soars, and an ingenious piece of mechanism furthermore marks upon a sheet of paper the notes thus taken.

"The great difficulty experienced up to the present time in utilizing the electricity in the atmosphere for any practical purpose apparently lies in a lack of knowledge as to how to handle and control the immense voltages met with."

In a letter from its Washington correspondent, the *Detroit Free Press* says on this point:

"From the investigations of the Weather Bureau it would appear that the voltage of the electricity contained in the atmosphere goes up with the level. . . . Owing to the variation in 'potential' there are strains and stresses in the atmosphere as in a building constructed of brick and stone, and when a certain voltage is attained something seems to go to smash, and positive electricity is replaced by negative electricity. Some day something definite will be ascertained about these things. Meanwhile it is known that there is a relation between the electrical potential and conditions of temperature and moisture. But enough has

been said to indicate the immensity of the problem which the government experts have tackled."

Electricity concludes its notice of the subject as follows:

"That Professor McAdie has just grounds for thinking that the twentieth century will see the utilization of atmospheric electricity for industrial purposes may be inferred when it is stated that the electricity drawn from the sky has already been made to run a small piece of mechanism with pasteboard wheels, in which insignificant toy may possibly be found the preliminary step toward the solution of the problem of the future application of atmospheric electricity for power purposes."

CAUSES OF THE INCREASE OF SUICIDE.

RECENT writers in many countries agree that suicide is on the increase, but the causes that they assign vary all the way from the weather to the decline of orthodox religious faith. Dr. W. W. Ireland gathers their conclusions in an article in *The Journal of Mental Science* (July), and the London *Lancet* makes an abstract of the article as follows:

"The records collected by Durkheim [in 1897] show that there are always more suicides during the six warm months of the year (April to September). This apparently holds good for all countries in Europe. Thus, of every 1,000 suicides per annum from 590 to 600 are committed in the warm summer season, and but 400 in the rest of the year.

"A steady and rapid increase of self-destruction is common to the whole civilized world. 'It is most marked in those countries which take leading parts in the world's doings.' Dr. D. R. Dewey has recently been studying the question in the New England States of America. He finds that since 1860 suicide has increased about 35 per cent. 'In Massachusetts it has increased in thirty years (1860 to 1890) from 70 to 90 to the million living and in Connecticut from 61 to 103 per million.' Norway seems to be the only country in Europe where suicide is diminishing. The latest figures given by Dr. F. di Verce in the *Rivista Sperimentale di Freniatria* show that 'suicide has (in Italy) continued the movement of ascent which is proper to it, rising from 890 verified cases in 1872 to 1,343 in 1881 and to 2,000 in 1898.' All who have made a special study of this subject have arrived at the conclusion that there is in Europe and North America a steady increase in the number of suicides. Some writers say that it is mounting in Europe at the rate of 50,000 a year.

"Different causes have been assigned by sociologists for this formidable rise. Dr. Fehr, in his learned work, 'Influenza as a Cause of Insanity' (Copenhagen, 1898), states that in Denmark after the severe and widespread epidemic of this malady in 1887-88 there was observed a rise in the number of suicides owing to the mentally depressing and debilitating effects of this disease. Dr. Ireland traces the greater portion of the cases of suicide to severe strain upon the nervous system which may be the outcome of a multiplicity of causes. Among these causes may be mentioned the increased strain of modern life upon the nervous system, and this is said to be paralleled by the steady increase in insanity in modern times. Dr. Ireland's studies on the lunacy returns of Norway, Massachusetts, Ireland, and of various parts of the continent accord with the conclusions arrived at by Koch, Kollmann, Cettingen, and Luiner, who have made laborious studies on this question—viz., that there is a real increase of insanity. Dr. Ireland also lays stress on the decadence of orthodox religious belief in the great towns. 'It is in great cities like Paris, Berlin, and Vienna, where agnosticism abounds, that we have the greatest number of suicides.'"

In a recent issue of the *Revue des Deux Mondes* (May, 1898), an article appears, from the pen of Louis Prool, entitled "Suicides from Poverty in Paris." In that article, the cause of suicide was found to be the difficulty of obtaining constant work and the low state of wages of some employments.

Cleanliness Better than Inoculation.—The doctors are now in an especially eager search for successful means of combating, by preventive inoculation, three diseases—typhoid,

cholera, and the plague. Commenting on this fact, *The Hospital* (July 15) says that we already possess better ways of prevention than inoculation. It explains itself as follows:

"Smallpox stands on a different platform, and the success of vaccination in controlling a disease which has shown itself to be incapable of control in any other way can not be taken as any argument in favor of preventive inoculations having for their aim the control of such diseases as typhoid fever, cholera, and plague, even if their efficacy for the purpose were better proven than it is. When we see groups of people, by virtue of their cleanly mode of life, able to walk practically unscathed through epidemics of plague; when we see cholera, which decimates certain towns, pass away harmless in the presence of a pure water-supply; when we see typhoid fever being steadily uprooted from its strongholds in proportion as man takes care to keep clean the soil around his house and the water which he drinks; and, further, when we see that by aid of this cult of cleanliness even other diseases, which are by no means to be regarded as infectious, are lessened in their virulence; then can we understand how far from the true scent are those who would protect mankind from individual diseases by a series of separate preventive inoculations. As a means of protecting an army which must march into infected districts, and of immunizing, if only for a time, those doctors, nurses, and hospital attendants who have to expose themselves to great risks, such measures may be justifiable, but as a means of protecting a people against the consequences of its own remissness!—No."

ACOUSTIC GYMNASTICS FOR THE DEAF.

PROF. VICTOR URBANTSCHITSCH contributes an interesting article on a recent method of treating defective hearing. Deafness, either partial or entire, is so frequent that, according to the late Professor von Treitsch, one out of every three persons is more or less hard of hearing, at least in one ear. These cases do not include persons who have either been born deaf or have become so in early life, so that the possibility of a cure is hardly thought of. Says Professor Urbantschitsch (in the *Deutsche Revue*):

"The question now arises whether there is not some means, in all these cases of deafness, by which the power of hearing can be worked upon so as to lead to its improvement. It is well known that methodical exercise of the body and frequent massage exert a favorable influence on certain nervous diseases, and from this came the thought that in a similar manner defective hearing might be improved by means of systematic ear exercise—a sort of acoustic gymnastics. This idea was expressed by Archigenes as early as the first century, and more recently Ernaud (1761) and Itarb (1802) demonstrated that exercises for the hearing might have a good influence in the case of deaf-mutes. In 1845 Wolff described a very meritorious method by means of which partially deaf-mute children were instructed both in speaking and in hearing. . . . In America acoustic exercises have been undertaken in similar cases with good results. . . .

"In 1888 I had under my charge a deaf boy who could only hear and understand one vowel shouted loudly into his ear. By means of systematic exercises for the hearing, which were continued for some months, a great improvement was made, so that gradually the boy could understand words and short sentences which were spoken loudly into his ear, and could repeat them correctly. The exercises were continued by a relative of the deaf-mute so that in two years the improvement in his hearing was so great that the boy could hear sentences when spoken loudly, only two steps away, and was in a condition to receive ordinary school instruction. In consequence of this success, I continued experiments on other deaf-mute boys, and reached results which to myself, at least, were thoroughly convincing. I thereupon entered into communication with Mr. Leffeld, the director of the Austrian School for Deaf-Mutes in Döbling-Wien, and with his help succeeded in having systematic exercises for the hearing introduced into that institution. These exercises were so fruitful in result among sixty pupils that the exercises were introduced into several deaf-mute schools throughout Austria. These exercises . . .

were bitterly opposed at first, but are now gaining favorable notice, and it is hoped that in a short time they will be adopted in a great number of schools for the deaf and dumb.

"On account of the great demands on the attention necessitated by these exercises—particularly in children and nervous persons—very great weariness ensues. The endeavor to keep up interest in the exercises must be made, while the pupil is still learning to understand single vowels and consonants, by uniting these to simple words of some special significance, as, 'papa,' 'mamma,' 'nose,' 'eyes,' etc., so that the deaf-mute learns as one learns a foreign tongue, the vocabulary being increased gradually. If I am convinced that a deaf-mute is not yet in a condition to understand each single letter of the practise words, experience has taught me that by repeated naming of some determined word an ear picture originates and a sort of acoustic memory will be awakened."

The writer warns those who make these experiments never to shout directly into the ear, as this may easily produce some injury to the nerve of hearing; and also at the beginning of the exercise, especially with weak and nervous persons, the experimenter must be contented with shorter times of practise, entirely omitting it on many days, as headaches and other signs of nervousness present themselves. Everything must depend on the nature of the person practising.—*Translation made for THE LITERARY DIGEST.*

A UNIVERSAL ANTIDOTE.

THE first thing to do in a case of poisoning is, of course, to administer an antidote. In medical handbooks we may read of the proper antidote for each variety of poison, but people do not carry about such handbooks as a usual thing, and when a case of poisoning is to be treated a delay of a few minutes may be fatal. Is there not some general antidote that can be used in all cases, and that is easily accessible? *Cosmos* (Paris, July 29) tells its readers that there is. After describing the modern method of washing out the stomach with lukewarm water by means of an ordinary india-rubber tube used as a siphon, it goes on to say:

"A universal antitoxic, applicable to most of the cases of poisoning, has often been demanded. One exists; and it is very simple and well known. It has been in use since the seventeenth century, when poisoners, who were numerous in those days, recommended it to their friends and accomplices. It is milk. Milk, by its fatty matter (butter) and by its casein, protects the mucous membrane against the corrosive action of acids, alkalies, and other caustic or irritant substances. The chemical rôle of casein is here very remarkable and very valuable. It is able to fill the double part of acid and of base, in presence of compounds with which it is brought in contact. It not only coagulates under the action of acids, by combining with them, but it also yields a precipitate with most mineral bases, forming insoluble caseates. If precipitation does not immediately take place with a product having a given reaction (acid or basic), this precipitate will appear through the intervention of another substance of contrary reaction. This is a very important law in toxicology which, as has been observed by its discoverer, Dr. Crowzel, has never before been formulated or even noticed.

"This chemist proposes to add to the milk five per cent. of borate of soda. This salt is not toxic, and is employed because it precipitates as insoluble borates all the mineral bases, except harmless or slightly poisonous alkaline bases. The poisonous acids decompose it, seizing on the soda and setting free boric acid, which is less poisonous and less soluble.

"Borate of soda thus realizes very remarkable general conditions, which are sufficient to make it a general antidote, altho unfortunately not a universal one, which result can be obtained with no known product.

"The mixture of borate of soda and milk is an antidote at once neutralizing and precipitant. It can be used especially with mineral poisons, altho we must except cyanids, ferrocynids, ferricyanids, chlorates, nitrates, arsenites, arseniates, and oxalates. Of these, the first three are precipitable by a mixture of ferrous

and ferric sulfate, while chlorates and alkaline nitrates can not be precipitated by any inoffensive reagent. Arsenites and alkaline arseniates can be eliminated by magnesia.

"In any case no risk is run and good may be done by giving milk with borate of soda to one who is thought to have been poisoned. It is the first thing to be done after emptying the stomach. If arsenic is suspected, magnesia should be given. If there are vegetable poisons, the best antidote is a one-per-cent. solution of permanganate of potash, which is harmless in this degree of dilution, and is easily obtained nowadays. It decomposes most organic substances by oxidizing them."—*Translation made for THE LITERARY DIGEST.*

IS DRUNKENNESS HEREDITARY?

THIS question is answered in the negative by Dr. G. Sims Woodward in a recent address before the Society for the Study of Inebriety. The doctor held that while certain nervous degenerations and diseases, certain altered and weakened inhibitory power, were transmitted from generation to generation, until far more convincing evidence than had yet been brought forward was presented he should strongly maintain that direct transmission of the taste for alcohol from parents to children did not occur.

We quote from an abstract of the address in the *London Lancet* (July 29):

"Let them take as an analogous case the question of hereditary transmission of tuberculosis. For how long a time had they not believed in the hereditary transmission of tuberculous disease? They had now, however, gradually come to know that tuberculous disease was never so transmitted. The virus might pass from the mother to the child during the time that the child was directly attached to the mother; this was quite a different condition. Heredity played no direct part in the transmission of tuberculosis, but indirectly it was a most important factor. So it was, he thought, in the case of drunkenness. He believed, then, that except in those cases of direct transmission where the parts were specially infected, this transmission did not take place. There were, however, certain weakened conditions of the tissue developed of weakly, nervous, or drunken parents, which rendered the patient much more susceptible to the action of the tubercle bacillus. So also with alcoholic disease or drunkenness. The disease was not transmitted but only the weakly and unbalanced condition of the tissues; as a result of this, however, the patient was more susceptible to the main exciting cause of the disease; in a word, the predisposing cause might be transmitted but the exciting causes never."

Dr. Woodward does not believe in Dr. Archdall Reid's theory that the drunkards must all be killed off by indulgence in order that the remainder of the population may be sober:

"If they [his hearers] were told that typhus fever should be allowed to eliminate all who might be susceptible to the disease in order that the nation as a whole might become immune to typhus fever, most of those present would exclaim that the proponent of such a theory had little knowledge of human nature and less confidence in the hygiene of which they as a nation were so proud. The same should hold good in the case of temperance."

Modern Uses of Frictional Electricity.—In the fourth of a series of articles on "Electricity as an Exact Science" in *Knowledge*, Howard B. Little has a word to say on the value of experience in scientific work, and states his conclusion that it is particularly valuable in electrical science, and yet that it is apt unless properly controlled to lead the scientific man into blunders. Speaking of the researches and work of Tesla, Roentgen, and Marconi in statical or so-called "frictional" electricity and its applications, he says: "Perhaps of all the errors into which electricians as a body have ever fallen, solely on account of commercial-electrical teaching or experience, the one most widely spread was that which led them (well within the past ten years) to deride the teaching in schools of 'frictional electricity.' It used to be said that to teach a boy what would happen when silk,

or sealing-wax, or glass, was rubbed was a mere waste of time, because it was not the electricity of commerce. It was pointed out that 'frictional electricity' had but two commercial applications, for it was only made use of to de-electrify silk, when in the process of manufacture it became electrified, and hung together, with a tendency to become entangled, and to electrify the ink contained in the telegraphic siphon recorder. When, later on, this latter field for the remunerative use of the despised form of electricity was no more (owing to the introduction of a clockwork tapping apparatus which was found more convenient as a means of making the ink 'jump' out of the tube), the electrician's tolerant smile at the 'science master' became something painfully like a grin. But all that has been changed by the three men just mentioned (purposely in conjunction, tho their work has been independent, and productive of widely different results). Before leaving this point, let me confess that I personally did my best to become one of the broadest grinners at the 'science master.' All I can say in extenuation is that, having cultivated a certain class of experience, I fell into the pit which I had dug unconsciously for myself, and, arrived at the bottom—well, I had good company there. Yet the value of experience must be by no means underrated. Perhaps the plain statement of fact is best expressed by the assertion that among electricians particularly it requires great experience to arrive at a just appreciation of the value of experience, and a wide experience to make a proper use of experience."

CRIME AND THE WEATHER.

THIS subject, which has been treated before in a general way, has been investigated statistically by Edwin G. Dexter, who contributes an account of his results to *Science* (August 11). Mr. Dexter's method consisted in tabulating over 400,000 misdemeanors from the records of the police, the schools, the penitentiaries, etc., in New York City, as well as of errors in banks, strength tests in gymnasiums, etc., and comparing them with the data obtainable from the Weather Bureau. In this way he arrived at the following result for temperature conditions:

"Moderately high temperatures were found to be accompanied by excess in all the misdemeanors considered; low temperatures by deficiencies, the temperature group 80-85° showing an excess of 68 per cent. for assaults by males and 100 per cent. for those by females. The next higher group, however, shows a drop to 33 per cent. excess for the former and a deficiency of 33 per cent. for the latter. This sudden falling-off for conditions of intense heat is shown for nearly all classes of data, and is undoubtedly due to the fact that under such temperature there is little energy available for offensive conduct. Death, suicide, and the recorded error in banks alone remain excessive under such conditions."

Low barometer seemed in general to act like excessive heat. The results for humidity were surprising, since they showed that a high percentage of moisture was less productive of misdemeanor than low humidity. Says Mr. Dexter:

"When we consider that the muggy, sticky days on which we feel it our natural prerogative to be 'out of sorts' are of the opposite character, this is quite surprising. The deficiency of disorders on such days is, however, undoubtedly due to the fact that altho they are emotionally depressing they are also physically weakening, and however 'ugly' a man might feel, if energy were lacking to be offensively active, the police court is none the wiser, and the fact is lost to our study."

The comparison of Mr. Dexter's data with statistics of wind show that the misdemeanors were less during calm than with moderately high winds, but that they grew less again with high wind-velocities. They also appear to be less frequent on cloudy and rainy days than in pleasant weather—a result that is doubtless to be explained in the same way as the results for humidity, stated above. Mr. Dexter closes his account as follows:

"Perhaps the most interesting general conclusion to be drawn from the study is that during those meteorological states which are physically exhilarating, excesses in deportment, in the ordi-

narily accepted sense of the word, prevail to an abnormal extent, while death and irregularities in mental processes (error in banks) are below expectancy. During such weather conditions, without doubt the quality of the emotional state is more positive than under the reverse conditions, but the results seem to show that in the long run an excess of energy is a more dangerous thing, at least from the standpoint of the police court, than the worst sort of a temper with no energy."

THE CAUSE OF CANCER.

CLOSELY following upon the news that Dr. Bra, in France, had discovered the microbe of cancer, comes the announcement, given wide currency through the daily press, that Dr. H. Lambert Lack, a London physician, has just proved to his own satisfaction that the disease is not microbial at all, but is due simply to an abnormal growth of ordinary tissue. This assertion, made very positively, proves to have been a little too strong. In a personal letter to the *Lancet*, dated July 7, Dr. Lack disclaims any association with the newspaper paragraphs referred to above, which, he says, "are in many respects misleading and are calculated to delude unfortunate sufferers by holding out false hopes," as well as to bring him into discredit among his professional brethren. He gives the following brief account of his experiments and their results:

"I have been long impressed by the following considerations—viz., that the epithelial cells of cancer were themselves the sole infective agents; that this cancer epithelium was practically normal epithelium, only out of place; and that from the very commencement of the cancer it was growing in the lymph spaces. I thought from this that if the normal epithelium by some accidental means should obtain entrance into the lymph spaces it would find no barrier to its continued growth and would produce all the phenomena of cancer. At present I have performed but a single experiment to test this view. I obtained an emulsion of the epithelial cells from the healthy ovary of a healthy rabbit and placed them in the animal's peritoneum. The animal died fourteen months afterward and on examination masses of growth were found in the abdominal and thoracic cavities having the characteristic features of typical ovarian cancer. Experiments will be carried out to confirm and extend these results, and until these have been completed no general conclusions can be drawn."

SCIENCE BREVITIES.

MAGNETIC observations at the Vienna Observatory have been discontinued on account of the electric railroads and electric light wires which have made accurate work impossible. The director has planned a new observatory, at some distance from the city, and the Austrian Government has been asked to build it.

THE third International Astronomical Conference will be held at the Yerkes Observatory, Williams Bay, Wis., September 6, 7, and 8. Prominent American and European astronomers are expected, and a permanent organization will be effected. Arrangements are being made to hold their annual meetings at the larger observatories.

"THE days of the underground cast and wrought-iron gas, water, and steam pipes are about numbered," says a Boston electrician, as quoted in *The Electrical Review*. "Electrolysis is playing high jinks with the iron pipes in all the big cities, and in a few years from now the water-pipes will become so weak that they will burst every time any pressure is put on them on account of being corroded by the action of the powerful currents. I will venture the prediction that seven years from now nothing will be used for underground piping of all kinds, except where high pressures are carried, except glass."

THE theory is advanced by Dr. W. B. Clarke, of Indianapolis, in a paper read before the State Society of Homeopathic Physicians, that the recent increase in the spread of cancer is directly due to vaccination. Starting with the fact that cancer is a disease characterized by rapid growth of abnormal cell-structure, he says: "It takes twenty-one years or more to make a man, and but three or four to make a cow. As cancer is a disease characterized by the rapid imposition of cells, I ask you, is it safe to put the rapid-growing cells or protoplasm of a diseased animal into the slow-growing cells of man, as is done in vaccination? Dr. Clarke believes that we are reaping the harvest of the seed so generally introduced forty to sixty years ago," and that "deaths from cancer are more numerous in England and Prussia, simply because the pernicious practice [of vaccination for smallpox] was generally introduced so much earlier there."

THE RELIGIOUS WORLD.

"THE STRANGEST RELIGIOUS COMMUNITY IN THE WORLD."

ABOUT six miles from Las Cruces, in New Mexico, is a unique colony which has been termed the most remarkable communistic sect in existence—a community with a religion, a civilization, and a Bible of its own, in the midst of an alien people.

The members of this community are of the theological type known as "Perfectionists," to which the well-known community at Oneida, N. Y., also belonged, altho that community differed from the Las Cruces colony in important social beliefs and practices. The founder was Dr. Newbrough, a New York dentist and a believer in spiritualism. In *Ev'ry Month* (New York, August), an account is given of the singular book which he wrote and of the colony founded to embody its teachings. The work is entitled "Oahspe," supposed to be an antediluvian word signifying "earth, air, and sky." Says the writer:

"It is said to have been written on the typewriter by Dr. Newbrough, his hands being guided by supernatural beings, and was printed without being read by the doctor. It is a book from which, tho containing much worldly wisdom, little in the way of a working theory may be gathered. It is certainly a work without a counterpart, filled with extraordinary phrases and with more peculiar illustrations, but it is the sacred book of a unique community, which was founded to establish the religion it teaches, and out of the spiritual and economic doctrines set forth therein to found

a new race. And the few who constitute the fraternity not only follow its economic doctrines and refrain from considering anything as theirs—they call themselves 'Kosmons,' which is to signify in the language of their sacred scriptures, non-owners of any- and everything—but the children are taught to revere the book as the inspired dogma of their religion. A selection from this book—certainly the most extraordinary Bible in the world and as large as our own Bible—indicates the reason for the founding of this community and the end in view in the special consideration paid to the rearing of children: 'The young are your

angels, given you by the Creator, and ye are their gods. Consider ye then what kind of a kingdom ye raise up."

The community is called Shalam, "The Children's Land," and the Children's Building, built of brick, is the largest. Another building, of adobe, is called "The Fraternum," and contains a large number of extraordinary and grotesque pictures, painted by Dr. Newbrough. A small brick building is called "The Temple," while the adobe houses adjoining the area named Shalam form a community called "Levitica," reserved for the adult members. A common storehouse furnishes them with supplies. As to the children—the most important feature of the community—the writer says:

"The greatest care is exercised in bringing up the children, who, under a special law of New Mexico, are adopted by the 'Faithists,' as the rulers of Shalam call themselves, and become thenceforth their children. The younger children are taught by kindergarten methods, and the older ones are instructed in such trades as they show a liking for. At a 'suitable age' they are taught spirit communion, and are especially instructed to be 'wary of spirits of the dead who profess not the Great All Person'—an injunction of much value, no doubt, to the incautious pupil. There is so much, however, that is reasonable and practical in the tuition and regimen prescribed that one is inclined to overlook the extravagances."

FELLOWSHIP OF RELIGIONS IN INDIA.

ON the occasion of the Queen's birthday, the Anglican metropolitan of Calcutta—Dr. Welldon—sent a circular letter to the bishops of his province suggesting that special services should be held on that day in the English churches, and expressing the hope that other religious bodies in India, whether Christian or non-Christian, might be willing to "unite with the Church

DR. NEWBROUGH,

Founder of the religious community of "Shalam," and author of "Oahspe."

Courtesy of *Ev'ry Month*.

of England in the manifestation of loyalty to the Queen-Empress and of gratitude for the manifold blessings of her long and illustrious reign." He said further that "the fact that prayers should ascend simultaneously on her behalf from churches, temples, mosques, and synagogues will, in itself, be a striking instance of the unity among all classes which is so desirable."

It seems, however, that not all of the metropolitan's clergy take the same view. Says the *Rangoon Times*, as quoted by *The Buddhist*, Colombo:

"The most devout Christian could find no legitimate objection to a suggestion which makes for peace and unity among the different communities in India, and it has more of a political than a religious significance. But, unfortunately, among Christians are to be found the most bigoted and intolerant religious enthusiasts on the face of the earth. We have no hesitation in including in this category the Bishop of Colombo and the standing committee of his diocese. In reference to Bishop Welldon's circular letter, this committee, which includes the Bishop of Colombo, passed, on the motion of the acting archdeacon, a resolution stating that they 'respectfully but earnestly deprecate any action intended to imply unity with non-Christian systems in religious worship or prayer.' The Bishop of Colombo, in a circular letter to his clergy, amplified the meaning and intention of this resolution. In his letter he admits, somewhat grudgingly it seems to us, that the prayers for the Queen, of Christians other than those belonging to the Church of England, will be acceptable to God, but prayers—he says they can not be called prayers in the full sense of the word—offered in non-Christian places of worship, the Bishop of Colombo believes to be dishonoring to God and to be in themselves—whatever may be the ignorance of the worshippers—acts of sin. Bishop Welldon would not, he is sure, 'have us willingly promote the offering of one single idolatrous rite, or one address to supposed deities very different in attributes from Almighty God; or one single appeal to the virtue of the acts of Buddha—such is the nearest approach to prayer known to the Buddhists.' The Bishop of Colombo must be aware that the handsome salary he receives is contributed by the very people whom he insults so grossly, and how he can settle that little affair between his conscience and his convictions it is difficult to understand. His repudiation of the metropolitan's suggestion, also, casts a side-light on the question of the obedience of the clergy of the Church of England, and seems to emphasize the general belief that the bishops in the matter of lawlessness are worst offenders."

A "PROTESTANT-CATHOLIC" CHURCH.

AT Piacenza, in Italy, is a church which, while retaining all Catholic rites and symbols, and in the midst of a Catholic community, repudiates allegiance to the Pope. A writer in *The Standard* (Baptist) thus relates his recent visit to this church:

"Don Paul Miraglia, the tall, handsome, energetic priest who is in charge of this church, is perhaps the most eloquent man in Italy. Sent to preach at Piacenza some years ago, he offended the Curia by his liberal sentiments, and was finally excommunicated. Nothing daunted, he set himself to preach independently of and in opposition to the papacy. By the kindness and sympathy of an Italian whose mind had been opened by a residence at San Francisco, a suitable edifice was placed at his disposal which has been fitted up and transformed into the '*Oratorio di San Paulo*,' and there Don Miraglia says mass every morning and preaches to crowds every evening. I had a year ago made this priest's acquaintance, and formed a favorable opinion of him, and had promised, whenever I might pass Piacenza, that I would call and see him.

"On May 29 he met me at the station, and after showing me all manner of kindness led me to his church. It was a new experience for me to find myself surrounded by all the customary appendages of Romanism. There were two altars, one with lighted candles, and the usual pictures on the walls. When I entered some female voices were singing Gounod's '*Ave Maria*,' and that over, the bishop (Miraglia has been elected bishop by his church) in his gorgeous robes, ascended the pulpit, and in introducing me uttered some tremendous philippics against the Pope

and priests, concluding with his usual formula; for just as Cato concluded every speech with the words: '*Carthago delenda est*,' so Miraglia, to encourage his followers, concludes every discourse with the words: '*Alla Curia non torno, dalla chiesa non esco, da Piacenza non parto*,' which, being interpreted means: 'I shall not return to the papacy, I shall not leave the church, and I shall not leave Piacenza.'

"Ascending the pulpit, I looked down on twelve hundred up-turned faces, altho it was a wet night, and I was pleased to observe that many of the people had in their hands copies of the New Testament. I had sent several hundred copies to Miraglia some months previous, and he urges to the study of them. Moreover, when I announced a text in the Epistle to the Ephesians, these people seemed to have little difficulty in finding it. I addressed them as 'Brethren in Christ, Catholic Protestants of Piacenza,' at which they smiled audibly. After congratulating them on the progress they had made in separating themselves from Romanism, and expressing the hope that many would follow their example, I told them frankly that I did not pretend to approve of all they did and believed, neither did I expect that they could approve of all I preach, but that it seemed to me the things that we had in common were more and more important than those dividing us. I then set myself to preach what I regarded as the most central and essential truths of the Gospel, showing the necessity of the new birth, the vanity of certain rites and ceremonies, and the importance of a life governed by the Spirit of God, and I showed how this is to be had by personal faith in a union with Christ, to whom each man must go for himself without the intervention of any priest.

"The people not only listened to these frank words, but applauded them heartily. At the close I had to submit to an ovation, an address and a beautiful bouquet of flowers being presented to me by three little girls dressed like Savonarola. In the sacristy (vestry) I was shown many relics which the enlightened people have brought and delivered up to the minister, who has the nucleus of a museum consisting of them."

RELIGIOUS INFLUENCE OF RUDYARD KIPLING.

A STUDY of Kipling's relation to religious and ethical thought has lately been made by the Rev. J. T. Sunderland, pastor of the First Unitarian Church at Ann Arbor. "Under any interpretation of religion, even the broadest, Kipling is not primarily a religious teacher," says Mr. Sunderland; "his first thought is art . . . he is about as far removed as a man can be from a professional moralist or teacher." Yet it is frequently claimed that Kipling is making a noticeable impress on the religious thought of the day. Mr. Sunderland is inclined to think this view correct, and strives to analyze the religious content of Kipling's writings and to answer the question whether he is affecting religious thought for good or ill.

As a poet, says Mr. Sunderland (in *The New England Magazine*, July), Kipling's religious utterances are limited in number, but of these some are particularly strong and have made a deep impression on the popular mind:

"But as a fact there are few writers of poetry and fiction in whose writings religion, or even ethics, has so subordinate a place. Aside from a dozen or so of his poems, one would hardly know from his books that such a thing as religion existed in the world. . . . I do not mean to say that Kipling handles his characters or tells his stories in such a way as to make his books positively immoral or irreligious; but I do mean to say that if we in this generation have no higher moral standard or better religious teaching than most of Kipling's writings afford—indeed I may say all, outside of a dozen or so of his poems—we shall not rise to any moral or religious height which we shall have reason to be very complaisant over.

"Kipling brings into the thought of our time a strong force; but morally it is an uneven force. His religious influence is not harmonious or consistent; he has not thought himself out into clearness in religious matters. Some of his religious conceptions—for example, those of God and justice and duty and heaven and

hell and retribution—are crude; for enlightened men to-day to accept them would be to go backward. His ideals of life are by no means invariably the noblest. Many of them give unmistakable signs of the debasing influence of the camp and the barracks."

Some further limitations of Kipling's religious outlook are thus indicated:

"His religion is preeminently the religion of power. With the power is associated some sense of responsibility, some awakenings of conscience, some traces of retributive justice, as related both to individuals and to nations; but higher than these he seldom or never rises. A religion of love he seems to know nothing whatever about. His religion is the religion of the Old Testament, not of the New—or rather it is the religion of the earlier and less ethical parts of the Old Testament. His God is the Jehovah of might and wrath and war, whom we find depicted in the books of Joshua, Judges, and Kings. Hence the opening lines of his 'Hymn Before Action':

'Jehovah of the thunders,
Lord God of Battles, aid!'

The God of love, of the Gospels, and the Epistles, especially the heavenly Father of Jesus, seems to be a conception wholly foreign to his thought.

"Kipling is not a spiritual seer, and he is not a great religious thinker. To some extent he feels the religious confusion of our time; but he does little or nothing to illuminate it. With the great religious problems which confront thinking men to-day he gives no evidence of having grappled; he can therefore afford us little help in the solution of these problems. It is this that differentiates him so widely from poets like Browning, Tennyson, and Wordsworth. These great thinkers and seers all have the power to take their readers strongly by the hand and lead them straight up out of the valley and the shadow, out of the fog and the dark, out of fear and doubt and spiritual uncertainty, to the mountain tops where there is light.

"Thus do these men who can think as well as sing—these great seers and interpreters of God and the human soul—lead in solving the religious problems that press upon the modern world, and lift men from despair to hope, from doubt to faith, from weakness to moral power, and give new meaning, new incentive, and new glory to man's life.

"It is here that Kipling is weak. It is here that his religion shows itself so much below the highest. It can make men fight; it can not make them love. It can make men plod and drudge with faithfulness, and even with courage; it can not give men wings; it can not make the soul sing songs of faith and joy and victory. And yet I believe that Kipling has a religious message for our time. Some of his poems have been born out of his deepest soul, and go straight to the consciences and religious needs of many men. God speaks in the world through many voices. I believe one is that of Kipling."

Mr. Sunderland places a high estimate upon the religious value of "The Recessional":

"It came to the conscience of England almost as if God had spoken from heaven. It was Kipling's solemn and mighty hymn. . . . I hardly know of anything in the history of literature so dramatic, so powerfully and nobly dramatic, as was this hymn of Kipling's, coming at that opportune moment to stir England's conscience, to rebuke England's pride, to warn her against putting her trust

'In reeking tube and iron shard—
All valiant dust that builds on dust'

and forgetting justice and humility and duty and God."

Mr. Sunderland does not think highly of "The White Man's Burden," for he does not believe in the principle that "we can shoot civilization into people." He also thinks "The Truce of the Bear" execrable. "What right," he asks, "has he to put the worst possible interpretation upon the Czar's conduct, especially when to do so means aid to the terrible war spirit and hindrance to the peace spirit in the world? Kipling has a heavy responsibility in this matter." Yet tho Kipling's first object in his writings is to entertain, he shows here and there that he recognizes his responsibility; especially, the writer thinks, in the noble

dedication to "Soldiers Three," in the "Envoi," and in "Life's Handicap." Mr. Sunderland thinks that Kipling's greatest tho not noblest poem of a religious nature is "McAndrews's Hymn." He further says:

"One of Kipling's religious poems not to be overlooked is his 'Hymn Before Action.' I have already referred to it as illustrating his view of God. A striking and powerful poem is his 'Tomlinson.' There may be some question as to whether its ethics is Christian or Satanic, but its scorn of weakness is tremendous; both heaven and hell refuse admission to the man who lacks strength. Kipling is robust in his religion, as in everything else. His religion is preeminently one of work, of deeds. We could only wish it made more difference with him whether the deeds were good or bad."

In concluding his analysis of Kipling's religious spirit, Mr. Sunderland cites the well-known concluding poem of his "Seven Seas"—the one beginning

"When earth's last picture is painted
And the tubes are twisted and dried"

In this poem, says the writer, Kipling "dashes on the canvas for us his dream of the future, beyond this world. It is fantastic, but it is impressive, and the last lines certainly have some good religion in them." It is not, indeed, a full and adequate picture of heaven, says Mr. Sunderland; nevertheless he is inclined to think there is in it much to inspire and to teach the world:

"For any man who stands on his own feet, who thinks for himself, who wants reality and not make-believe, is not this, so far as it goes, about the kind of thing that heaven must be if it is to have any attraction for him? One of the fine traits of Kipling is his hatred of cant and pretense, his love of sincerity and reality. In these lines this comes out into unique and powerful expression. Surely there is a lesson here for the whole world to learn."

ETHICAL TEACHINGS OF MOHAMMEDANISM.

A WRITER has recently called attention to the fact that much closer relations between Christian and Mohammedan peoples will exist in the coming century, owing to the militant nature of Mohammedanism in India, upon the east and west coasts of Africa, and in other parts of the Orient, and that therefore it would be well for Christians to gain a juster view of the principles of Islam than is at present common. The moral teachings of the two religions are generally supposed to be very different from each other, if not antagonistic. This, however, according to Miss Beatrice Taylor, who is apparently a convert to the religion of Mohammed, is an error. Except as to sex relations, which are always largely a matter of sociology and geography and not properly of religion, the teachings of Islam contain little that could not be accepted by a Christian, while its attitude upon a number of problems of life is a more rational one, she asserts, than that taken by Christian theology. The writer says (in *The Humanitarian*, July):

"To begin with, it must be remembered that in the teachings of the Arabian prophet, the service of man and the good of humanity constitute preeminently the service and worship of God. Faith without work has no meaning; 'this life is but a tillage (mazraa) for the next.' And everywhere our continued existence after the death of the physical body is brought to the fore. But our life is 'a life to be lived in the present.' The inevitable struggle for the mastery of the lower self by the higher is spoken of. It is pointed out in the language of poetry that a man partakes of the nature of the beast as well as that of the angel, and he is urged to subdue the nature of the beast that he may mount even higher than the angel. Striving for good is taught in the most emphatic terms, 'for striving is the ordinance of God, and whatever God has ordained can only be attained by striving.'"

The idea of brotherhood and love of neighbor, commonly as-

sumed to be the central concept of Christian ethics, is also the constant admonition of the Koran and of later commentaries:

"The return of good for evil is preached on all occasions: 'Think only of what is good for each, and consider not the wrong that has been done thee; pardon others readily, and do good to all.' It has been truly said that 'the moral idea of the new gospel was set in the common sense of duty and the familiar instances of love.' For all are entreated to help others without thought of recompense—to act as brother to brother: 'Wouldst thou be taught the steep path? It is to ransom the captive, to feed the hungry, the kindred, the orphan, and him that is stricken low. Be of those who enjoy steadfastness and compassion on others' [from the Prophet; Bokhâri]. . . . But help to the suffering and the weak is not preached in an exclusive spirit, for it is declared incumbent to assist every oppressed person, whether Moslem or not: 'If in this world you can not make a heart glad, yet act not so as to make the humblest soul sorrowful' [Hazân]. 'Wo to them that make a show of piety and refuse to help the needy.' 'There is no piety in turning the face to east or west, but only in believing in God and doing good.'

"Again and again we have the idea that since there is a divine spark in each individual, in serving the human being, man is serving God: 'Be kind to man on the earth, whether he be good or bad; being kind to the bad is to withhold them from badness' [from the Prophet; Bokhâri]. Again, 'All God's creatures are His family, and he is the most beloved of God who tries to do most good to God's creatures' [from the Prophet].

"Further on we come across the same idea, expressed in other words: 'The Prophet was asked who was the most favored of God's creatures. He replied, "He from whom the greatest good comes to His creatures." And then he was asked what actions are best. He answered, "To gladden the heart of a human being, to feed the hungry, to help the afflicted, to lighten the sorrows of the sorrowful, and to remove the wrongs of the injured"' [from the Prophet; the Mustatraf].

"In the same place we are commanded: 'Do not be avaricious, or covet the goods of your brethren; love for them what you love for yourself; guard yourself from anger, passion, and greed, for these are the worst of faults' [*Ibid.*]. 'He who is subservient to his passions and desires, and forgets in their pursuit his duty to others, is the worst and weakest of God's creatures.' Here is a positive injunction laid down: 'Be persistent in good actions.'"

With regard to the Prophet's teachings upon the subject of salvation through real faith, manifested in good works, the writer says:

"That man is master of his fate, is a prominent teaching: 'It (the soul) shall enjoy the food which it hath acquired, and shall bear the evil it sought after' [the Caliph Ali]. 'Whosoever gets to himself a son, gets it solely at his own responsibility' [*Ibid.*]. 'He who shall mediate between men for a good purpose, shall be the gainer by it. But he who shall mediate with an evil purpose, shall reap the fruit of it' [the Koran]. 'To gladden the heart of the weary, to remove the suffering of the afflicted, has its own reward. In the day of trouble, the memory of the action comes like the rush of a torrent, and takes away our burden' [from the Caliph Ali; the Mustatraf].

"From the Caliph Ali's writings we learn the high standard of truth set before the Moslems: 'No man is true in the highest sense of the word, but he who is true in word, in deed, and in thought.' On this head, too, we have the Prophet's own words: 'He is not of me, but a rebel at heart, who, when he speaks, speaks falsely; who, when he promises, breaks his promise; and who, when trust is reposed in him, fails in his trust.'"

Magnanimity and charity to all living creatures is part of the Moslem's creed, says the writer:

"A woman who had sinned was passing by a dog that held out its tongue from thirst, and was near to dying. The woman drew off her boot and tied it to the end of her garment, and drew water for the dog, and gave it to drink; the Lord forgave her sin.' The Prophet was asked, 'Verily are there rewards for kindness to four-footed animals, and giving them to drink?' He said, 'Man reaps his reward for each act he does to any living creature.'

"The Prophet's definition of charity is large-hearted: 'Every good act,' he would say, 'is charity. Your smiling in your brother's face is charity; an exhortation addressed to your fellow men to do virtuous deeds is equal to alms-giving. Putting a wanderer on the right path is charity; assisting the blind is charity; removing stones and thorns, and other obstructions, from the road, is charity.'

"He is a man," says the Allamah Abul Fazl, 'of high understanding and noble aspirations who, without the help of others, recognizes a ray of the divine power in the smallest things in the world; who shapes his inward and outward character accordingly, and shows due respect to himself and to others. True greatness, in spiritual and in worldly matters, does not shirk the minutiae of business, but regards their performance as an act of divine worship.'"

THE LONGEVITY OF CLERGYMEN.

It has long been known that ministers are much better "risks" than the members of any other profession. According to *The Quiver* (London), the returns of the registrar-general in England show that no other class of workers enjoy so long a lease of life. Commenting on this *The Christian Advocate* (July 20) says:

"This is, no doubt, due to two or three prominent causes, among which may be put their almost total immunity from risks of accident and death that attend certain trades and professions:

DIAGRAMS ILLUSTRATING THE COMPARATIVE LONGEVITY OF MINISTERS.

their general habits of temperance, moderation, and regularity as compared with most workers; and their daily exercise, study, etc., which give a combination of mental and physical recreation, of outdoor and indoor life, such as few other workers get, and which must prove beneficial to health. The diagrams here shown form a striking illustration of the percentage of different classes of workers, including ministers, who attain to the 'threescore years and ten' of the psalmist. Out of every hundred in each class, forty-two ministers, forty farmers, thirty-four teachers, and twenty-four doctors live to the age of seventy."

A NEW bishop of the Mennonite church was selected at Millenburg, Pa., early in June. According to the custom of this sect, which follows the apostolic method of choice mentioned in Acts i. 26, the bishop was chosen by lot. Each of the four candidates was handed a Bible, and into one of these had been placed a slip of paper with the words, "Indicated as God's choice." The Bibles had previously been shuffled together. Rev. Abraham Herr, of New Dansville, received the Bible containing the slip, and was duly proclaimed bishop of the Mennonite church, which is a flourishing and industrious organization.

FOREIGN TOPICS.

AFTER THE PEACE CONFERENCE.

THE Russian Government publishes a communication in which great satisfaction is expressed with the results of the Conference at The Hague. It runs in the main as follows:

The Conference has, indeed, found it necessary to defer the definite settlement of the disarmament question until the several governments have found time further to examine into the propo-

GOOD OLD JOHN BULL (preparing dum-dum bullets for South Africa): "Verily, those foreigners are wicked men. Lord, I thank Thee that I am not like unto these!"—*Amsterdämmer*.

sals. Yet some relief is as good as certain, as all nations agree that a reduction of the military burdens now borne by them is greatly to be desired. The work of the Conference will no doubt be of some influence in mitigating the horrors of war, and the different governments unite in the declaration that war should be abolished altogether. It is at least a fact that a third power may offer to arbitrate between quarreling nations. The sovereign rights of nations have not been diminished; but a new basis has been created for international peace.

Most European papers agree that all this is, to put it mildly, extremely optimistic. The Socialists especially are unsparing in their ridicule. *Justice*, London, says:

"How the representatives of the various powers contrived to keep a sober countenance as they sat round that board of very green cloth we are at a loss to understand. It is the greatest farce of make-believe of our time, and we do not hesitate to say that Sir Julian Panncefote has well earned his peerage if only for the constraint which he must have placed for all those weeks upon his facial muscles. . . . We knew, of course, that nothing would be done, but we thought that this nothing might be done decently. Not so. The Czar, as peace promoter, has made ready for war with greater vigor than before; America, the great champion of arbitration, has devoted herself all the time to blowing the Filipinos into the region of perpetual peace with the most approved weapons; England, the arch-hypocrite, having slaughtered the Sndanese into subjection, has been threatening the Boers with wholesale immolation unless they did what they have no mind to do; and so on and so forth. A grisly comedy indeed."

The nations point each other out as responsible for the shortcomings of the congress. *The Outlook*, London, criticizes one of the German delegates who declared that his country is anything but ruined by her armaments, and it hopes that the German Socialists will show that the Emperor is mistaken. It says:

"If everything is for the best in that best of all possible worlds, the Fatherland, how comes it that the Social Democrats can march more than two million electors to the polls? and, as the Berlin correspondent of *The Times* had to confess the other day, 'The comment of the sensible and reflecting portion of the German nation is that there are far worse enemies of progress and enlightenment in the state than the Socialists!' This Berlin correspondent speaks of 'the present unhealthy and artificial organization of German society.' Unless we are very much mistaken, more will be heard of this during the next few years."

The Continental papers, on the other hand, point out that England and the United States, whose delegates talked so much of arbitration, are least willing to try it. *The Deutsche Zeitung*, Berlin, fears that the arbitration tribunal would be used merely to save England from a strong adversary. *The Neue Freie Presse*, Vienna, says:

"The difference between theory and practise is curiously illuminated by the persistence with which the United States and England advocated an obligatory court of arbitration. Unless the delegates made a mental reservation, on their country's behalf, the logical incompatibility of speech and action must be admitted. Austria-Hungary proposed arbitration to the United States just before that resolution was passed at the Conference. We, therefore, showed our good will. It passes our knowledge and understanding why the authorities in Washington failed to give that moral support to their own proposals which would have been conveyed in the acceptance of the Austro-Hungarian suggestion."

Goldwin Smith, too, indulges in a slap at the United States. He says in the *Toronto Sun*:

"The only tangible fruit, apparently, will be a permanent board of arbitration, which, we are told, is a priceless boon to mankind. Curiously enough, its merits appear to be most eloquently proclaimed by the ambassador of the United States, a power which, in forcing war upon Spain when she had tendered arbitration in the case of the *Maine*, has most flagrantly trampled on the principle, and, being bent on grasping its prey, would not have been deterred by the existence of an international board. . .

"The American representatives, in signing the report of the Conference, enter a caveat in favor of the Monroe doctrine, and against any liability of the United States to be entangled in the affairs of any continents other than their own. They can hardly think that the Philippines are in their continent, or that their Government does not, by taking part in a European conference, entangle itself in European affairs."

The Westminster Gazette, London, thinks that the United States and Great Britain, kindred nations and friendly, ought to set a good example by arbitrating their disputes. It says:

"Great Britain and the United States have taken a leading part in bringing about the arbitration tribunal, and, curiously enough, they have a capital opportunity of showing that their views about arbitration are something more than mere pious opinions, good enough to be put on paper, but too good to be carried out in practise. We refer to the Alaskan difficulty. . . . Is the Lynn canal, a very narrow inlet penetrating inland seventy or eighty miles and actually fresh water at its head, a 'winding'? If 'No,' the landing-places at its head would belong to Canada. If 'Yes,' to the United States, which at the moment is in possession. That is the controversy in bare outline, and we set it out to show that surely it is one to which the formula of arbitration ought to apply."

But the most lengthy and bitter comments are devoted to the refusal of Great Britain to abolish the use of needlessly lacerating bullets. Military men contend that wars are short nowadays, and wounded men rarely recover soon enough to rejoin their regiments. To rob a man who has already been placed *hors de combat* of all chance of recovery, and to sentence him to the agonies of slow death caused by wounds which baffle the skill of all physicians, is regarded as needless cruelty. *The St. James's Gazette* admits that it might be unpleasant if the dum-dum bullet were used against Englishmen, but asserts that the British army

must have it. *The Speaker*, in the course of a lengthy argument, excuses its use as follows:

"Let us keep out of it [war] recognizing it as the most hateful of all the curses that afflict mankind. But, if we are drawn into it, then it is our duty to fight to win, and to fight in the way which will give us victory most speedily and most completely. We trust that this does not sound like a cruel and inhuman proposition. For our part we believe it to be much less cruel and inhuman than any course which, while recognizing war as permissible, would seek to place it upon the level of a fencing match or a glove fight—with the one all-important exception that the combatants are allowed, if they can, to kill each other. Happily, the Conference at The Hague has given us something infinitely more valuable than the useless condemnation of the dum-dum bullet."

The *Journal des Débats*, Paris, a paper noted for the moderation with which it generally expresses itself, says:

"There are to be found people who do not love England. They are wrong. England is a great country, and exports humanity, whisky, and cottons. Sometimes it may appear that England does not carry out her own humanitarian ideals, but that is only because England is very humble. She does not wish to push herself forward. . . . We must remember that the English are a liberty-loving people. Other nations may and should be prohibited from arming themselves, but it is very bad taste to suggest anything of the kind in the case of England, especially when England wished to pass away the time with some weaker nation. Do you know the genial, gentle, graceful dum-dum bullet?"

Here follows a description of the bullet, and its effects, such as our readers have doubtless seen in the daily papers. The writer then continues:

"The benefits of the invention have been sufficiently demonstrated. England has given the Hindus a taste of it. But their humanitarian zeal does not stop here. The excited Boers, who are white men, will also be pacified with it. . . . Let us all be grateful that once more England, strong in her goodness of heart and the gentleness of her manners, leads the world in civilization."

A very blunt, but very clear and direct, view of the efforts of the Peace Conference is attributed to a famous American now on his way home. Admiral Dewey, in an interview with a *Neue Freie Presse* reporter in Trieste, is represented as saying:

"Who do you think is going to disarm? The country which tried to get along without great armaments was the United States. You have no idea what it cost us to get ready, and how scared we were in the mean time. In future we will know better. We are getting ready a fleet of forty sail, including twelve armored cruisers. We do not intend again to be caught napping; and in view of our own tremendous exertions, it is not likely that other powers will renounce the advantage which their past effort gives them."—*Translations made for THE LITERARY DIGEST.*

GENERAL GALLIFFET AND THE FRENCH ARMY.

GENERAL GALLIFFET, the present French Minister of War, certainly makes good his reputation for fearlessness and firmness. To stop the open opposition to a fair trial for Dreyfus which was continually carried on by certain officers, he has dismissed from his post as army inspector General Negrier, one of the most influential military men in France. The *Kölnische Zeitung*, Cologne, describes the facts in the case as follows:

"General Negrier was only a captain in the Franco-German war, but he showed much bravery and skill and rose rapidly to high position in the colonial wars. His military ability can not be doubted: but the manner in which he disregarded on several occasions the orders of his superiors throws an unfavorable light upon the discipline of the French army. In Germany, where the rule obtains that military operations can not in the end be successful unless all, from the highest to the lowest, obey the commands of their superiors, Negrier would have been cashiered. In France he is likely to be commander-in-chief in case of war.

The offense for which he has been removed from the Board of Army Inspectors is his declaration that this highest authority in matters of military organization would protest if Dreyfus were released as innocent, and that he expected the army to join in this demonstration."

The enemies of the republic are somewhat disconcerted by the energy which Galliffet exhibited in defense of the present form of government. That his action was necessary can hardly be doubted. Daily, officers encourage their men to use violence against persons who dare to express a belief in the innocence of Dreyfus. The *Echo de Paris* says:

"General Negrier has not written a factious order, and he has been punished with unprecedented severity for defending, in simple conversation, the much-abused army. His enforced leave of absence gives satisfaction chiefly to the revolutionary Socialists. . . . At any rate, we can not count upon the preparedness of the army while he is placed at the disposition of the authorities. Who will direct the manœuvres in the Bourgogne? . . . Who will carry out a mobilization, if this were necessary? Things have come to a pretty pass if politics are thus introduced into military affairs."

The *Petit Journal*, the "yellow" journal *par excellence*, says the country will not permit its ablest officers to be treated thus unjustly to please the foreigners. The *Journal de Paris* considers the country in great danger and its military prestige on the wane, because the army can not be expected forever to be quiet under the abuse heaped upon it. But even papers which do not consider the mere examination of the defense of Dreyfus as a crime against patriotism regard the step taken by Galliffet as extremely imprudent. It must be remembered that the innocence or guilt of Dreyfus is a matter of secondary importance to most Frenchmen. What they dread is that Dreyfus and his friends will retaliate, and that the officers of the general staff, the heads of that army which is the pride of France, will be shown to be dishonorable, corrupt men, unworthy to defend France and incapable of leading in the war of revenge which is still the hope of many Frenchmen. The *Temps*, Paris, says:

"The Dreyfus affair is not in itself dangerous, for, judged by itself, it is simple enough. The deplorable part is the manner in which it is exploited in the interest of social and political passions. It is time that it were finished, that all—the press, the public, the government, the officers—recover that calmness which is so necessary for the country. Let the court which judges the case at Rennes do its duty, let nothing remain doubtful, let the verdict be such that all France can ratify it and that a reconciliation of the best spirits of the country may take place."

Ernest Vizetelly, whose description of French affairs is generally pretty correct, writes in *The Westminster Gazette*, London, that Negrier may become rebellious, being led away by his prejudices, and that, as his following is very strong, General Galliffet may not be able to cope with the situation. The *St. James's Gazette*, which greatly admires "a War Minister who doesn't care a straw for bluster," says:

"The fact that papers like the *Temps* and the *Débats* are shivering and muttering fears that General de Galliffet may have gone too far is significant. Half measures and a tendency to back out of a difficult situation at the critical moment have been the curses of French administration under the Third Republic, and well-meaning opportunist papers like the *Temps* and the *Débats* are good representatives of this frame of mind. General de Galliffet typifies the opposite school, and if France is to be saved it will be by the men of decision once more coming to the front. . . . But the cancer has to be cut out, quite regardless of personal feelings. France has to be brought back to common sense and common justice, and it is being brought back not by attacks or censure from outside, but by the firm and just action of Frenchmen themselves. There are already signs that the reign of the chattering, railing, time-serving gang who have dishonored the country and the army is nearing an end, and that the best men are getting to the top. Those who have most severely criticized France during

the past few years will be the first to offer her sincere congratulations on the change."

The *Indépendance Belge*, which can not under any consideration be accused of anti-French sentiments, is also astonished at the nervousness of moderate French papers. It says:

"What does the *Journal des Débats* mean by calling the agitation on behalf of the unfortunate Dreyfus a 'national outrage'? The *Journal des Débats* forgets that there are still outside of France, and, for that matter, in France, to be found people who can read, reflect, reason, and judge clearly, and who believe that there is but one way for France to recover her prestige in the eyes of the world: she must pitilessly and energetically disavow those who defend or excuse the abominable maxims which the general staff have employed against the unfortunate Captain Dreyfus. M. de Negrier is one of these, and a partizan soldier to boot."—*Translations made for THE LITERARY DIGEST.*

THE ASSASSINATION OF PRESIDENT HEUREAUX.

BETWEEN the "Pearl of the Antilles" and Puerto Rico lies Haiti, the only one of the West Indian islands which enjoys political independence. It was at first owned by Spain, which country later ceded the western part to France. Of the original race which occupied it, only faint traces remain; but the Spaniards, who recognized the value of the soil, replaced them with negro slaves, and for centuries the island was one of the best markets of the British buccaneers who ravaged the African coast. The negroes thrived, the whites did not, and when, at the beginning of the present century, the Napoleonic wars drained all French and Spanish colonies of troops, the negroes rose in rebellion, slew their masters, and possessed themselves of the land. Twenty thousand raw French troops perished of fever in the attempt to regain the lost colony, and then the attempt was given up. The French never intermarried with the negroes to an appreciable extent, hence the Western portion of the island is inhabited chiefly by blacks. In the part which Spain possessed most of the time, mulattoes prevail. But both republics are equally turbulent, and peace reigns only when a despot enforces his rule. Such a despot was Heureaux, the "elected" President of the Dominican Republic. The *Handelsblad*, Amsterdam, gives the following points of his career:

"Ulisses Heureaux was a mulatto, and entirely self-educated. His efforts in this direction were not without result: he spoke, read, and wrote French, Spanish, and English with ease. He was a good administrator, but his good points were overshadowed by his tyrannical nature. To maintain himself in power, he organized an army of 2,500 men, well equipped and armed. With this he drowned in blood every attempt to throw off his rule. His little fleet was valueless, the ships serving chiefly as floating prisons. Once when his son, whom Heureaux had sent to study medicine, returned without permission from Paris, he was placed for two months aboard one of his father's ships and then sent back to the French capital without having been permitted to set foot on land. Heureaux leaves no fortune, altho his income was about \$2,500,000 a year; but half of this was needed for the army, and most of the rest for his official staff. This income was derived from the customs dues. If he wished to favor a friend, he made a custom-house official of him. But if he was short of cash, he would calmly 'borrow' all the unfortunate official's stealings, leaving him a beggar."

Heureaux was killed by a man whose father he had executed some years before. His career, his administration, is typical of the conditions which prevail in either republic of the island, and some Canadian papers declare that, since we have annexed Cuba and Puerto Rico, we must occupy Haiti also. It is our manifest destiny and our duty, they think. The *Witness*, Montreal, says:

"The crops raised are of the usual West Indian description, and the soil itself is all that can be desired on the score of fertil-

ity. Minerals, including gold, silver, copper, and iron, are tolerably abundant, but for lack of capital and by reason of indolence and ignorance these resources are practically neglected. It is hardly possible, nor is it desirable, in the nature of things, that this rich island, capable of supporting millions of population, can be much longer left to be the spoil of its present cantankerous, unprogressive inhabitants, a reproach to civilization."

Goldwin Smith thinks there would be very little profit to the people of the United States in trying to manage such turbulent people, especially as a citizen army will not do for the purpose, and a large standing army threatens us with despotism; but he fears we will try it just the same. He says in the *Toronto Sun*:

"The assassination of the President of San Domingo is likely to plunge that hapless travesty of a republic once more into its normal state of confusion. At once the eyes of the expansionist party in the United States are turned eagerly in that direction, and the Government is exhorted to send a fleet ostensibly to protect American interests. When General Grant was President, San Domingo threw herself into the lap of the United States and was shaken out again. Grant earnestly desired the annexation, and tried to bring it about by what were denounced at the time as unconstitutional means. But the people would have none of it. They were then too wise to wish to incorporate barbarism in their commonwealth. What they will do now, being launched in the career of tropical and barbarian expansion, is not so certain. From Cuba and Puerto Rico it is an easy step to San Domingo. From San Domingo it is an easy step to other islands. The people of the United States have come to the parting of the ways, and at their head is a man no more capable of shaping their course or his own than a sheep that has fallen into a pit."

A few European papers are wroth with some of our own which, with reference to this Dominican affair, express themselves as if the Monroe doctrine were an international maxim. The *Figaro*, Paris, says:

"The Americans would not dare to flaunt their Monroe doctrine in the face of the world if a European combination chose to oppose them. It would be a good thing if the present West Indian crisis gave Europe a chance to whip this Monroeism out of the Americans, and stop the practise of playing out this 'doctrine' against European interests."

The French generously assign to Germany the task of teaching the United States a lesson, on the assumption that "Michel is the man who's got the big boots on." The German papers, however, declare that Germany has no intention to interfere with Uncle Sam's "inalienable right to sit down on a red-hot stove," and the English certainly will not interfere.—*Translations made for THE LITERARY DIGEST.*

THE NEW JAPAN.

ON the 16th instant jurisdiction of the United States consular courts in Japan will end, and all the exceptional privileges, exemptions, and immunities now enjoyed by citizens of the United States as a part of, or appurtenant to, such jurisdiction will absolutely cease and determine, and thereafter all such jurisdiction will be assumed and exercised by Japanese courts."

This runs the most important sentence of the notification by which Alfred E. Buck, United States Minister to Japan, announced in the beginning of July that the new treaties would come into operation. For more than two centuries the Japanese had excluded the outside world. The Portuguese, who at first had been received kindly enough, were banished in 1638 on account of the political aspirations of their converts to the Roman Catholic church. The Dutch, the only foreigners tolerated, were confined to a single factory on an island. In 1853, however, an American squadron extorted a treaty from the Japanese, and other nations soon followed the example of the United States. The proud, highly civilized Japanese never forgot the humilia-

tion to which Commodore Perry subjected them, tho in time they forgave it. With astonishing rapidity they acquired the armaments and military science of the "Western Barbarians," making an attack upon their country a very unsafe proceeding. After that, certain changes in the judicial system were made which, with other administrative reforms, rendered the conditions of life in Japan so similar to those of Europe and the United States that most countries were induced to abolish consular jurisdiction. In return, Japan admits foreigners to the same rights and privileges which are granted elsewhere. Japan is therefore to-day not only the most civilized country in Asia, but ranks also among civilized nations as the term is understood here and in Europe. The *Jim-min*, Tokyo, commenting upon the imperial rescript which announces the change, expresses itself to the following effect:

The position which Japan has thus happily won among the nations is due in the first place to the wisdom and virtues of the Emperor. Japan is the first Oriental power which thus obtains admittance to the comity of Western nations on equal terms, and it behooves her to set a worthy example to other peoples of the East. The result of the manner in which she enjoys her novel privileges may greatly influence the future progress of civilization. The reputation of the nation and the prestige of the empire depend greatly upon the uses to which the newly acquired rights are put.

The *Nichi-Nichi Shimbun* hopes that the Japanese will above all endeavor to shine by their manners. It says:

"In olden times the Chinese used to call Japan the land of gentlemen, and foreigners were wont to applaud the courteous manners of her people. But since the war of 1894-95 a spirit of arrogance manifested itself. Foreigners do not find fault with Japanese institutions, but they condemn the want of discipline in the schools, and the rude behavior of the students. This should be remedied even if mixed residence were not about to be inaugurated. It would be most unhappy if such abuses continued."

The *Kokumin Shimbun* and the *Shogyo Shimpō* express themselves in similar terms. The latter paper declares that, unless mutually kindly relations prevail, it would have been better if the treaties had not been revised. The *Asahi Shimbun* thinks Chinese, too, should be admitted to the interior. "If it were found that the Chinese work at too low a rate of wages, legislative remedies could be found," it says. Other papers believe that Chinese capitalists would settle in Japan if given equal rights with other foreigners, and capital is what Japan needs most just now. The *Japan Mail*, to which we are indebted for the above expressions of Japanese opinion, says:

"It is an almost invariable rule that the expressions employed in a Japanese imperial rescript are comparatively colorless and unmarked by any evidence of strong feeling. But in the message just addressed to his people, the Emperor of Japan tells them that treaty revision has for years been to him an abiding object of desire. . . . It is, perhaps, difficult for foreigners in general to appreciate the moving effect that such language must exercise upon the Japanese people, whose mental attitude toward their sovereign is still based on a profound belief in His Majesty's divine origin. We may be sure, however, that every Japanese will derive from this portion of the rescript a conviction that the nation's mood should be one of deep gratitude, and that the sovereign has invited his subjects to participate in his own satisfaction and to assist in completing it. . . . The Emperor declares in the plainest terms that it is his policy and desire to abolish all distinctions between natives and foreigners, and that, by pursuing that course, his people will best consult his wishes, maintain the character of the nation, and promote its prestige. It is a very gracious and enlightened rescript, worthy of the epoch, and of the sovereign under whose government Japan has risen to a position never before attained by an Oriental state."

The *Japan Gazette* points out that treaty revision enhances greatly the value of real estate held by the foreigners. The *Kobe Herald* grumbles a little at what it calls "a subordination by professedly Christian states to a state which is still content and may be proud to allow itself to be classed—well, a heathen state."

The Celestial Empire, Shanghai, suggests that Russia and China copy Japan and become civilized.

The Speaker, London, thinks the Japanese long since deserved to be admitted on terms of equality by other nations. It says:

"The Englishman in South America is tried by the courts of the Spanish republics, sometimes composed of a mixed race, with much less sense of fairness and respect for law than the Japanese. It was an anomaly that Guatemala and Nicaragua should be allowed to exercise full sovereignty while Japan was still hampered by the old treaties. . . . The diplomatist especially will be glad to be rid of powers which caused frequent friction, and will feel that a Japanese alliance will become more possible when extra-territoriality has been finally abolished. But the trader, being a blunt man of limited view, will ask what are the more immediate and practical advantages. . . . The Japanese are very easy to teach, very moderate in their wants, and clever at handicrafts. They have not the currency advantages which have given an artificial stimulus to the Shanghai mills; but labor is cheap and good, while the climate does not render European superintendence extravagantly dear. It may be that Englishmen will have a larger share in Japanese mills under Japanese rule than they have in the mills of Bombay under English law."

The Saturday Review is eager for an anti-Russian Anglo-Japanese alliance. This hope of an ally for the extension of British power in the East is also expressed in the Canadian press.

The Times, Victoria, says:

"Japan has now a navy afloat and in preparation for early launching that places it among the leading naval powers of the globe, and the quality of the Japanese as fighting men was well tested in the late war with China; they are bold and dashing fighters, fine tacticians, good gunners. Supported by an ally like Great Britain, they would be sure to give a capital account of themselves. As for the war rumor, the Japanese are in an exceptionally favorable position to get 'inside' information as to Russia's policy."

The Canadians recognize that they must do something to put Japan in good humor with the British empire. The London, Ontario, *Advertiser*, one of the best-edited papers in the Dominion, remarks that it is not safe to exclude Japanese. "China's feebleness and ignorance merely happen to spare us the unpleasant consequences that might arise if we treated a more sensitive and powerful nation in the same way," it says. The *Ottawa Free Press* says:

"If Canada is to shut her ports against the Japanese, there is nothing to hinder the latter closing their ports against Canada, and the British generally. What then becomes of Canada's commercial expansion in the West? The general verdict is that this will be disallowed."

The *Journal des Débats*, Paris, says:

"The difficulties which Japan encountered in forming her new judicial code were immense, yet the work had to be finished, else the powers would not consent to the revision of the treaties. One by one the powers were gained over, Germany being among the first who set the good example. The others could not help following; England, tho with a good deal of repugnance, consented, and France did so last year. The prestige obtained by the Japanese arms in the war with China overcame the last objections. . . . There may be some bickerings at first, for the Europeans are ordinarily little disposed to make concessions in the far East, and the Japanese, on their side, are very touchy on the point of national honor; but these difficulties will soon pass away and perfect accord will be established."

The *Deutsche Tages Zeitung*, Berlin, thinks Japan has won a great moral victory. The *Kreuz-Zeitung* says:

"Europe has never before admitted a 'heathen' nation to equality, and it is no use trying to hide the fact that Japan would never have been admitted 'into the family' if she had not developed such uncommon energy. Her position has been gained by her own efforts. For a while the negotiations were carried on with much difficulty. The powers wanted a court of appeals in which European judges represented European interests. The United States first and England next dropped this demand, and the others followed suit. July 17 Japan triumphantly took her place on equal terms among the civilized nations."—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Brush writes from Clifton, April 29, 1899, that urgent appeals are being made to the Canadian Government for improvements on the St. Lawrence River and Gulf. The heavy losses in both the past few years have led the insurance companies to double their rates, the new schedule taking effect immediately. The high rates of insurance and the dangers of the route are diverting considerable ocean traffic to American ports, and further loss of traffic is imminent, unless the Government takes immediate steps to widen the channel through Lake St. Peter and establish new lighthouses in the gulf.

In transmitting the returns showing the value of exports declared for the United States at Puerto Cabello for the quarter ended March 31, 1899, Consul Ellsworth reports as follows relative to Venezuelan currency: "No coins of the designation of *peso* is in circulation, but 4 bolivars pay all accounts of *peso*, and it is still the custom to render accounts in pesos. The Treasurer of the United States has fixed the value of the bolivar, the monetary unit of Venezuela, at 19.3 cents, which makes the value of the *peso* 77.2 cents in United States currency. The Venezuelan dollar is in actual circulation, and is of silver. It calls for 5 bolivars, and, calculating the bolivar at our Treasury valuation, the Venezuelan dollar is worth 96.5 cents. In rendering accounts, making invoices, purchasing products of the country, market values, etc., this dollar is not considered, it being well understood that the *peso* is the basis of calculation; but in paying accounts, etc., it is taken at its face value—5 bolivars (96.5 cents United States).

Under date of April 29, 1899, Consul Brush, of Clifton, says: "An authority whose estimates have heretofore proved conservative brings word from Dawson that the wash-up from the Yukon this year will aggregate \$19,000,000, apportioned as follows: Eldorado, \$2,500,000; Bonanza, \$2,500,000; French Hill, \$1,500,000; Gold Hill, \$1,500,000; Big Skukum, \$1,000,000; Little Skukum, \$1,000,000; Dominion, \$4,000,000; Hunker and Quartz, \$5,000,000; total, \$19,000,000. These figures leave out of consideration a number of important locations, including Sulphur Creek, Stewart River, Upper Klondike, and Scroggie Creek."

EDUCATIONAL

The Dwight School for Girls

While in beauty and healthfulness of situation, desirability of environment, and efficiency of equipment, Dwight School offers peculiar advantages, the chief aim, kept constantly in view, is true scholarship. The standard of instruction is indicated by the admittance of its graduates without examination to leading colleges.

General college preparatory and primary courses. Advanced work in languages, music, painting, etc.

Consul Dudley, of Vancouver, under date of April 12, 1899, writes that a meeting has been held by the salmon cannery of the province to protest against the new regulations established by the Government of the Dominion regarding the catching and canning of salmon. Incidentally, the assembly urged that the cannery be allowed to purchase salmon caught in American waters, and to bring them into British Columbia free of duty. The establishment of additional hatcheries on the Frazer River, says the consul, will increase the run of salmon along the northern shore of the State of Washington. He adds:

"Most of the fresh fish retained in this city is imported from the United States. The reason given for this is that the wholesale dealer can there procure any quantity of the kind of fish desired, while the business in the Province is not sufficiently organized to insure the variety needed."

"Those who read the German press can not entertain the slightest doubt that German industrial circles look upon the enormous development of the industries of the United States, during the last few years, with apprehension," writes our commercial agent at Bamberg, Germany.

Several meetings of representatives of industrial branches have taken place in Germany with-

in the last few days, and the main point of their discussions was, in every instance, the ever-growing exports of the United States.

The meeting of German manufacturers of tool-making machines which was recently held at Düsseldorf asks for protection against the increasing American importation; so does the convention of German shoe manufacturers which took place at Breslau a few days ago. The association of German cycle manufacturers means to fight American competition even more keenly than the representative of the branches just named. The agrarians, as is well known, would like to exclude American grain, meat, and fruit.

Whoever enters a shoe-store in Germany where American goods are to be had knows that he there gets the best, the most comfortable, and the most elegant shoes that are to be obtained; and, knowing this, he willingly pays a higher price than for the German article. To keep this reputation is of the highest importance to American exporters. One of the leading retail merchants of this city, who has branches in several towns of Bavaria, and who handles American articles, called my attention to some American shoes for ladies which retail at \$1.25. "If you want to kill your export trade to Germany, you must continue to sell such goods," he said. Quantities of cheap and unreliable American shoes thrown upon the German market would do endless harm to our exports in this article.

The way to introduce articles into Germany has often been pointed out to the interested parties, viz., send experienced representatives familiar with the customs and language of this country, establish sample stores, and prepare catalogs giving necessary details in German. The latter point can not be repeated often enough, for the numerous pamphlets and catalogs in English received at the consulates day by day are of no use whatever for German business. Upon my endeavoring the other day to demonstrate the advantages of American tool-making machines to a local firm (Buxbaum Brothers) one of the most important in this part of Bavaria, by means of a catalog printed in English, I was told that the firm had no time for translations. At the same time, the manager showed me the catalog of an American manufacturer of agricultural machinery, beautifully prepared, translated into German, brief and to the point; the machines (reapers and mowers) are to be found in this part of the country by the score. He said: "Our agents always carry these catalogs with them, and they can be found among the best classes of the peasantry."

At the present time, when the German machine industry is so busy that people have, in many cases, to wait twelve months for machines that have been ordered, our manufacturers should gain a firm footing on the German market. It can be done by sending the proper men over, by conforming to the German usage of giving credit, and by carrying orders promptly and well.

PERSONALS.

MANY acts of heroism were performed during the height of the recent flood at Brackettville, Tex. The most notable of these heroes were Captain Cornish and Dr. Woodson of the Ninth United States Cavalry, stationed at Fort Clark. A letter from Brackettville describes the acts of these two men as follows:

"About daylight runners came to the quarters of Captain Cornish, who commands the post, and informed him that the town of Brackett was being swept away by a flood, and imploring him to lend assistance. As quickly as the orders could be given and executed, Captain Cornish had the entire garrison called out and mounted. When they reached the bridge which spans Las Moras Creek, separating the town of Brackett from the post, they found the water flowing swiftly two feet over the guard rails of the bridge. Just beyond the bridge was a slough where the water was probably ten feet deep. Finding it impracticable to get into town this way, Captain Cornish made a detour and finally got into town by another route.

Meat in Hot Weather.

People are beginning to learn that a proper diet for the different seasons of the year is as essential as a change in the weight of clothing to meet the whims of the thermometer.

Scientists who have made a study of the proper food for hot and cold weather are unanimous that meat should always be avoided during the heated summer periods. Mr. Walter M. Christie, the famous trainer at Princeton College, in a letter to the Sanitas Nut Food Co., at Battle Creek, Mich., says: "For hot weather, Protose takes the place of meat admirably and one feels the better for using it."

Protose is a vegetable meat, tasting similar to beef, but containing 25 per cent. more nutriment and 10 per cent. more fat-making properties. It is one of a score of delicious, scientifically prepared foods made by the Sanitas Nut Food Co., which have become popular wherever introduced.

Any reader who will mention THE LITERARY DIGEST and inclose six cents to pay postage, will be sent a sample can of this delicious vegetable meat.

Meantime Dr. Woodson, the post surgeon, had secured a little twelve-foot skiff kept by Captain Cornish for use on nearby lakes and started on his perilous mission, rescuing men, women, and children from house to house, trees, and rafts. He first went to the government pump-house, where the guards had been firing rifles to attract attention to their helpless condition. After taking these guards to high ground, Dr. Woodson steered his little craft boldly into the raging torrent that was then sweeping from ten to eighteen feet deep through the town. The first house he reached was about one hundred yards north of the wagon bridge, where two women were taken from the roof of a dwelling that was almost submerged. These were taken to high ground. Dr. Woodson continued the work of rescue until every person in an exposed position in the town had been removed to a place of safety. No account was kept of the number of people taken out of the flood by Dr. Woodson, but it is absolutely certain that seven out of the number would have been drowned but for his heroic conduct. Once his little boat was capsized by the swift current, but being a good swimmer he pushed it up against a tree, righted it, and bailed out the water with his hat; he then climbed in again, and continued the work of rescue."

A WELL-KNOWN English novelist expresses as follows the impressions he received from hearing Mme. Melba in "Lucia."

"I went to scoff; I remained to pray. I confess my previous folly. A welcome change has come over the spirit of opera. The tawdriness of Covent Garden, the undisguised contempt for dramatic effect, the awful penny-in-the-slot chorus has hitherto kept one away. On my rare visits I have shut my eyes and tried to figure the singers standing before me in repulsive evening dress. On Saturday night, however, I kept my eyes open, as well as my ears, and was edified. Madame Melba is wonderful. Her voice lingered all through Sunday and drowned the various Salvation Army bands and other hideous kinds of music that pass my residence on the day of rest. And Madame Melba can act. Were she not handicapped by her priceless voice she might be

one of our great tragic actresses. I almost forgot the fact that *Lucia* in the flesh did not habitually converse with her associates in elaborate song. M. Saleza played *Edgardo* besides singing the music excellently, and was as thoroughly in the picture as Melba. The chorus, too, seemed really quite interested in the progress of the drama. Perhaps Melba inspired them. They neither yawned nor smirked nor talked about their husbands or their babies. As we can not have the ideal invisible chorus, that of "Lucia" on Saturday night was as near perfection as possible."

merit, but they are not up to date. Write them on something that is before the people's eyes." THE POET: "I tried that, but could find nothing to rhyme with spectacles."—*Exchange*.

Words that Tell.—"Oom Paul is a man of few words," remarked the man who talks wise. "Well," answered the flippant friend, "you take a look at some of the words in a Dutch dictionary and you won't blame him."—*Washington Star*.

His Remark.—MISS SHARP: "Chollie made such an interesting remark last night." MISS SHORT: "What did he say?" MISS SHARP: "He told me he would be compelled to leave at 9 o'clock."—*Cleveland Leader*.

Century Runs.—"What are those queer-looking trophies the Filipinos wear around their necks?" asked the raw recruit. "Them's the medals for the century runs they've made during the war," replied the Kansas volunteer.—*Philadelphia North American*.

Why He Objected.—"What's the matter?" asked the Congressman of his constituent. "I got you a government job, didn't I?" "Yes." "And the salary is satisfactory, isn't it?" "Oh, yes; the salary's all right; but, hang it all, they expect me to earn it!"—*Chicago Evening Post*.

Willing to Accommodate.—The British tourist wandered into the Rustlers' Retreat and languidly asked for a "high ball." "Jake," called the accommodating barkeeper to his assistant asleep in the corner, "the gent wants a eyeball. I dunno wat fer, but he wants it. Go out and ketch a Chinaman."—*Indianapolis Journal*.

Misapprehension.—GUEST: "What have you got?"

WAITER: "I've got liver, calf's brains, pig's feet—"

GUEST: "I don't want a description of your physical peculiarities. What you have got to eat is what I want to know."—*Tid-Bits*.

Comes Natural to 'Em.—"Children! children! Don't make such a frightful noise," said the mother. "We're playing omnibus, mamma," said Mattie, soberly. "Yes, I know, dear; but it isn't necessary to make such a terrible noise." "Yes, it is, mamma. We've got to where Hattie insists on payin' the fare and so do I!"—*Tid-Bits*.

The Remedy.—YOUNG FATHER (in the future):

For Debilitated Men,

Horsford's Acid Phosphate.

Dr. J. B. ALEXANDER, Charlotte, N. C., says: "It ranks among the best of nerve tonics for debilitated men." Renews the vitality.

"Great snakes! Can't you do something to quiet that baby? Its eternal squalling just drives me wild."

YOUNG MOTHER (calmly to servant): "Marie, bring in my husband's mother's phonograph and put in the cylinder, 'At 10 months.' I want him to hear how his voice sounded when he was young."—*San Francisco News-Letter*.

Rheumatism...

gout, catarrh, uric acid troubles all arise from defective action of the kidneys and digestive organs: the kidneys do not properly remove the waste products. Uric acid and chalky deposits accumulate in the muscles and around the joints.

Tartarlithine...

regulates the action of the kidneys, dissolves and removes the uric acid and chalky deposits, and reduces inflammation. It does not upset the stomach, and can be taken by the most delicate. Prescribed by many leading physicians.

A Good Recommend.—A young Irishman once went to a kind-hearted old squire for a recommendation. An elaborate one was written and read to him. He took it with thanks, but did not move. "What's the matter with it?" roared the squire. "Oh, nothin', sorr," said the lad, quickly. "Well, then, why don't you go?" "Sure, sorr, I thought on the strength of a recommend like that you'd be wanting to hire me."

Current Events.

Monday, August 14.

—The Secretary of War issues another appeal for aid for the Puerto Rico hurricane sufferers.

—The *Columbia* wins another victory over the *Defender*.

—An attempt is made to assassinate, by shooting, Maltre Labori, the counsel for Dreyfus, while on his way to the court room.

—Admiral Dewey is ill in his ship at Leghorn.

Tuesday, August 15.

—President McKinley makes a speech at the Catholic summer school on Lake Champlain.

—The *Columbia* wins a third race from the *Defender*.

—It is announced that M. Labori will recover from his wound.

—The plague breaks out in Portugal.

—The Russian Government announces that Tachen-wan, China, will be opened as a free port.

—Mrs. Langtry is married to Hugo Gerald de Bathe.

Wednesday, August 16.

—Anti-Goebel Democrats in Kentucky nominate John Brown Young for governor.

—Iowa Democrats nominate Frederick E. White for governor; the ticket is endorsed by the Populists.

—Despatches from Puerto Rico declare the loss of life in the recent hurricane to have been at least 2,000, and many sections still to be heard from.

—The application of the Dreyfus counsel for a postponement of the court-martial trial because of the shooting of Labori is refused.

LARKIN SOAPS

OUR OFFER FULLY EXPLAINED IN LITERARY DIGEST, MARCH 25TH.

—The British Government is "prepared to send 20,000 men as an emergency force to the Transvaal within a week."

—Americans capture the Filipino town of Angeles.

—Prof. R. W. E. Bunsen, the noted German chemist, is dead.

Thursday, August 17.

—The War Department orders that ten new regiments of volunteers be enlisted for service in the Philippines.

—The coroner's jury in the Bridgeport trolley accident brings in a verdict charging the motor-man with criminal negligence and also blaming the company.

—Colonel Picquart testifies before the Dreyfus court-martial.

Friday, August 18.

—The first ten regiments of volunteers for service in the Philippines are completed.

—The cup challenger *Shamrock* arrives in New York.

—General Jimenez, the Dominican revolutionist, is arrested at Cienfuegos.

—Western Australia passes a bill giving women the right to vote.

—Emperor William makes a striking and conciliatory speech at the unveiling of the soldiers' monument near Metz.

—Sir Charles Tupper speaks in London on the Alaskan boundary dispute.

—Colonel Picquart again testifies before the Dreyfus court-martial at Rennes.

Saturday, August 19.

—Three of the new volunteer regiments have been ordered to the Philippines.

—The allied printing trades of New York make an imposing demonstration against *The Sun*, whose employees are on strike.

—By order of General Brooke, at Havana, General Jimenez is released from custody.

—Prof. Blisa Perry of Princeton University, it is announced, will become editor of *The Atlantic Monthly*.

Sunday, August 20.

—The Bible Conference at Northfield, Mass., closes.

—A Filipino defeat is reported from the island of Negros.

—The Sanitary Board of Portugal isolates the city of Oporto, where the bubonic plague is prevailing.

—A fierce outbreak of Anarchists in Paris is suppressed by the police only after severe fighting.

The Chess-Playing Pope.

"In his days of illness, Leo XIII. finds his chief amusement in Chess. His regular partner is Fr. Giulio, a Dominican monk. The Pope and the monk have been playing against each other for over twenty-one years, and it is yet undecided which is the superior. When Leo, shortly after his enthronization, introduced the royal game in the Vatican, some ascetic Cardinals raised an outcry, invoking the decision of the Council of Treves, which forbade priests to play Chess. The Pope listened to these fanatics with a superior smile on his lips. 'I know all you want to say,' he remarked, 'and I tell you that Bishop Petrus, who first thundered against Chess, and the Treves Council were both mistaken. The latter's decision soon fell into disuse, and my namesake, Leo X., openly avowed that there was no harm in Chess-playing. Even the fact that Martin Luther, his adversary, was a passionate Chess-player, made no difference. In fact, both the Pope and Luther thundered against games of chance, while practicing Chess.'"—Abbreviated from quotation in *The A. C. M.* from the *New York Journal*.

Games from the London Tournament.

FINE SAMPLE OF "MODERN CHESS."

In the following game there is nothing brilliant, but there is the best kind of careful, thoughtful play. When fourteen moves have been made the game seemed even, or, if there be any advantage, most folks would give it to White, for in an endgame a Knight is stronger than a single Bishop. Look at the position when White makes his 15th move! We are quite sure that M. Cohn believed that he had a Draw. Then, notice Lasker's wonderful skill: he doesn't make any blunders, and

he takes advantage of every slip of his opponent. White's first slip was his 17th move. He should have played P-K B4, following it with Q R-Q sq. This would have stopped the advance of Black's K Kt P. One of the best moves in the game is Black's 22d, as the sequel shows. White's 24th, while not a blunder, was an oversight, and Black takes immediate advantage of it, winning a Pawn.

The New York Chess Association.

The midsummer meeting will be held in the United States Hotel, Saratoga Springs, New York, during the week August 23 to September 2. The features of interest will be the Inter-State Match, the *Staats-Zeitung* Trophy contest, and class tournaments for the Farnsworth and Wright cups. The Manhattan Chess-Club has been successful four times in getting the *Staats-Zeitung* cup, and expect to win this time; but America has now a newly created Chess-master, Mr. Frank J. Marshall, of Brooklyn, who will represent the Brooklyn Chess-Club in this contest. The Inter-State Match will be the star feature of the meeting. New York, Massachusetts, and Pennsylvania being represented by teams of seven players each. Prizes of \$50, \$40, \$30, \$20, \$10 are offered for the best, next best, etc., individual scores.

Chess-Nuts.

Rumour says that Lasker has agreed to play Janowski for \$2,000 a side and the championship of the world.

Lasker has been to see a phrenologist, according to *The Pall Mall Gazette*. The phrenologist didn't know that the young man whom he was examining was the Chess-Champion of the World. He said that Lasker was "fairly constructive, able to organize quickly, does not always concentrate his mind, distributes his attention, is versatile, calculation good, organ of concentration not large enough to give him persistency in any particular pursuit." He capped the climax by saying: "He might play Chess a little, but I should say Cricket was his specialty."

The Literary Digest

VOL. XIX., No. 10

NEW YORK, SEPTEMBER 2, 1899.

WHOLE NUMBER, 489

Published Weekly by
FUNK & WAGNALLS COMPANY,

36 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

NEW PHASES OF THE DREYFUS DRAMA.

AMERICAN comments on the proceedings at Rennes are all based on the view that it is France herself that is on trial; and the feeling seems to be that thus far she has not made a creditable showing. Many of the incidents accompanying the trial—the speeches by the generals on the witness stand; the shooting of Labori, and the escape of the assassin; the court's refusal to suspend its session; Labori's reappearance after eight days; the dramatic conduct of Dreyfus; the acknowledgment by ex-President Casimir-Perier, after a silence of five years, that he believes in the prisoner's innocence; the riots in Paris; the siege of President Guérin and his companions of the Antisemite Society in a house in Paris by police who refrain from any endeavor to capture the house and arrest its inmates—all these provoke comments that are not complimentary to the character of French administration in comparison with our own. The *New York Tribune*, in the following description of the testimony of one witness, exemplifies the general tone of the American press toward the "evidence" presented against Dreyfus:

"Finally, there came what alone was needed to perfect the comedy. This was one Müller, a blind paralytic. He testified that he—despite his paralysis—had visited Potsdam with a 'friend,' had entered the imperial palace, had walked into the Emperor's bedroom—it must have been the Emperor's bedroom, for his friend told him it was!—and there, on the Emperor's table, had seen—despite his blindness—a newspaper with a marked item with a marginal note, in the Emperor's own handwriting, incriminating Captain Dreyfus.

"After that, what more is needed?"

Scope of the New Trial.—"The exact legal situation created by the decision of the Court of Cassation in the Dreyfus case, and the instructions under which the present court-martial is proceeding, are not generally understood, we think. A careful reading of the full text of the decision shows that, like most judicial opin-

ions, it is extremely cautious. In reality, it does not go beyond disannulling the former verdict against Dreyfus, on the ground that it was irregularly obtained. It was the illegal submission of secret documents to the military tribunal, of which the accused was left in ignorance, which compelled the Court of Cassation to order a new trial. True, it did refer in the decision to the evidence used against Dreyfus, and did, in a way, discredit it. But it did not do so in any such fashion as to prevent the present court-martial from giving weight to the old testimony if it chooses to. Thus it simply said of the famous '*canaille de D.*' letter that 'at present it is considered inapplicable to the condemned man.' This is very far from deciding, as some have inferred, that the letter could not be used against Dreyfus at all. So of the alleged confession to Captain Lebrun-Renaud. The court only said that it was not possible to fix the precise language of it, on account of the discrepancies between witnesses. Even in regard to the bordereau, the court did not positively decide that Esterhazy wrote it, but stopped with citing various facts which 'tend to prove' that it was not written by Dreyfus. The upshot is that, legally, the court-martial can do what it pleases with all this discredited evidence, and, provided its proceedings are regular, can find any verdict it chooses against Dreyfus without danger of fresh reversal by the Court of Cassation. This suggests the peril that a monstrous injustice may be repeated under the forms of law."—*The Evening Post, New York.*

Blots on Our Own 'Scutcheon.—"One striking feature of American criticism of France is the complacent assumption of the critics that the 'Dreyfus affair' could not have happened in the United States. It is asserted that our national sense of justice and greater deliberation in considering charges against accused persons would have prevented such a shocking miscarriage of justice. It is flattering to our national pride to indulge in such assumptions, and perhaps there may be some foundation for them. At a time when there is no excitement and no pressure brought to bear upon those entrusted with the execution of the law, American administration of justice may be as near perfection as it is possible to attain. But when the passions of men are aroused a military court-martial in the United States, judging by the fate of Mrs. Surratt, is not always to be trusted. This unfortunate woman was convicted and hanged upon testimony which never amounted to more than suspicion, and manufactured suspicion, at that. She was hounded to death by those who clamored for blood and were indifferent about such trifling considerations as proof of guilt.

"Moreover, recent occurrences have demonstrated that when courts-martial in the United States render verdicts in accordance with the law and testimony the Administration can not always be trusted to enforce them. One of the greatest scandals of the present Administration is the leniency which has been shown by the President and the Attorney-General toward an army officer convicted of embezzling \$1,700,000 of government money. The military court sentenced him more than a year ago to dismissal from the army, fine, and imprisonment. Political influence has protected him and he is still an officer of the army, enjoying all the privileges of his rank. Another army officer convicted of 'conduct unbecoming an officer and a gentleman' was not cashiered from the service, but retired on full pay, altho he is alleged to possess a snug fortune. These are some of the blots on our escutcheon. We may be, as some assume, infinitely superior to our French brethren, but before we crow too loud we should be sure that our own record is not open to attack."—*The Sun, Baltimore.*

Ag'er and the Dreyfus Case.—"One of the most distinctive features of the fiasco . . . is the complete subjection of both the president of the court and the judges to the distinguished witnesses for the prosecution. Colonel Jouaust lends a more than willing ear to every word of General Billot, General Roget, Gen-

eral Mercier, and others of high rank, and shows in many ways that their superior position impresses him much as it would if he were not on the judicial bench. A colonel can not command a general. It is a plain case of witnesses intimidating the court. . . .

"The recent Court of Inquiry into the beef scandals in the United States army during the war with Spain is a singular parallel, in the respect above mentioned, to the Dreyfus trial, altho in this case it was Secretary Alger, the real prisoner at the bar, who intimidated both judges and witnesses. Men were summoned to tell what they had not seen rather than what they knew, and most of them spoke with the consciousness that their fortunes were dependent on the man whom their testimony was relied upon to defend. The same means have been used to blacken Dreyfus's character and to whitewash Alger. The object of the Rennes court-martial is to prove Dreyfus's guilt; the Court of Inquiry was called together to prove Alger's innocence. In such cases it is always the expected that happens.

"But the voice of the people is weightier than legal documents, and the future will know the truth, altho the gates of the temple of justice may be closed for a season."—*The American, Baltimore*.

A Menace to Every Nation.—"There is one feature of the revelations made by the Dreyfus trial which shows a standing menace in every capital of the civilized world.

"In this trial the power and the purpose of 'the military *attaché*' are fully brought into play. With the growth of international representations at each of the capitals, the ambassador has been permitted to be accompanied by a staff, usually consisting of an eminent attorney, a representative of the army and the navy, and other attendants. The presence of these gentlemen is always esteemed as adding to the *éclat* and importance of the ministerial residence. . . .

"The real inside purpose, however, of such establishments has been shown up in the Dreyfus investigation. These military *attachés* from foreign countries are nothing more nor less than paid spies, whose purpose it is through the distribution of money and the employment of wine and women, to ferret out the military and naval secrets of the countries to which they are sent.

In this work, which includes the bribing or the leading astray of fellow officers, the foreign *attaché* is unscrupulous and seductive. He pursues his work through channels which do not arouse suspicion, and using the cover of hospitality he betrays every principle of civilized life. . . .

"This whole system of having military *attachés* accredited to legations is out of place except for the purpose of bribery. The presence of these men in Washington, for instance, as in every other capital in the world, is for the purpose of securing by unlawful means information which would not be given them were they to ask for it openly. Even during our late war with Spain, it came out that the Spanish ambassador, through his military and naval *attachés*, had been regularly violating the hospitality which he enjoyed, and all of this was justified on the ground of exigency."—*The Constitution, Atlanta*.

Why France is Misunderstood.—"It is almost impossible for a people to muster the historic imagination which will enable them to look at things from the viewpoint of a nation whose history, traditions, and environment are radically different from their own. This is why much that is in the present workings of the French Government and the conduct of the French people is incomprehensible to the average person in the United States. Voltaire once said that France was the country of wit and folly, of industry and idleness, of philosophy and fanaticism, of simplicity and pedantry, of laws and their abuse, and of good taste and impertinence. A majority of persons in the United States will perhaps be apt to accept seriously this view of France as given half humorously by one of its acutest satirists. They will have difficulty, for example, to reconcile the conduct of the third republic with their own preconceived ideas of republicanism. . . .

"Moreover, the majority of the men who framed the constitution of the present republic were not republicans at all. They were Orleanists, Bourbons, Bonapartists, and reactionaries of other sorts, who were unable to agree among themselves as to the form of government to devise, who accepted the republic because no other kind of government seemed practicable in that exigency, and who framed a constitution which they thought would make the republic as harmless as possible to the interests of their par-

DREYFUS BEFORE THE COURT.

ticular royalist favorites, believing that the days of the republic in any case would be short.

"Here are conditions which are widely different from those which have prevailed in the United States. Virtually, this country was a republic from the time that the first British colony was planted in it, a century and two thirds before Lexington. The rule of the British kings was felt but lightly. In general the local laws were framed by the colonial legislatures, and imperial concerns touched them but slightly. There were no class divisions to eradicate when the day came to put the republican idea into formal and concrete shape, no caste distinctions to subvert and no political prescription of any sort to eradicate. In France, on the other hand, traditions and usages, all of which are more tenacious than statutes, which had been the accumulated growth of many centuries of time, were hostile to republican government. The training in self-rule which Americans had from the beginning

not humiliated. If he could march into the throat of bellowing guns, could he not linger to the end on Devil's Island and make no sign?"—*Florida Times-Union, Jacksonville.*

HOW THE INDIAN IS FARING.

H. L. DAWES, member of Congress from 1857 to 1873 and United States Senator from 1875 to 1893, writes a timely article in the August *Atlantic Monthly* to answer the oft-heard remark that we have failed miserably in our attempts to care for the American Indian. As our success or failure with the red man has a direct relation to our ability to govern the brown one in the East Indies and the black one in the West Indies, Mr. Dawes's sketch throws light on a problem where every illuminating ray is welcome.

The Indian problem came into prominence early. It was plain that the two races could not live together, and the white race rapidly pushed the red one from its territory. Mr. Dawes says:

"What was to become of the untutored, defenseless Indian, when he found himself thus pushed out of the life and home of the reservation, and cut off from the hunting and fishing which furnished the only and scanty supply of his daily wants? It was plain that if he were left alone he must of necessity become a tramp and beggar with all the evil passions of a savage, a homeless and lawless poacher upon civilization, and a terror to the peaceful citizen.

"It was this condition which forced on the nation its present Indian policy. It was born of sheer necessity. Inasmuch as the Indian refused to fade out, but multiplied under the sheltering care of reservation life, and the reservation itself was slipping away from him, there was but one alternative: either he must be endured as a lawless savage, a constant menace to civilized life, or he must be fitted to become a part of that life and be absorbed into it. To permit him to be a roving savage was unendurable, and therefore the task of fitting him for civilized life was undertaken.

"This, then, is the present Indian policy of the nation—to fit the Indian for civilization and to absorb him into it. It is a national work."

The first appropriation to fit the Indian for citizenship was made in 1877 when, after a hard struggle, \$20,000 was extracted from an unwilling Congress. The next year it was increased, however, until in this year it has risen to \$2,638,390. "The contrast between the small beginning and the last appropriation," says Mr. Dawes, "itself indicates a public confidence based on merit." The first appropriation, with benevolent contributions and the interest on funds belonging to the Indians, was used to support 48 small boarding-schools and 102 day-schools with 3,398 pupils:

"There are now 148 well-equipped boarding-schools and 295 day-schools, engaged in the education of 24,004 children, with an average attendance of 19,671. How near this comes to including the whole number of children of school age, in a total population of a quarter of a million of Indians, every inquirer can form a pretty close estimate for himself.

"No one will deny that, at this rate of progress, the facilities for the education of Indian children will soon reach, if they have not already reached, those enjoyed by their white neighbors in the remote regions of the West. The results thus far are of a most encouraging character. A personal examination, by competent and reliable officials, of all these schools, and as far as possible of the life of every person who has gone out from them, shows that seventy-six per cent. of them are proving themselves, in the language of the present wise and broad-minded commissioner who has this work in charge, 'good average men and women, capable of dealing with the ordinary problems of life, and of taking their place in the great body politic of our country.' This is an army of missionaries going forth among their own people, speaking the language, clothed with the equipment, and inspired with the hopes and ambitions of civilized life. Its value can not be overestimated. It is to this ultimate end that these schools are conducted. Industrial education which will fit the pupil for independent manhood is the necessity which justifies the under-

was necessarily absent in France. Moreover, that country is surrounded by nations whose governing classes deem a republic to be a menace to their own governmental system and who are hostile to it on that account. These are facts which Americans ought to bear in mind when passing judgment."—*The Globe-Democrat, St. Louis.*

Parisian Humbug Season.—"The comic opera season is hardly on as yet elsewhere, but Paris wouldn't be Paris if a continuous performance of farce comedy were not to be had at all seasons. One of the greatest of French tragedies holds the boards at Rennes, but Paris naturally prefers burlesque, and so long as Paris is Paris the gaiety of nations is not likely to suffer eclipse. . . .

"Oh, for another Thackeray to describe it all in a new 'Paris Sketch-Book'!" How 'Titmarsh' would have revelled in that wealth of material—the gasconading humbug Guérin threatening to pour boiling oil on the heads, and probably on the nice white pantaloons, of the spick-and-span gendarmes, who are described (white pantaloons and all) as politely requesting admission to the beleaguered castle and then carefully watching their quarry day after day, while thousands of the human flotsam and jetsam of the Paris boulevards pack the streets for squares around to see the show, cheer the besieged, applaud 'l'armée' and 'conspuez' somebody or other whom their vagrant fancy may lead them to acclaim to-morrow! Verily, in Paris the humbug seems to have all seasons for his own."—*The Plaindealer, Cleveland.*

"We believe the correspondents are right in saying that France is convinced of the innocence of Dreyfus, but what follows? Not that the court will declare Dreyfus innocent; France must not be humiliated tho a thousand suffer. As a soldier, it was the duty of Dreyfus to give his life when necessary for his country; far more, say his fellow citizens, should he be ready to give his honor for hers—he should suffer all things that she be

taking. Whatever else may await these youth, they must be able to meet the demands of the life which will surround them, or they will fail. If they are to be farmers, as most of them must be, it is of vastly more importance to them, in the outset, to be taught the requirements of a successful farmer—irrigation, grain-raising, grazing, herding—than to be taught any amount of book-learning or culture. This dominating purpose of the Indian school is the test of its usefulness. The result of its work thus far has not failed to stand the test."

The adult Indian is not forgotten:

"Soon after the beginning of appropriations for Indian schools, Congress, in what is called the Severalty act, provided for every Indian capable of appreciating its value, and who chose to take it, a homestead of one hundred and sixty acres to heads of families, and a smaller number to other members, inalienable and un-taxable for twenty-five years, to be selected by him on the reservation of his tribe. If he prefer to abandon his tribe and go elsewhere, he may take his allotment anywhere on the public domain, free of charge. No English baron has a safer title to his manor than has each Indian to his homestead. He can not part with it for twenty-five years without the consent of Congress, nor can the United States, without his consent, be released from a covenant to defend his possession for the same period. This allotment carries with it also all the rights, privileges, and immunities of an American citizen; opens to these Indians, as to all other citizens, the doors of all the courts; and extends to them the protection of all the laws, national and state, which affect any other citizen. Any Indian, if he prefers not to be a farmer, incumbered with one of these homesteads, may become a citizen of the United States, and reside and prosecute any calling in any part of the United States, as securely under this law as any one else, by taking up his residence separate and apart from his tribe and adopting the habits of civilized life. Thus every door of opportunity is thrown wide open to every adult Indian, as well as to those of the next generation."

So much for the methods. What have they accomplished? Mr. Dawes says:

"These are some of its results: 55,467 individual Indians, including a few under former treaty stipulations, have taken their allotments, making an aggregate of 6,708,628 acres. Of these, 30,000 now hold complete patents to their homes, and the rest are awaiting the perfection and delivery of their title deeds. More

than 15,000 are heads of families now holding permanent homes—permanent for twenty-five years, at least. Around these are gathered the lesser allotments of the other members of each family. Every adult male landholder stands at the polls and in the courts in the full rights of American citizenship.

"Not alone in these statistics are manifest the evidences of permanent advance of the race toward the goal of orderly, self-supporting citizenship. Bloody Indian wars have ceased. The slaughter of warring clans and the scalping of women and children fleeing from burning wigwams are no longer recorded. Geronimo himself has become a teacher of peace. The recent unfortunate difficulty with the Chippewas in Minnesota, caused more by lack of white than of red civilization, is no exception. We are at peace with the Indian all along the border, and the line between the Indian and the white settlements is fast fading out. The pioneer goes forth to trade and barter with the red man as safely as he does with his white neighbor, and returns at night to his defenseless home with less apprehension of peril to those within than when scouts and sentinels mounted guard over it."

These Indian farmers are not only supporting themselves and their families, but are making money. "It is needless to say," remarks Mr. Dawes, "that this is a peace establishment more effective to prevent outbreaks among these Indians than all the bayonets relied upon in the past for that purpose." We have found a new way to make a "good Indian."

Under the new *régime* the red men have become not only peaceable, but actually religious:

"Bishop Hare, who has devoted his life to the uplifting of the Indian in the diocese of the two Dakotas, tells of a dozen Indian clergymen, and more than fifty deacons and catechists, engaged in missionary work among the Sioux alone, and 1,600 Indian communicants in the Episcopal church. The Indian women in his diocese contributed in one year \$2,000 for missionary purposes. There are 33,000 Sioux, and 8,000 are members of various churches. The Presbyterians, working among the Indians in other parts of the country, report nearly 5,000 church-members and 4,000 enrolled in their Sunday-schools, who gave in one year for missions \$2,600, besides \$3,400 toward their own support. Equally encouraging are reports from other denominations in all parts of the field where the national policy of making self-supporting citizens has taken root. The aggregate of church communicants is 28,351."

DEMOCRACY'S NEW ISSUES IN CARTOON.

In conclusion, Mr. Dawes gives an encouraging view of the red man of 1899:

"Other features of the work are not less successful. Not the least is the manhood it has inspired and the hope it has awakened in the Indian. It is dawning upon him that he was made for something, and he is beginning to care for the morrow. Pride in his children, in his home and its surroundings, is prompting effort and stimulating desire to excel. He no longer doubts and distrusts, and is daily growing more and more sure that the hand held out to him is for guidance and help, and not for betrayal or spoliation. . . . When such results have been accomplished in the green tree, what may we not hope for in the dry?"

MR. REED'S RESIGNATION.

PAPERS of every political hue, in commenting on Speaker Reed's resignation of his seat in Congress, acknowledge his strength of character and his sterling honesty. The *Portland Me.) Advertiser* (Rep.), Mr. Reed's home paper, says:

"In many things he has been tried and found true. In national affairs he has ever been a commanding figure. On all sides his incorruptible honesty, his spotless integrity, his uprightness in every walk of life, his firmness of will, his intellectual greatness, his forensic ability, his statesmanlike qualities, are acknowledged. His departure from the field of public affairs, tho possibly not final, takes away no small part of the strength of the Maine delegation. Another man could better have been spared."

THOMAS B. REED.

The *Cleveland Plain-dealer* (Dem.) says:

"Tom Reed is one of the few Americans of eminent ability who

make friends and enemies in pretty equal proportions. He was not a timeserver, he lacked in oily smoothness, his tongue was a whiplash and his gavel a scourge. But all men will admit that he certainly was a legislative giant, and his party can poorly afford to lose him from its council fires."

The *Baltimore Herald* (Ind.) speaks in a similar tone:

"While many men enter politics as a road to wealth, Mr. Reed is obliged to pursue exactly the opposite course. Having no favors to ask, and scorning to 'crook the pregnant hinges of the knee that thrift may follow fawning,' he leaves Congress poorer, perhaps, than when he went in, rewarded only by the consciousness of having done his duty without fear or favor."

The *New York Tribune* (Rep.) notes his failure to fall into line with popular movements of opinion:

"In keenness of intellect he encountered few equals and no superiors in the field of national politics. In breadth of judgment, liveliness of sympathies, and that quick appreciation of the drift and current of popular feeling which mark the successful political leader, history will judge him perhaps less fortunate. A certain lack of toleration qualified and neutralized the respect imposed by the keenness of his political vision and the audacity of his party generalship."

But the *Springfield Republican* (Ind.), which advocated the nomination of Mr. Reed for the Presidency in 1896, thinks that the very quality disparaged by *The Tribune* is a great point in his favor. *The Republican* says:

"The value of Mr. Reed's autocratic domination in the Speaker's chair has been in his checking of 'drifts' and turning them from sweeping through the Treasury of the United States—in his control of 'popular currents.' There was no lack of 'quick appreciation' of them, for that was the secret of his mastery over them. No small or weak man could ever rule as he ruled. Nor were the methods by which success is won in the politics of to-day a closed book to Mr. Reed. He understood them perfectly, while refusing to employ and profit by them. The low level of trade and dicker that presents itself to the aspirant for a nomination to the highest office of the republic made its appeal to Speaker Reed only to awaken his profound disgust, and we know for a fact that he exhibited 'a certain lack of toleration' where Mr. Hanna was responsive and subservient. Every man knowing the inside history of the campaign of 1896 honors Mr. Reed."

The *Washington Times* (Dem.) speaks of the experiences that the opposition had at the hands of Mr. Reed, and says:

"Thomas Brackett Reed will be greatly missed in the next session, and with the same feeling that people experience when they chance to miss a boa-constrictor in a tropical forest."

The assertion is made by the Washington correspondent of the *Kansas City Journal* (Rep.) that Mr. Reed is being considered as a prospective nominee for the Presidency, to lead an anti-expansion wing of the Republican Party. The correspondent says:

"This action, it is said, is prompted in the first place by what is alleged to be the overwhelming sentiment against so-called imperialism supposed to be more than symptomatic in the old party, and the aversion of the New England Republican dissenters to go into the Democratic Party as the only alternative of severing their connection with the present organization. It is said that these Republicans feel as much in earnest over the question as they did on that of slavery, and that the energy which they will throw into the campaign will not lack the enthusiastic impetus that characterized their work leading up to the Civil War."

"The first name mentioned in connection with the movement is that of ex-Speaker Reed. To what extent he can be swayed to accept the Presidential nomination in opposition to his old party is not known. Reed, however, is the first choice of the anti-imperialists and, if the movement is consummated, he will be unanimously named as their candidate."

Many papers hazard the prediction that Mr. Reed will again appear in public life with undiminished power.

A Convict's View of Long Sentences.—Altho it is not usual for the patient to prescribe his own medicine, it is natural that he should feel considerable interest in it, especially when his malady is criminological, and the medicine a long term behind the bars. In *The Star of Hope*, the new periodical edited by the convicts at the Sing Sing state prison, some of them have been discussing the long sentence, invariably reaching the conclusion that it is a bad thing. The discussion reveals the fact, however, that the inmates of the state prison have advanced further than some who live outside, in considering the sentence a means of reform rather than a punishment. Convict No. 440, for example, who writes in the issue for August 12, shows that the long sentence is a survival of the old idea of revenge, while the parole system aids the convict to what all the convict writers profess to desire—reformation. He writes:

"I put the question to all fair-minded men, does it require ten or fifteen years to reform a man? No. If he does not reform in a year, there is no reform in him. I say to society, give him a chance. Manifest an interest in him through applied efforts in beneficent direction."

"The greater portion of the men who return to prison have left the prison doors behind, saying that 'I committed the crime, the commonwealth have punished me, so I owe the State nothing.' They go in search of work, but the doors of society are closed against them. With little money, no results in their efforts to

procure work, they become despondent and discouraged. In such an environment they resort to crime, and prison is the result.

"If the State would . . . pass a parole law, there would be a great decrease in crime. For example, under such a law, if a man sentenced to twenty years' imprisonment, after serving two years he be paroled under the conditions that, if he violates his parole, he will have to return to prison and serve the eighteen years on the old sentence in addition to his new sentence, I dare say, not 5 per cent. would return. To-day 80 per cent. of the men who leave the prison walls return.

"Ignorance has a great deal to do with increased prison statistics. Education is what men need and require who have criminal tendencies.

"There are many men here to-day who did not even know or realize the penalty for the crime they committed. For one, out of the hundreds behind prison walls, I hope that our legislators and other public officials will come to our rescue along the line we have feebly noted, which will result not only beneficially to the State, but to our mothers, wives, and children."

IS POLITICAL CORRUPTION GREATER HERE THAN IN ENGLAND?

ONE of the points dwelt upon persistently and effectively for years by the civil-service reformers, and generally accepted as true, is that far less political corruption exists in England than in the United States. The subject has been recently raised in *The Public* (Chicago)—a single-tax paper published by Henry George's first lieutenant, Louis F. Post—by a correspondent who wants to know if this purer political condition really prevails in England, and, if so, how it is to be accounted for. The question is argumentative evidently, for the correspondent answers himself as follows:

"That country [England] is not run by corrupt politicians for selfish ends. There seems to be a healthier public sentiment on all public questions. And right across the imaginary hair line between our country and Canada, the Standard Oil Company has been thrown down; the railroad commissioners have prevented discriminating rates, and the Standard Oil Company's oil is not allowed to be used for any government purposes. Threats are made that the oil will be excluded from the territory altogether. Is there an inherent something in the English fiber that repels injustice? or what is it? It is something I have tried in vain to reason out."

The editor of *The Public*, taking up the subject, proceeds to examine it on several sides. He begins by showing that British corruption has at least not reached the vanishing point. He recalls the scandals in Canada in connection with the tariff and railroad subsidies, and the defeat by the British Parliament, because of railroad opposition, of a bill requiring automatic car-couplers. The London news reports are quoted as saying that "the railway interest is quite as powerful a factor in politics here as in the United States, and pursues its ends by the same means." Reference is made also to the defeat of the bill before the British House of Commons to raise the flash point of petroleum, when the necessity for the measure was generally conceded, and to the open charge made by *The Pall Mall Gazette* that the oil ring had been "too strong for the House of Commons," and to *The Speaker's* assertion that "Mr. Rockefeller and the American Standard Oil trust triumphed in the House of Commons Wednesday afternoon."

But such instances, the editor thinks, are rare. By far the greatest amount of corruption, he says, has a respectability and legal form that prove that in that line, at any rate, "they do things better on the other side." Class power in England is considered by many writers to be as potent a means of getting something for nothing as any lobby in the United States. Michael Davitt, the Irish journalist and agitator, is quoted to the effect that the English House of Lords is "composed mainly of land-

lords, who, together with their class, own almost all the land of Great Britain and Ireland." The quotation from Davitt continues:

"All laws have to be sanctioned by these irresponsible legislators before they become operative, and in this way these law-making monopolists blackmail the general community by opposing measures of progress which might limit their own privileges, and by promoting enactments favorable to their interests. As a bribe to induce this chamber to pass the Local Government (Ireland) bill of last year, the Irish landlords have been relieved of all charges relating to the relief of the poor. In other words . . . it has relieved the pro-English landlords of Ireland of some two million dollars a year which must now be paid out of the pockets of the general taxpayers of Ireland and Great Britain. This, in your country, would be equivalent to 'boodling.' Here it is only a continuance of the old English game of robbing the industrial poor for the benefit of the idle aristocracy."

In an old country, too, we are reminded by the editor of *The Public*, the "boodling" period is past—the most valuable privileges have already been disposed of. This feature of the situation is interestingly put in the following quotation made from *Saturday Night* (Toronto):

"The principal cause of political corruption is that, this being a new country, our governments have so much—belonging to the public, of course—to give away in exchange for political influence, such as land, mines, railway franchises, contracts for public works, etc. In England there is nothing of the kind going. The land and all pertaining to it went centuries ago to the political heeler of the period, who was generally a lord or a baron, who, instead of rallying the voters or throwing the influence of a big corporation into the scale, took the field with his vassals and dependents whenever the opposition made itself troublesome. If the opposition succeeded he became a traitor and lost his head, but if the government was sustained his loyalty gave him a pull when it came to division of the spoils. Possibly he may have been corrupt and the system open to criticism; be that as it may, the descendants of those who grabbed about all there was worth grabbing in England—and who hold much of it yet—are the British aristocracy who set the pace and give English politics the tone of honor and integrity we so much admire. The point is that in an old and finished country, all the stealing in the way of distribution of natural opportunities and special privileges has been done, and one great source of political scandal removed. Again, there is nothing in British politics in the way of any sort of personal advantage for the mass of workers. The high offices are the special perquisites of a class and go by social rather than political favor; the smaller ones, which the scions of the aristocracy and the plutocracy don't want, are filled according to civil-service rules. Here there is nobody so poor, so ignorant, or so uninfluential that he may not hope by identifying himself with a political party and diligently hustling, or pretending to hustle, at election times, to get something, if it is only a temporary job as messenger or the chance to rent his house for a polling-booth. In England the great mass of the people know that they have nothing to expect from any party, however hard they work for it. Things are on altogether a different basis, simply because the country is older. The ruling classes had ancestors who did all the stealing necessary to enable them to live in comfort and respectability. In this new, only partially exploited land, those who want to rise to wealth and eminence have to take a hand in the grab game themselves. English institutions, purity of elections, and civil-service examinations that are other than a farce, will come in all right when there is nothing left to steal."

But even if we prove that the British system of class privilege is wholly wrong, the fact remains that our way of boodling is more demoralizing. "Our politics," says the editor of *The Public*, "are demoralized by corruption as English politics are not. . . . The reason for this is that the parasites of English politics regard themselves and are regarded by the public as justly entitled to their plunder." He continues:

"No moral miasma proceeds from them to contaminate the community. Even when they legislate to strengthen their privileges or to make them more profitable, their act assumes none of

the outward characteristics of 'boodling,' and consequently exerts no vicious influence. But where privileges are acquired by 'boodling,' a demoralizing influence is inevitable. If, for example, half the earnings of a community were given to one of its members as matter of right, both giver and taker feeling that the recipient was justly entitled to what he got, that community might be an exceedingly virtuous one. But if only a small fraction of the income were received by one member of the community through scandalous 'boodling' the whole community might be demoralized."

Another consideration that works for purity in English politics, the editor of *The Public* points out, is the fact that the British lawmakers begin their work as soon as elected, and are continually responsible to their constituents, as Parliament can be dissolved at any time; while in the United States the new Congress does not begin work until thirteen months after it is chosen, and the people are powerless between elections. Thus in England the Parliament is always in the hands of the people; in the United States the people are in the hands of Congress.

STRIKE DATA.

THE efforts of political economists to express the workings of human nature in propositions like the truths of geometry have not yet reached the point where the probabilities of a labor strike can be accurately estimated or its outcome forecast; but an examination of the data shows that we can safely write: "About this time look out for strikes," on the midsummer pages of our almanacs. The *Boston Transcript* gives the following reflections on our strike history:

"The three great strikes in this country most readily recalled are the railroad strike of 1877, centering in Pittsburg, the Homestead strike of 1892, and the Chicago strike of 1894. These were all midsummer outbreaks, which is somewhat remarkable in view of the diminished activity of many industries during the summer and the further fact that in certain lines of work a more effective blockade could be maintained in the winter months. Coal-miners, for example, could seemingly bring greater pressure to bear upon their employers at a time when the demand for coal was greatest and the public inconvenience from a shortage of it the most intense. In these circumstances it seems as if there must be something in the farm weather to account for the extra violence of the summer outbreaks in the labor world, just as a high suicide rate in summer is always expected. The great railroad strike of 1877, which for many years held the record for destructiveness, broke out at Martinsburg, W. Va., July 14, and continued through that month and a good part of August. It was rumored at the time that a concerted strike had been planned to take place in October upon all the railroads, but that it was forestalled by a premature outbreak on the Baltimore & Ohio.

"The Homestead strike broke out on the 6th of July. It was one of the most violent labor wars in the history of the country. To it Mr. Cleveland referred in his speech of acceptance at the Madison Square Garden, and the opinion was general at the time that, coming as it did at the opening of a Presidential campaign, it did much to turn the tide against the party then in power. Two years later, the attention of the country was again called to a great midsummer labor war. This time the trouble had originated with Pullman employees in May, but it was the 26th of June when the American Railway Union took its first step by ordering out the employees of the Illinois Central Railroad. This precipitated a conflict of large proportions.

"The official figures as to strikes and lockouts published by the Bureau of Labor do not show any discernible relation between such outbreaks and the general condition of business, good or bad. But the general impression of business men is that strikes are most frequent in times of industrial transition. When a period of depression is coming on, and wages begin to go down, strikes inevitably result. The labor organizations are in good condition from the preceding period of prosperity, and the first pinch of adversity finds them ready and strong for battle. The depression comes on, however, and if it lasts for several years,

the labor organizations tend to disintegrate. There has clearly been a very considerable weakening in them, for example, since 1893. When times are such that two or three men are looking for one job, it is next to impossible to maintain union rules and preserve organizations intact. But as the times begin to improve the organizations stiffen up, as it were; and when their ranks get fairly firm, disturbances are apt to come. A general rise of prices, such as usually accompanies a return of prosperity, is constantly suggesting to workmen employed at a fixed scale of wages that they ought to share in the upward movement, and this inference has its effect. It is to be hoped that this summer the conditions of workmen will improve through that natural competition of employers for their services which always takes place in an active labor market, and that to less rational methods of attempting to accomplish the same result there will be no occasion to resort."

A New Attempt at Reform of Primaries.—One objection urged against primary reform laws has been that any such acts might merely entrench the "bosses" behind the semblance of legal authority, so that the attempt to purify politics would end in defeating its own purpose. This objection, however, is based on the supposition that the "bosses" will have their own way in the primaries. Some hope that a law can be framed that will avoid that result is derived from the news from San Francisco that at the first trial of the new primary election law there the local "bosses" of both the leading parties were defeated, and tickets free from machine influence were placed in the field. The *Chicago Times-Herald* describes the California statute as follows:

"This reformatory statute puts the machinery of the primaries in the immediate control of the board of election commissioners and provides that the primaries of all parties shall be held simultaneously. The effect is to make the conduct of a primary much like that of a regular election. And there is, of course, an unusual inducement for voters other than ward workers to show themselves. As a result, the total number of ballots cast was 32,000, or about 50 per cent. of the average at a biennial election. "This is indicative of a remarkable change for the better since the days when the primaries of the whole country virtually amounted to secret meetings of self-appointed party directors who got together for the purpose of dividing nominations among themselves."

After noting that similar efforts at reform in Illinois "have not been brilliantly successful," the same paper advocates an entirely different system of nominations in municipal elections as the only cure for present evils:

"While it is extremely gratifying to recognize the decided improvement that has been made in San Francisco, it may be doubted if a radical and final cure for the evils of municipal politics can ever be found under the primary system.

"Whatever its safeguards, this system is essentially partizan, and the partizanship that is based on the divisions of national politics is utterly irrational in local affairs. If we elect a mayor or an alderman because he is a Republican or a Democrat we vote not to secure a business administration for a municipal government, but to strengthen a party organization for some ulterior purpose. The scheme is all wrong. It has no regard for the real object of the election.

"To secure that object the nominations should be by petition, and the names of parties should not appear on the ballots. Then the issue would be perfectly clear and simple. We should not have to consider the possible effect upon the fortunes of the national political organization to which we are attached. We should consider only the personal merits of the candidates."

LETTERS AND ART.

A LITERARY WOMAN-HATER.

THE best known of modern Swedish novelists is Auguste Strindberg, whose story "The Father" has lately been translated into English. Of all the enemies of woman, Strindberg is perhaps the bitterest that has ever made a mark in literature. This bitterness reached its climax in the historical dramas,

"The Father" and "Miss Julie"; and in the latest of his plays, "Margit," there are indications that the author is well on the way to a change of heart.

A writer in *Literature* (August 18) thus comments on "The Father":

"Something supremely terrible must have touched Strindberg's life at the quick before the production of 'The Father' in 1887. The influence of Schopenhauer and Nietzsche is not sufficient to account

for such a sudden change. 'The Father' quivers with intensest hate and most brutal rage. There is something ignoble in the story itself and in the author's passion. 'It is Man and Woman against one another incessantly, all day long'—the woman the enemy of man, for 'love between the sexes is strife.' And the weapons used on both sides are fiendish. Conceive the situation. The captain and his wife, Laura, are fighting for the possession of their child, body and soul. The captain represents all the ancient systems, the conventions. According to his doctrine, the mother has no legal or moral right over his child's future. 'She has sold her birthright by a legal transaction, and surrendered her rights in return for the man's undertaking to care for her and her children.' Laura is compact of new ideas of revolt. To compass her ends she deliberately throws doubts upon the paternity of her child. There is diabolical subtlety in her reasoning. The father can not be sure that Bertha is his, he can not prove that his wife is faithful or unfaithful, therefore he can have no absolute right. 'You have fulfilled your function,' says Laura, 'as an unfortunately necessary bread-winner and father. You are not needed any longer, and you must go.' The captain is a nervous and highly strung man of science. The wife plays with his reason till his brain snaps. And the woman wins. This story, terrible enough in outline, in Strindberg's hands becomes nauseous. We are spared nothing of the sordid detail of the struggle; the arguments are set forth in all their brutal grossness. The book is one that every sensitively minded reader readily closes with an overpowering sense of relief."

The same critic speaks as follows of Strindberg's autobiographical writings:

"A number of volumes of Strindberg's autobiography have appeared at various times, the most characteristic and suggestive of all bearing the terrible title 'Inferno.' These have been snappily commented by more than one autobiographical novel, of which we have chosen 'Axel Borg' as being the most accessible.

"The value of these autobiographies as human documents must be open to dispute, for their genuineness seems to us more than questionable, in spite of the author's repeated declarations. It is impossible that any human being could actually have fathomed the depths of darkness described in 'Inferno' and have retained his sanity. 'Inferno' appears to us to be the conjurings of a

brain expanded by overthought. Strindberg is a combination of exaggerations—exaggerated hates, passions, fears, hopes, imagination. And 'Inferno' is but a nightmare exaggerated into experience. The real man stands out in 'Axel Borg'—a creature of intense egoism, brooding, thinking great thoughts in outer loneliness, warring with all mankind and with himself, until the day of life becomes the night of despair, God a mockery, and existence a very hell. A strange and terrible picture, this, of a genius absolutely uncontrolled."

The *Vestnik Europi*, of Russia, sees in "Margit," produced last year, a marked change in Strindberg,—if not in his fundamental convictions, at least in their embodiment. It says in substance:

The theme of his new drama is again family life, but it is free from his usual one-sided accusations of womankind. On the contrary, woman as compared to man in the weakness of her nature appears as a heroine and brings peace and harmony at the same time that she helps to bring about the solution of life's problem. The drama deals with what love is apt to promise and marriage to keep. This is but one side of the problem. The main question is: must we try to escape the evil of life and its deformities, or must we bear the cross in silence, and, having passed every imaginable suffering, make peace with life? This is not a Christian idea borrowed from Count Tolstoy, but something else, the thought that poverty and even deformity are necessary to life. The spirit, after it is once embodied, must undergo every humiliation. Then it becomes free, that is, it does not any longer fear life, having understood it. "You told me once," Margit says to her confessor, "that reality with all its filth and squalor is given to us by God, and we must not turn away from it; on the contrary, we must take it such as it is."

This thought seems to the Russian critic very original, not reflected in any other work of art. To make peace between man and life, to show that spiritual freedom does not mean shaking off the dust from one's wings in the manner of a butterfly, but in going through every evil and being able to conquer it all,—this moral is undoubtedly much higher than the one displayed in the author's earlier dramas and novels, in which his sole aim seems to be the condemnation of women and the family.—*Translation made for THE LITERARY DIGEST.*

PERPETUAL COPYRIGHT.

A PETITION, signed by a large number of representative American authors and publishers, is soon to be presented to Congress asking that copyright privileges be made perpetual. The petitioners say:

"Perpetual copyright is the natural duty of all authors. In Queen Anne's reign, when laws regarding the limiting of copyright were first enforced, the price of books was very high. Our Government copied the English legislation on the question. In 1831 the present system became law. Sixty-eight years have passed. The masses can buy books.

"In Russia copyright exists during an author's life, twenty-five years after his death and ten years in addition if an edition is published within five years of the end of the term; in Spain, during the author's life and fifty years thereafter; in Germany, for the author's life and thirty years thereafter; in France, for the author's life and fifty years thereafter; Austria, Sardinia, Tuscany, and the papal states, for the author's life and thirty years thereafter; and in Holland and Belgium, for the author's life and twenty years thereafter.

"We demand that the United States shall at once take the foremost position and make copyright perpetual. The reason of the law is the life of the law; the reason for the putting of any restriction on the life of copyright having disappeared, the limitation should cease, and the right of the author in his works should be perpetual."

Public opinion appears to be divided as to the desirability of the proposed law. The *Nashville Banner* thus states the matter:

"Miss Margaret Lee of Brooklyn is the prime mover in the in-

terest of this cause, and the reasons actuating her are that the present law is out of date and that the labor of a man's brain when turned into literature should be his own property, the same as if it were stocks and bonds. Our present copyright law was enacted sixty-eight years ago. It grants to the author exclusive rights to his publications for twenty-eight years, with the privilege of renewal of fourteen years, making forty-two years in all. This law was patterned after that of Great Britain, which grants a right for forty-two years or during the lifetime of the author and seven years after his demise. Mexico is the only country having a perpetual copyright, and in other countries the law grants rights during the author's lifetime and for a period of from ten to fifty years after his death.

"A petition to Congress is being liberally signed by authors and publishers. Of course, the latter are in favor of the proposition, as in the great majority of cases they buy outright the manuscript of the author, and they are not averse to having a monopoly created in their favor. But the American public, when the facts are put before them, will oppose this measure. If a restriction could be placed on the publisher by granting him a short-term copyright, it might be wise to extend the time in favor of authors who own their own manuscripts. Copyright books are expensive, and it is only by cheap editions that the mass of the people can get first-class books. A limit to the copyright paves the way for cheap books."

The St. Paul *Dispatch* also opposes the measure:

"The readiest answer to that array of arguments is that there is no reason why the descendants of some man or any man should draw a tribute from the reading public for all time, simply because their ancestor was able to write a successful book. They can not prove a meritorious claim. They might not be able to read, much less write anything that anybody would care to read.

"For ninety-nine out of one hundred books, the discriminating taste of time makes a perpetual copyright useless. The first edition is so often the last that no copyright is necessary. In the case of other books of which thousands and hundreds of thousands are printed, the author is amply enriched by being able to sell the exclusive right to publish during a long term of years.

"The interests of public policy are against a perpetual copyright. Works that have become classic should be cheap enough to be within the reach of every one."

On the other hand, the San Francisco *Call* says:

"No valid argument can be urged against the perpetual copyright asked for in the petition. If a man use the profits of his labor to buy land the Government secures the title forever to him and to his heirs until either he or they sell it. If another man employ his labor in producing a book he is justly entitled to as full possession of the property as is given to the landowner. Reasons of public expediency require that perpetual patents should not be given to inventors, for improvements in mechanism affect widespread industries, and a monopoly of an improvement in machinery would in some cases amount to a monopoly of the industry; but no such objection stands against perpetual copyright for authors.

"It is not at all likely the movement will make much headway until after a prolonged agitation, for the opposition to it will be strong; but it is none the less worth while for authors to begin the contest for what is undoubtedly a natural right. It required many years to bring about the arrangement for an international copyright between this country and Great Britain, but in the end the authors were successful. An earnest and united effort for perpetual copyright may have a similar history. The literary men of this generation will hardly profit by it, but they may have the satisfaction of winning a recognition of the rights of those who are to follow them."

Some Odd Book Titles.—Some of the oddest book titles that surely ever the mind of man conceived are given in *The Pall Mall Gazette* of recent date. Most of them go back to Reformation times, and deal with subjects of pious interest. Here are a few of them, as quoted in the New York *Times*:

"The Great Shipwreck of Fools, who are in the Hold of Ignorance, swimming in the Sea of the World; of great Effect, Profit,

Utility, Value, Honor and Moral Virtue, for the Instructing of Everybody: which book is adorned with a great number of Figures, the better to demonstrate the Folly of the World.' . . . 'The Little Dog of the Gospel barking at the Errors of Luther'; 'The Royal Post to Paradise, very useful to those who wish to go there; a collection of the Works of Pious Doctors who have curiously treated the subject'; 'The Spiritual Snuffbox, to lead devoted Souls to Christ'; 'Sixpennyworth of Divine Spirit'; 'Seven Sobs of a Sorrowful Soul in Sin; or, the Seven Penitential Psalms of the Princely Prophet David.' In the time of Oliver Cromwell we have 'A Reaping Hook, well tempered for the stubborn Ears of the Coming Crop,' and 'Some Beautiful Biscuits, cooled in the Oven of Charity and put aside carefully for the Fowls of the Church, the Sparrows of Spirit, and the Swallows of Salvation.' There is something terse and tailorish in 'Buttons and Buttonholes for the Believer's Breeches' and cobblerlike in 'High-heeled Shoes for those who are Dwarfs in Sanctity.' Here is a title in which all kinds of imagery are mingled: 'A Sigh for the Sinners in Zion coming from a Hole in the Wall, by an Earthen Vessel known among Men under the name of Samuel Fish.'"

CHEAPENING OF THE MAGAZINE.

THE recent step taken by Messrs. Harper & Brothers in reducing the price of *Harper's Monthly Magazine* to 25 cents is regarded by the press as an indication of important literary undercurrents. The Baltimore *News* thus comments upon the change:

"This is the first of the older magazines to follow the tendency toward cheapening the prices of magazine literature, and in the illustrated periodical field leaves *The Century* the only one maintaining its old rate of 35 cents. *The Atlantic Monthly*, which is 35 cents also, is not illustrated, and is in a certain sense more of a review than a magazine. The mystery has been all along how the high-priced magazines could withstand the opposition created by the lower-priced publications. The recent consolidation of the Harper and McClure interests has no doubt led to the present lowering of the price of the Harper's periodical, but at the same time it may be expected at its present price to come into competition not so much with *McClure's* and *The Cosmopolitan* as with *Scribner's*, which has been 25 cents ever since it was established under its present management, and has no doubt pushed the 35-cent magazines very hard. It has carved out a field of its own. All of the old standard magazines, in fact, have their special family of readers and constituents, but it is quite certain that the cheaper periodicals have gradually encroached upon their field.

"It is an interesting fact in the history of *Harper's Magazine* that, while it is virtually the oldest of the illustrated publications, it was also the first to be offered to the public at a popular price. Before the Civil War its price was 25 cents a copy, and while it had comparatively a very small amount of advertising, the publication paid handsomely. When it was established in 1851, it reprinted a great quantity of matter from the foreign magazines and published nothing original except the instalments of J. S. C. Abbot's 'Life of Napoleon.' This was the first experiment in this country with the serial publication of a book or novel, and it proved immensely popular. In the third year of its publication, *Harper's Magazine* had attained the enormous circulation of 118,000 copies per month. The perfecting of the electrotyping process in 1852 enabled the publishers to print any number of copies from the same plates without detracting from the beauty and clearness of the impression, and it was this that led to the introduction of illustrations as a successful feature.

"The present reduction in the price of the magazine is an indication that the influence of the McClures is already being felt in the methods of the older and more conservative house."

The New York *Evening Post* thinks the chief significance of the change is as an indication of the great competition existing in the magazine world, due to the revolutionary developments of the past decade:

"The change is often explained as wholly due to improvements

on the mechanical side of printing. 'Process' has superseded the lithograph and wood-engraving at a fraction of the cost, and with an artistic loss perceptible only by a small minority of purchasers. Paper is cheaper; presswork is cheaper; great economies in production and distribution have been introduced; naturally, therefore, the price falls. But this is not the whole story. With the cheapened magazine a cheapened reading public has been created, and has fed the demand for low-priced illustrated magazines. It is safe to say that we have to-day in this country a million more buyers and readers of magazines than we had a decade ago. A vast new clientèle has been called into being. How swiftly it came into view when the appeals first began to be made to it is seen in the successive reductions of price made by *McClure's* and *The Cosmopolitan*. The conductors of those magazines were doubtless surprised at the audience they secured. Through their efforts, with those of other publishers working along the same lines, the magazine public became enormously enlarged in a very short time. Thousands of people took up the habit of buying their magazine, when the price became 10 cents, just as they had before bought a daily paper. The old and somewhat select class of leisurely magazine-readers was suddenly transformed into a multitude which no man can number.

"In other words, the magazines found an almost unsuspected field to work. It can not be said exactly, as it was said of Wordsworth, that they created the taste by which they are enjoyed; but they and their new-found public interacted upon each other rapidly. What had before happened in book-publishing came to be true in magazine-publishing—that is, a vast popular audience was reached. The proprietors tapped the vein of the great democratic reading class which De Tocqueville forecast. It is only fair to add that he said this class would not be given to overnice discrimination, and that success with it would not necessarily argue talent. Some of the cheap magazines which sell widely have gone on the principle not merely of popularizing literature, but of plebiscating it, which is a very different thing, as Coleridge said. The masses are not given to nice distinctions in their reading. A book is a book, a novel a novel, a magazine a magazine; the only ground of discrimination being, the cheaper the better. But it is the demonstration that there are a possible 1,000,000 readers at 10 cents, instead of 50,000 or 100,000 at 25 or 35 cents, which has been fluttering the magazines and producing the intense competition between them."

The Post pays the following tribute to the important part which magazines have played in American literature:

"With all their faults, which we reserve the right to groan over as often as we please, the magazines are too valuable an element in our intellectual life to be spared or impaired without a protest. They help keep an honorable literary tradition alive. American magazines have been the nursing-mothers of American writers, and they remain such to-day. Much of our best poetry first saw the light in magazines, and still does so. If this saying seems a reflection on the best poetry now producing in this country, we can not help that. On the artistic side, too, the leading magazines have been of real educational importance; and we can but hope that no pressure of competition or lowering of price, in the case of one or all, will lead to a regrettable cheapening of quality."

The *Boston Transcript* says:

"The only wonder is that the step has not been taken before. Competition is as sharp among the magazines as anywhere else. Sometimes it has seemed to us that it was sharper. When we can get good magazines for 10 cents a copy, even the oldest and best established of these periodicals must recognize the significance of the fact and make concessions to it. This may be the first step to further reductions later. Still it is hardly necessary for *Harper's* to drop to bottom figures, tho possibly it may eventually be considered good business policy to do so. Its history has been unique. There are other magazines carrying names as old as its own, but they have not maintained unbroken vigor and continuity to the same extent. Its good will has never been clouded. It has been mental meat for nearly two generations of readers. It is as familiar to the sight as the most time-seasoned book-backs in our libraries. Whatever changes may be made, we trust those airily clad and chubby torch-bearers and flower distributors will not be discarded. They have been taken into the hearts of hundreds of thousands, and no new friends could quite fill their places."

It has been authoritatively announced that the price of both *The Century Magazine* and of *The Atlantic Monthly* will remain as before. *Scribner's Magazine* has always been sold at 25 cents since its first publication in 1887.

With regard to the amount of reading matter, the principal magazines stand as follows: *Harper's* and *The Century* each publishes 160 pages of reading; *Scribner's* 120 pages; *The Atlantic* 143 pages; *McClure's* 96 pages.

THE "PRINCE OF VAGABONDS."

"AS a master of English, there are eminent critics who dare to rank Borrow with the foremost of the century, in a small company where perhaps not more than half a dozen are to be found." So says *The Bookman*, anent the publication of Professor Knapp's long-looked-for biography of the mysterious author of "The Bible in Spain," "Lavengro," and "Romany Rye." The same reviewer adds: "No one can be stupid, or dull, or narrow who revels in 'Lavengro.' It has been said that to appreciate it, in the right way, is a certificate of character." Among the epithets bestowed upon George Borrow, in the difficult effort to classify him, are: "prince of romantic and picturesque vagabonds," "great high priest of the ungentle," "the later De Foe." To those not familiar with his writings, these epithets will serve somewhat to reveal the nature of the puzzling fascination and exasperating charm exercised by Borrow's personality.

"The one great weakness of him," says Professor Knapp, "was to exhibit himself as a mysterious traveler." In consequence of this love for mystery, Borrow's biographer has had a long and perplexing task. Through Norwich and London and the regions round about and in a long sojourn in the Peninsula, this undaunted biographer followed the *pateran* and the trail of his pseudo-gypsy, with all the sagacity of a Romany, and the pertinacity of an Iroquois scout; and he tells us that the enthusiasm for linguistic and gypsy studies with which the erratic narratives of Borrow inspired his youth, "has never suffered any decline these fifty years, nor allowed my love for his memory to grow dim." It was in this spirit that Dr. Knapp set himself to the task, and in the pursuit of it he has spent and been spent with reckless prodigality of love and labor. He is now engaged in preparing an annotated edition of Borrow's autobiographical work, "Lavengro" and "Romany Rye"—"really one book in two parts."

George Borrow was born at East Dereham, Norfolk, on July 5, 1803, while his father, the captain, was busy recruiting for his regiment. The child was baptized George Henry Borrow. It is worth

GEORGE BORROW.

From the picture in the possession of John Murray.

while to remember these entries in the parish register, because the erratic Lavengro was forever playing capricious and fantastic tricks with his name and with his age. Save in signing legal or official papers, he rarely used the name that was given him at the font, altho it is found on the fly-leaf of his earliest school-books. In 1823-25 he affected the name of "George Olaus Borrow" for a literary conceit. Afterward his epistolary and literary designation was simply George Borrow. In Ireland he was Shorsha, in Italy Giorgio, and in Spain Don Jorge. "As to his age," says his biographer, "he persisted, wilfully, in giving it incorrectly during the long period that reminded him of his struggles and his failures."

When he was twelve years old the lad was sent to the best school in Clonmel, to study Greek. It was here that he met the wild Irish gossoon, Murtagh, "who is supposed to have taught him Irish in exchange for a pack of cards." It was Borrow's delight to revert to this episode at every turn of his life. He was once a schoolboy at Clonmel, and at a bound he is an authority on Ireland!

It was at the Tombland horse-fair, and on the heaths and in the vales and dingles thereabouts, that the roving, adventurous youngster foregathered with his Romany cronies, in their camps between the Black Hills.

"Here were grouped the tents of the wanderers, set 'after the manner of Egypt'; and here began that series of dialogs, the weirdest and the grimmest that ever passed between human beings in Gypsy Dale or Mousehold, or elsewhere in all the queer retreats of this world."

In 1820 Borrow made the acquaintance of William Taylor of Norwich, the early and intimate friend of Southey, and who was the first, according to Lockhart, to instil into Scott's mind the love of poetry.

Taylor took a lively interest in Borrow, and gratuitously taught him German. He used to say, "What I tell Borrow once he never forgets"; and it was he who declared later that his inspired vagabond could translate with facility and elegance "twenty different languages before he was eighteen."

But Taylor's moral influence was pernicious. The present biographer lays at his door the failures and the mortifications of that "veiled period" in the career of Borrow which he foolishly strove to conceal under the specious guise of foreign travel—"all those years of buffeting with the unclean spirit."

It is apparent that at this time Borrow's bumptiousness had peculiar charms for him, and he flourished it with a fine scorn for all modesty and reverence, as well as for the captious Martineaus of this weary world. He writes: "If ever my health mends, I intend to live in London, write plays, poetry, etc., abuse religion, and get myself prosecuted; for I would not for an ocean of gold remain any longer than I am forced in this dull and gloomy town." He was just twenty-one when he wrote that—and a glaring ass.

It is not long before he is assaulted by fits of morbid melancholia, which presently assume the proportions of monomania. In "Lavengro" we find vague allusions to this strange malady; at first it is "The Fear," and afterward "The Horrors." It is frequently mentioned in his letters to his mother. He had an attack at Hamburg in 1833, at St. Petersburg in 1834, and in January, 1854, while on a visit to his kindred in Cornwall.

And then there is the "Veiled Period" in his life, to which his biographer recurs again and again, with explanatory comment. How many times did Richard Ford, in his letters, implore his friend to "lift the veil from those seven years"—the mystery that lay between 1825 and 1833? Ford wrote:

"I have often thought of the years over which you propose to drop a curtain. . . . No doubt it will excite a mysterious interest; but then it is open to any misconstruction that the *neccios y tontos* [ignorant and stupid people] may put upon it. I should give

some incidents of the interval, and not stall a curtain over so long a period. I am inclined to think that it must be too curious to be lost to mankind."

But Borrow persisted in amusing himself with his false light. He had given his readers to understand by his Bible and his gypsies "in Spain," that during that interval of eclipse he was traveling over Europe and the East, even to India, China, and the frontiers of Tartary. He "had lived in habits of intimacy with gypsies in strange lands." He had been in the south of France and Italy, and in the suburbs of Moscow. He "had heard the ballad of Alonzo Perez de Guzman chanted in Danish by a rustic in the wilds of Jutland." He had lived much among the Hebrew race, and was well versed in their ways and phraseology. He had "visited the principal capitals of the world," etc. One reviewer characterized him as a kind of Wandering Jew. But these voyagings and adventures were, for the most part, apocryphal and imaginary. That interval had been passed between Norwich and London, "doing hack-work for booksellers."

The "Veiled Period" was closed by the appointment of Borrow to proceed to St. Petersburg, "to assist in the editing of such parts of the Manchu Testament as we [the Bible Society] may choose to print." This was that affiliation of the "harum-scarum young man" with an awfully respectable body which so shocked and scandalized the Martineau blue-stocking.

In March, 1834, Borrow made a bold offer to the committee of the Bible Society, that (they consenting) he would undertake the distribution of one thousand copies of the Manchu New Testament in the benighted regions of the far East—"wandering, book in hand, overland to Peking, by way of Lake Baikal and Kiakhta, with side-glances at the Tatar hordes." The respectable gentlemen of the committee were astonished and perplexed by the romantic audacity of their agent; it took them a year to make up their minds to accept. But when Borrow at last applied for a passport to cross European and Asiatic Russia, the passport was refused, and the project nipped in the bud.

But Borrow always *believed*, says Knapp, that he went to Kiakhta, China, and over the East; and so did the readers of his books. "Did it ever strike you," wrote his Danish friend, Hasfeldt, "how much you resemble the good hidalgo, Don Quixote de la Mancha? To my notion, you might readily pass for his son."

Riding to Madrid, Borrow halted for three days at Merida, where he attended a gypsy wedding, and was crowned king by the Romany folk. At Almaraz he held that dialog with the rustics at the village inn which is so appropriate to the people and the country. Knapp exclaims:

"What a picture! The huge fire, the bustling housewife, the hunter with his musket, the shepherds with their dogs, and the beggar, who, after demanding charity, sat down among them and joined in the conversation. And such a conversation! . . . 'I would I were a wolf!' What a magnificent ruin is the rustic Spaniard!"

At Cordova he tarried eleven days, set out for Madrid on the 20th, and reached his destination on the 26th of December. How he ever succeeded, practically alone, says Knapp, all those three hundred and odd miles from Seville, in threading the defiles of the Sierra Morena, the dreary and frigid plains of La Mancha, with Carlist cut-throats and Spanish banditti hovering over his path, will never be told.

His heart was always with the gypsies, even when his mother was congratulating the widow Clarke on having brought him to heel. It was hard for him to forego his liberty, his right to roam about the world as freely as he had done these seven years, to wander over England without *impedimenta*, and to sit under hedges, learning strange old words from some Romany Ursula, while the swarthy crew of her tribe watched and grinned after their kind. Who would be a Giorgio when he could be a

Romany Rye, and say with Jasper, as aforetime, "There's the wind on the heath, brother?"

"What would one of your sleek, solemn, black-coated weaklings have wrought among the traditional *majos manolos* and *chulos*—boys of the ring? . . . What would kind words and Christian smiles have achieved among such men as you find between the Larapiés and the Calle de Toledo? We [says Knapp] met them first in 1867, tamed by thirty years of civilization. . . . What must they have been in '37, with their red sashes bristling with knives, their cloaks hiding an arsenal of sinister tools?"

William Bodham Donne, writing of "Lavengro" in Tait's *Edinburgh Magazine*, remarked that the public had been looking for a second Marco Polo, and were presented instead with a nineteenth-century De Foe. His gypsies, his Armenians, his Jews, his Methodists, his tinkers, his innkeepers, his bruisers, his horse-tamers, were representative men.

The Rev. Mr. Berkeley tells of the attempt of the old gypsy woman to poison Lavengro, and how the effects of it followed him through life. He would sit silent and melancholy for hours, refusing food, not answering when spoken to. These were his "Horrors." At other times his philosophy was a healthy one—"Walk five miles a day; learn to box, and keep a civil tongue in your head."

On the 26th of July, 1881, George Borrow, being in his seventy-ninth year, was found alone and dead in his cottage at Oulton.

Theodore Watts-Dunton, in his "Reminiscences," recalls his last meeting with the strange wanderer whom he loved so well. It was on Waterloo Bridge, in a sunset of impressive and memorable splendor:

"We talked of 'Children of the Open Air'
Who once in Orient valleys lived aloof,
Loving the sun, the wind, the sweet reproof
Of storms, and all that makes the fair earth fair;
Till, on a day, across the mystic bar
Of moonrise came, 'the Children of the Roof,'
Who find no balm 'neath evening's rosiest woof
Nor dews of Peace beneath the Morning Star."

"DANGERS OF BUYING LITERATURE BY THE LABEL."

SOMETHING of a literary tempest has arisen over a dispute between Mr. John Brisben Walker, owner of *The Cosmopolitan*, and Mr. Paul R. Reynolds, American agent of Count Tolstoy. Mr. Walker recently contracted with Mr. Reynolds for the publication, in *The Cosmopolitan*, of Tolstoy's new novel, "The Awakening." The publication was begun in the April number, but shortly disagreements arose as to the editor's rights under the contract. It appears from Mr. Walker's statement in the August *Cosmopolitan* that he claimed the right to suppress and alter certain passages in Count Tolstoy's story which seemed to his judgment unfit for the pages of a magazine designed for general circulation.

Mr. Ernest H. Crosby and other friends of Count Tolstoy have made a public statement through the press, claiming that the proprietor of *The Cosmopolitan* has used unwarrantable liberties with a work of literary art and has so altered its form as to render it a travesty on Count Tolstoy's real work. The dispute has resulted in the discontinuance of the story in the August number, and a suit for damages to the amount of \$100,000 has been begun by the owner of *The Cosmopolitan*. In an editorial upon the subject, the *New York Commercial Advertiser* extracts some instructive lessons from the imbroglio, attributing the cause of the trouble to literary methods that originated with the late Robert Bonner.

"The novelist's friends declare that no amount of money could repay him for the damage he has sustained by the Bowdlerizing the novel thus far has suffered at the hands of the magazine editor, anxious for Tolstoy's name, but not willing that Tolstoy's

work should appear in the chaste columns of his magazine, except as altered by himself.

"Whatever fault or blamelessness there may be on either side, the trouble arises from the habit of buying literary wares by the label and not by the sample, a practise begun and carried out with great success by the late Mr. Bonner. . . .

"*The Ledger* had no artistic ambitions. Its problem was, therefore, simple, since the Fanny Fern school of literature was then the popular one with all the reading public and with the writers. When the modern commercial magazine tries to deal in literature with more complex artistic standards, there comes a clash. If it publishes novels as certain writers of repute write them, it offends certain subscribers, called, by the artistic, philistine: But the magazine does not hesitate between circulation and artistic necessity. Rather than displease its subscribers it alters manuscripts so as to allow children to spring suddenly into being from the circumambient atmosphere, rather than admit that heroes and heroines ever have children without marriage. It excludes discussion of the influences that would change a high-minded young man into a libertine, preferring to represent the deterioration as coming suddenly out of original sin, and so on.

"Sin may be used as an ominous background. Characters with dark curling mustachios and shifty eyes may indulge in sin, to their own undoing, but none that has the faintest claim to starrng in the piece is permitted to wallow in sin, except in the reformed, repentant stage—tho now and then a harmless, amusing rascal, like Weir Mitchell's François, is tolerated.

"Whether problem novels are good for the human race admits of discussion. But so long as problems attract many writers, and repel many readers, the Bonner method of buying literature will continue to breed confusion between writer and editors."

A Dictionary of College Slang.—Dr. Babbit, of Columbia University, is preparing a dictionary of college slang, and desires the cooperation of students and college men generally in making it as complete and accurate as possible. He will be glad to receive slang words in use in the various colleges, together with their definitions, and any other facts of a kindred nature. Germany has six such dictionaries, but the one existing American dictionary of slang has not been revised since 1853. Of this enterprise *Literature* says:

"The differentiation of the dialects of Yale and Harvard is believed to be as clearly marked as that of the speech of Georgia and Mississippi negroes. In days of yore we ourselves remember we have heard a senior of high scholarship state that he would 'rather scoop the valedictory than yank a fellowship,' because the valedictory demonstrated his popularity with his classmates, whereas the fellowship merely resulted from his 'cinch' with the faculty. 'To scoop' and 'to yank' were favorite infinitives, of college origin, and were rarely split. 'Cinch,' of course, was exotic, and has become a part of the common speech of every-day life."

NOTES.

A SET of the schoolboy newspaper *The United Service Chronicle*, which Kipling edited, has just brought \$500 at a sale in London.

A NEW uniform edition of Mr. Hamilton Wright Mabie's works is shortly to be published. Few books are more delightful and suggestive to the literary student than his "Essays in Literary Interpretation" and "My Study Fire."

One of the first fruits of the new alliance in the publishing world (see THE LITERARY DIGEST, June 24) is a new encyclopedia, to be called "The Harper-McClure Encyclopedia." It is to be considerably larger than any similar publication.

A NEW illustrated biography of Shakespeare by Mr. Hamilton Wright Mabie is announced by *The Outlook*, New York, as its most important serial feature for 1900. It will be in twelve parts, beginning with the first week in January. The purpose is to "make more clear the genius of the English-speaking race," through this study of its greatest creative spirit. The portraits and other illustrations are to be profuse.

It is safest—in London second-hand book-stalls at least—to look into a book before buying it. A London bookseller has just confessed in court that he and others had the habit of "buying up old books and sticking covers on 'em." It appears that the plaintiff had found, on buying "Nicholas Nickleby" and "Oliver Twist," that there was never a word about Nicholas and Oliver in them.

SCIENCE AND INVENTION.

HOW LONG HAS LIFE BEEN ON THE EARTH?

THE estimates of the earth's age made by experts in different sciences, each from the data of his own particular science, have long been notoriously at variance. The geologist has wanted a long time for the formation of his strata, while the physicist has been unwilling to grant it. The biologist wants even more than the geologist, for he realizes that in the time necessary to evolve a man from an ameba one million years are "but as yesterday." Scoffers find in this disagreement of the savants reason for rejecting all their conclusions. Sober-minded lovers of all the sciences believe that from an ultimate reconciliation of the opposing views will come a more accurate knowledge of the earth's origin. Dr. Klein, who writes in *Gaea* (Leipsic, August) of some new estimates made from the physical standpoint, seems to regard them as weakening the hypothesis of organic evolution. After referring briefly to the estimates made by Darwin and his school and by the geologists, Dr. Klein, who has made a study of the subject for many years, says:

"Recently physics and astro-physics have furnished still further data toward making an estimate of the earth's age that is confined within somewhat narrower limits. The celebrated physicist and mathematician, Lord Kelvin, has recently made some investigations on this subject that are of the greatest scientific authority and hence of universal interest. They show that in estimating the age of the earth we must assume a far narrower limit than many geologists have thought necessary, and that the earth has not been fitted for the dwelling-place of organic life during an indefinitely great number of millions of years.

"A maximum limit for the age of the earth as a stable molten globe can be deduced from its shape. After the withdrawal of the moon from the fluid part of the earth, the rotation of the earth must have become slower, so that several thousand million years ago the duration of day and night was shorter than at present. But if at that period the fluid earth had solidified, the polar flattening corresponding to the rotation-speed would have been preserved to this day. But this is not the case. From this standpoint I have shown that the rotation period of the earth at the time it solidified could in no case have been less than $17\frac{1}{4}$ hours, and that the time at which the solidification took place was probably 1,200,000,000 years ago, and could in no case have been more than 2,400,000,000 years ago. The latest estimates of Lord Kelvin agree with this, for he concludes that we can assert with certainty that the earth 5,000,000,000 years ago, and probably also 1,000,000,000 years ago, had not solidified. These are, then, the outside limits that must be assumed in this discussion, and the question now arises whether they can be made narrower and more certain. To this end Lord Kelvin has been investigating the radiation of the earth's heat, and finds, making use of experiments made in North America on the behavior of rocks, especially of diabase, at very high temperatures, that the age of the earth, from the standpoint of the physicist, is not greater than 24,000,000 years. The solidification of the molten mass of the earth probably took place in such wise that the interior first became solid, down to a large space near the central point, where the dense metals, platinum, gold, silver, copper, etc., that remain fluid under very high pressure, were gathered. On the liquid lava-sea of the surface were formed by radiation white-hot flakes or spots, which in time became spaces surrounded with glowing liquid, and these quickly grew larger. In a very few years the temperature of the solid surfaces must have been greatly lowered, but as long as it exceeded 1,200° the hot vapors of zinc, mercury, sulfur, water, and other substances must have surrounded it as an atmosphere. The last substance to remain in the warm envelope of air was water vapor, and, as the temperature of the crust went gradually further, the first rain fell, probably in torrents. Free oxygen, as Lord Kelvin points out, was probably not present in the early atmosphere, in which case it must have been furnished by plants, since there are plants that grow under warm water, and, under the influence of sunlight, extract from the water and the carbonates dissolved therein hydrogen and carbon

to build up their substance and release free oxygen in the water, by which it is given up to the atmosphere. But hundreds of thousands of years must have passed before the quantity of atmospheric oxygen obtained in this way became large enough to support animal life. In any case, provided sunlight were present, some hundred centuries after the solidification of the earth's crust it was fitted to support animal and vegetable life. The only question is, whether at this time the sun was in a state to radiate sufficient heat and light. This question is now answered in the negative by Lord Kelvin, as it was earlier by Von Helmholtz and afterward by Simon Newcomb. If the earth's crust had solidified only 50,000,000 years ago, even then the sun was not in a condition to send out the necessary heat and light. Probably not more than 20,000,000 or 30,000,000 years have passed since the sun began to emit enough heat to support the slightest organic life on the earth. So, on physical grounds, the age of the organized life of the earth can not well be greater than 20,000,000 to 30,000,000 years—a fact with which all hypotheses regarding the developmental history of terrestrial organisms will have to reckon."—*Translation made for THE LITERARY DIGEST.*

FIREARMS TO PREVENT HAIL.

THE use in Europe of mortars of special design to prevent damage from hail-storms has several times been mentioned in these columns, and has recently been alluded to more than once in the daily press. An illustrated article on the subject, contributed to *La Nature* by Lieutenant-Colonel Delauney, of the French army, enables us to give some details of this custom,

which appears to be founded on sound scientific principles and to be practically successful. Says Colonel Delauney:

MORTAR FOR PREVENTING HAIL.

"For this purpose, a special form of fire-arm is used; it is a sort of mortar set in a wooden base and having fixed to its mouth a sheet-iron cone more than 2 meters [$6\frac{1}{2}$ feet] high. The mortar is charged with 100 grams [1.550 grains] of powder, well tamped down; the cone is put in place and then the piece is fired. The detonation produces a considerable disturbance of the air, owing to the cone, whose vibrations are ample and prolonged, and which acts like a gigantic organ-pipe. To this action is added that of the gases produced by the deflagration of the powder, which, being hurled into the air, increase the disturbance to a considerable degree.

"If a hail-storm is in process of formation and a mortar of this kind is fired in the neighborhood, the meteorological laboratory is turned upside down; the hail-stones can not form, and, in place of these dangerous projectiles, a heavy shower of rain will fall on the earth. Styria and Carniola were the first countries in which these mortars were used to prevent hail, and M. Ottavi, the editor of *Il Coltivatore*, an Italian agricultural journal of high reputation, assures us that in these two countries the vineyards defended by mortar have never been injured by hail for the last three years.

"The example set by Styria and Carniola has just been followed by Venetia and Piedmont; a society of defense against hail by means of cone-shaped mortars has been formed in Corregliano in the province of Trevisa, and other similar societies have been established at Arzignano, at Barbarano, and in the province of Vicenza.

"It appears that one mortar is able to protect against hail a circular space 500 to 750 meters [1,600 to 2,500 feet] in diameter. It is therefore sufficient to place these pieces of artillery in such fashion that they are distant from each other about 1 kilometer to $1\frac{1}{2}$ kilometers [two thirds of a mile to one mile].

"The price of one of these mortars is about 150 francs [\$30], but this expense may be lowered, it appears, by the use of cast-iron instead of bronze.

"However this may be, this attempt to fight the devastating scourge of hail is certainly worthy of note. Our Southern vine-

yards, which suffer so much from this cause, might try these mortars, and if the results should be satisfactory, they would doubtless be widely adopted."—*Translation made for THE LITERARY DIGEST.*

DO DOCTORS CARRY DISEASE?

MANY people believe that this question should be answered in the affirmative, at least so far as the family physician is concerned, for he rarely takes the elaborate precautions that the surgical specialist finds necessary. Those who argue thus, however, are laymen. The professional man is quite sure that the transmission of contagion by the person whose business it is to put a stop to it occurs rarely, if ever. The question crops out now and then, even in the medical press, and, alluding to a recent instance, *The Hospital* (London) speaks editorially as follows:

"It would be quite unfair to argue from the elaborate methods adopted by the surgeon to secure asepsis that the physician who does not take all these precautions is a source of danger. The cases are not analogous, for when the surgeon in old days carried infection from operation to operation he did so by means of what was practically an inoculation; he actually inserted it into a raw wound. Still, that there is some risk of carrying infection in one's clothes, if one is careless and allows them to come in contact with an infectious patient, must be admitted. If cabs and omnibuses can be sources of infection, why not doctor's coats? So far as the hands are concerned, ordinary antiseptics and measures of cleanliness ought to be sufficient to prevent them ever becoming vehicles of disease. But the clothes are more difficult of control, and if dust is to be regarded as infectious it must sometimes be impossible to avoid transporting infectious particles from house to house. Moreover, there are other ways in which a person who is much exposed to certain infections may carry them about. It is pretty well recognized that certain pathogenic microbes, notably those of diphtheria, may make for themselves a home on the mucous membrane of the air passages, as, for example, in the nose and pharynx, where they may continue to grow without producing any sign of disease. Whether this is due to a gradually acquired immunity on the part of their hosts or to a loss of virulence on their own part it may be difficult to determine, but it seems clear that, however slight their virulence may be in regard to the person who carries them, they are capable of very quickly developing virulence if implanted in some one else, and this is a mode by which infection may possibly be spread by medical men, and still more probably by nurses, and one against which it seems almost impossible to guard. Indeed, we should look upon the nurse or the mother, who spends long hours in the sick-room, as much more likely to become a carrier of infection than the doctor, who merely looks in now and again. Still, the risk is there. On the whole, it would seem that the danger of carrying infection from case to case lies principally, altho not entirely, in the possibility of carrying dust from house to house. The hands can always be kept clean, the nails can always be kept well trimmed, and probably few doctors get so soaked in infection that their mucous membranes become culture media for its germs; but clothes are a difficulty. Clearly, a medical practitioner ought to be a very spruce and well-brushed individual. A frowsy doctor may become a danger. But then he ought to be an anachronism."

Do Anesthetics Produce Unconsciousness?

This question, which was recently discussed in these columns, is thus reviewed in *The Hospital*: "There are two sets of facts which suggest that, however little we may remember what has happened, consciousness is not entirely abolished even while fully under the influence of an anesthetic. One of these has to do with the horrible feelings with which some people maintain they have been oppressed while under ether or chloroform. This, however,

is a bit of evidence to which we need hardly attribute much importance. These feelings are probably 'relics of the transition stage, either when passing into or when emerging from anaesthesia'; and, as in dreams, what seems to have been the experience of an hour may probably have been the outcome of a sensation lasting not more than half a minute or even less. Other evidence as to the retention of consciousness is derived from the undoubted retention of all the signs of consciousness, as shown by gestures and cries, which is by no means uncommon during anaesthesia. Now we shall probably be perfectly right in saying that such signs of consciousness need not imply the action of the highest centers, being probably of the nature of reflex action carried out on a much lower plane, and that their presence is no proof that 'we' feel. But so much depends on how we define consciousness! To say that one's consciousness is the sum of one's memories suggests a path out of the difficulty, and should make one quite easy about the signs of suffering exhibited during anaesthesia—for if not remembered they do not matter. During anaesthesia the shutters are up, the office is closed, and the pigeonholes in which memory is stored away are inaccessible to sensation and to pain. A simple conception enough; but probably far too simple to be true."

DIFFERENCE BETWEEN AMERICAN AND BRITISH LOCOMOTIVES.

THE excitement caused by the so-called "industrial invasion of England" by American manufacturers brings up afresh the whole question of American *versus* British locomotives, since the exportation of locomotive engines from American shops, to fill English railway orders, has formed no small part of this "invasion." Many of those who stoutly maintain the superiority of English locomotives on the one hand, or of American locomotives on the other, would probably be at a loss if asked to state in plain language the chief points of difference between the two types. To the assistance of all such comes Charles Rous-Marten, who in

ENGLISH EXPRESS LOCOMOTIVE, MIDLAND RAILWAY.

Courtesy of *Engineering News*.

an article in *The Engineering Magazine* (August) tells just what they ought to know.

Mr. Marten begins with the foundation of the locomotive—its frame—and tells us that machines of the English type are framed with plates and the American with bars. The curious diversity of opinion regarding these two methods is illustrated by Mr. Marten by the following anecdote:

"An order had been given [by a British colony] for some American engines, it being held that these would be most suitable to colonial roads hastily and cheaply constructed, with light permanent way, steep gradients, and frequent sharp curves. A British engineer took exception to this view and contended that the superior strength and rigidity of their plate-framing rendered British engines far safer and more economical on a rough and light road, which necessarily made the utmost demand upon stability and endurance. He condemned the American bar-framed locomotives as 'loose-jointed affairs resembling so many wicker baskets.' He was promptly answered by an American engineer,

who twitted him with utter ignorance of the primary conditions involved. 'It is quite true,' he said, 'that our American engines may be compared to flexible wicker baskets—but *therein lies their merit*. They are so flexible that they glide easily over rough roads and round sharp curves on which a stiff, unyielding British engine would soon knock itself to pieces. It is the remarkable flexibility of an American engine that renders it so supremely suitable to new countries with their light-built and curved lines.'

EXPRESS LOCOMOTIVE, ATLANTIC CITY RAILROAD.

This engine, built by the Baldwin Locomotive Works on the Vaucrain compound system, hauls the fastest train in the world, regularly making the run from Camden to Atlantic City, 55½ miles, in 50 minutes.

Courtesy of *Engineering News*.

"Now the matter might conveniently have been left here . . . but a new and fearful complication was introduced by a second American engineer, who 'went for' both the previous writers 'with the gloves off.' The bare suggestion that the American engine was a 'loose-jointed affair,' nay, even that it was more flexible than the British machine, filled him with derision. Every child knew, he practically declared, that the bar-frame of an American locomotive, instead of being more flexible than the plated frame, was infinitely stronger, stiffer, and more rigid. Therein, he maintained, lay its merit. You did not want an engine to go bending and twisting itself all over the place, however rough the road might be. Indeed the rougher the road the less the engine ought to bend and wriggle. What you wanted was in effect an engine that was so strong and stiff that it could ride roughshod over all curves and inequalities and weak rails and slight permanent way."

With the description of this "triangular duel" Mr. Marten leaves the question, which, he remarks, may be regarded as still unsettled.

The next point of difference relates to the position of the external working parts, which in English engines are "inside," or beneath the boiler, and in American engines are outside the wheels. The advantages of the former plan are: economy of space (an important point on English roads, with their low tunnels and high station-platforms), protection from cold, and neatness of appearance. The American plan has in its favor that the working parts can always be reached and are constantly visible. Says Mr. Marten:

"Practically the issue resolves itself into that of inside *versus* outside cylinders. For if the cylinders be outside then most of the working gear will have to be outside also, and *vice versa* . . .

"Few points in locomotive construction have been the subject of stronger dispute than this one of the position of cylinders. The advocates of the outside position claim that by placing the cylinders outside the frame, not only are they far more easily accessible, but also a straight driving-axle can be used and the crank-axle, with its essential weakness of form, can be dispensed with. It is pointed out that if a double-crank axle be set up on end and regarded as a column it manifests about the weakest shape that could be devised, and one which possesses the minimum of strain resisting capacity, especially as compared with a straight axle consisting of one homogeneous bar of steel.

"All this is practically indisputable. But the reply, as usual in such engineering cases, is that the unquestionable advantages may be too dearly bought."

To condense somewhat the disadvantages of the outside position, as set forth by Mr. Marten, he points out that the cylinders in this type are so far apart that the alternate action of the pistons sets up a so-called "punching" or "boxing" action, that the outside cylinder is more exposed to cold, and that the position necessitates stronger and more expensive construction. Some advocates of the inside cylinder even deny the superiority of straight axles and assert that the greater twisting force to which they must be subjected is harmful.

The next point, or rather group of points, is that while the English desire the greatest durability, even at increased cost, we prefer to use materials which, tho not the best, are as good as we want them to be, and cost less. Says the writer:

"The American engine while it lasts is quite as good a machine and quite as efficient per unit of nominal power as the British locomotive, only it will not last so long. And the American engineer says with much emphasis and reason that he does not want it to last so long because it must in a decade or little more become virtually obsolete and block the way of more modern and up-to-date machines with which he would like to replace them. And so he contents himself with his cheaper steel tubes and fire-boxes and gets as much work out of them as his British *confrère* does out of his more expensive brass or copper. By the time the steel tubes and boxes are worn out he is almost ready for a new engine. It is no doubt true that brass or copper tubes and copper boxes are more economical in respect of repairs. But as in the case of cylinder-position the engineer, British or American, holds that his own method, if it has some disadvantages, is on the whole a better one."

Among minor differences noted by Mr. Marten are the large and comfortable American cabs, whose superiority seems to him "indisputable," and the movable or "bogie" truck, both of which, however, are now used on many English engines. In chimney construction we have given up our once distinctive shapes and adopted the straight British flue. Says Mr. Marten in conclusion:

"In short, the distinctive features of the British and American systems are now but few. Their tendency is to become fewer still. . . . There is, I think, a growing tendency toward assimilation between the systems of the two English-speaking nations, so far as this is feasible in view of the difference in the conditions to be satisfied. England has not the long journeys of America or the American loading gage space which would permit of large vertical or lateral extension of existing maximum dimensions. But I certainly anticipate that the present importation of the Midland, Great Central, and Great Northern line of American Mogul goods engines will have an appreciable influence upon the future of British locomotive engineering."

FOOD VALUE OF ALCOHOL.

THE experiments of Prof. W. O. Atwater, of Wesleyan University, which have been described in these columns, and which, as he believes, show that alcohol acts in some degree as a real food, have been widely discussed, as was inevitable. The sensational character of such an assertion by a reputable investigator who holds a chair in a college under denominational supervision, controverting, as it does, the dictum of almost every textbook used in our schools, is self-evident. In an editorial on the subject, *Modern Medicine* (July) expresses the opinion that Professor Atwater can not uphold his assertions, even granting the correctness of his experimental data. It says:

"Professor Atwater claims to have proved that alcohol is a food to the extent of two or two and one-half ounces per diem, admin-

istered in divided doses. . . . Professor Atwater says that alcohol does not form tissue.

"If alcohol does not form tissue, it does not repair the body. If it does not repair waste, if it can not be used to build up the bodily machine, it is proper that some competent authority should be asked to explain how it is to be considered a food.

"Starch, sugar, and fats become foods or fuels only through their assimilation. Abundant physiological evidence attests that no substance can act as a food or as a true source of energy unless it has first entered into the composition of the body. It must be assimilated. . . .

"Experiments have clearly shown that fat, sugar, and starch must all alike be converted into the form of glycogen and enter into the muscle structure before they can become a source of energy.

"Professor Atwater tells us that alcohol can not form tissue, hence the query is pertinent. How can it be a source of vital energy? The body does not burn food as a stove does fuel. Food can be called fuel only in a highly figurative sense. The oxidation of food in the body does not take place directly. Food is assimilated, becoming a part of the tissue. Oxygen is also assimilated, entering into the composition of the tissue along with the food elements under the action of special organic ferments brought into play by nervous impulses received from the central ganglia.

"The molecules of these residual tissues which form the storehouse of energy in the body are rearranged in simpler forms, thereby giving up a portion of the energy which holds them together in the state in which they exist in the tissues, and this energy thus set free appears as muscle force, mental activity, glandular work, and various other forms of functional activity. . . . At present we must hesitate to accept as conclusive any experiment which gives alcohol a food value, and which does not at the same time state well-known and thoroughly established physiological facts to the contrary."

INCANDESCENT GAS BURNERS, OLD AND NEW.

THE popularity of gas-lighting by incandescence has now become firmly established, but very few people know the composition of the "mantles" in their burners, or the principle on which they operate. These burners are generally known as "Welsbach" burners, because their mantles are made on the principle, discovered by Baron Auer von Welsbach, of saturating a fabric with a solution of rare mineral earths and then burning out the fabric, leaving a delicate crystalline skeleton. The rare earths considered most effective are thoria and ceria, and they are contained in the mineral monazite, deposits of which, from having been almost worthless twenty years ago, have now attained great value. A large number of interesting facts regarding the mantle system of illumination is contained in a paper by Vivian B. Lewes, read before the Institution of Gas Engineers on May 3 last and printed in *The Progressive Age* (London). It had been supposed that a very small admixture of ceria was necessary for good results, but this has been disproved, Mr. Lewes tells us, by the recent experiments of Mr. A. A. C. Swinton, who placed mantles of different composition in a Crookes vacuum-tube and "bombarded" them by passing an electric discharge through the tube. The ceria makes the mantle heat more rapidly, but it also cools quicker and gives very little more light. Another mantle consists of alumina and the oxids of chromium, but Mr. Lewes is of the opinion that the thoria mantles are preferable.

Attempts have been made recently to make mantles on another than the Welsbach principle of saturating a fabric and then burning it out, namely, by making the ingredients into a paste with some gummy substance, drawing it out into threads and then weaving these into a fabric, burning it out as before. The latest substance used is the "artificial silk" of Chardonnet, several times described in these columns.

There seems to be every probability, Mr. Lewes thinks, that

mantles of this type are to play an important part in lighting. Another new feature, he says, is the doing away with the asbestos thread and loop, which has always been a weakness in the fabric, the top of the mantle being now sewed around with fibers of the same character as those of which the mantle itself is made.

Treatment of Disease with High-Frequency Currents.—Professor Apostoli has recently been experimenting in the treatment of various diseases by means of very rapidly alternating electric currents, and with notable success in some cases. His results, which were communicated to the Academy of Sciences in Paris, are thus summarized in *The Electrical Review*: "No less than 24,371 applications of the current were made to a total of 913 patients. The general symptomatic results noted were as follows: Progressive restoration of the general health, recuperation of energy, return of the appetite, better sleep, improved digestion, and the reappearance of good spirits, and endurance of fatigue. In arthritis, in all its forms, the current seems to be of the greatest utility." The professor finds that the current is harmful in acute rheumatism, but efficacious in the chronic form; it is notably effective in gout, altho it sometimes brings on acute attacks when first used; it gives good results also in neuralgia, sciatica, calcareous formations, varicose veins, piles, dyspepsia, and asthma. In cases of obesity dependent on gout, it benefits the patients by regulating the general distribution of nutrition. The only directly injurious effect of the high-frequency current reported by Professor Apostoli is the bringing on of eczema which is often attributable to it. "In short," says the writer in *The Electrical Review*, "the high-frequency current is a very valuable treatment for gout in all its manifestations. It is preeminently a cell medicine, and operates both to stimulate and regulate the general nutrition."

Military Motor Carriages.—According to *The Scientific American*, a military auto-car called a "motor scout" was exhibited at the Automobile Club's recent show at Richmond, England. "It consisted of a quadricycle fitted with a 1.5 horse-power petroleum motor. It is convertible, carrying either two persons or one person, and a light Maxim gun. The gun is mounted in front over the leading wheels, and it is arranged so that it can be fired with the vehicle going at full speed. Below there is a tray sufficient to store 1,000 rounds of ammunition. Another type is termed a 'war motor car.' According to *The Mechanical Engineer*, it is plated with armor and has a ram both in front and behind. The armament consists of two quick-firing Maxim guns carried in two revolving turrets. The steering is done by the aid of information obtained by mirrors, so that the crew need not expose themselves. The car is driven by a four-cylinder Daimler motor developing 16 horse-power. An electric searchlight is provided, the dynamo being worked by the main engine."

SCIENCE BREVITIES.

A GYROSCOPIC device for measuring the oscillation of ships, made by a firm in Milan, Italy, is described in *The Electrical Review* as consisting of "a small electric motor mounted in gimbals like a ship's compass with its armature running in a vertical position at a very high speed. As the ship rolls the armature maintains its original position, while the frame supporting the gimbals rings follows the motion of the ship. Suitable scales and pointers are provided."

THE official figures of the Treasury bureau of statistics, as quoted by *The Journal of the American Medical Association*, "show that there were imported last year in the United States 1,539,056,750 grains of quinine. As there were practically no exports of this article, this means something like twenty grains for every man, woman, and child in the country. In 1807 the average import price in the United States was a trifle more than sixteen cents an ounce. The statement comes from Washington, also, that during the last year, or thereabouts, more than 125,000,000 grains of quinine have been consumed by American soldiers suffering from various types of Southern fevers. In some instances men who were in the hospitals in Cuba and Puerto Rico were dosed regularly with three hundred grains a week. Hardly an individual, it is said, failed to take the drug during some period of his active service, either as a curative or a preventive. Furthermore, the claim has gained credence that Americans consume one third of the quinine of the world."

THE RELIGIOUS WORLD.

THE ARCHBISHOPS' DECISION IN THE
ENGLISH RITUAL CONTROVERSY.

THE decision of the Court of Archbishops, sitting at Lambeth, that the ceremonial use of incense and the processional use of lights are neither enjoined nor permitted by the Anglican prayer-book, meets with general approval in England, altho of course the more extreme members of the ritualistic party are far from pleased. The decision is based purely upon the legal merits of the case in the Church of England, and the archbishops make it clear that they do not condemn these Catholic usages *per se*. Indeed, Dr. Temple, the Archbishop of Canterbury, states in his decision that it would be impossible for him to condemn incense, which was prescribed in Jewish ritual "by divine ordinance," as an undesirable or inappropriate adjunct of worship. Even now, he says, the laws of the Church of England would not exclude its use in great ceremonies of state, in which the sovereign requested the primate to authorize its use; and it may be used also extra-ceremonially "to sweeten the church." The use of "lights" or candles carried in religious procession is also condemned for the same reason, as being not in accord with English church law.

Some misapprehension of the meaning of this decision is to be noted in a number of journals, which suppose that all use of "lights" and processions is forbidden. The fact is that lights have been in use on the altars of English cathedrals and some country churches since the Reformation, and that at the present day their use on the altar is so common as to excite little or no comment. Even so well-informed a paper as *The Independent*, however, says of the decision that "it declares positively against the use of lights, of incense, and of processions."

The English papers for the most part regard the decision as a wise one. *The Saturday Review*, which is strongly anti-Puritan and conservatively high-church in its sympathies, says:

"All the arguments for the ceremonial use of incense, and the carrying of lights in procession as catholic and edifying practises, remain absolutely unaffected by the legal prohibition pronounced by the primates. The fanatics who denounce every unfamiliar rite as superstitious or idolatrous will find little satisfaction in this judgment. So far is incense from being condemned as evil, that 'even now the liturgical use of incense is not by law permanently excluded from the church's ritual.' If the ecclesiastical atmosphere were less heated, the archbishop suggests that this latent authority might even now be used. 'Many things might become probable when our toleration of one another has risen to a higher level which are not probable at present.' Only one thing can give the archbishops' decisions the character of a Protestant triumph, and that is the disobedience of the ritualist clergy. It is indeed very difficult to see how disobedience could be excused. It is certain that no weightier confirmation could be given to the popular charge against the ritualists that they are essentially lawless, following no better authority than their own preferences. We would earnestly press on the clergy concerned to consider calmly the position in which they are placed."

The Spectator says:

"Those who throughout the present troubles and discontents in the church have held fast to the belief that the Court of the Archbishops would prove a tribunal competent to provide the necessary discipline for the church, may fairly feel their faith justified by the admirable decision given on Monday in regard to the liturgical use of incense and the carrying of lighted candles in processions. Nothing could have been wiser, more moderate, and yet firmer in tone, and, in a word, more eminently judicial, than the judgment read by the Archbishop of Canterbury. That the decision will be obeyed even by the most extreme ritualists we can not doubt. To think otherwise is to assume that the men who lay most stress upon episcopal authority, and whose whole

theory of church government and discipline is based on the right of the bishops to direct the church, are willing to flout that authority and to declare that they will only obey when decisions are consonant with their own particular theories. But that would be pure anarchy, and anarchy of a kind which should be specially odious to the advanced High Churchmen."

The London *Speaker* (Liberal) thinks that the ultimate outcome of the ritual trouble will be disestablishment, for it does not place much confidence in the obedience of the ritualistic clergy:

"The archbishops have shot their bolt against Mr. Westall and Mr. Ram. Mr. Westall has lost no time in assuring his friends that, unlike the jackdaw of Reims, he is not one penny the worse, and that he cares no more for the primates than he cared for his diocesan. So long as that diocesan, the Bishop of London, protects him from prosecution, he will, no doubt, continue to disregard the spiritual power which he promised to obey. Another clergyman, Mr. Otley, has also expressed contemptuous disregard for archiepiscopal opinion. Laymen will be puzzled to explain Mr. Westall's conduct. He appeared by counsel before the archbishops, thereby recognizing their jurisdiction as arbitrators between the Bishop of London and himself. Having done so, and lost his case, he defies the authority he had acknowledged, and announces that he shall do as he pleases. Dr. Cobb, on the other hand, who was not a party to the proceedings, and is therefore not bound by the award, declares that he will submit to the views of the archbishops. It is possible that the example of so prominent a ritualist may be generally followed, and that these 'paternal admonitions' may check the growth of some superstitious practises in the Church of England."

The Rev. F. B. Meyer, a London dissenting minister who has lately been in attendance at the Northfield Conference, regards the ritual controversy as the most momentous issue in English history, and believes that the obedience or non-obedience of the clergy will decide the question of disestablishment within a few years. He is quoted in the Boston *Transcript* as follows:

"The question arises, Will the ritualists acquiesce? There was never a greater question, at least religious question, before the English people. Will the ritualists acquiesce? The answer to that God alone can give. The ritualists defied the people in privy council. Will they obey the church in the archbishops?

"If they do acquiesce the establishment in England is secure for many generations to come, and the power of the Church of England will be even greater than it has been. And, in spite of the controversies, it is stronger now than it ever was before. You free Americans here seem to have no idea of this power. You ought to be a free churchman in England, as I have been, and you would learn it soon enough.

"If the ritualist party does not acquiesce, disestablishment will come inside of a decade. Think of that, and see if you can understand the tremendous issues involved. The ritualists may give in and so save the establishment. Altho on the outside, I have some inside sources of information, and I can not help believing the ritualists will make the best of it and obey. The next three months will tell. Watch affairs for that length of time. The enormous issues involved warrant your thought and attention, even if you are the busiest people on the globe."

Christian Work (undenom., New York) says:

"The moral effect of this decision, which does not amount to more than an executive order interpreting English canonical law, and does not have the force of a canonical court decision, will be limited in part by the extreme ritualists, who would rather disobey it and take chances of a further or final interpretation, than give up their practise of the sensuous and esthetic in ritual on the instant. The only way in which the practise can be suppressed is by direct parliamentary legislation. This could finally settle the question, but it can not be had; it will be recalled that the attempt to secure this failed last winter. Here, indeed, the non-conformists join the ritualists; they oppose parliamentary legislation because they think the use of 'popish practises' will drive many in the Anglican communion into nonconformity, and will also hasten Disestablishment. At the same time it was the reinforcement of nonconformist political influence that gave point and

vigor to the protests of Low Churchmen, and the objections of the former against a state church made unanswerable the argument that churchmen should at least obey a state church while they had one. The effect of the archbishops' declaration will now be awaited with keenest interest."

TRUE AND FALSE SACERDOTALISM.

A FRANK defense of sacerdotalism as an essential and desirable element of any true religious system has lately been made by the Rev. E. Winchester Donald, rector of Trinity Church, Boston. It is noteworthy that this is not a new defense of "ritualism." Dr. Donald, like his predecessor, Phillips Brooks, is a liberal Broad-Churchman, and does not write of albs and chasubles, maniples, stoles, and tunics, but of the deeper sense of priesthood and mystery manifest in all the great religions of the world. Writing in *The Outlook*, he says:

"I should like to recall attention to the fundamental and elemental truth which originates the idea of human mediation at all and has perpetuated it through all the life of man. The priesthood is one of the permanently fixed institutions of humanity. It is independent of ecclesiasticism, and lives concretely even when, as a theoretically unsound abstraction, it is discredited and discarded. Men who have expended much of their energy in combating the priesthood, both as idea and as institution, have themselves been great priests. The Puritan of Massachusetts left England to escape priests, only to exhibit, ere half a century of residence in New England had passed, in the persons of their clergy the unwasted force of that from which they fled. The priest goes wherever man goes; always has, and always will. He changes his name; he himself changes never. He makes many or few claims—many yesterday, few to-day—but he never ceases to exercise his great, unalterable office of a mediator between his fellows and their God. He is pagan and Christian, Romanist and Protestant, but always priest; one through whom men feel surer of finding God than when on a solitary quest. Wherever we find man, we find religion; wherever religion, its priest. This is the fact which never fails to meet us when we search the past or scrutinize the present. What does it mean?"

The history of priesthood, says Dr. Donald, is necessarily that of an official priesthood, yet it remains true that the Pope and Jerry McAuley are both the resultant flowers of the same long-planted seed of religious instinct and need. Inquiring into the nature of this need, he says:

"What, then, is it which leads one human being to seek another human being's good offices as a mediator with God? Probably the simplest and most common example of it is illustrated when a man, in time of stress or peril, asks another man to pray for him. Obviously, it is open to him to make prayer for himself. Very likely he does pray for himself. But he wants the prayers of others. He feels that strength or courage or endurance are more likely to be given him if his own petition is reinforced by the petitions of his fellows. He will even declare that the prayers of others have carried him safely through more than one supreme crisis of the past; that in some mysterious yet very real way those prayers brought into his life a stock of divine strength which his own unsupported petitions could not bring; that a true mediatorship was exercised, by virtue of which a desired, divine boon was secured to him. If we should urge that God is as ready to hear his prayer as that of another, or that his own prayer is surer to open the channels of grace between his soul and the sources of Divine help, he will assent to it as a sound proposition; but the next time peril threatens or sorrow overtakes him, he will promptly resort to his fellows and ask their prayers. His instinct is more than a match for his best reasoning. Moreover, this instinct asserts its vitality in those who ordinarily manifest, or indeed experience, little of that emotion which we call religious. People who never pray, who perhaps can not, or who, in health and fortune, explicitly decry it, frequently, in sudden anguish, cry out, 'If there be anything in prayer, remember me when you pray: for God knows I need all the help I can get.' A desperately sick child sets the whole house praying. A sinking ship's company searches out the minister among the passengers and

bids him kneel to supplicate God in their behalf. There is no compulsion, no conventional conformity to official rule. It is pure humanity giving utterance to its ineradicable constitutional feeling that, in some mysterious yet very real way, the power of mediatorship is lodged in it; that what the individual can not secure from Heaven through his own act may be gained through another's."

As to the nature of the priest's office, Dr. Donald says:

"The priest has a twofold office: he gives absolutions and offers sacrifices. Absolution is the act by which a priest persuades a sinner that God has forgiven him. It is never, in paganism or Christianity, the act of forgiveness itself. That a Roman priest claims to forgive sins is an ignorant slander upon Rome. His devotees are not searching for his forgiveness—do not want it; they want the forgiveness of God. So long as the priest habitually succeeds in persuading sinners that God has forgiven them, his office is impregnable. When he fails to persuade them, his day is over, his absolutions are impotent words. . . .

"The priest also offers sacrifice. What is sacrifice? It is giving something, held to be precious, to God for the purpose of obtaining His favor. Some men believe that God is unable or unwilling to grant favor except upon terms. He is made able or willing by sacrifice. Other men believe that God is able and willing to bestow mercy, but that they themselves are incapable of receiving it until made receptive by sacrifice. The two beliefs are critically different. Both have been and are now widely held. It is at least doubtful whether either of them will ever disappear. One of them is certain to last. . . . Sacrifices are being made, every day, in contemporary life; consequently sacrifices are being offered by priests. There are no signs that they will cease to be made and offered. There are only many signs of effectual protest against particular ceremonial forms, and equally against claims which transcend those of natural sacerdotalism. The priest will continue to offer sacrifices so long as sacrifices are made, and, what is equally imperative as a condition, so long as in the heart of official priesthood lives natural priesthood."

HOW CHRISTIAN THEOLOGY IMPRESSED A HEATHEN.

IN the year 1709, an Italian priest named Joan Battista Sidotti was sent by Pope Clement XI. to preach the Gospel in Japan. After reaching the far East, he stopped at Manila to provide himself with the ordinary garb of a Japanese gentleman, so that he might arouse less distrust when he arrived in that country. At Yeddo, however, he was arrested and confined in prison, altho he was treated with consideration. Among his visitors was a counsellor of the Shogun named Arai Hakuseki, with whom he had many conversations concerning Christian teaching. Some of Arai's comments are thus given in the Boston *Transcript* (August 4), translated from the German of Dr. L. Lönholm, professor in the University of Tokyo:

"The teaching of the West (Europe) says that heaven and earth and all things could not have come into existence of themselves, but that there necessarily must have been in existence a Being who created them. If, however, the idea that nothing can come into existence of itself be correct, the question naturally arises, Who created God? If, however, God came into existence of Himself, why could not earth and heaven have come into existence of themselves?"

"It sounds like childish talk when the followers of the foreign teaching say that the breaking of God's command by Adam and Eve was such a great sin that they themselves could not expiate it, but that three thousand years afterward God was obliged to appear upon earth in the person of Jesus Christ and expiate the sin Himself. Whoever gives a command has also the power to forgive the breaking of that command. What then stood in the way of His pardoning its infraction, especially as the whole misdeed consisted merely in the eating of an apple? Was it necessary for God to become man in connection with so insignificant an affair?"

"The teaching of the West also says that God sent a great flood upon the earth and therein were all mankind drowned with

the exception of Noah and his family. But if God is the creator of all things and their great Prince and Father, what reason had He for destroying His own creations? Why did He not make man in the beginning good and obedient to His teaching? If He did not have the power to do this, how came it that He had the power to create the world? And if mankind, on the other hand, was created so stupid as not to understand the teaching of God, was this so great a sin on their part that God, the Creator and Father of all things, should have destroyed mankind?

"Sidotti having described to Arai the European custom of crossing one's self when meeting another person, and having explained that the purpose of this custom was to protect the individual against lightning, the devil, and other like things, Arai remarked: 'It is very wonderful that God, the Christian God, should first have created lightning, the devil, and similar bad things, and then have taught mankind how to protect themselves against these things. It would have been much simpler and surer not to have created lightning and the devil at all. In regard to the supernatural, the Christians appear to be upon the same low level as the common people here in Japan.'"

ALLEGED DECLINE OF THE RELIGIOUS PRESS.

A NEW YORK daily paper recently devoted an editorial to a consideration of the religious press, quoting opinions from some representative denominational papers which apparently indicate that the religious journal, in order to hold its own under present conditions, must devote much of its space to secular subjects in the effort to be interesting and to be in touch with events of the day. There appears upon the whole to be a general acquiescence on the part of the religious press with the view that the conditions of religious journalism have considerably changed, and that especial effort is necessary in order to maintain its former strength. All, however, do not agree as to the remedy. *The United Presbyterian* (Pittsburg) says:

It is no doubt true that the religious newspaper does not possess a distinctively religious character to the same extent it once did. Instead of confining itself to the discussion of subjects ecclesiastical, moral, and religious, subjects of vital importance to man in his relation to God and in all his higher relations, it undertakes to deal with questions which are purely secular and have no connection whatever with man's spiritual interests, or the interests of the Church of Christ.

"Some of our leading religious newspapers contain such a mixture of secular and religious news, and engage so freely in the discussion of political, economic, and scientific subjects, that whatever else they may be they are in no sense religious periodicals.

"There are questions which to some extent have become political questions, as prohibition, Mormonism, etc. Neither the pulpit nor the religious newspaper should be denied the right to discuss these, because political parties have taken sides upon them. Indeed, they can not be properly considered or discussed apart from the teachings of the Scriptures. Preachers of the Gospel, religious newspaper writers, intelligent Christians are competent to discuss them, and can not thrust them aside. Right views on these subjects should frequently be presented in the pulpit and in the religious newspaper.

"Our daily newspapers, our magazines, and monthly reviews present very full and able discussions of all political, economic, and scientific questions. It is an impertinence and an intrusion, therefore, for the religious weekly newspaper to invade the territory which rightly belongs to the secular journal, and undertake to furnish information and instruction on subjects which it can only handle as a mere novice.

"Christian doctrine, practical and experimental religion, supply abundant themes of the most appropriate character for the religious newspaper. The doctrines of the Gospel are opposed, covertly and openly assailed; the Lord Jesus is wounded in the house of His friends; 'Judgment is turned away backward, and justice standeth afar off, for truth is fallen in the street, and equity can not enter.' And yet much of the religious press which should cry aloud and spare not, and lift up its voice like a trum-

pet, is talking about civil-service rules, blunders of the campaign in the Philippines, etc."

The Churchman (Prot. Episc.) says:

"The comments do not arrive at any result, except to show that a journal of any sort, religious or other, in order to be read must be interesting. The essential thing, it is plain, is that it be read. If nobody reads it, it may be immaculately and transcendently good, but it will exist to no purpose. The chief point in discussion between some journals and others is whether, in order to be interesting, it is necessary to minimize that which is 'religious' and to emphasize that which is 'secular.' Even *The Rosary Magazine* is found to contain only three religious articles out of sixteen, and of the three 'one is on Joan of Arc, one concerning a bishop, and the third a story of travel in the Holy Land.' What we personally contend, on the other hand, is that religion, pure and simple, is of all human subjects capable of the most interesting treatment. If it is dull, the fault is in the writer, not in the theme.

"To set down, week by week, the story of the progress of the Christian idea, to chronicle its successes and its failures, to follow the events of contemporary history as they are interpreted from the Christian point of view, this, we maintain, can be made the most attractive and useful of all occupations. And the material is so abundant, the facts and truths are so many, that there is scant space for anything else.

"We believe, indeed, that the day of narrow denominational journalism has happily gone by, but the day of the religious newspaper which shall take the whole world for its parish, and deal with all life in the spirit of reverence and faith is here, and shall abide."

The Pilot (Rom. Cath., Boston) says:

"The St. Paul *Pioneer Press* says that the religious newspaper is losing its hold on the people or trying to keep it by catering to the so-called 'liberal' tendencies of the times; and the New York *Sun* makes somewhat a similar charge, saying that some religious weeklies, 'instead of building up the religious faith of their readers, spread among them teachings subversive of it, or at least they were religious mugwumps, with no definite cause either to sustain or attack. The consequence was that their prosperity declined greatly or gave place to actual adversity. They lost their distinctive character and with it their distinctive support. Instead of strong meat for men they purveyed milk for babes—literary mush and swash and intellectual slops.'

"These allegations can not be brought against the Catholic papers nor against some of the ablest and most successful Protestant ones. The New York *Independent*, the Boston *Congregationalist*, *The Churchman*, and other strictly denominational journals continue to thrive, because they do not surrender their convictions, and also because they try to be something more than exponents of doctrinal teaching. They aim to present to their readers a high form of literary excellence and journalistic skill, as do the best Catholic weeklies also.

"A religious paper of any creed can not live by faith alone. If we may say it without irreverence, good works are also of vital importance to success. It is the lack of the latter essential that dooms to an early and unlamented death a lot of scrubby little journalistic foundlings whose only claim to existence is based on their mission to annihilate Pope and popery by the potent influence of bad grammar and worse temper. Even the gospel of love can not win with such sorry weapons. The gospel of hate suffers still more by their use. . . .

"The days of the weekly paper, religious or secular, are far from numbered, so long as readers prefer accurate information to sensational gossip, and good English to pavement slang; and so long as weekly papers use their opportunity of treating current affairs with discrimination and good taste, so long will their work be rewarded with public and liberal patronage.

"The daily paper has its proper and indispensable place. So has the weekly. As for the average Sunday journal, it is not so much a question of place as of space, of quality as of quantity, of time as of comparative eternity in the reading of it. It does not even try to attain that golden mean which John Brougham once told us that he aimed at in his poorest play, the 'Lottery of Life,' that of 'not being too sensational for the intelligent nor by any means too intelligent for the sensational.'"

ANOTHER CONGRESS OF ZIONISTS AT BASLE.

THE third international gathering of Zionists, held at Basle, Switzerland, early in August, showed that the Zionist movement for the recovery of Palestine is now well defined. Its primary object, as stated in the inaugural address of the president, Dr. Theodor Herzl, is to acquire a charter from the Turkish Government authorizing Hebrews to establish settlements in the Holy Land. It is significant that Dr. Herzl, who was received in special audience by the Emperor of Germany during the latter's recent visit to Jerusalem, has been decorated by the Sultan with the important insignia of the order of Medjidie. This would make it appear that Zionism is something more than a dream. It is said that considerable sums are coming in to the Jewish Colonial Trust at London, sent from Jews living in all parts of the world; and, according to the report of the directors, the number of shareholders now exceeds 100,000. *The Deseret Evening News* (Latter-Day Saints) says:

"In estimating this movement two facts must be kept in view. One is that for centuries the Jews themselves have been praying incessantly for the restoration now contemplated. The opponents of Zionism are the few 'reform Jews' who with Moses Mendelssohn hold that Judaism stands for only a religious brotherhood.

"Another fact is this, that Zionism is daily materializing in the settlement of Palestine by Jews. Twenty years ago, there were only 14,000 of that people in Palestine; now there are at least 40,000, out of a total population of 200,000. Their colonies are flourishing, being engaged extensively in the cultivation of the soil and in dairying. Thus Zionism is no longer a theory but a fact.

"Still, it is expected that in due time the Sultan will officially give his sanction to the efforts of the Zionists. Abdul Hamid can not fail to understand that the building up of Palestine and surrounding country by a race so superior to the Syrians would mean the development of the dormant resources of the country, and corresponding advantage to the Ottoman empire. And then, the Jewish colonial bank now in existence would be the very institution with which the Sultan should desire to entertain the friendliest of feelings.

"The Zionist movement is worth while watching. The gathering of the Jews to Palestine marks an epoch in the world's history. Once before, when a handful of exiles from Babylon decided to build the waste places of Judea, the foundation was laid for the advent of the Son of Man and the world-changing conquest of the Nazarene. When once more the branch that was cut off is planted in native soil and taking root, who can tell what flowers and fruit it may bear—what 'new birth' may come to the world through that event?"

However, the chief opposition to the consummation of this idea still comes from the Jews themselves, especially from the American Jews, who with comparatively few exceptions disbelieve in the wisdom of the plan and have little confidence in its practicability. The following report from the Basle correspondent of the *New York Journal* indicates pretty plainly the present status of the movement in Europe and America:

"The opposition of the most prominent of the Jews of Western Europe and America, which manifested itself in comparative mildness when Zionism in its present phase was first projected, has increased greatly, and, as Max Nordau said in his speech here, the bitterest foes of national Jewdom are the great ones among the Jews.

"In his address Nordau lashed them savagely, asserting that they were animated only with a desire to be comfortable, and with a secret hope that if the 'Jewish question' were allowed to rest quietly for a time the Jews would disappear, swallowed up by the majorities in the countries in which they reside. He calls these opponents of Zionism Jewish antisemites, and says they are far more dangerous to the weal of Jewdom than the Christian antisemites. The latter, he asserts, are friendly to Zionism.

"As to the present situation of the Jews of the world, Nordau takes an alarmist view. He appears convinced that the present fortunate position of the Jews of England and America is not

permanently assured, and he points to the Dreyfus conspiracy to illustrate how ready antisemitism is to reveal itself in countries where its existence was unknown.

"The settlement of Palestine is to be gradual, the first settlers to be those Jews who find their present conditions intolerable. About a million of these are expected to be located upon the site of the ancient Jewish kingdom within a year or two. It is suggested that after the Jewish bank is established and the Sultan has thus become convinced that there is money in it for him, he will be ready to give such guaranties as will pave the way for the secure possession of Palestine by the restored nation. It is also intimated that, having once given the essential assurances, there are nations of Europe who have manifested their readiness to keep the Sultan to his word, as well as to prevent outside interference.

"The attitude of Herzl and Nordau in the whole movement is both surprising and interesting. Neither has anything to gain from it, and both have asserted positively that they will take no prominent part, once success has been attained. Both have also refused to accept any remuneration for their services, altho neither is rich and both are dependent upon their labor for their incomes.

"Herzl is a busy journalist and author, whose time is most valuable. Nordau has a large practise as a physician in Paris, and is also an author and correspondent. Zion has interfered greatly both with his labors and his leisure.

"Herzl is an enthusiast—ardent and intense. Nordau is a cynic and a fighter. Neither is a Jew in religion. That both are disinterestedly sincere in advocating Zionism is beyond cavil, and, strange to say, the fanatical Jews of Eastern Europe have the utmost faith in them.

"Among American Jews the only prominent friends of Zionism appear to be the Gottheils—father and son. The one is rabbi emeritus of Temple Emanu-El, of New York. The other is professor of Semitic languages at Columbia University. The latter is a delegate to the congress. Altogether, not a handful of American-born Jews are interested in Zionism, and the majority of even the Russian and Polish immigrants seem indifferent to it."

RELIGIOUS NOTES.

THE Catholic press of all countries censure severely the behavior of the American soldiers in the Philippines. Churches are robbed with impunity by our men, so it is charged, and the authorities do not interfere. It should be remembered that in most countries to rob a temple of whatever religious denomination is considered the worst of crimes. Even the Protestants, who believe that the Government may confiscate the wealth accumulated by the church, are astonished that our soldiers may steal silver and gold chalices and costly vestments and exhibit their plunder with impunity.

The Independent says that it is now becoming evident that a large part of the campaign against "Americanism" in the Roman Catholic church originated in personal animosity to the Catholic University on the part of the European professors who were dismissed from that institution. Bishop Horstmann has made public a letter from Dr. G. Perier, former professor of canon law at the university, in which the latter threatens the late rector, Bishop Keane, and the other university authorities that he will make known to the "competent Roman congregations" and the country at large what "has been the spirit of this house." The threat has since been executed, says *The Independent*.

AN English religious paper is much exercised over what it deems the degeneracy of the United Presbyterians in passing resolutions recently in favor of the use of tobacco. It says: "Are the United Presbyterians 'filthy Christians'?" Mr. Moody was once asked whether a man can be a Christian and use tobacco. He replied, 'Yes, a filthy Christian.' We read with a shock of surprise that the General Assembly of the United Presbyterians at Philadelphia set forth that the presbyteries have voted eleven to one in favor of the use of tobacco. And mark this, the vote was two to one in favor of permitting students to use the poisonous and filthy weed! Think of Presbyterian parents urging their boys (and girls) not to smoke cigarettes or use tobacco in any form, and having the 'up-to-date' youths jubilantly point to the action of the Presbyteries quoted above!"

IT is easy to recognize the solar application of the following paragraph from the *New York Independent*: "What is often called the brightest daily paper in New York devotes much attention to defending the most extreme conservatism of theologic belief for the disguised purpose of discrediting all religious faith. It does not often throw off the mask so completely as in its comment on the re-ordination of Professor Briggs, when, after declaring that he must advance still further to either agnosticism or Roman Catholicism, it says:

"If he is of a temperament which can only find satisfaction in obeying the dictates of his reason, he will bring up in agnosticism; if faith alone can give him peace, he will yield his intellect finally to the authority for faith which asserts itself most uncompromisingly."

That is, reason must lead to agnosticism, while faith asks no question of reason, and is only wilful credulity. Of course, nobody but an agnostic could take that position."

FOREIGN TOPICS.

THE COMING SOUTH AFRICAN WAR.

THE chance that peace will be preserved in South Africa has been growing less and less each week. The British Government seems determined not to accept a compromise, and Mr. Chamberlain does not take the trouble to deny that the intention is to establish that paramountcy of England in South Africa

"W'at sorter seasonin' d'you sagashuate I'se gwinter cook you with, Brer Rabbit?" sez Brer Fox, sezee.

Brer Rabbit up en say he don' wanten be cooked 't all.

Brer Fox he grit his toof. "Youer gittin' way from de point, Brer Rabbit," sez Brer Fox, sezee.

—*Westminster Gazette.*

which has always been claimed for her and which the Boers refuse to acknowledge. In Parliament Mr. Chamberlain said:

"We say our predominance, which both sides of this House has constantly asserted, is menaced by the action of the Transvaal in refusing to redress the grievances, or refusing even consideration of the requests put in the most moderate language by the suzerain power. We say that is a state of things which can not longer be tolerated. We have said we have put our hands to the plow, and will not draw back."

The jingo papers, and they are in the majority, express themselves after the manner of the following utterance, which we quote from *The St. James's Gazette*:

"There will, we hope, be no further attempts to deny or to whittle down the Queen's suzerainty in the Transvaal or British supremacy in all South Africa. The fiction that the Transvaal is independent in its relations to Great Britain or to foreign powers is at an end. England, which is responsible for the peace of South Africa and for the fair and equal treatment of British subjects throughout that vast dominion, claims and will exercise the right to speak the final word. . . . The country is united behind its Queen and its government, in its insistence on the removal of this constant source of danger, which has grown rather than diminished by 'leaving it to time,' and it awaits the result with confidence. 'We have put our hands to the plow and we will not draw back.'"

The war preparations continue on both sides, and when England believes herself ready, fighting may occur at any moment. It is also possible that the Boers will, as in 1880, take possession of the best strategic positions on the Natal side if the British attempt to occupy them. Yet Britons are not unanimous in the matter. Many, especially in religious circles, regard the quarrel of their country as grievously unjust. *The Christian*, London, says:

"While we are fuming against the despotism of President Krüger and his burghers, it is well we should remember that Englishmen who, in our name, rule despotically over the various nations whom we have conquered, are in constant and serious

danger of acquiring a despotic temper which may do irreparable harm both abroad and at home. How few stay-at-home Englishmen realize that our rule in India is, at the bottom, a military despotism. . . . But in certain sections of the press there is almost an open profession of desire to precipitate a crisis between Britain and the Transvaal, in order to wipe out the humiliations we have from time to time suffered at the hands of the Boers (who, whatever their faults, are resolute and brave, and know how to repel aggression), and to 'wipe out Majuba.' This low and brutal standard is utterly unworthy of a great Christian country, and true patriots must ever stand up for a higher principle in vindication of our 'national honor.' The next few months will prove a testing time for all of us. We repeat the conviction that peace in South Africa will be permanently secured only by fair dealing and honorable self-restraint on our part."

That the mining population of the Transvaal has no desire to become permanently fixed in South Africa is pointed out by many writers. Thus Mr. H. A. Bryden says in *The Fortnightly Review*:

"When gold has been exhausted in these regions, the Dutch, who live upon the land, will remain, while a large proportion of the British and foreign element, who nowadays flock only to the mining centers to make money and come away, will have retired to other and more congenial spheres. It is one of the unfortunate characteristics of modern life in South Africa that the average British settler will not remain upon the land and content himself with a pastoral or agricultural existence. The life of the veld farmer is too slow, too dreary, and too monotonous for him. He must have excitement. He will prospect for gold, superintend mines, run a store, join the border police, but he will not settle upon the land. Such colonists are not very satisfactory. They are largely migratory. The stolid Dutch, on the other hand, are there always upon the soil, acquiring votes, creeping slowly over the whole surface of South Africa, and retaining, as in Cape Colony, the balance of political power. These steadfast, slow-moving colonists are indeed rooted to South African soil, and will always remain so. Succeeding British governments will have to reckon with them. . . . There are even people, who know South Africa intimately well, who predict that in fifty years' time the Dutch will far outnumber the whole British population of Africa south of the Zambesi."

The Canadian Parliament has passed a resolution encouraging the British Government, and similar manifestations may take place in Australia. But the Anglo-Indians are a little nervous. They are never quite certain that a general war will end with India in the possession of Great Britain, and the possibility always exists that other powers may consider it to their interest to take a hand. *The Friend of India*, Calcutta, thinks it extremely imprudent to attack the Transvaal, as it can not see any cause for such a course. It says:

"However bad the Boer Government may be in theory, in practice it allows foreigners of every nationality to dig for gold in the finest reef in the world, under exceptionally liberal conditions. If the mining rules in India had been comparable in liberality with those of the Transvaal Government, we should never have heard the bitter complaints of London capitalists that it was impossible to develop India's mineral wealth. Even in Rhodesia, the next-door neighbor of the South African republic, the conditions imposed on the mining concessionaire are far more onerous than those prevailing in the Transvaal, while the rate of taxation is at least three times as heavy. If, then, men can get gold on these easy terms in the Transvaal, and if the government of the republic protects them, as it does, against violence to their person or to their property, it would be contrary to human nature—or at any rate to gold-getting nature—to expect the gold-diggers to waste their time in worrying about the right to vote for parliamentary candidates."

The Daily Chronicle, London, points out that the uniform wealth of the Transvaal gold reefs, while yielding rich profit to the actual mining population, does not give many opportunities to the gamblers of the stock exchange. Hence these create disturbances which will provide the necessary fluctuations. Indeed, they have had "a good time" lately, a fact which causes the

Berlin *Kladderadatsch* to indulge in ridicule in the form of the following "telegrams from London":

"Monday: Chamberlain declares that Krüger's promises are insufficient. The Ancient and Honorable Artillery Company of the City of London send their trousers to be creased. In consequence of these warlike preparations South African shares fall.

"Tuesday: President Krüger promises to grant citizens' rights: 1. To all Englishmen in the Transvaal who want them. 2. All Englishmen in the Transvaal who *don't* want them. 3. All Englishmen elsewhere in the world who don't want them. Shares rise.

"Wednesday: Chamberlain is displeased because Krüger grants more than is wanted without consulting him. Shares fall.

"Thursday: Krüger promises to cancel privileges which displease Chamberlain. Shares rise.

"Friday: The British papers demand war because Krüger withdraws some concessions. Shares fall.

"Saturday: Krüger will do whatever he is asked to do. Shares rise.

"Sunday: No business done at the Exchange. No South African 'news.'

"Repeat *ad infinitum*."

The government of the South African republic publishes some interesting affidavits, showing how the 21,000 names on the petition to the Queen were gathered. The following is a sample:

"I live at Frenkel's cottage, Kark Lane, Fordsburg. I am the widow of Bernhard Horn, deceased October 11, 1893. The agent who came to me with the petition told me that he was very poor and had to keep a family of little children, and that he was paid so much per name. I was sorry for him, and, to please him, signed as follows:

"My name: MRS. F. HORN,

"My late husband's name: B. HORN,

"My children's names: H. HORN, M. HORN."

However, the majority of papers throughout the British empire do not mention that petition now. They speculate upon the results of the coming struggle, and a great deal of incorrect information is conveyed to the reader. Much of this finds its way into American papers, especially into the Canadian press. *The Witness*, Montreal, says:

"The Boers have had remarkably good fortune in the past in having always been in a position to fight from shelter and at long range; or perhaps it would be truer to say, as they would say themselves, that Providence has always put victory into their hands. They have never had to face disciplined troops in equal fight, and would probably never do so, while a few shells would probably be enough to dislodge them from any rock fastness from which they might hope again to pot British soldiers as tho they were Kafirs."

The Boers, however, claim to have stormed British positions which were thought to be impregnable, notably at Majuba Hill. The *Winnipeg Tribune* says:

"The troops defeated by the Boers were raw recruits; they were panic-stricken, and simply bolted, leaving not a few dead companions behind. The Jameson raid, some years later, was not war; an undisciplined mob, unskilfully led, made an attack upon a Boer force. Some of the mob were shot down; the rest ran for their lives. The third encounter will tell another story. If Great Britain can not 'crush like a nutshell' a puny opponent like the Boers, it is time she ceased building war-ships and maintaining an army. The lion's tail should seek refuge under the disgraced brute's abdomen, and the British people should drag down the Union Jack and erase their name from the list of great nations."

In contradiction of this it is asserted that the troops sent against the Boers in 1880-81 were as good as Britain had. The 60th Rifles were there, and the 14th Hussars, and the 16th Lancers. The detachment defeated with such terrific slaughter on Majuba Hill consisted of the 92d Highlanders, the heroes of the Afghan war, and the Naval Brigade. It was led by Sir George Pomeroy

Colley, a staff officer of great promise, who fell just as he was about to surrender. Jameson's men ranked in quality and training with the Natal mounted police and the Canadian mounted police. It is thought, however, that large numbers of Indian troops will be employed this time, and Portugal, which is in the power of Great Britain, from a financial point of view, may have to furnish a contingent. The *Seculo*, Lisbon, declares that British troops will march through Portuguese territory, and that the Portuguese garrison at Lourenço Marques is being strengthened, as Portuguese troops will be sent against the Boers. The *Voz Publica*, Lisbon, says:

"There is no doubt that the sympathies of our people are on the side of the Transvaal, and against England. But these sympathies are of little value, as the people of the South African republic will never be informed of them. It is easy to see that the troops which are being sent to Lourenço Marques are intended to assist the stronger of the adversaries. . . . Yet it is not certain that the Boers will be beaten. It is certain only that the bravery of the Portuguese soldiers will not benefit their country. Whichever side wins, we are likely to lose Mozambique."

The Amsterdam *Nieuws van den Dag* remarks that "the disastrous attempt to overcome a white enemy with purely British troops is evidently not to be repeated." All news coming from British sources is received with great caution on the Continent just now. The London *Times* has not again sent Miss Shaw to South Africa, whose partizan reports are so much discredited, but its Johannesburg correspondent is the editor of the *Johannesburg Star*, a paper subsidized by Rhodes, as the London *Daily Chronicle* asserts, and whose news is not trusted. It was *The Times* which published the news that a colored American was handled roughly by some policemen in Johannesburg. *The Times* also reports that the Boer commanders regard the coming war as hopeless. The following by Commandant Piet Viljoen, in the Potchefstroom *Voortrekker*, tells a different tale. He says:

"For years the English have hulled and worried us, and our patience is nearly at an end. We have, as it were, been forced to store our wrath in a sack, and it is full to the bursting point. Chamberlain wants war. Very well, let war come; but do not let us stop this time until the British flag is soaked in blood. Chamberlain threatens continually. Does he think he can frighten a Boer with his threats?"

A sure sign that war is thought certain to come in South Africa is the resignation of many officers of the Capetown volunteers, remarks the Pretoria *Volkstem*. These volunteers are chiefly business men, who have no intention to take part in a campaign. One lieutenant-colonel, one major, five captains, seven lieutenants, and two non-coms. have already resigned. On the other hand, new companies are being formed throughout the Cape Colony of elements which are less likely to suffer serious material losses by being compelled to go to war.—*Translations made for THE LITERARY DIGEST.*

A Proposed German-Dutch Customs Union.—

An agitation which can not fail to affect important economical and political circles is at present carried on in Holland. It is for nothing less than a German-Dutch customs union, an object which the English especially have endeavored to defeat for generations, on the ground that economical union between Germany and Holland would soon be followed by political alliance, an event which would not be to the interest of the British empire. The Dutch are turning more and more toward Germany. The *Handelsblad*, Amsterdam, expresses itself in substance as follows:

The question is not new, and Holland certainly could profit by the proposed union. On the other hand, we have substantial benefits to offer the Germans, such as reductions of railroad, canal, and tariff rates. Moreover, we have a greater trade with Prus-

sia than with any other country. Prussia sends 16.2 per cent. of our entire imports, and takes 51.9 per cent. of our exports! Our independence would only be strengthened by a customs union with Germany, for we can count upon Germany to defend us in that case, while to-day we may only *hope* for her help.

The *Utrechtsch Dagblad* even advocates a direct political alliance, and explains that the fear of Germany with which British insinuations used to inspire Holland has, in the course of generations, given way to confidence. The *Tyd*, Amsterdam, a Catholic paper, is less pleased with the scheme, which would strengthen the Protestants of Germany. It says:

"A customs union would be dangerous to Holland's independence. A military union would soon follow, and then the time would soon arrive for Holland to be wiped from the list of independent nations. Our traders would only care for their comfort, which would depend upon a good understanding with Germany. It should also be taken into consideration that other nations would resent our intimacy with Germany, and might discriminate against us."

In Germany it is chiefly the Rhenish and Westphalian industrialists and capitalists who agitate in favor of the proposed customs union.—*Translations made for THE LITERARY DIGEST.*

THE RETURN OF ADMIRAL DEWEY.

THE conduct and the bearing of our returning admiral seem to command respect even in countries where no great sympathy with American ambitions exists. His prudence, his ability, his manliness, are noted and inspire confidence everywhere. The *Hongkong Telegraph*, referring to the Filipino war, says:

"Had matters but been left in the hands of Admiral Dewey, we do not for a moment believe that things would have come to such a pass. His upright sailor's nature would have guided him

拿 丢 督 提 師 水 美

A CHINESE PORTRAIT OF ADMIRAL DEWEY.

From the prospectus of a "History of the United States of America," published at Foo Chow.

aright. But when matters are dealt with by consuls and diplomatists who are far from the scene of action and have no knowledge of the country or people to be dealt with, then disaster is only too frequently the result, as affairs in the Philippines have shown."

The *Freie Presse*, Vienna, points out that Dewey's character is of no little importance, as by him his countrymen are largely judged. It says:

"Trieste is the first European port at which Admiral Dewey

touches, and it is a pleasing duty of our country to receive the naval hero. This duty is gladly performed in the fatherland of Tegetthoff, where the leader in battles of the deep is appreciated, and cool-headed soldiers are honored. . . . Thousands of our people are glad to note, by the example of Dewey and his companions, that liberal institutions do not prevent the formation of a manly character, fit to defend his country, and that no tyranny is needed to make the defenses of a country strong."

The *Piccolo*, Trieste, is delighted to find that Admiral Dewey is condescending enough to speak to newspaper reporters, something an Austrian admiral would not dream of doing. American reporters who attempted to interview Admiral von Spaun were told that they were beneath the notice of an officer and a gentleman. Admiral Dewey, on the other hand, good-naturedly spoke to reporters of any nationality. As to Dewey's exploit, that is not reckoned anywhere among the greatest deeds of naval warfare, but that does not detract from the liking every one seems to have conceived for him. *Saturday Night*, Toronto, says:

"Admiral Dewey performed his duty like a man and so far has held his tongue like a gentleman. We must not blame him if his countrymen make fools of themselves. A certain bit of war-work lay to his hand and he did it. There is every reason to believe that he would give a creditable account of himself if he ever found it necessary to engage in a battle, but of course it is absurd to class him with the great sailors of history because of the Manila incident."

The *Saturday Review*, London, speaks of the "frothing" done in the United States with regard to Dewey's victory, and refers as follows to President McKinley's remark that the "brilliant achievement of Dewey will live in the annals of the world's heroic deeds":

"No doubt; but if the annalist is not an American he will remember that most of the Spanish vessels were helpless old-fashioned craft, and that the victory (on the American side) was bloodless."

The Germans, too, think it is going too far to compare the Manila battle with the deeds of Farragut or Tegetthoff, and the *Lokal Anzeiger*, Berlin, says:

"It may be assumed that even the Americans will keep silent about the matter, for it was no heroic deed to sink the helpless Spanish ships, which were intended to keep down the Tagales, not to fight armored battle-ships and cruisers."

But this does not, in the opinion of foreign critics, neutralize the duty of rewarding our admiral, a duty which the people of the United States appear to shirk. The *Handelsblad*, Amsterdam, which admires the admiral especially for his dislike of self-advertisement—"a thing very rare in an American," it says—speaks of the "downright meanness" exhibited by the American people by the slowness with which the funds intended for his benefit come in. The *St. James's Gazette* expresses a similar view in the following:

"By a curious coincidence the grant of money given to Lord Kitchener by Parliament has just been made a standard of comparison in two foreign countries, by which the treatment meted out to their own respective heroes of the moment may be judged. . . . Lord Kitchener appears in the caricature of the *Petit Illustré* hugging a coronet and a bag containing £30,000, while the gallant Marchand is content to hold aloft the tri-colored flag. In America, on the other hand, the meagre response to the call for national subscriptions for a testimonial to Admiral Dewey moves the New York *Herald* to print a cartoon in which Uncle Sam is keeping his hands tightly in his pockets—a figure of Dewey is beside him wearing a huge medal—and John Bull stands near with a genial smile as he hands \$150,000 to the hero of Omdurman. The French caricaturist affects to sneer at our soldier's substantial reward, but perhaps beneath the sneer is as much envy as there is avowed admiration in the American cartoon."

Numerous attempts have been made to exploit Admiral Dewey's prestige in the service of the pro-British, anti-German agitation

in this country. The latest move in this direction was a supposed interview with the admiral at Trieste, in which he was represented as saying that "our next war will be with Germany." As the New York paper which published this news is regarded by Europeans as one of the most unreliable, the interview was not credited. The *Kölnische Zeitung*, Cologne, says:

"The forger press has long given its special attention to Admiral Dewey and attributed expressions to him which, in his correspondence with Admiral Diederichs, he has himself described as pure inventions. However, part of the American papers themselves doubted the authenticity of the interview, and others attacked the poor admiral, so Germany need not further notice the matter."

But while Admiral Dewey is exonerated from all blame, the Germans are getting a little restive under these attacks. "Even German patience has its limits," says the Munich *Neuesten Nachrichten*. The *Echo*, Berlin, notes with pleasure that the German-American papers believe that such "news" is paid for with British money, but adds that "there is a lesson in this for Germany which she should not forget." Remarkably sharp is a comment in a Russian paper, the *Novosti*, St. Petersburg:

"If the American admiral really made such a remark, he has committed an unprecedented breach of good manners in a country allied with Germany. And these are the principles and manners which those who gained the victory over Spain purpose to introduce in Europe. The cruelties which the Americans practise at Manila do not satisfy them, and they shout à Berlin! They have evidently lost all traditions of truth and justice."

We append a translation of two letters published in the *Neuesten Nachrichten*, Berlin, exchanged between Admirals Diederichs and Dewey upon the latter's promotion:

THE CHINA SEAS, March 17, 1899.

Dear Sir: I have the honor to acknowledge the receipt of your valued communication of 4th inst., in which you convey the information that the rank of an admiral has been conferred upon your excellency. I beg to express my sincerest congratulation on this latest acknowledgment of your excellency's merit, and beg that you will be convinced of the great satisfaction which this pleasant news has given me.

I have, your excellency, the honor to subscribe myself,

Very truly yours,

V. DIEDERICHS, Vice Admiral.

Commanding H. M. Squadron of Cruisers.

To His Excellency ADMIRAL G. DEWEY, Commanding the United States Fleet on the Asiatic Station; Flagship *Olympia*, Manila.

MANILA, April, 16, 1899.

My Dear Admiral v. Diederichs: I thank you most heartily for your friendly congratulations on my promotion. It is a great pleasure to know that this promotion gives you satisfaction, and I am glad that our differences were merely of newspaper manufacture. In the hope that I may have the pleasure to meet you again ere I leave this station,

I remain yours very sincerely,

GEORGE DEWEY,

Admiral of the United States Fleet, Commanding the United States Fleet of the Asiatic Station.

To His Excellency VICE-ADMIRAL V. DIEDERICHS, Commanding H. German M.'s Squadron of Cruisers.

—Translations made for THE LITERARY DIGEST.

IS THE INTERNATIONALISM OF THE SOCIALISTS GENUINE?

THE German Socialists encourage their French brothers to resist the wave of militarism which is at present sweeping over France. The *Vorwärts*, Berlin, says:

"The Dreyfus case may, after all, bring about a happy crisis. France did not get what she ought to have got after the war of 1870. She did not get a militia after the pattern of Switzerland. Instead she has been saddled with an army modeled like that of the victor. Militarism has penetrated the republic, her democratic institutions are in danger, the civil authorities have been subordinated to the military. Yet all this is useless. France can not keep up the race with her German competitor, for Germany has a dozen millions more of people than France. Little by little the French army should be changed into a militia. Our comrades in France understand this, and do their best to bring about this result. We want nothing better than to be able to imitate them until we can set our foot upon the throat of militarism. Nor will we be at loss to discover an innocently imprisoned person. But such a campaign is impossible in Germany."

The *Hamburger Nachrichten* points out that the French revolutionaries only recently were violent anti-Dreyfusards and very much concerned for the "honor of the army." Moreover, the French Socialists continually demand the restitution of Alsace-Lorraine. And the French papers do not believe that the German Socialists are more international at heart than the English labor leader Burns, who only recently expressed himself confident that the English-speaking peoples were about to conquer the world in the interest of peace, progress, and civilization. The *Journal des Débats*, Paris, summarizes the views of some German leaders as follows:

"Bebel and Liebknecht oppose the army because they regard it as a kind of police force whose chief object is to protect the wealthy. It is in this spirit that they protested against the annexation of Alsace-Lorraine and discountenanced the festivals of the battle of Sedan. The most noted thinkers of the Socialist Party do not stand by internationalism, despite the reactionary policy of the Emperor. Bernstein is not against colonial expansion, the extension of German markets and prestige; he recognizes that the interests of the workingmen are the same as those of the capitalists, and that the army and navy serve all alike; he is aware that England's naval and military power has enabled her to extend her industrial empire. Thanks to the science and ability of her military chiefs and the discipline of her army, Germany has built up an industry by which the Socialists benefit themselves in a large measure. Moreover, the tactics of the German-Socialists are in accord with these theories. Heine, in Berlin, declared amid the applause of his audience that the army must be increased rather than diminished, and that he would vote for an increase if better protection were given to workingmen. Schippel proclaimed that even among the Socialists a majority would not be found in favor of the militia system.

"We do not think it is nice of the *Vorwärts* to invite France to adopt the military organization and with it the rank of a country like Switzerland. Only the enemies of society would profit by it."—Translations made for THE LITERARY DIGEST.

FOREIGN NOTES.

A VERITABLE fortune is gathered for the Sultan from the wrecks of the battle of Smyrna. Since 1770 a number of Russian and Turkish ships have rested at the bottom of the sea. These are now being investigated, and the ship of the Russian admiral alone has yielded over \$250,000 in coin, besides silverware and jewels.

THE fact that the Germans and English are enemies becomes more and more apparent. Especially in Africa innumerable bickerings take place between the two nations. The London Missionary Society has sold out nearly all its property in the German colonies to German mission societies. The artillery recently ordered by the Transvaal is conveyed to Delagoa Bay by the *Reichstag*, a vessel entitled to fly the German naval reserve colors, and one which could not well be interfered with without serious complications. The German and English colonial troops are not as friendly as they were, and in East Africa a German trading expedition has been refused food on British soil.

The University of Maine

A public institution maintained by the State and general Government

Undergraduate Courses are: Classical, Latin-Scientific, Scientific; Chemical, Agricultural, Preparatory Medical; Civil, Mechanical, and Electrical Engineering; Pharmacy (4 years), Pharmacy (2 years); Short and Special Courses in Agriculture, Military Drill.

Expenses for University fees, board and rooms, \$170.50. Loans covering tuition are provided for needy students. A new dormitory for women. Rooms in the dormitory are free.

The School of Law is at Bangor. The tuition charge is \$60. Three resident, and six other instructors.

The Faculty includes 49 names; students number 329. The equipment includes 18 buildings, large and small, 9 well-equipped laboratories, the museum, the herbarium, the shops, and library.

Please read ALL that follows, including our now famous standing offer of

30 NIGHTS' FREE TRIAL

Express prepaid, and back if you are not satisfied.

Compressing the felt.
Binding and closing the tick by hand.

Ostermoor

The name that for 46 years has stood for the best in mattresses and cushions. We cushioned 25,000 American churches.

Patent

Our product and its name are protected hygienic. We originated and perfected this wonderful process. Avoid substitutes. We have no Agents. No stores sell our goods. See special mail offer below.

Elastic

Our mattress is closed in the tick by hand, and never mats, loses shape or gets lumpy. Softer and purer than hair can be; no repicking or restuffing ever necessary.

Felt

Not corn-bushes or feathers or hair (all dirty, dusty, unwholesome), but airy, interlacing, fibrous sheets of snowy whiteness; soft but elastic. A sleep-producer, and probably an heirloom, for they last indefinitely. Guaranteed vermin-proof.

Mattress

Sleep on it 30 nights, and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can get your money by return mail. "no questions asked."

\$15

(6 ft. 3 in. by 4 ft. 6 in.) If made in two parts, 50c. extra. Smaller sizes at smaller prices. EXPRESS PREPAID. The low price is due to the saving of all profits of middlemen.

OUR BOOK "The Test of Time," is mailed free to any one. We wish particularly to correspond with the skeptical who think our claims exaggerated. Send for the book anyway—it will interest you to look through it. Our book, "Church Cushions," also mailed if desired.

OSTERMOOR & CO., 117 Elizabeth St., New York

Planetary Pencil Pointer

Needed in every office, school, home. Saves its cost in lead.

Mechanical perfection. No toy. Circulars free. Made only by A. B. DICK COMPANY, 152-154 Lake Street, CHICAGO, 47 Nassau Street, NEW YORK.

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strength. Sent post-paid for \$1.25. The best work published on the great value of lung gymnastics, by Dr. Patchen. Send 2-cent stamp for testimonials to G. HYGIENIC SUPPLY CO., BOSTON, MASS.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

A copy of an ordinance recently published in Japan has been forwarded by Minister Buck, of Tokyo, under date of June 20, 1899. It reads as follows:

Imperial ordinance No. 272, of June 15, 1899, relating to branch offices of foreign commercial companies, and to commercial companies and associations established by foreigners.

ARTICLE 1. A foreign commercial company which has set up a branch office in Japan before the commercial code takes effect must, within six months from its taking effect, register such fact according to the provisions of article 255 of the commercial code and appoint a representative in Japan and register his name and domicile.

The provisions of article 257 of the commercial code and of article 202 of the law concerning matters not in contention apply correspondingly to such foreign companies.

ART. 2. A commercial company formed by foreigners in Japan before the commercial code takes effect must, within six months from its taking effect, make a company contract in accordance with the provisions of the commercial code and register the formation of the company.

ART. 3. If a commercial company act in contravention of the provisions of article 2, the court may, on the application of the public procurator or of its own motion, order the dissolution of the company.

The order of dissolution must be published in the same manner as registered facts are published.

ART. 4. As to commercial companies formed by foreigners in Japan before the commercial code takes effect, the legal relations which will arise before the registration is made according to the provisions of article 2, or before an order of dissolution has become finally binding, are governed by the law of the country to which the company belonged.

ART. 5. An association formed by foreigners in Japan before the commercial code take effect, which has property of its own, must within six months from the date of the commercial code change its organization into that of some kind of commercial company recognized by the commercial code. The provisions of the preceding two articles apply correspondingly to such an association.

Consul Monaghan, of Chemnitz, under date of April 15, 1899, reports that a school for teaching embroidery is about to be opened in Plauen. The Government has appropriated 9,000 marks (\$2,142) and the city 3,000 marks (\$714) for the initial expenses; 5,000 marks (\$1,100) and 3,000 marks (\$714), respectively, will be contributed annually for its maintenance. The number of applicants for admission.

mission is said to be so large that hardly half can be accommodated. Consul Monaghan speaks of the excellent system of technical education in Germany; nearly every important branch of industry in the empire, he says, has its school, and the country's industrial development is in large measure due to these educational facilities.

PERSONALS.

HELEN KELLER, the deaf, dumb, and blind girl, has passed creditably the Radcliffe examination, says the Columbus, Ohio, *Dispatch*: "It is quite certain that no person ever took a college examination with so heavy a handicap—so many kinds of a handicap—as Helen Keller's on this occasion. As all the world knows, she could not see the examination papers nor hear the voice of an examiner. The natural method of communicating the questions to her would have been to make use of the fingers of her old-time 'teacher' and interpreter, Miss Sullivan. Miss Sullivan does not know Greek or Latin or the higher mathematics, and while she is able to serve Helen by communicating to her printed Greek and Latin letter by letter, she could not, even if she had been so disposed, have given her the slightest assistance in answering the examination questions. But it was deemed best by all concerned to avoid even the remotest suggestion or possibility of assistance. A gentleman was found—Mr. Vining, of the Perkins institution, who had never met Helen Keller and who was quite unknown to her and unable to speak to her—who could take the examination papers as fast as they were presented and write them out in Braille characters, the system of writing in punctured points now much used by the blind. The questions, thus transcribed by him, were put into Helen's hands in the examination room, in the presence of a proctor who could not communicate with her, and she wrote out her answers on the typewriter.

Here, however, came in one of the additional points in Miss Keller's handicap. There are two systems of Braille—the English and the American—with marked differences between them. She had been accustomed to the English system, alone, in which most of the books printed in Braille have appeared. Mr. Vining, on the contrary, knew nothing about the English system. He, therefore, gave her the questions in the American system. She was compelled to puzzle out the unfamiliar method of writing much as a writer of one system of shorthand would puzzle out the characters of another system. To add to her difficulties, her Swiss watch, made for the blind, had been left at home, and there was no one at hand on either of the examination days to give her the time. Therefore, she had to work in the dark as to the time she had left after each question.

"But she passed the examination triumphantly

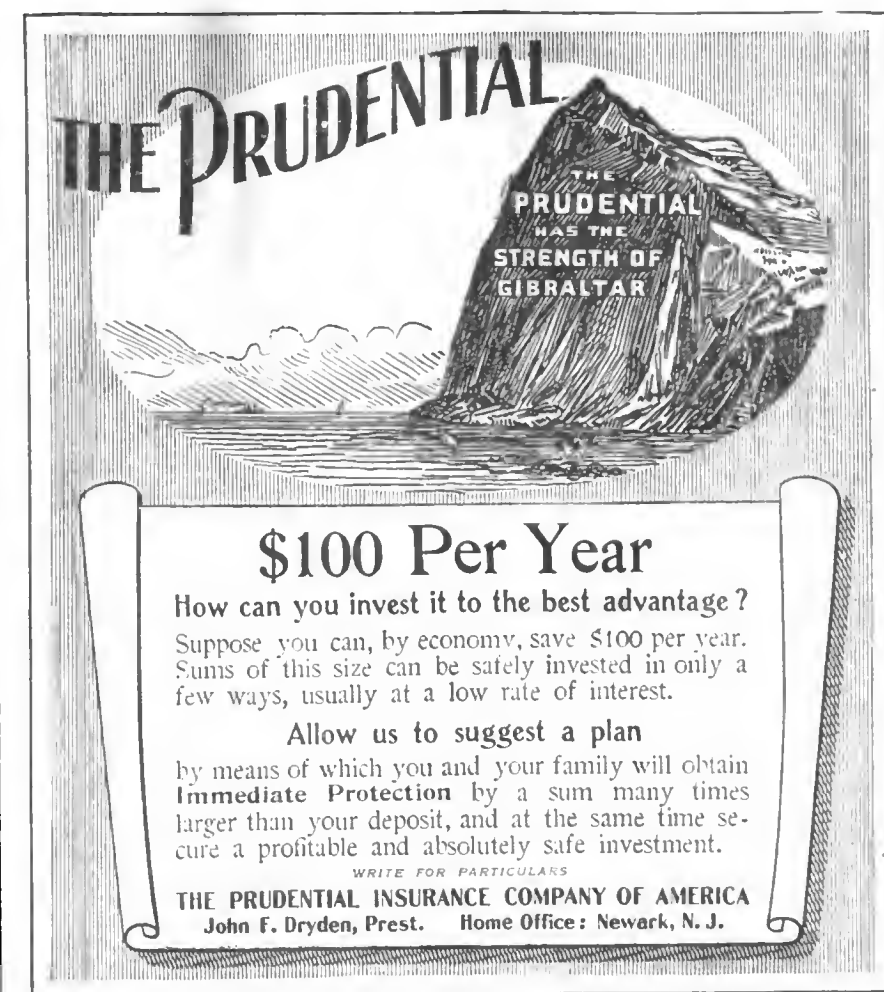

IF you look at a dozen common lamp-chimneys, and then at Macbeth's "pearl top" or "pearl glass," you will see the differences—all but one—they break from heat; Macbeth's don't; you can't see that.

Common glass is misty, milky, dusty; you can't see through it; Macbeth's is clear.

Tough, clear glass is worth fine work; and a perfect chimney of fine tough glass is worth a hundred such as you hear pop, clash on the least provocation.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

THE PRUDENTIAL

THE PRUDENTIAL HAS THE STRENGTH OF GIBRALTAR

\$100 Per Year

How can you invest it to the best advantage?

Suppose you can, by economy, save \$100 per year. Sums of this size can be safely invested in only a few ways, usually at a low rate of interest.

Allow us to suggest a plan by means of which you and your family will obtain Immediate Protection by a sum many times larger than your deposit, and at the same time secure a profitable and absolutely safe investment.

WRITE FOR PARTICULARS

THE PRUDENTIAL INSURANCE COMPANY OF AMERICA
John F. Dryden, Prest. Home Office: Newark, N. J.

in every study. In advanced Latin she passed 'with credit.' In advanced Greek, which her tutor regarded as her 'star' study, she received a 'B,' which is a very high mark. Yet here, the time and the Braille difficulty worked most heavily against her. What her marking was in the other studies is not known; it is only known that she passed them. Helen Keller is now ready for matriculation as a student of Radcliffe college. Her passing of the examination, especially under such circumstances, is in itself a wonderful achievement. No particle of its severity was abated for her because she is deaf, dumb, and blind, and no precautions were remitted because she is known to be incapable of deceit. She sat in total darkness and alone, without the touch of any friendly hand. A slip pricked with unfamiliar characters was put before her, and her typewriter clicked out its quick and true response to the hard questions. That was all.

With such an example before them, will any boy or girl despair?

MORE OR LESS PUNGENT.

Where It Counts.—MAUD: "Do you like to have men flatter you?"

ETHEL: "Oh, I don't mind, if they happen to be photographers."—*Harper's Bazar*.

Hyphens.—"Might I ask what your nationality is?" inquired the man who had been talking politics. "Certainly. My ancestors came from various countries. I am a German-Irish-French-Dutch-Swedish-American. I have no patience with a man who limits himself to merely one hyphen."—*Washington Star*.

Bliss Ahead.—"Von fare for the roundtrip?" asked the gentleman with the long coat and nose to match. "That's what," said the ticket agent.

THE NEW FOOD.

One of the most remarkable discoveries in the food line that will help to make this century famous is Protose, the vegetable meat. This is truly an important addition to our food products. Progressive physicians have long agreed that rheumatism, indigestion, biliousness, Bright's disease, diabetes, heart trouble, and various nervous affections were in many cases due to, and always aggravated by, eating flesh-foods. So many people are so accustomed to their meat daily that the meal seems tasteless without it, and it was hard for patients thus afflicted to break the old-time habit.

Protose solves this problem. It tastes similar to beef or chicken, contains twenty-five per cent. more food elements than either beef or mutton, and can be served in all the various ways that beef and chicken can be prepared.

Six cents to pay postage, sent to the Sanitas Nut Food Co., 71 Washington Ave., Battle Creek, Mich., will secure a sample can of this delicious meat.

NO FAITH CURE

ABOUT STUART'S DYSPEPSIA TABLETS.

They Cure Stomach Troubles and Indigestion Anyway. Whether You Have Faith in Them or Not.

All physicians agree that the element of faith has a great deal to do in the cure of disease.

Firm belief and confidence in a family physician of the same confidence and faith in a patent medicine have produced remarkable cures in all ages.

This is especially true in nervous troubles, and no field offers so prolific a harvest for the quack and charlatan as the diseases arising from a weak or run-down nervous system.

Nevertheless, the most common of all diseases, indigestion and stomach troubles, which in turn cause nervous diseases, heart troubles, consumption and loss of flesh, require something besides faith to cure.

More faith will not digest your food for you, will not give you an appetite, will not increase your flesh and strengthen your nerves and heart, but Stuart's Dyspepsia Tablets will do these things, because they are composed of the elements of digestion, they contain the juices, acids, and peptones necessary to the digestion and assimilation of all wholesome food.

Stuart's Dyspepsia Tablets will digest food if placed in a jar or bottle in water heated to 98 degrees, and they will do it much more effectively when taken into the stomach after meals, whether you have faith that they will or not.

They invigorate the stomach, make pure blood and strong nerves in the only way that nature can do it, and that is from plenty of wholesome food, well digested. It is not what we eat, but what we digest that does us good.

Stuart's Dyspepsia Tablets are sold by druggists at 50 cents for full-sized package.

Little book on cause and cure of stomach troubles mailed free by addressing F. A. Stuart Co., Marshall, Mich.

222-227 Canal Street, New York.

A CURE FOR RHEUMATISM...

Dr. J. G. CONNOR, Ionia, Mich., writes:

DEAR SIR: An old friend of mine handed me a couple of small vials of your TARTARLITHINE some time ago and I tried it on myself, having suffered from rheumatism for several years. I assure you I was so pleased with its effects that I procured a full sized bottle, and since taking it I have been entirely free from rheumatism during the past year. I also observed that it is not surpassed by any other preparation as a PROMPT and EFFICIENT diuretic; besides it is pleasant to administer. Please send me a few bottles for use among my patients afflicted with Rheumatism.

Regular package \$1.00.

Of all druggists or post-free by mail. Pamphlets with Testimonials FREE.

	And White resigns.

Notes by One of the Judges.

(a) This move is not to be commended for several reasons, especially as it permits Black to get his Kt on K 4 and thereby drive White's Kt from B 3. White feared P—Kt 5 attacking the Kt, followed by Q—R 5 ch. The more brilliant and, we think, better way of meeting this threat is to give the Kt for two Ps, and bring about a strong attack. For instance: 5, B—B 4, P—Kt 5; 6, Castles, P x Kt; 7, Q x P, Kt x P; 8, Q x P, and White gives Black something to think about.

(b) As White took chances on Black playing Kt—K 4, he should now take Kt. For the Kt is more dangerous on K 4 than the B.

(c) Should have played Kt—K 2 first.

(d) If 15, B x Kt P, Kt—B 6 ch; 16, Q x Kt, Q x B. (e) Stopping the Kt, and relieving the pressure on the K.

(f) This, in connection with his 25th and 26th, is excellent. It is good Chess.

(g) This doesn't accomplish much. Probably he hasn't any better.

(h) The exchange of Q's is at once fatal. White has a lost game anyway.

(i) Several times in this game Black was in a ticklish position, and only his very correct play saved him.

Notes from The Field, London.

(a) Showing the weakness of the King's Fianchetto defense. The compulsory advance of this P is weakening.

(b) Janowski developed with a clear judgment of the weak points in Black's defense. The text-move forces the 14th and 15th moves, and then White threatens with 16 Kt—Kt 3 to post this Kt on B 5.

(c) Compulsory. The loss of a P is the lesser evil. If he allows Kt—B 5, he could not dislodge it, and would have to defend the Q Kt P with either Q or R. Both suicidal.

(d) Blackburne's attack is highly ingenious and planned with a master-hand. It required all of Janowski's skill to withstand it.

(e) Obviously Kt x Kt ch would be followed by P x Kt, threatening P—B 6 and Kt—B 5, with winning advantage.

(f) Preparatory to R—Q 5.

(g) White is now perfectly secure, and reassumes the attack. The remainder requires no further comment, except a recommendation to study the correct and elegant way in which White winds up the game.

The London Tourney Players.

The Birmingham *Weekly Mercury* "sizes up" the players of the recent London Tourney as follows:

"Lasker has fulfilled expectations and showed himself head and shoulders above every other competitor. . . . Janowski threw away second prize through sheer inconsiderateness. . . . Pillsbury has not done himself justice. Instead of going into training, he was playing blindfold games and giving fatiguing performances. . . . Maroczy is a fine player, who has done quite as well as he deserved. . . . Schlechter has done well. . . . We have always expected more from Schlechter than he has performed. . . . Of Blackburne we need say nothing save that he is a great player who is growing old. . . . Tachigorin has unaccountable lapses, and, like Janowski, is apt to be careless. . . . Showalter has done fairly well, but he is unequal, and is not at his best in long tournaments. . . . Steinitz has fallen much below his ancient form, but as no man may preserve his youth forever, he must be content to give way by reason of advancing age. He is sixty-four, and no living man, nor any man that ever lived, has carried off so many victories. We admire his pluck, and we sympathize with his decline, which, after all, may be only temporary. . . . Of 'young' Bird, it is enough to say that he is still sixty-nine, and will probably remain at that interesting age for another decade or two. We hope so, for Birds of such a feather are scarce, and are growing scarcer day by day. With another temperament, Bird might have made more mark on the sands of time. But he bubbles over with fight that he throws away chances through sheer impetuosity."

OF the fourteen greatest Chess-Masters, beginning with Philidor (1747), there are four who seem to be greater than the others; La Bourdonnais, Morphy, Zukertort, and Lasker.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

GERMAN-AMERICAN PRESS ON THE PHILIPPINE WAR.

THE anti-expansion sentiment among our German-American citizens appears to be gaining in strength. Most of their papers demand that the United States come to terms with the Tagals. Many Democratic papers subject General Otis's bulletins to searching and by no means charitable criticism, interpreting them as stories of defeat and humiliation. Republican papers friendly to the Administration say little about the war. Not a few German-American papers of acknowledged influence declare boldly that a nation with a criminal record like that of the people of the United States would be more profitably employed in improving its own civilization rather than in the attempt to assimilate benevolently a far-off nation that has requested the American army of occupation to return to its own shores. The *Freie Presse*, Chicago, says:

"Nothing is so likely to disgust an intellectually healthy person as the talk of the jingo papers about our civilizing mission. In the first place, our civilization is of such a kind that we can not with decency offer it to any one, even as a gift. The administration of our large cities shows that we are not equal to the task of governing them. The almost daily occurrence of lynchings proves that our laws are not even sufficient to maintain a minimum of order, and the corruption which our war with Spain revealed does not place us in the light of a people who can recommend their education and breeding to others, much less force it upon them at the point of the sword. Whether the people whom we liberated are fit to govern themselves or not is none of our business. When the United States was struggling for her independence, many people in Paris and Berlin regarded us as not quite 'ripe' for self-government, yet the 'rebels' were assisted, and no attempt was made to hold them in tutelage. . . . We have, here at home, much room for improvement ere we can claim equality with the most highly civilized nations, and we

have therefore not the slightest moral right to force our scanty education and civilization upon others."

The Cincinnati *Volksblatt* fears that the expansion policy of the Administration will cause the Republican Party to lose the next Presidential election, and calls that policy the only weak point of the Republicans. The New York *Staats-Zeitung*, whose excellent foreign news commands respect—it gives the version of the Associated Press and an extensive special cable letter daily—expresses itself, in the main, as follows:

We often find in the papers printed in English remarks to the effect that, even if the annexation of the Philippines was a mistake, we can not draw back as we would lose prestige. Now, the United States did gain a little prestige by the war with Spain, but hardly as much as most Americans fancy. Spain does not pass muster as a military power on the other side of the Atlantic, and it is not admitted that the United States proved its warlike ability. On the contrary, our deficiencies as a military power became more apparent. But what has most hurt our prestige is the fact that we have broken the promises with which we began the war, by our reservations at the Peace Conference as well as by our Philippine war. Our influence in the council of nations would have been greater if we had left to Spain's colonies their freedom and independence after the war. We will admit that retreat from the Philippines would now somewhat damage our military reputation. But, as we have shown, that reputation never amounted to much, and a struggle lasting for years is not likely to increase it. Taken altogether, it is best to withdraw from our untenable position.

The *Morgen Journal*, New York, quotes Admiral Dewey in support of the assertion that the Filipinos are quite able to govern themselves, and believes it would be best to give the Filipinos autonomy first and win them over to annexation later. The *Westliche Post*, St. Louis, agrees with the New York *Staats-Zeitung* in saying that our policy has reduced rather than increased our prestige, and thinks that our inability to conquer the Filipinos will reduce our military reputation to nothing. Moreover, the attitude of the United States creates distrust everywhere. The paper says:

"The results of this distrust begin to show themselves. In Canada they reveal themselves in the irritable attitude of the people, and the coldness evinced toward the United States. In South America the republics forget their quarrels and think of combining in order to defend themselves against us. The representatives of the South American countries try to explain why they draw closer together, but the real reason is obvious. Moreover, the great distrust of the United States shown by the South Americans reveals itself in the many arrests of American citizens under pretense that they are spies."

The Louisville *Anzeiger* points to the Hazleton massacre, the murder of the Italians, and the unfortunate prisoners in the Cœur d'Alene district, "where hundreds of men are kept confined without the chance of a fair trial," as proof that civilization, justice, and humanity are not exactly at home under the Stars and Stripes. Many papers aver that the war is being carried on with a veritable riff-raff, that the American citizen will not enlist now that the war with Spain is over, and that more than one town in the United States prepares for defense when United States troops pass through. "No wonder that the Filipinos hate their 'liberators' now worse than the Spaniards," says the Buffalo *Volksfreund*. The New Jersey *Freie Presse* thinks when men like Dewey, Fnn-

ston, and Barrett are against the war, it is time to end it. The *Wächter und Anzeiger*, Cleveland, Ohio, referring to the bombardment and plundering of defenseless towns, says:

"Even if the war were carried on in a humane fashion it would be nothing to boast of. As it is carried on now it calls to heaven for vengeance, as the greatest crime that could possibly be committed by a strong people against a weaker one. If our imperialists could only read in their morning papers, as they eat their breakfast, what flits through the brains of the Filipinos when they think of the United States!"—*Translations made for THE LITERARY DIGEST.*

A PARTY WAR IN KENTUCKY.

AN interesting situation is presented in Kentucky by the nomination of two Democratic candidates for governor, a movement that may result, as some predict, in demoralizing the Democratic forces in a doubtful State on the eve of a Presidential campaign. The situation is thus described in the *Springfield Republican* (Ind.):

"The convention of Democratic bolters at Lexington has made the split in the Kentucky Democracy a formidable affair. Senator 'Joe' Blackburn nearly faints whenever he makes a speech because of his fury over the situation. As a situation it is extraordinary and quite worthy of the attention of people who make situations a study. In some respects it is baffling, but it is always interesting.

"This man Goebel, the regular Democratic nominee, was as fairly nominated by the Louisville convention as are most men who run for political office. . . .

"But a formidable revolt against Goebel has arisen. This revolt is not bounded by lines of cleavage between gold and silver men. John Young Brown, a former governor, is an earnest free-silver man, but he is the nominee of the dissidents. Gen. Simon Bolivar Buckner opposes Goebel and even calls him a Robespierre, yet General Buckner was the gold Democratic candidate for Vice-President in 1896. The split seems to be due to causes entirely local, and also complex. A large number of people, having nothing in common on other matters, find themselves in agreement concerning Goebel.

"First, he has antagonized Democrats who hold honor dear in politics, by the election law which he succeeded in forcing

through the last legislature. The Goebel law is certainly an outrage, and solely because of it Mr. Goebel deserves defeat. The law creates a board of three state commissioners, who are empowered to appoint subordinate boards of three members in each county. The local board is to name all the judges and clerks of election, and no provision is made for minority party representation in any of the boards. With Goebel, or any other man, as governor, this law provides a political machine of enormous and dangerous power. The fear that Mr. Goebel, if elected, will become a boss difficult to overthrow is well based, therefore, and the opposition of his enemies at this critical time becomes easily understood.

"With those who object to the Goebel election law are joined a considerable number of ex-Confederate voters and the interests of the Louisville and Nashville Railroad. These old Confederates harbor a deep grudge against the candidate because he killed Col. John D. Sandford a few years ago. Colonel Sandford was very popular in veteran circles. Mr. Goebel, however, was acquitted by the courts in the trial for the shooting, on the ground of self-defense. According to the evidence Sandford was the first to draw his pistol, but Goebel was too quick for the older man and shot him dead. The old soldiers, however, believe that Goebel incited the colonel to draw on him. Yet it was shown that the colonel had threatened the lawyer with violence for days before the shooting. The opposition of the railroads is due to Mr. Goebel's long warfare against their interests. He has been very industrious in prosecuting claims against the corporations, and has secured the passage of laws not designed to benefit them. Still another influence which Mr. Goebel must combat is the prejudice of the aristocratic families of Kentucky against a young man whose father was a very humble immigrant from Pennsylvania. The old families look upon him as a 'political upstart.'

"Bryan has indorsed Mr. Goebel because he is the regular candidate and is supported by Blackburn. The *Louisville Courier-Journal* supports him because of its desire not to be bolting all the time, and also, perhaps, with the hope that under Goebel's leadership silverism may be thrown off. Mr. Watterson's quick rally to the regular candidate probably made it easier for many silver Democrats to bolt. The famous editor is hated like a rattlesnake by many of those whom he fiercely denounced as 'anarchists' only a short time ago. The outcome of this intricate conflict is in grave doubt, yet Mr. Goebel himself is an exceptional organizer and worker, while Bryan's appeals can not fail to have great influence. It is certainly a rare Republican opportunity at this writing."

KENTUCKY GUBERNATORIAL CANDIDATES.

A CUBAN CENSUS.

THE President's proclamation to the Cuban people, intimating that the census, about to be taken, is a step preparatory to self-government for the island, has met no adverse criticism in the American press, and seems to be generally considered a wise act. The proclamation reads as follows:

"TO THE PEOPLE OF CUBA:

"The disorganized condition of your island, resulting from the war and the absence of any generally recognized authority aside from the temporary military control of the United States, has made it necessary that the United States should follow the restoration of order and peaceful industry by giving its assistance and supervision to the successive steps by which you will proceed to the establishment of an effective system of self-government.

"As a preliminary step in the performance of this duty I have directed that a census of the people of Cuba be taken, and have appointed competent and disinterested citizens of Cuba as enumerators and supervisors.

"It is important for the proper arrangement of your new government that the information sought shall be fully and accurately given, and I request that by every means in your power you and the officers appointed in the performance of their duties.

WM. McKINLEY."

The feeling of the Cuban press is shown in the following despatch from Havana to the New York Sun:

"The proclamation of President McKinley, that was issued here yesterday, was curiously received by the Havana journals, the organ of each faction in Cuban politics receiving it as favorable to its own views. The *Discussion*, the organ of the Separatists, and the *Patria*, a paper of the same stripe, hail the proclamation as the most definite reaffirmation of the joint resolution of Congress, and they construe it as meaning the beginning of absolute independence, for which they are contending. The *Discussion* prints a cartoon showing faces of representatives of each party on reading the proclamation. On the face of the partizan of independence there is a look of unqualified joy, while the face of the annexationist expresses deep disgust.

"The *Nuevo Pais*, on the other hand, comments on the ambiguity of the proclamation's phraseology, and calls attention to the fact that the word independence nowhere appears in it. It declares that the proclamation contains nothing to indicate the recall of the American troops, the termination of the military occupation, or the establishment of a Cuban republic."

A VICTORY FOR THE ANTI-EXPANSIONISTS.

THE election of Judge Shackelford (Dem.) to represent Mr. Bland's old district in Congress is hailed by anti-expansion papers as significant. The campaign was made almost entirely upon the issue of expansion, and, in spite of the fact that Judge Shackelford was admittedly less popular than Mr. Bland, he carried the district by over 3,000 plurality, Mr. Bland's plurality in

1898 having been 2,360. A despatch from St. Louis to the New York *Herald* says of the election:

"The result is a distinct victory for the anti-expansion forces, as the battle was fought mainly along that line. The Republican candidate, John W. Vosholl, in his speeches strongly upheld the Republican policy in the Philippines. The Democrats vigorously opposed the expansion trend. The skirmish, which ended so disastrously for the Administration advocates, is the first fought along that line in the United States, and has a significance national in scope and interest. . . . It was noticed in the votes that where the most canvassing was done along anti-expansion lines there the Republicans lost the heaviest."

The New York *Evening Post* (Ind.), which is strongly opposed to expansion, says:

"There are other interesting features of the result than the overwhelming defeat of the expansionists. One is the fact that the Philippine business was the one thing which engrossed the attention of the people. Another is the fact that the Republicans lost most heavily where the most canvassing was done by the Democrats along anti-expansion lines, and that 'Republican strongholds' refused to support the Administration's policy. A third is the indication of the attitude of the German-Americans toward this new issue. These voters are particularly strong in Osage and Cole counties, and the Republican vote in these two counties was cut down from 500 to 600. The opponents of

SEÑOR AGUIRRE. SEÑOR RASCO. SEÑOR MENDOZA. SEÑOR DUMAS. SEÑOR JIMENEZ. SEÑOR PEQUEÑO.

THE CUBAN CENSUS SUPERVISORS.

Courtesy of the New York Tribune.

imperialism have reason to feel greatly encouraged over this result. It is in the Mississippi valley that expansion was supposed to be strongest with the people, but the first test of public opinion shows that there is already a revolt in that quarter against the course of the McKinley Administration in the Philippines. The tide has begun setting in the right direction, and it will gain strength steadily."

The Springfield *Republican* (Ind.), another leader of the anti-expansion forces, says:

"The old Bland district is in the heart of Missouri and contains Jefferson City, the State capital. It is right on the main route of railroad travel between St. Louis and Kansas City, and can not, therefore, be considered isolated, or 'wayback' from the great currents of popular sentiment which have been sweeping over the West during the past year. It is not far from Kansas and is not out of reach of the military ardor which Funston's volunteers have sent back to their homes. . . . The result of this election is a complete discomfiture for the whole imperialist party in the United States. . . . The facts speak for themselves. The imperialists invited the country to watch the voting in the Eighth Missouri district and see the President indorsed. The answer is an emphatic rebuke. It is also a distinct encouragement to all

opposition parties to concentrate upon this great issue of Americanism and loyalty to the Declaration of Independence against imperialism and militarism."

The New York *Sun* (Rep.), which favors expansion, sees nothing extraordinary in the Democratic victory:

"The Democratic voters of the Eighth Missouri district are of their old way of thinking. They are constitutionally opposed to all Republican plans and purposes irrespective of their merit and efficacy, and whether they are foreign or domestic. They did not vote against expansion; they voted against the Republican Party. They would have done the same if it had been against expansion and the Democratic Party for it.

"Missouri is a sure Democratic State, and this special election in the Eighth district merely illustrates that fact anew."

The New York *Times* (Ind. Dem.), which favors expansion, takes a similar view:

"The Eighth Missouri is a Democratic district. The Republicans have carried it but once in twenty-five years. It would seem therefore that in electing Judge Shackelford over his Republican opponent the voters of the district merely followed their immemorial custom of giving the most votes to the Democrat. This Democratic triumph is not a solitary, startling, and epoch-making event, but a jog-trot, biennial, and commoner garden custom of the people of the district. Certainly they have rebuked the Republican Administration. They always do, so often as their elections happen to occur during the incumbency of a Republican President."

The St. Louis *Republic* (Dem.), however, says:

"The test of these issues by the vote of the people of the Eighth district was admitted by the Republicans to be decisive, and their campaign was made on this basis. *The Globe-Democrat* and other Republican organs called strenuously on Republican voters to rally to the support of the Administration policy of expansion. The St. Louis organ of Republicanism was especially insistent that the contest was one of national significance. It formally notified the Eighth-district Republicans that every newspaper published in the United States would devote exceptional space to the news of the election, and exceptional editorial attention to the lesson taught by its results.

"The result offers the plainest possible proof of the growing power of Democracy on the issues to be presented to the people for settlement in 1900."

BOTH SIDES OF THE SOUTH AFRICAN QUESTION.

ALMOST concurrently, two articles from authoritative sources have appeared, presenting the opposite views—Uitlander and Boer—of the issue in South Africa. Mr. Thomas R. Dodd, of Johannesburg, secretary of the South African League and a leader among the Transvaal Uitlanders in their protest against

WANTED—AN INTERNATIONAL REFORMATORY FOR BAD BOYS.
—The Record, Chicago.

President Krüger's methods, sets forth in the September *Forum* a defense of their cause; and the Rev. P. G. J. Meiring, pastor of the Dutch Reformed Church of Johannesburg, who is in

America as a delegate to the Pan-Presbyterian congress at Washington, argues, in a press interview, the Boer side.

Mr. Dodd tells of the emigration of the Boers from the Cape northward in 1837 to escape British rule, their principal grievance being the British liberation of their slaves. They found liberty, but not financial success, and by 1877 their government was in such straits that it ceased to exist, and a peaceful anarchy took its place. The government treasury contained twelve shillings and sixpence to meet a debt of £215,000, with no way of raising funds. Sir T. Shepstone, in spite of Boer protests, annexed the country to Great Britain, and an era of prosperity followed. Prosperity did not allay the discontent, however, and four years later, in 1881, the Boers inflicted severe defeats upon the British at Majuha Hill and Laing's Nek, and won their independence so far as domestic affairs were concerned, England retaining a suzerainty over their foreign relations. In this settlement the rights of the Uitlanders were not clearly set forth, but Mr. Dodd gives the following extract from the conference which preceded the signing of the convention:

"MR. KRÜGER—'There will be equal protection for all.'

"SIR E. WOOD—'And equal privileges?'

"MR. KRÜGER—'We make no difference so far as burgher rights are concerned. There may perhaps be some slight difference in the case of a young person who has just come into the country.'"

Mr. Dodd continues:

"Had this declaration of intention been expressed in the convention, in set terms, the present trouble could never have arisen. But the convention—which Mr. Gladstone's government characterized as an agreement between two equally generous nations, the one strong and magnanimous, the other weak and brave—was interpreted by the Transvaal Government in a pettifogging spirit; and hit by hit the rights of Uitlanders were whittled away. The franchise, which, in 1881, was obtainable after a twelve months' residence, was, at the beginning of this year, practically not obtainable at all; for, when a fourteen years' residence—including a period of probation, during which he incurred all the responsibilities of citizenship, but did not enjoy all its privileges—had qualified the applicant, the consent of two thirds of the burghers and the approval of the government were still required. Consequently, it is generally felt by the Uitlanders that it has been the intention of the government to restrict the franchise to one privileged race."

In 1887 gold was discovered, and in ten years the revenues of the Boer Government leaped from £236,584 to £4,462,194 a year. Up to 1892 the Uitlanders were too busy making fortunes to agitate seriously for the franchise, but from that time their discontent grew until in 1895 they formed the Transvaal National Union and made a demand for political reforms. Mr. Dodd gives the following sketch of the condition of the government at the time the demand was made, and tells of the reception it received:

"When it is stated that the civil service was utterly incompetent and almost utterly corrupt; that the bribery of Volksraad members was a common practise; and that, in addition to the long-standing liquor, dynamite, and railway concessions, others had been applied for, it will be seen how urgently reforms were needed. Petition after petition had been sent to Pretoria, only to be rejected. Efforts had also been made to influence the parliamentary elections; but a law had been passed rendering the formation of Uitlander election committees illegal. Consequently, every avenue of approach was closed. Progressive members, so-called, having 'ratted,' again and again, it was decided to make one final appeal; and, in 1895, a monster petition, which was signed by nearly 40,000 people, was sent to the government by the National Union. The petition, however, was rejected, by a considerable majority, on the motion of a member, who said, 'If they want the franchise let them come and fight for it.' So closed the first chapter in the efforts of the Uitlanders in the interest of reform."

Then came the Jameson raid, which, altho well meant, ruined

the cause of the reformers; and the oppressive press laws, alien immigration laws, and alien expulsion laws followed in rapid succession. The alien immigration law was soon repealed, however, at the request of England, emphasized by the sending of a fleet to Delagoa Bay. Since then, however, affairs have been growing worse instead of better until the Uitlanders feel that they can endure it no longer. Mr. Dodd gives the following list of the demands of the Uitlander council made three months ago:

- "1. Legislation by mere Volksraad resolution to be abolished.
- "2. Equitable franchise law and fair representation, with re-distribution scheme.
- "3. English and Dutch languages to be official.
- "4. Reorganization of the civil service.
- "5. High court to be independent. (At present the judges of the high court are required, under pain of dismissal, to respect any resolution of the Volksraad, however hastily it may have been passed. This demand was the direct result of an action in which an American subject obtained damages against the government.)
- "6. Reform of education.
- "7. The cancellation of monopolies. (In addition to the long-standing liquor, railway, and dynamite monopolies—the last two of which are said to represent a permanent tax from £600,000 to £1,000,000 per annum upon the country, altho conducted almost solely in the interest of the monopoly holders—there are now monopolies engaged in the manufacture of coca, calcium carbid, soap, candles, matches, brushes, etc.)"

Mr. Dodd adds:

"That it should be necessary, at the close of this century, in any civilized country, for white men of education and ability to ask for these rights may well seem incredible. That they should ask for them in vain seems impossible."

Rev. Mr. Meiring, who was interviewed at Montreal by a representative of the *New York Times*, pronounced it his conviction that the agitation in the Transvaal is the work of interested persons in high places, whose object is not the redress of the grievances of the Uitlanders, but the wiping out of the Transvaal as an independent community, and its absorption by Great Britain. As proof of this he cites the fact that the reform party won a victory in the Volksraad in April, and says that the redress of the Uitlander grievances will be accomplished by the free action of this party, without the need of a resort to arms. The correspondent gives Mr. Meiring's story of British aggression as follows:

"Mr. Meiring recites what he terms the systematic source of oppression and cupidity practised by England upon the Boers from the time they left Cape Colony, in 1836. He says they then migrated into the then uninhabited region beyond the Orange River. They assigned three reasons for this exodus—English partiality to the Kafir robbers, the enforced use of the English language in a country where few Englishmen lived, and the abolition of slavery. Upon reaching what is known as Natal, the territory was purchased from the Zulus, who afterward massacred the Boers, who later drove the Zulus to the mountains. No sooner were they fairly settled than an English gunboat appeared in the harbor of St. Lucia Bay, and Natal was proclaimed to be British.

"Not desiring to live as the subjects of any power, the Boers were forced to go west to the Orange Free State to establish a popular government. Shortly after their settlement the English governor, Sir Henry Smith, proclaimed the country British, basing his action upon the ground that the Boers, once having been British subjects in Cape Colony, they remained so, and wherever they settled it became, *ipso facto*, British territory. Then the Boers fought and lost, and were forced to 'trek' to the country

(The idea for this cartoon was suggested to Mr. Davenport by William J. Bryan.)

"THE DESCENT OF MAN" IN POLITICS.

A Cartoon by Mr. Bryan and a Reply.

now called the Transvaal, at that time—1845—a land where no man, black or white, made his habitat.

"In 1872 alluvial gold was discovered, and a number of English and Scotch miners came there. Following this came the wars with the Kafirs, which were difficult of suppression. Thereupon the miners sent a petition, purporting to be in the name of the people of the Transvaal, to England, asking England's assistance to repel the invaders and govern the Transvaal. In response the English governor sent a small company of soldiers, at the head being one Theophilus Shepstone, who at once proclaimed the Transvaal English territory.

"Deputations sent to England to ask a revocation of the proclamation failed to bring about the desired result. Then the Boers again took up arms to protect their country from the encroachments of England, and the result was Majuba Hill and Laing's Nek. England relinquished her claims on the country and gave the Boers their independence. Instead of seeking revenge for the defeat of a small body of men she acknowledged her error."

The franchise, rightfully withheld at first, according to Mr. Meiring, is about to be granted, so that the franchise argument is now only a pretext:

"In 1884, after the discovery of gold quartz, foreigners flocked to the country, not to make their homes, but to seek wealth. Under these circumstances it was no wonder that the Boers refused to grant the new population the right of franchise, when with it they could control legislation and take the government out of the hands in which it belonged.

"Mr. Meiring does not deny that there has been legitimate ground for grievance in the withholding of the franchise to the extent which has obtained of recent years in the Transvaal. There are two political parties among the Boers, the Conservatives, and the Liberals, or progressive party. The latter has contended that the franchise act should be broader, and that the principle must be acknowledged that residence entitles the possessor to a vote. Heretofore the latter party has always been in the minority in the Volksraad, but at the elections in April last it obtained a small majority.

"The Liberals having obtained a majority in the Volksraad, the extension of the franchise and the introduction of more liberal laws were about to allow as a natural consequence. In the mean time, however, certain men who had their own interests to serve began an agitation for immediate reforms, and made a passing grievance a pretext for their attempt to involve England in a war with the Transvaal."

The dynamite monopoly, Mr. Meiring thinks, will not reduce the mining companies to beggary:

"The dynamite monopoly is the second most important grievance of which the Uitlanders complain. The Transvaal Government has granted an exclusive franchise to a large syndicate, composed of German and other capitalists, to manufacture dynamite in the country, and has forbidden the importation of the article from other countries. The price demanded for dynamite by this syndicate is 75s. a case, and it is declared that an American company recently offered to deliver it in the Transvaal for 50s.

"With regard to this monopoly, Mr. Meiring said that it was also one of the matters which the Progressive Party, now in the majority in the Volksraad, proposed to change, but they had encountered the steady opposition of President Krüger, who had threatened to resign when the popular body reported in favor of the discontinuance of the monopoly. The reason which had influenced the government in granting the concession was, however, not difficult to appreciate. It was argued that if the importation of dynamite were permitted, no company would be likely to establish a powder manufactory in the Transvaal. The country would accordingly be without the means of obtaining a home supply of explosives in the event of war, and might find difficulty in obtaining munitions elsewhere."

Mr. Meiring feels that the Boers are right in defending themselves against British aggression, and declares that a war would be a crime. He says:

"It is the glory of England that her people have always loved freedom and have been imbued with a spirit of right and justice toward others. If it were not that a few interested persons, most

of them in high places both in England and in South Africa, had succeeded in controlling all the channels of publicity and had spread erroneous and misleading reports broadcast, we would hope for and receive the treatment we deserve at the hands of the English nation. I do not believe that any one who possesses right feelings and is capable of the influence of sentiment will be able to read the history of the Afrikaners without sympathizing with them and without reaching the conclusion that a war forced upon them by England would be criminal."

A CURE FOR CITY CORRUPTION.

THE ever-present problem of political corruption is treated from a novel standpoint by J. W. Martin, a member of the executive committee of the London Fabian Society, who recently lectured in this country. Like De Tocqueville, who once said that the cure for the evils of democracy is more democracy, Mr. Martin contends that the cure for municipal corruption is a further extension of municipal enterprise. Writing in *Harper's Monthly*, he says:

"In every city, however mixed its population and shameful its record, there is a preponderating class of work-people who have passed through the public schools, who read the newspapers, and discuss political matters acutely. They should form the backbone of a reform party. Without them victory is impossible. With them it can not long be delayed. They can be won only by the adoption of a broad social program. They suspect a person who preaches honest government with the restriction of its function to the narrowest possible limits. To this timid advocate they reply: 'If you have so little confidence in your own government as to be afraid to use it for big purposes, we don't see why we should get enthusiastic about it. Those who can't trust themselves must not ask others to trust them.'"

Mr. Martin especially urges the reform element in American politics to concentrate its influence on the public ownership of city franchises. "Everywhere," he says, "the appreciation of the value of city franchises is growing. Citizens are fast learning that large revenues may be got from them for expenditure on parks and open spaces, public baths, better schools, free lectures and libraries, concerts and gymnasiums." He claims that a forward policy in the direction of municipal ownership has been eminently successful in England, and cites as striking object-lessons London, Birmingham, and Glasgow—three of the best-governed cities in the world. Until recent years all these cities were in the hands of corrupt officials, but a bold municipal policy and the extension of public functions have resulted in much greater political honesty and considerable reduction in taxes. For example:

"Prior to 1870 Birmingham and its government were in a foul condition. . . . The inhabitants had no municipal ideals; aspirations and performance were alike mean. About 1870 there came to a few young men the revelation, 'This town will be reformed only by giving it something worthy to do'; and under the leadership of Mr. Joseph Chamberlain a new period was inaugurated. Soon the conditions changed. Municipal activity for social alleviation succeeded to the monotonous effort to secure honesty simply for honesty's sake. For the larger duties came forward larger men, and succession on all sides justified the wider program. First, the gas supply was municipalized, and the price reduced from seventy-eight cents to fifty-three cents per thousand. . . . As the water company did not give pure and sufficient supplies, and a large portion of the inhabitants were dependent on shallow wells, this service was next taken over by the community. . . .

"In 1876 Birmingham acquired ninety acres of overcrowded and unhealthy property at its center, and commenced a wonderful transformation. Part was cleared and let out on lease, so that the chief business houses now stand on the former site of noxious slums. Numerous model dwellings for workmen have been constructed; light and air have been let in all through the district; and now this municipal estate is worth twelve and a half million dollars. A beautiful museum and art-gallery, numerous parks, gardens, and recreation-grounds, five sets of public baths, nine

free public libraries, a city cemetery, plentiful markets, and efficient schools and colleges—all testify to the width of view of the city rulers, and give substantial reason for civic pride. With the enthusiasm and watchfulness which these schemes have generated, bribery and boodling are impossible."

Moreover, Mr. Martin asserts that London, Glasgow, and Birmingham are not exceptional instances, but are types of the municipal purity and pride which accompany the wide social activity of English cities. "A like result may be obtained," he says, "only by the adoption of a like method," and he points to Boston as an American illustration of his theory:

"Boston has started on a similar career with a similar effect. There every man who bathes at the beach baths or takes his shower in the palatial all-year baths, every boy who attends the municipal summer camp, every woman who enjoy a stroll in the extensive parks or attends a free city concert, has solid reason to support good government. While workmen, therefore, vote for Mayor Quincy, the richer residents serve eagerly on the numerous honorary commissions, which practically supersede the out-of-date council. Jobbery and inefficiency are *not* the staple subjects of city discussions. Honest and capable people are really in power, and all classes unite in supporting the executive."

HOW THE SLUM MAKES CRIMINALS.

CONVICT No. 315, of the state prison at Sing Sing, N. Y., writes an interesting article in *The Star of Hope* (Sing Sing prison, August 26), telling of society's crimes against the criminal. The writer says: "It is our opinion—and we write as one who has felt, metaphorically speaking, the branding iron of society—that the crimes of society against the individual (while he is not yet a criminal), continued with unrelenting ferocity when he has become one, are the causes of 50 per cent. of the crimes committed." He adds: "We don't propose to defend crime. We hate it, whether it is exhibited in the individual or in the body social. It is merely to show the cause and effect as we understand it, that we write." He then divides criminals into three classes: The accidental or unintentional criminal; the criminal of circumstances or environment; and the criminal by election or preferment. It is evident that we can do little to keep from their evil way the criminals who become such by accident or by deliberate choice, so we are left to deal with those who become criminals from circumstances or environment. Society's crime against this class of evil-doers is our toleration of the city slum. Not only does the slum urge its children on to evil before they realize what life means, but when they have become men and women and the judge sends them to prison to ponder the wages of sin, there is no memory of an innocent, happy childhood to beckon them back to repentance and better lives. No. 315 says:

"The accidental criminal has the recollection of better days and better things to cheer him. His memory harks back to other times and scenes. His idols may be shattered, but his ideals remain; and with their aid he can fathom the depth he has fallen; and he can, with the help of God and the outstretched hands of those who love him, struggle from out the slough of evil back to the narrow path again, tho some of the mire will always cling to him. But the criminal of circumstance is denied this. His memory holds no picture of a clean, sacred home-life, no recollections of a happy childhood—as happiness is understood—but instead it is always the streets, and the foul, evil-smelling brick barriers that form the background of his picture—phantoms of slatternly women and emaciated and crying babies; miasmas of foul smells; and recollections of cold, hunger, drunkenness, and disorder—the body.

"His first recollections of law and order are insolubly associated with the policemen—his natural enemy—the despoiler of his youthful pleasures, the relentless individual who seemed to his immature mind to legislate, execute, and adjudicate all law. His first glory was the overcoming of the, to him, irksome laws of that

ever-present minion of society. How glorious to have him chase you from the docks when you went to swim, what bliss to hit him in the back with a rotten tomato when you come out. Unconsciously he became an evader of the law; a thorn in the policeman's side and, *ergo*, a nuisance to society. His early amusements were watching a street fight or participating in one; his first games were those of chance; his field sports killing cats; his airings were taken on the tail-end of street cars or the end-gates of wagons; the street was his home; the tenement his residence and a good place to hang up his hat."

As every boy has his hero, whom he admires and imitates, so the child of the slum has his:

"How he admired Chimmy and Chonnie and Mickey as they stood there with their '3 for 5's' in their mouths; the red light of the 'gin-mill' illuminating the faces that were just beginning to show the lines of dissipation. How eagerly he listened to their poor bare tales of conquest of Sallie and Annie and Katie; of their dexterity with their hands; their capacity for mixed ale; their relation of the latest crime, the story of their latest contribution to jail; how Mickey Hoolihan had kicked in the 'sats' of a policeman. He heard them relate their different limits of sensuality, and as the policeman on the beat wandered by and saluted them by their first names instead of 'fanning' them off the corner, he throned them in Olympia and longed to grow up and be as they."

The prison, according to No. 315, turns the "accidental" criminal into a permanent one, who repays society for its crime against him. The slum boy, too, finds Sing Sing ill calculated to turn him to a better life.

TOPICS IN BRIEF.

LETTERS AND ART.

VITALITY OF MACAULAY.

ALTHO it is the fashion among certain critics to decry Macaulay of late years and to allude to him as a sort of literary mountebank, it is nevertheless well known that his popularity with the reading public on both sides of the Atlantic is still enormous. Even granted, as many people claim, that he is merely a masculine and picturesque rhetorician skipping along the surface of things and reflecting back to us with immense self-confidence the surface traits of men and scenes gathered in the course of a vast reading and stored in a wondrous memory, yet it appears to be undeniable that these are qualities which captivate an almost uncounted multitude. It is especially Macaulay's virility and common sense—"that great English characteristic"—which makes his vitality to-day still unshaken, according to Mr. H. D. Sedgwick, Jr., in *The Atlantic Monthly* (August). He says:

"Macaulay did not care for philosophy. 'The philosophy of Plato,' says he, 'is the philosophy of words.' 'The brilliant Macaulay, who expresses the tone of the English governing classes of the day, explicitly teaches that *good* means good to eat, good to wear, material commodity; that the glory of modern philosophy is its direction on "fruit"; to yield economical inventions; and that its merit is to avoid ideas and avoid morals. He thinks it the distinctive merit of the Baconian philosophy, in its triumph over the old Platonic, its disentangling the intellect from theories of the all-Fair and all-Good, and pinning it down to the making a better sick-chair and a better wine-whey for an invalid; that "solid advantage," as he calls it, meaning always sensual benefit, is the only good.' This is Emerson's criticism on Macaulay, but he puts it forward as illustrating English traits. Taine says: 'I do not wish to criticize doctrines, but to depict a man; and truly nothing could be more striking than this absolute scorn for speculation, and this absolute love for the practical. Such a mind is entirely suitable to the national genius; in England a barometer is still called a philosophical instrument; philosophy is there a thing unknown. . . . The English have moralists, psychologists, but no metaphysicians. . . . The only part of philosophy which pleases men of this kind is morality, because, like them, it is wholly practical, and only attends to actions. . . . Macaulay's essays are a new example of this national and dominant inclination.'

"England is highly renowned for her natural science; but the Englishman's lack of interest in abstract ideas is the burden of the lamentation of every English Jeremiah."

And yet there was another side to Macaulay's nature in curious contrast to his inability, in his own writings, to grasp the ideal standpoint; and his sympathy with Dante and Cervantes—two great idealists—was strong. Mr. Sedgwick says of this other side:

"In Florence, his rooms looked out on a court adorned with orange-trees and marble statues. His diary reads: 'I never look at the statues without thinking of poor Mignon:

Und Marmorbilder stehn und sehn mich an:
Was hat man dir, du armes Kind, gethan?"

I know no two lines in the world which I would sooner have written than those.' In another part of his diary he writes: 'I walked far into Herefordshire, and read, while walking, the last five books of the "Iliad," with deep interest and many tears. I was afraid to be seen crying by the parties of walkers that met me as I came back—crying for Achilles cutting off his hair, crying for Priam rolling on the ground in the courtyard of his house; mere imaginary beings, creatures of an old ballad-maker who died near three thousand years ago.' To such sentiments few have been as susceptible as Macaulay, but beyond that, into the realm of spiritual sensitiveness, into the borderland where the senses cease to tyrannize, he could not go."

Mr. Sedgwick passes an appreciative and discriminating judgment upon Macaulay's history, and says that it is of permanent

value to the world to possess a history of England written from the Whig—that is, the Englishman's—standpoint. Of the "Essays" he says:

"Macaulay saw the world as one vast picture-book. This is the reason why his essays stand on the Australian's shelf next to the Bible and to Shakespeare. There is nothing in English literature comparable to them; there is nothing of the kind in foreign literatures. Each essay is a combination of history and literature, of anecdote and learning, of incident and portraiture, of advocacy and party spirit—such as are commonly found separate and distinct in the essays of a dozen different men. There is somewhat of the constructive element of imagination here; as the mechanical mind brings together the odds and ends of its recollection, the remainder baggage of its memory, and works and fashions them into an invention, so Macaulay from his vast stores unites and combines scattered materials and creates an imaginative picture. There is nothing to be found in his work which the world did not possess before; but most of the world was not aware of those possessions until Macaulay gathered them together."

THE MENDICANT STUDENTS OF RUSSIA.

THE Russian University presents the singular spectacle of a free institution in an autocratic land—an institution from which even the lowest peasant-born student is not excluded, even tho he be as destitute of means as of social position. The university is the poor Russian's opportunity, the stepping-stone to the many places under the Government open only to its graduates.

A writer in *The Saturday Review* (London, August 19) tells of some of the ways of the "poor student" at Moscow and St. Petersburg. He says:

"A stroll through the streets of Moscow during term time furnishes abundant evidence of the popularity of its university. The uncompromising military blue-and-green uniform which stamps the student and, which he can never, save under dire penalties, exchange for plain clothes, is to be met with at every turn. A few rich students are caught sight of driving; the many are on foot. The Russian, even the Russian boy, hates athletics and dislikes exercise of any kind. He never walks in the ill-paved streets of Moscow if he can afford to do otherwise. The 'poor student' has no choice. He not only tramps, but tramps much more than his more fortunate fellows drive. There are lessons to be given as well as lectures to attend, for the poor student is poor to the verge of starvation. He has terrible hardships to fight against in the pursuit of knowledge. But he is stout-hearted and his ambition to learn is genuine and earnest. He is impulsive, but his impulses are generous, tho they frequently lead him into scrapes. He is intellectually broad minded, and tho his ideas not seldom come to nothing he has plenty of them. In fact, in spite of drawbacks physical as well as moral, among the former of which not the least is a decidedly unwashed and slovenly appearance, the poor student is perhaps the most interesting character in all Moscow.

"Wherever the student congregates the scene is a novel one for the foreigner. Opportunities for seeing them '*en bande*' are unfortunately rare. The right to call together meetings for the discussion of any and everything under the sun is denied them. Students' associations are forbidden to the Russian, and woe betide the enterprising young man whose energies lead him in this law-breaking direction. Discovery means exile and a promising career ruined. One admirable occasion, however, is afforded by the symphonic concerts given during the winter months at the Club de la Noblesse. Here students are admitted free to the final rehearsals always held on Saturday mornings. The Russian loves music, and the chance is one not to be missed. They arrive, young and old (for there is no limit to a Russian student's age), an eager crowd, rushing in breathless to the concert hall. The majority bear every appearance of having but lately rolled out of bed. Faces are unmistakably unwashed and hair—worn extra long as it is winter time—uncombed. Their clothes, with the exception of jackets which have been hastily scrambled into, have certainly served as sleeping garments. Yet these wild-looking youths rouse something more than mere curiosity in for-

eign eyes. Interest and sympathy must be felt for the distinctly dirty crowd of boys in patched and faded uniforms who have come to forget everything for an hour in music. There is so much character and so much meaning in the scene. With the same earnestness they face hardship and overcome the difficulties of that lasting struggle, a poor Russian student's life."

THE PROBLEM OF CHILDREN'S BOOKS.

THE question as to what is the best home reading for children, the reading that will after all principally determine the bent of their literary tastes in after-life, is one that has been debated much of recent years. The *Chicago Dial*, which has given much space in the past to the subject of English teaching in school and college, prints an article from Mr. W. T. Field which contains much that is suggestive. Mr. Field believes in "Mother Goose" as the earliest pabulum for the youthful mind:

"There is nothing better for him, provided always it is the real simon-pure 'Mother Goose,' and not the miscellaneous stuff which masquerades in cheap editions under that name. The parent must not think that any story which will amuse a child is useful. The individual taste has not at this period of development become pronounced; the child will accept anything eagerly; a story is a story. But the influence of the stories which are told him is deep and lasting. If he is fed upon tales of ogres and giants who eat up little boys, a taste is formed which will continue to demand extravagant and blood-curdling fiction. 'Jack the Giant-Killer' is the logical antecedent of 'Jack the Indian-Killer' and 'Jack the Ripper,' which our children see a little later upon the news-stands—more's the pity. We sometimes ask why these outrageous yellow-covered tales are written; but the explanation is quite easy. There is a demand for them; and we should see to it that the demand is not fostered by the tales which our children hear from their nurses in the days before the little ones can read for themselves."

The period at which the child begins to know the meaning of the printed word and to wander away from his reading-book is a time when he especially needs help, but Mr. Field thinks that some latitude should be allowed him in the selection:

"If he himself chooses one from a half-dozen books, all of which are equally good, the chances are that he will better enjoy the reading of it and will get more real good from it than if it were presented to him alone as something to be read because of the good it would do him. Do not make his reading a duty, but let it be a privilege and a pleasure. He may prefer 'Robinson Crusoe' to 'Pilgrim's Progress,' and if he does he should be allowed to read it. But beware how widely his choice is allowed to extend. Fruits are good for children—but there are unripe fruits and there are partly decayed fruits which are not good. The average parent will be quite careful as to what his children are putting into their stomachs, but is apt to be equally careless as to their mental fare."

"The boy-handit, wild-west, sensational stories of the news-stands, to which reference has already been made, are not, after all, the most dangerous species of children's literature. They are so glaringly bad that parents instinctively scent their presence and banish them from the household. Their influence is happily becoming limited to those homes in which the parents themselves are not above the moral standard of the tales—and in such homes there is little chance for the growth of a pure literary taste or a high moral character. It will be observed that the influence of all literature is felt along these two lines, the esthetic and the moral; that which affects the taste and that which affects the character. While these remarks apply chiefly to the esthetic influence, the two are so blended that it becomes quite impossible to avoid reference to the moral influence as well. That which we love, we are."

"The most dangerous class of children's literature is that in which sensationalism is respectably clothed. There are stories quite as bad in their influence as the border-ruffian type, but more refined in their setting. The boys and girls move in good society, but they are always getting into the most impossible situations and having the most startling adventures—hair-breadth

escapes, encounters with burglars, and all that sort of thing. These stories appear in reputable children's magazines, and are interspersed with items of useful information—science, history, and biography. The story is inserted to make the magazine popular; and it answers its purpose. In the family of my friend A, three well-known children's periodicals are taken and read. Several days before the time for the appearance of each issue, the children are in a fever of excitement; and when the paper at last appears, everything is dropped until the fate of the hero of the continued story is ascertained. In this family there is no library worthy of the name. The periodicals already referred to supply all the reading matter for which the children care, or for which they have time after their school duties are fulfilled."

The writer thinks that there is another species of juvenile literature still worse than this sugar-coated sensationalism, to wit, "the sentimental stuff which is written in the name of religion and morality, but which is effective only in vitiating the taste, weakening the intellect, and giving false views of life." Happily the best Sunday-schools and religious papers have now cast this out. The principal thing is to teach the child to buy, read, and take care of good books—books that will be of permanent value:

"It is one of the most significant facts of modern life that a snuffet of periodical literature, both juvenile and adult, is operating against the reading of books and the formation of libraries. The magazine has its place, but it also has its limitations; and we should lead our children to understand that, after all, the vital and permanent literature is that preserved for them in good books. Let every child have his little book-case in the nursery—or, better yet, a shelf in the library which he may call his own. Let him be encouraged to read good books and to care for them. He will then come to feel the friendship with them which is the greatest joy of the literary life. A good book presented to a child on each succeeding birthday—a book chosen wisely with respect to the child's tastes and abilities, but of sterling worth—will soon put him in possession of a library which will be a lasting source of strength and satisfaction. It is a mistake to think that the child must be continually supplied with fresh reading-matter—that a book once read is finished. Indeed, the strong intellects of the last century are those which have been nourished in childhood upon a few good books—read and reread until the thought and style became a part of the reader's permanent possession. Nor does a child lose interest in a good book after a single reading. What boy ever tired of 'Gulliver's Travels'?"

"Such books as those of Kingsley, Church, and Jane Andrews, Lamb's 'Tales from Shakespeare' and 'Adventures of Ulysses,' the fairy tales of Andersen and Grimm, 'Æsop's Fables,' 'Robinson Crusoe,' and the 'Swiss Family Robinson,' 'Pilgrim's Progress,' 'Franklin's Autobiography,' 'Tom Brown at Rugby,' and the stories of Scott and Dickens—all these are genuine classics, and they never grow old. Then there is a multitude of new books written for children by men and women who love and understand the needs of child-life. Never was there a wider range of selection, and never a time when the [non] possession of children's libraries was so inexcusable."

Wagner's Views of English Musical Taste.—Two volumes of Richard Wagner's letters have lately been published in England. One of them, a collection of his letters to Wesendonck—a rich merchant whom he met in 1852—contains some passages which the *London Academy* quotes in illustration of Wagner's opinions about music in England; opinions, it is hardly necessary to say, which were not extraordinarily complimentary. Here is one passage written from London in March, 1855:

"No one here arrives at any kind of interest in a thing unwonted. . . . True art is something utterly strange to them, and they assuredly are not to be caught by anything but its incomings and outgoings. The equanimity with which these persons [the Philharmonic audience] listened to the singing of a wearisome duet [by Marschner], for instance, just thirty seconds after the close of the 'Eroica,' was an altogether new experience to me; all the world assured me that no one took the least offense at it, and exactly as the symphony, so was the duet applauded. . . .

Anything more objectionable than the genuine English stamp . . . I can not conceive; they one and all have the type of the sheep; and just as certain as the instinct of the sheep for finding out its fodder on the meadow is the Englishman's practical sense; his fodder he finds, to be sure, but the whole lovely field, with the blue heavens above it, unfortunately is non-existent for his organ of perception."

Again he says, April 5, 1855:

"The real delight of the English is oratorio; there their music becomes the interpreter of their religion—*passer moi le mot!* Four hours long do they sit in Exeter Hall, listening to one fugue after another in perfect confidence that they have discharged a good deed, in reward for which they will get nothing whatever to hear in heaven but the loveliest Italian operatic arias. It was this deep fervor of the English public that Mendelssohn gaged so well when he composed and conducted oratorios. . . . Mendelssohn is to the English completely what their Jehovah is to the Jews. And Jehovah's wrath now strikes the unbelieving one; for you know that, among other great qualities, the dear God of the Jews is also credited with very much rancor."

"To think that he put up with us!" says *The Academy*. Hard cash, however, had something to do with it, for, as Chopin said, "the English are the only people who pay well." Had he lived until now, he would have added, "and the Americans."

THE ART OF WOOING IN LITERATURE.

THE evolution of the art of love-making is traced by a writer in *The Atlantic Monthly* (August), from the time of Dante's divine Francesco to the days of the "Prisoner of Zenda." This fine art is, says the writer, more largely influenced in its manifestations by environment, the times and customs, and most of all by the climate, than most people imagine:

"Take the lovers of the days of Dante. Did they not swoon from the very violence of their feelings, while, according to Chaucer, the suitors of England, after the fashion of Ellen Montgomery, fell to weeping the moment their eyes happened upon the object of their devotion? The 'Morte d'Arthur,' on its part, introduces us to lovers who are subject to constant physical collapses. They lose their appetites, occasionally their minds, always their common sense. They swoon from joy, and make all manner of violent demonstration. Of all lovers they appear to have been the most inconvenient, since how was it possible to be ever ready to restore them with a sight of the lady, when, likely as not, she was locked in a dungeon or confined in a tower?

"The Elizabethan lovers, true to the spirit of their age, sang love-songs to the music of the lute. They composed verses to Phyllida's eyes, and wrote lyrics to Clorinda Maying. A flowery bank, as background to a lady's charms, was an absolute necessity in the landscape, and, apparently, no one went wooing except in summer. The wearing of lustrous gowns introduced the laborious fashion of wooing by letter-writing, a method by no means inexpensive, when we call to mind the realms of paper consumed by Lovelace and Clarissa alone, not to estimate the excessive postage of the day nor the payment of the many special messengers employed by the gentleman."

With the disappearance of hair powder and knee-buckles a change came over the spirit of love-making. One did not have any longer to live up to a plume and lace ruffles. Therefore today, says this investigator, lovers are "entirely tailor-made," and no longer woo on the knee.

The writer finds among nineteenth-century novelists many different varieties of amative artists. He thinks that Scott hurries his lovers through the scene with a haste that suggests that both author and hero would rather that the latter were brandishing a broadsword or carving a venison at a festive board than that he were thus engaged. Dickens has "as sorry a lot of lovers as can well be encountered in the pages of romance."

Another discovery which this interesting investigator has made is that a woman invented the art of kissing—that is, according to

an ancient legend. The writer finds corroboratory evidence in favor of this hypothesis in the fact that feminine novelists devote much more space and attention to very ardent wooing than do men:

"Recall for a moment the loving glances, the hand pressures, the kisses, which enliven the pages of Miss Mulock, and call to mind Stevenson's complaint concerning his inability to manage the swish of the petticoats. Think how few are the kisses of Kipling, how innumerable those of Mrs. Burnett or the tearful Miss Warner.

"Of late, if again we base our conclusions on the novels, love-making has taken on a new and cheerless phase. Each lover, emulating the early example of Narcissus, falls in love with his or her own image, expects the other to do likewise, and sets about wooing with that end in view. Imagine, if one can, a more dismal vision than a procession of modern lovers. Contrast with the princes of the plumes and loving hearts the Reverend John Storm, the religious Mr. Helbeck, the incomprehensible Mr. Ware. Fancy any princess having the inclination, much less the time, to listen to the interminable discussions of any one of them!

"Justice, however, recalls to our memory 'The Prisoner of Zenda,' and we acknowledge the presence of a very prince of lovers, worthy a fairy tale itself."

LITERARY TASTES OF CONVICTS.

A VISITOR to one of the large State's prisons gives an interesting account of the prison library and of the books that are most in demand. The library was the result partly of gifts, partly of twenty-five-cent fees paid by visitors. The money thus obtained was expended by the book committee largely in buying cheap English reprints at the department stores. The writer says (in the *New York Sun*):

"Such as it was, the library became very popular. It was the librarian's duty to pass along the tiers evenings with a basket of books, collecting and exchanging. There was something pathetic in the way his first appearance was greeted. As he stopped before a cell a grab would be made through the bars. Whatever it was he had to give out, the inmate wanted it. One would have no difficulty in getting rid of a basket of shavings in like fashion. The average convict is so bereft that he will take anything and try to get more of it. Men unable to read were just as anxious for a book as their more educated fellows.

"It followed that the choice lay largely with the librarian, tho at first he had to contend with the inevitable convict suspicion. 'I want that green book,' one would say; 'that one you are hiding under the others.' After the feeling that some one else was going to be favored had worn away, the demand generally was for 'a novel.' The best definition of the prison conception of this term is probably a story where the action is rapid. 'Vanity Fair' was returned with disgust, the complaint being, 'I didn't want that dry stuff; I wanted a novel.' The convict desire, it must be borne in mind, is for that which is easy. On account of their deliberateness, Dickens's novels were by no means popular. The author's name, by the way, was invariably called 'Dickson.' There was some little demand for 'Oliver Twist' on account of Bill Sykes and his dog, and for 'Old Curiosity Shop' on account of Quilp and his boy. 'Pickwick Papers' was never read throughout, but in places, as for instance 'Bob Sawyer's Party,' and wherever Mr. Alfred Jingle appeared.

"The favorite among Scott's novels was 'The Bride of Lammermoor,' the misfortune of the hero being doubtless the main attraction. The personal element is never lacking in a convict's reading. He is continually comparing the hero's fate with his own; he is continually picturing what he would do under similar circumstances. The book most sought after, which was worn to threads and tatters, was 'Donovan,' by Edna Lyall. In this story the hero goes to the dogs, and after much suffering reforms and is rehabilitated. The average convict sympathized with the downfall, considered the suffering critically and with pride in his own endurance, and regarded the rehabilitation as the highest form of the purely imaginative in writing. To this personal element must also be attributed the zest with which even old men read Horatio Alger, Jr.'s stories. They all had been poor boys

on the streets; perhaps in their dreams they seemed to rise to fame and fortune.

"Dialect stories were not liked because they are hard to read. To this there was a single exception, the Irish tale, Charles Lever's romances being highly favored, with 'Charles O'Malley' in the lead. 'Rory O'More' and 'Handy Andy,' by Lover, were also popular. Doubtless such a plot as that of the 'Little Minister,' with its revelation of simple, quaint, and generous natures, would appeal to the convict heart, but not one in the case of this prison had the patience to finish the first chapter. There was an absolute lack of patience in reading, which made all poetry a closed book, except perhaps Macaulay's 'Lays' and Bret Harte's verses. Much has been written about the magic power of 'Pilgrim's Progress,' but it seemed to fail in prison. The first pages were bethumbed and grimy enough, but from where Christian and Faithful begin to talk they remained unsoiled."

Scientific and philosophical works have no charm for the convict mind. Histories written in a popular style, however, were in demand:

"Accounts of battles, not technical, were read with avidity, but a sea-fight seemed the crowning glory. There seemed to be no curiosity as to the why and wherefore of wars. To the convict mind they were both natural and inevitable. Pride in America was only matched by contempt for foreigners—natives of the British isles being excepted—and even Columbus was classed as a dago. Literary eccentricities were mercilessly condemned. With utter aversion Carlyle's 'French Revolution' was handed back to the librarian. 'That fellow is no good; he can't even write decent English,' was the verdict.

"There was something pathetic, too, in the frequent requests for 'a book with pictures in it.' There should be food in such a preference for reflection for those who reason regarding the average convict from their own moral and mental standards. As well might one apply like tests to a child. The average convict, when removed from the fields which his cunning has made familiar, has but a blurred sight. Printed letters fatigue him; he has no apprehension for subtlety of expression; he can find more pleasure in an actual representation of the idea, however rude.

"In fine, then, the reading of the average convict must be simple, easy, and able to hold the attention. To this there was one exception. The books provided by the Catholic priest were in regular demand by the Catholic convicts, however much or little they may have been inwardly digested. This accentuates a religious difference between convicts apparent to all who have been associated with them."

THE MAN WITHOUT THE HOE.

THE question as to the justice of Mr. Edwin Markham's word-picture of "The Man with the Hoe" (see THE LITERARY DIGEST, March 11, June 17, July 22) continues to be debated in the magazines and daily press. One writer in the New York Times calls attention to what he says is Mr. Markham's inversion of the real law of life:

"Mr. Markham, teacher and scholar, knows that progress, not degradation, is the law of our being. He knows that however sad may have been that man's lot, it was infinitely better than that of his savage progenitor. 'Savagery was the formative period of the human race. Commencing at zero in knowledge and experience, without fire, without articulate speech, and without arts, our savage progenitors fought the great battle, first for existence and then for progress, until they secured safety from ferocious animals and permanent subsistence' (Vide Morgan on 'Ancient Society,' p. 41).

"Great as is the distance between Mr. Markham and 'The Man with the Hoe,' it is as nothing as compared with that between them both and their prehistoric ancestor. The gain to 'The Man with the Hoe' is enormous. He, too, 'is heir to all the ages,' and has received a part of that great inheritance. The human race is not being degraded. It moves onward and upward. Our own generation has seen the abolition of slavery in America and of serfdom in Russia. The Peace Congress at The Hague is a stepping-stone toward Tennyson's dream of a parliament of men, a federation of the world. Men are better fed, clothed, and

housed than they were fifty years ago. Children are being educated. Pestilence has lost half its terrors. Famine is met and conquered. Disease is alleviated. Justice is softened. Manners are milder. The passion of philanthropy extends. We have much yet to do, but the desire to do it is widespread and reaches all ranks of society. Let us thank God and take courage."

On the other hand, Mr. Markham's admirers assert that he has shown himself in his poems to be an unmistakable optimist, believing as he does in the ultimate solution of all social problems through the application of the principle of fraternity. It has been added that a walk through the slums of New York or of any modern city will very effectively convince an overconfident optimist—one who can see no deep injustice and wrong in present social conditions—that Mr. Markham's "Man with the Hoe" has innumerable counterparts in real life, tho these counterparts do not all bear hoes. *The Criterion* (New York, August 5) calls Mr. Markham "a poet with a message," and likens him to one of the Hebrew prophets:

"Among the innumerable choir of song-birds comes a cry from the deeps. Here is one of the old barbaric tongues of poesy that has broken the long silence. It is a voice Dantesque in its terribleness, Miltonic in its vigor. Such a revival is curious, and has its origin in something deeper than personal experience. It springs, indeed, from some tremendous upheaval in universal thought. The heart of humanity is deeply stirring; and these poems are but the surface indications, of which we shall have more as time goes on.

"There has been a great deal of shallow criticism of 'The Man with the Hoe.' The poet has been accused of that oversensitiveness to which the artistic temperament is popularly (tho erroneously) thought to be subject. Owing to such undue sensitiveness to purely isolated phenomena, the poet, it is said, has pictured a wholly imaginary being surrounded by wholly imaginary conditions. In this view Millet and Markham are both mistaken; the French peasant is by no means the miserable being he is represented in picture and poem; and the American farmer is certainly not fairly typified in either. Then, too, the introduction of agricultural machinery has compelled the passing of the man with the hoe. And, after all, the man of Markham's poem is not so utterly unhappy, since, not having the brains to realize the conditions to which he is condemned, he does not suffer so much after all.

"Suppose we grant all this; yet the truth of the poem remains. 'The Man with the Hoe' is the man with the trowel, the man with the plane, the man with the spade—in short, the man everywhere who is condemned to ill-requited toil under conditions that render it impossible that he should 'have life and have it (more) abundantly'—*life* being used in that special universal sense which the biblical writers sometimes employ. That there is an element of exaggeration in both picture and poem may be admitted; but to perfectly epitomize one must exaggerate—in the way a telescope magnifies a star.

"We have been told that 'The Man with the Hoe' is socialistic—whatever that may mean. It is all very melancholy. If one can not indicate the need of social reform without being forced into the company of the confusion-beleaguered wits of the Karl Marx school, I, for one, with a full consciousness of all such resolution implies, will be willing to postpone social reform for some time yet. But of course 'The Man with the Hoe' is not socialistic any more than it is evangelistic or rationalistic. It is a protest against existing social conditions—but so are Jeremiah and Isaiah.

"This cry of Markham's is a clarion call to his fellow singers. It is a voice demanding the restoration of rights and reparation for wrong. But the answer to his appeal must be a song of hope. For beyond the long martyrdom of man there is the blazing sun of justice—joy after Golgotha. And he who shall sing the promise with a power equal to this new singer's will be greater than Markham; it is not too much to say that his advent will mark the creation of a new world of song—the lines dividing the sleeping, dreaming world of poesy and the new and risen one."

Referring to various criticisms that have been printed to the effect that Markham's poem is a misrepresentation of American farm life, *The New Voice* (New York, August 12) contains the following defense of the poem:

"As literary criticism this [criticism] is very poor stuff. Markham's subject was a picture painted by Millet, and the peasant drawn by Millet was not an American farmer riding a sulky plow, but such a peasant as is to be found in country after country of the Old World. The poem fits the picture and voices with rare power the emotions aroused by Millet's art. Judged as a poem, therefore, 'The Man with the Hoe' is one of the finest things yet produced in America. It has eloquence and depth and redeems the ugliness of the theme with rare beauty of expression. But we may say all this and yet call in question its philosophy. Wordsworth's 'Ode to Immortality' may be none the less the 'high-water mark of English literature,' as it has been called, because the central thought (that of prenatal existence) is one that philosophers and scientists have not accepted."

The writer points out that the philosophy of Markham's poem is the same as that underlying Lowell's "A Parable," the conclusion in each being that "social and political conditions are, in great measure at least, responsible for the brutishness and misery of the lower classes." He continues:

"But, cries one critic, that figure is not a true representative of the American farmers. True, and that very fact, were the critic keen-sighted enough to see it, proves Markham's case. That figure, 'stolid and stunned, a brother to the ox,' under the better social conditions of America has become, time and time again, a *man*, erect, self-reliant, with ideas in his head, music in his heart, books in his house, a pew in the church, and a boy or girl in college. How will you account for the change if not by the change of social environment, and the appeal to new hopes and ambitions which are produced by the change?"

"Mr. Markham's philosophy is, we fear, dreadfully right. And every one of us who is sitting with folded hands in the presence of social or political injustice must plead guilty when he asks:

'Whose was the hand that slanted back this brow?
Whose breath blew out the light within this brain?'"

But some of Mr. Markham's critics are of the opinion that the man who in these days is so fortunate as to have a hoe—or any means of livelihood—is to be congratulated rather than consoled with. The New York *Sun* (August 2) prints a letter from "a well-known gentleman whose entire responsibility is unquestioned," offering three prizes, of \$400, \$200, and \$100, for the three best poems on "The Man without the Hoe," that is, the man who has no chance to work. He says:

"What about the man without the hoe? he who can not get work, or, having the opportunity to labor, won't do it? There are thousands of young men in this country who have been educated up to the point where the honest and healthful occupation of their fathers in the field has become distasteful to them, and, in many cases, they have grown to be ashamed of it and of their parents. In European countries, particularly, there are multitudes of young men, the younger sons of titled people, for instance, who have been taught that common labor or work in the trades is beneath them, and they sink their individuality, their manhood, and their future in the ranks of the army and in petty government positions. They must have money, but they must earn it only in a 'genteel' way. These are the men without the hoe—the real brothers to the ox. Who shall tell their story? Who shall best sing the bitter song of the incapables who walk the earth, driven hither and thither like beasts by the implacable sentiment of a false social education, suffering the tortures of the damned and bringing distress upon those dependent on them because they have lost that true independence of soul that comes to him who dares to labor with his hands, who wields the hoe and is the master of his destiny."

"The writer would like to see a good poem written on these lines, and the subject is a great one. He therefore offers to give for the best poems written on this general subject \$400 as first prize, \$200 as second prize, and \$100 as third prize; the competition to be decided by a committee of three, one to be the editor of *The Sun* and the others to be Mr. T. B. Aldrich and Mr. E. C. Stedman, if those gentlemen will be willing to serve on such a committee. All poems to be sent in to the editor of *The Sun* before October 15 next. Brevity, strength of sentiment and expression, and literary grace and beauty to be the factors of merit."

WHY HAVE WE NO SATIRE?

A RECENT English writer has expressed wonder that the land which produced Freneau and Lowell should at the present day have no satirists, and suggests that Americans would do well to cultivate this form of literature, which has been found so excellent a spur to moral and literary progress, from the days of Aristophanes and Juvenal to those of Pope, Voltaire, Burns, and Thackeray. A writer in *The Atlantic* speaks approvingly of this suggestion:

"The advice is not new. It was an early surmise of Americans themselves that this form of literature was agreeable to their temper. Freneau chose it with deliberation in Revolutionary times, and defended his choice critically. Poe, in one of his book reviews, maintained a similar opinion, tho the book of which he wrote had scarcely any fame except what he gave it. The success of Lowell, who attained a moral accuracy of the judgment which was unknown to Aristophanes and to Juvenal, might seem conclusive. But satire of the kind praised by Poe failed, and Freneau long ago ceased to be read by the many. So there must be something in this matter besides national aptitude."

"It may be that the moods of an age have somewhat to do with the development of satiric power. The satirist must have that which arouses his ire and his wit, and of this mankind gives him a superfluity in every age. But he may need also a background of earnest feeling in the people who group themselves, with all their peculiarities, around him."

"The question is whether we are in earnest now to the degree required. Of course we are full of ideas, good, bad, and indifferent. Nothing is too trivial for our pursuit. On the other hand, nothing is powerful enough to centralize all our thoughts. Our conduct shows that we are looking for a thought capable of dominating us. We have a downright mania for organization and experiment. We start new kinds of societies every hour in the day. We are interested in religions, and genealogies, and social hobbies, and literary will-o'-the-wisps. Half the crowd of persons who gain what is called distinction do so by starting a so-called 'movement,' and getting a constituency that will sneeze every time they take snuff. We are very much like that flying multitude which Dante found this side of the Styx, chasing every banner that rose. We are so nearly conscious of this fatuous vagrancy of intellect that we have coined words to mark its absurd effects. Ours is the age of 'fads.'"

"It is certain that life will have to become strenuous instead of merely busy before such a poet can gain an audience. The day for describing Hudibras with one spur or Quixote with a pasteboard helmet, or even for outlining such a starveling figure as Ichabod Crane, is long past. The exaggerated Hebrew features of contemporary prints have already ceased to be humorous. The presages of future satire are seen in those glimpses of the inner nature, which, rare as they are, show that the genius of satire is not dead. It is the poet's audience that is dead—dead to everything but its 'fads.'"

NOTES.

IBSEN is reported to be zealously working on a new play, which he hopes to finish by autumn. The title is not to be made known at present.

KIPLING and Hall Caine are both said to be in danger of suffering from an "overboom." In the former case this arises from too much "stage management," and too much "Stalkey stories," which shock some of his old readers and fail to interest many others.

THE British bobby who was recently granted a pension of £40 per annum by Mr. Balfour out of the civil list would probably be looked upon with contempt as a mere "literary feller" by the "practical politicians" of Tammany Hall. He was named Charles Assheton, and was a policeman in the Monmouthshire force, in Wales. The *Sheffield Telegraph* says that during his spare hours he taught himself Latin, and studied literature and kindred subjects, in time becoming the author of many books of striking merit, among them an excellent history of Welsh literature.

THE following story of two famous British authors is related in the Springfield *Republican*: When Rudyard Kipling was once on a visit to Thomas Hardy, he went to see a house which the author of "Tess" thought would suit him. While Mr. Kipling was out of hearing, Mr. Hardy observed to the landlady, "I may mention to you that this gentleman is no other than Rudyard Kipling." "Is that so?" she replied, "I never heard the name before." Presently Mr. Kipling found a convenient opportunity to say, "Perhaps you may not be aware that the gentleman who brought me here to-day is Mr. Hardy, the eminent author." "Oh, indeed," was her reply, "I don't know his name."

SCIENCE AND INVENTION.

NEW INVESTIGATIONS ON THE DRUG HABIT.

THOSE drugs that are taken habitually for their pleasant effects belong almost universally to a class of poisons possessing the curious property of gradually accustoming the human system to their results. The amount of morphin sometimes taken daily by a confirmed opium eater would kill a person unaccustomed to its use, and the same is true of alcohol, cocain, hasheesh, and even tobacco. Recent researches on this interesting phenomenon of "habitude" or "adaptation" in drugs, which is at the bottom of the alcohol problem, the opium problem, and every other similar problem, are treated of in an article signed "L. M.," in *Cosmos* (Paris, August 12). Says the writer:

"This question of adaptation was the subject of an interesting report and of an important discussion at the recent Medical Congress at Lille. The author of the report, M. Simon, of Nancy; has studied the question under various aspects.

"Adaptation may be produced by a large number of drugs, and when it has been established the persistence of useful effects is often noticed to accompany the disappearance of the injurious effects.

"To take some examples, the iodid of potassium, even in small doses, produces in certain subjects the symptoms of an acute cold, with a rash and great discomfort; if the dose be lessened and kept up, the therapeutic effects will be produced without the disagreeable physiological effects.

"Aptitude to endure drugs is sometimes in relation with circumstances other than continued use: sex, age, and state of health have much to do with it. Thus, quinin causes roaring in the ears, which doubtless is lessened in some degree by use, but which never takes place in subjects attacked by intermittent fever, even when large doses of the drug are taken; or which at least takes place with a very slight degree of intensity. It seems, in such cases, that the curative action replaces the physiological effects."

In some cases, we are told, adaptation is a good thing, but when we have to do with poisons that act on the nervous system, such as morphin or alcohol, it becomes a danger. The author of the report already mentioned has studied the subject especially from this point of view, and is quoted as follows by the writer in *Cosmos*:

"The diminution of poisonous action is not the only consequence of habit; its effects are infinitely more complex, and the physiological properties of a drug in such cases seem to be notably modified. A substance that, at the first dose, seems to make an impression, so to speak, on the entire organism, acts, at the end of a certain time, only on some particular portion of it, so that of the effects of the initial doses, some weaken and finally vanish, while others remain and keep on manifesting themselves, at least under certain conditions, during the entire period of administration of the poison. . . . Thus, subjects who take morphin for the first time have gastro-intestinal trouble, vertigo, and general discomfort, which symptoms disappear completely as they go on; but the sensitive and psychic centers continue to be influenced; brain-excitation, excessive ideation, general well-being, and the quieting of pain continue, and this during a very long time."

This persistence of excitability, however, Dr. Simon tells us, is not complete, and this is why the first doses have a more powerful effect than those that follow, so that the user of a drug must increase the dose continually to get the same result. Another curious thing is that the organs most sensitive at the first dose are generally those least affected by habitual use. To quote Dr. Simon again on this point:

"At the end of chronic poisoning by small doses of atropin, the pupil expands after each dose, as in the normal state; the sensitive centers retain their sensibility to morphin, and the psychic

centers continue to be influenced by alcohol and tobacco. This proposition, however, is not always true: iodids when administered for a long time cease to produce the symptoms of a cold, and opium does not continue to determine great mental activity, but plunges the subject into a complete state of torpor.

"The effects of habitude are not indefinite, and it has, in all cases, a limit that can not be passed with impunity. Of course, if we stop at a medium dose, even if this would be poisonous to a healthy subject, it can perhaps be borne easily all one's life. This is what happens daily with tobacco, and even with alcohol and opium. But use almost always degenerates into abuse; the result is a slow and chronic poisoning whose symptoms differ entirely from those of the acute variety and which is remarkably alike in the case of different kinds of drug. . . .

"To cure a case of poisoning there is no other way than the suppression of the poison; but here we often have grave complications to deal with. From this point of view, drugs of habit may be divided into two classes. Those of the first class do not produce undue mental activity and never become the object of an irresistible passion; the suppression of these may cause no injurious, or even painful, result. This is not the case with drugs that become so indispensable to the organism that the subject can not do without them; they are for him, in some degree, true foods, with the distinction that we may deprive ourselves, if necessary, of nourishment for a time, while the poison, as soon as its effects have passed off, demands immediate renewal.

"If the habit has not lasted very long and the doses of the drug have been moderate, cure may be brought about ordinarily with reasonably great ease; but when we have to deal with an inveterate habit, and when the organism has been accustomed to large doses of the poison, the return to health takes place only at the end of long treatment, and death or mental alienation may be the result. Even when the disease has been cured, we must not forget that there are backsliders, and that the slightest pretexts often suffice to produce them."

Dr. Simon's researches evidently do not hold out much hope to the inveterate drunkard or opium-eater. As for the person who is beginning to take some drug, trusting that the effects of habitude will protect him and that he will not go further than the medium dose, the word of science to such must coincide with Mr. Punch's celebrated "advice to young persons about to marry"—"Don't!"—*Translation made for THE LITERARY DIGEST.*

CAREER OF THE LATE PROFESSOR BUNSEN.

THE name of Prof. Robert Wilhelm Eberhard von Bunsen, of Heidelberg University, who died on August 16, was almost a household word with students of physics. Born at Göttingen, March 31, 1811, he hardly belonged to the present generation of investigators; but he had been identified with such great discoveries in the past, and had given his name to utensils and apparatus of such wide use, that his name could not be forgotten, altho, being nearly ninety years of age at his death, his active life as a scientific man had long been ended. *The American Machinist* speaks of him as "one of the great physicists of the century." It says: "He is classed as a chemist, which he was preeminently, but he was distinctly a larger man than that. In so far as chemistry was his specialty, he was so omnivorous a specialist that the lines of his knowledge and research radiated from it to the remotest corners of the physical field."

Professor Bunsen graduated from the University of Göttingen, where his father was a professor, when nineteen years old, and became a professor in the Polytechnic School at Cassel at twenty-two. His first years of independent work led to discoveries concerning arsenic which opened up long chapters of modern chemistry. In 1838 he was "extraordinary professor" at the University of Marburg, and here he took up the study of the high furnace, inventing the appliances of the hot-blast, and developing his method of gas analysis. In 1841 he began the study of electrolysis and the electric arc, and invented the Bunsen battery-cell, which was in use until the advent of the dynamo. His

calorimeter was far in advance of any known, and he invented other instruments for the investigation of heat phenomena. The laboratories of to-day are full of his contrivances, and every shop knows the Bunsen burner, while it is also an indispensable part of the Welsbach gas-burner. In 1852 he became professor in the University of Heidelberg, where he stayed to the end of his days.

Of Bunsen's greatest work—that in connection with the invention and development of the spectroscope—a writer in *The Electrical Review* says:

"In 1857 he returned to his studies of spectrum analysis. He called to his assistance Kirchhoff, the young professor of physics at Heidelberg, to deal with the problems of general physics in-

THE LATE PROF. R. W. E. VON BUNSEN.

involved. The result of the investigations was not only the final discovery of spectrum analysis and of the spectroscope, but also the creation of three branches of science—spectroscopy as a department of optics, spectroscopic astronomy, and spectroscopic chemistry. By means of the spectrum lines, Bunsen discovered the metals thallium, caesium, and rubidium."

In 1883 Bunsen was chosen one of the eight foreign associates of the French Academy of Sciences, one of the highest scientific honors attainable. The writer of the notice already quoted from *The American Machinist* says further of his work and character:

"The eccentricity of Bunsen's genius was in the fact that he was without any abnormal mental traits. He betrayed no stupendous egotism. He gave to all others more than their full share of credit, many times going out of his way to attribute to others what was distinctly his own. In the history of science Bunsen is likely to find a lesser place than belongs to him, from the fact that he leaves so little written record. He thought too fast to think in words, and his lectures were full of inaccuracies of language. It is said that he could not answer verbal questions, either oral or written, and could not have passed a decent examination upon his own discoveries. These discoveries are lastingly embodied in the daily practise of the laboratory and the workshop, and his life has been a mighty force in the advancement of civilization."

In a notice of Bunsen's life, *The Scientific American* says of him:

"He was almost the last of the great men who have made modern science what it is to-day. His long and useful life was filled with the most splendid achievements in many sciences, but it was as a chemist that he will be chiefly remembered. . . .

"In looking over the names of the scientists of the last half century, it is almost impossible to find one whose personal contributions to science for the good of the world have been so great as those of Bunsen, and the many hundreds of pupils who during the last half-century have been benefited by personal contact with him are now doing the world's work in chemistry in hundreds of laboratories."

SUPPRESSION OF WEATHER FORECASTS IN MANILA.

THE accusation that the United States authorities have improperly suppressed the issue of weather forecasts by the Spanish observatory in Manila has been officially answered. It will be remembered that this accusation, as translated in these columns from the French journal *Cosmos*, gave the impression that our act was instigated by the jealousy of the director of the Hongkong observatory. It now appears from a brief note on "Meteorology in the Philippines," published in *The National Geographic Magazine* (Washington, July), that this official, Dr. Doberck, was indeed at the bottom of the matter; but, it is said, he was entirely within his rights in requesting that the foreign forecasts in Manila be discontinued, as it is contrary to international usage to publish such forecasts. Our War Department's action, therefore, it is asserted, was quite in conformity with international courtesy. We quote below the explanatory note just referred to:

"In a communication dated November 5, 1898, Dr. W. Doberck, director of the Hongkong observatory, informed the chief of the United States Weather Bureau that the Manila observatory was continually communicating sensational typhoon warnings to the newspapers in Hongkong, and that as this action was against international regulations laid down for the guidance of meteorological authorities, which prohibit an authority in one country to issue storm warnings for another country, he desired and recommended that the American government of the Philippines put a stop to this irregularity, which interfered so materially with the work of the Hongkong observatory.

"Acting upon the recommendation made by Dr. Doberck, and approved by the chief of the United States Weather Bureau, the Secretary of Agriculture requested the Secretary of War to provide for discontinuing telegraphic typhoon warnings from the Manila observatory to points outside of the Philippine Islands. The position taken by the United States authorities was that the Manila observatory was improperly interfering with the British observatory by sending warnings into the territory covered by the observatory at Hongkong, and that warnings of this character should not be sent except upon the request of the British Government. They held that as director of the British meteorological observatory, having supervision over meteorological matters for the British Government in China, Dr. Doberck would not be justified in sending weather forecasts to Manila, and that such action on his part would, with propriety, be resented by the officials of the Manila observatory. In this position they were strengthened by the relations which have for many years existed between the prominent meteorological services of the world. The United States and Canadian meteorological services never presume to issue forecasts or storm warnings for any part of the territory under the sovereignty of the other, notwithstanding that they have in their possession daily meteorological observations from observatories both in the United States and Canada."

The American Association Meeting.—The annual meeting of the American Association for the Advancement of Science, held at Columbus, Ohio, from August 21 to August 25, inclusive, was attended, according to the accounts in the daily press, by about eight hundred members. The retiring president, Prof. Frederic W. Putnam, opened the session with an address entitled "A Problem in American Anthropology," in which he discussed the question of the unity or diversity of prehistoric man in America. The president for this year, Prof. Edward Orton, of Columbus, in reply to addresses of welcome from various rep-

representatives of the city, gave a review of the history of science that was highly praised. Most of the work of the association, as is usual, was done in the various sections, devoted each to its special branch of science, and the three days from the 23d to the 25th were occupied with the meetings of these and of numerous affiliated societies. After the close of the regular sessions the members and their friends were offered the choice of four different scientific excursions, thus cataloged by the correspondent of *Electricity*: "A trip to Fort Ancient, the great prehistoric fortification, in Warren County, which, by state law, is under the care of the Ohio Archeological and Historical Society. This society will act as host at the fort, which is seventy-five miles from Columbus. Second, an excursion to the great coal-mines of Ohio, sixty-five miles to the south, showing the 'fallen forests' and different systems of mining coal; third, a 110-mile trip, via Sandusky, to Kelley's Island and Put-in-Bay in Lake Erie, showing the station of the United States Fish Commission and great glacial grooves and strontia; fourth, an excursion to the famous old Indian fort at Newark, Ohio, and to the botanical and geological curiosities in Licking Valley." At the close of the last session Prof. R. S. Woodward, of Columbia, was chosen president for the next annual meeting, which is to be held at New York.

A VETERAN SCIENTIST'S RETIREMENT.

MUCH interest is taken in the scientific world in the approaching retirement from his professor's chair in Glasgow University of Lord Kelvin, who, before his elevation to the peerage in 1892, was known as Sir William Thomson. Readers of *THE LITERARY DIGEST* do not need to be reminded that since the

LORD KELVIN.

Courtesy of *The Western Electrician*.

death of Von Helmholtz, Lord Kelvin has held the undisputed primacy among living experts in physical science. He affords one of the few instances of a person raised to the peerage for eminent services who has made his title equally well known with his family names by reason of the continuance of those services. With most men entrance into the peerage has been a retirement from active duty, but Lord Kelvin's contributions to science have been as valuable, considering the relatively short time in which they have been made, as were those of William Thomson. Says *The Western Electrician*, speaking of his retirement:

"Lord Kelvin is eminent as an inventor as well as a physicist. His mirror galvanometer rendered the early Atlantic cables economical in working, and he was knighted in 1866 for his aid to transatlantic telegraphy. His siphon recorder was an improvement, and he has invented other valuable aids to submarine-cable laying and navigation. His electrical measuring instruments are well known. In 1892 Sir William Thomson became Baron Kelvin. He is an ex-president of the Royal Society and has received

many other honors. Lord Kelvin has surveyed the whole field of electricity and magnetism, as his published works and inventions show. He was consulted in relation to the Niagara Falls project, and on his last visit to the United States, two years ago this summer, he inspected the electrical plant at the Falls with great interest. His appointment as the technical adviser of the new British Westinghouse Electric and Manufacturing Company is a late announcement."

The Yacht "Columbia's" Steel Mast.—The recent breaking of the steel mast of the cup-defender *Columbia* has caused much discussion among engineers about steel as a material for masts in general, and the construction of this mast in particular. Says *The Marine Review* on the subject: "One authority has claimed that the *Columbia's* mast failed because it was of poor design, being built up of a number of pieces of sheet metal, riveted together, the argument being set forth that the riveted joint is in itself a source of weakness. It is asserted that at best not more than three fourths of the strength of the plate is available. The engineers who take this view hold that to have produced a light and unbreakable steel mast it should have been made from an ingot of high carbon nickel steel, hollow forged on a mandrel and finally finished by turning in the lathe to proper contour. A mast of this construction, it is said, would have had no weak point and could have been made of uniform strength to the utmost exactness. If desired, it might be treated by oil tempering, and under such circumstances would, it is asserted, have been twice as strong, weight for weight, as the riveted mast which gave way. The supporters of this plan admit that to have carried it out would have been costly, but they contend that the results would have justified the expense. But the Herreshoffs, evidently, cling to their original idea, for it is announced that the *Columbia's* mast is being repaired and will be ready for use in less than a week. The new plating will, however, be one fortieth of an inch heavier than that at first put on. As the strain seemed to come in the middle of the mast, precautions are being taken to strengthen the spar at that point."

SCIENCE BREVITIES.

A NATURAL curiosity consisting of a mountain of alum is described in *Le Tour du Monde*: "It is found in China, 20 kilometers [12½ miles] from the village of Liou-Chik, and bears the name of Fan-Chan mountain. It has a diameter of not less than 16 kilometers [10 miles] at its base and a height of 590 meters [1,940 feet]. For centuries the inhabitants of the country have exploited this natural source of wealth, digging from it yearly hundreds of tons of alum. To obtain it they quarry blocks of stone, which they first heat in great furnaces and then in vats filled with boiling water. The alum crystallizes out and forms a layer 15 centimeters [6 inches] thick. The compact layer thus produced is afterward cut into blocks weighing 50 kilograms [110 pounds]."—*Translation made for THE LITERARY DIGEST.*

"THE manufacture of telephone apparatus has so far advanced in Japan," says *Electricity*, August 16, "that, with the exception of springs, for the supply of which foreign aid is still depended on, all other necessary paraphernalia can be made at home at about one half the cost of foreign goods. At present, therefore, only a very small portion of telephone apparatus is being imported. . . . The manufacture is carried on both at government and private shops, between which no particular difference is noticeable regarding workmanship. It is thought in some circles that to encourage the development of the industry the government shops ought to be closed and greater patronage accorded private enterprises. There are in Tokyo quite a number of such factories, of which only two or three are doing business on a large scale. There exist also a few in Osaka, as usual turning out a cheap and inferior quality."

THE following instance of loss of hair due to mental shock is related by M. Boissler in *Le Progrès Médical*, June 17. He says, as translated by *The Lancet*: "The subject was a vigorous peasant, aged thirty-eight years, who was not of a nervous temperament beyond being slightly emotional. His hair was abundant and of a dark chestnut color and not even slightly interspersed with white filaments. One evening, as he was returning home, preceded by his mule, on which was mounted his son, aged eight years, the animal slipped and the child was thrown off and trampled on several times. He was only severely bruised, but the father thought he was killed, and in endeavoring to save him was terror-stricken. He trembled and had palpitations and a feeling of cold and tension in the face and head. On the following day the hairs of the head, beard, and eyebrows commenced to fall in quantities so that after eight days he was absolutely bald. At the same time the skin of the face and head became paler. Without delay the hairs began to grow again in the form of a colorless down. Soon all the affected regions were covered with finer, more silky, and a little more thinly sown, completely white hair. The hair of other regions was not affected."

THE RELIGIOUS WORLD.

THE RELATION OF THE ANGLICAN CHURCH TO BIBLICAL SCIENCE.

BISHOP POTTER has recently been charged by the New York *Sun* with denying the sacred character of the Scriptures because he referred to them lately as "literature." It has also been said that the Episcopal church, by making welcome within her fold such men as Dr. Briggs, Dr. Potter, and other "advanced" thinkers, is disloyal to her historic standards. *The Churchman*, however, which it will be remembered has persistently defended the ordination of Dr. Briggs, asserts that a spirit of open-mindedness toward all truth and a refusal to promulgate dogmatic teaching in relation to principles not clearly taught in the Bible have always been distinguishing marks of the Anglican Church. The writer continues:

"Some have charged her with an unworthy laxness in thus refusing to demand of her members acceptance of certain speculations. She has been faulted for a colorless latitude that, it was imagined, left room for denial of vital truth. Yet nothing could be further from the fact. While following the precedent of our Lord Himself in refusing to require belief in any theory of the sacraments, the ministry, the church, or even of the Incarnation itself, that exceeds the limits of revelation, she does require, in the most explicit language, that these ordinances and these facts be recognized as of divine obligation on every member of the Christian Commonwealth. This position is so wholly admirable and salutary that it is impossible not to believe that it reflects that wisdom which is the gift of God the Holy Ghost. . . .

"This policy has had marked results. The church that stands before all others as the advocate of the critical study of Holy Scripture, as well as of its supernatural inspiration, is the church that has done more than all others to interpret the Bible to the increased knowledge and varying needs of each age. The Anglican idea of the use of the Bible is to make it at once the best-known and best-understood book in the world. To show how far this idea has been fruitful, it is only necessary to compare the destructive if exhaustive criticism of Germany, and the wild if brilliant hypotheses of French savants, with the sober, rational, and constructive labors of English and American scholarship.

"Indeed, not only has the church no fear of the results of criticism, but she insists that this work is her proper function. The Bible is her book. Its interpretation properly belongs to the body that during many years and with much contention decided on its limits and accepted its authority. Her scholars are men trained in the very highest exercise of the human mind, but they are men of reverence, of balance, and of sanity in judgment. Their conception of their work makes the ultramontane neglect of the Bible as impossible as the ultra-Protestant garbling of it."

Referring to the pessimistic utterances of *The Sun*, the writer continues:

"Men of this type are to be found both without and within the church. And their reverence for time-honored traditions that are losing their vitality has drawn forth many jeremiads and forecasts of disaster. These have found expression in numberless forms; but the very worst and weakest we have seen is the editorial utterances of the New York *Sun*. This organ has ventured to charge not only the bishop of New York, but even the church herself, with disloyalty to her standards. The basis of this charge is that Bishop Potter has pronounced the Bible 'a literature,' and that the church has allowed the widest critical study—as if these things were crimes. From these premises, the conclusion is drawn that both the bishop and the church deny the inspiration of the Scriptures, together with the divine revelation contained therein. It seems next to impossible for an intelligent journal in these days to be guilty, either through ignorance or viciousness, of the fallacy of the 'undistributed middle' in a question of such supreme consequence.

"And yet we can find no other explanation of *The Sun's* attitude. When it says because Bishop Potter calls the Holy Scriptures a 'literature,' that therefore he means to deny their divine character and to imply that they are merely of human origin,

and when it charges that the church, in allowing the widest critical research, is false to her own claim as the preserver of Holy Writ—then it deliberately introduces into its conclusion that which is not contained in the premises. On the contrary, Bishop Potter's utterances and the church's history demonstrate an absolute faith in the inspiration of the Scriptures. It is because of this very faith that the bishop of New York and the church are perfectly willing to recognize the Bible as subject to all the conditions of literary history, and hence properly open to every legitimate critical inquiry.

"The Bishop of Durham, recognized as the most eminent theologian of the English church, says that a Christian scholar 'will accept without the least misgiving the canon that the Bible must be interpreted "like any other book"; and his reward will be, to find that it is by the use of this reverent freedom he becomes assured with a conviction, rational and immovable, that it is not like any other book.'"

The writer, in further confirmation of his statements, quotes as follows from the report of the committee on the "Critical Study of the Bible," which was put forth authoritatively in a special resolution of the last Lambeth Conference:

"We have been bidden to study the Bible like any other book; but such study has shown us how absolutely the Bible differs from any other book. We have come to see the significance of the fact, that no authoritative decision on the nature of inspiration has ever been given by the church; and certainly the significance of the principle, that we have no right to determine by arbitrary presuppositions what must be the character of the records of revelation. We have come to realize, with new conviction:

"(1) The variety, the fulness, the continuous growth shown in the Bible, and that it is a Divine library rather than a single book.

"(2) The permanent value of the several books of the Old, as well as of the New Testament, when each is placed in its historical environment, and in relation to the ruling ideas of its time."

More impressive still, we are told are these words from the Lambeth Encyclical of 1897, which records the conviction of the bishops of the Anglican communion throughout the world:

"The critical study of the Bible by competent scholars is essential to the maintenance in the church of a healthy faith. That faith is already in serious danger which refuses to face questions that may be raised either on the authority or the genuineness of any part of the Scriptures that have come down to us. Such refusal creates painful suspicion in the minds of many whom we have to teach, and will weaken the strength of our own conviction of the truth that God has revealed to us. A faith which is always or often attended by a secret fear that we dare not inquire lest inquiry should lead us to results inconsistent with what we believe, is already infected with a disease which may soon destroy it. But all inquiry is attended with a danger on the other side, unless it be protected by the guard of Reverence, Confidence, and Patience. . . . The central object of Christian faith must always be the Lord Jesus Christ Himself. The test which St. Paul gives of the possession of the Holy Spirit is the being able to say that Jesus is the Lord. If a man can say with his whole heart and soul that Jesus is the Lord, he stands on a rock that nothing can shake."

The Only "Christian Daily."—What is said to be the "only Christian daily newspaper in the world" is to be found in Montreal, where it was established over half a century before the author of "In His Steps" painted the imaginary difficulties of such a journal. *The Christian Commonwealth*, London, thus speaks of it:

"The Montreal *Witness* has been in existence for fifty-four years, and has now a constituency of 200,000 readers. It has from the first refused advertisements of strong drink, tobacco, theaters, and quack medicines, and thus sacrifices at least £10,000 a year. And yet it is a splendid success. The paper was originated as *The Weekly Witness* by a sturdy Scotch Christian and temperance advocate, Mr. John Dougall. His son, John Redpath Dougall, persuaded him to convert it into an evening halfpenny organ. This son has carried on the traditions of his father. He refuses all business alliances with Belial, and allows

no space to theater and sporting gossip. He has made foes in plenty, and attempts have been made to blow up his works with dynamite. To his sturdy character is ascribed the fact that none of the Canadian dailies issue Sunday editions."

PROTESTANT MISSIONARY CONDITIONS IN THE PHILIPPINES.

ARCHBISHOP IRELAND, of St Paul, was lately asked to give his views concerning the duty of people of all denominations to do something for the work of religious reconstruction in the Philippines. In reply to this editorial request, the archbishop says in an interview (*The Outlook*, August 26) :

"I will speak frankly, and give expression to my convictions as a Catholic and as an American. As a Catholic, I can not approve of any efforts of Protestants to affect the religious duties of the inhabitants of the islands. Catholics are there in complete control; they have a thorough church organization; the inhabitants are Catholics; some of them may not live up to the teachings of their faith, but they have no idea of abandoning that faith for another. It represents all they have ever known of a higher life. Protestantism will never take the place in their hearts of that faith. To take from them their faith is to throw them into absolute religious indifference. If the inhabitants of those islands were all Protestants, would Protestants ask Catholics to unite with them in the work of Protestant disintegration? Now, as an American I will no less object to efforts to implant Protestantism in those islands. Why? Because I want to see American rule made possible in those islands. Do your Protestant missionaries realize that they are doing the greatest harm to America by making her flag unpopular? Spain has already begun to say to her former subjects: 'You have objected to our rule. Very well, what have you in place? You have given up to strangers not only your civil government; they are also taking away your religion.' . . . If I were America's enemy to-day, I would say to American Protestants, Hurry on your missionaries to Cuba, Puerto Rico, and the Philippines, and have them tell the inhabitants of those islands that their historic faith is wrong and that they ought to become Protestants. This would be the speediest and most effective way to make the inhabitants of those islands discontented and opposed to America.

"Now, I will call your attention to something that occurred in Algeria years ago. Before he became President of France, General MacMahon was governor of Algeria. He was an ardent Catholic, as ardent as any, and he believed that Roman Catholicism was the best religion for the whole world. That he believed as an individual; but what did he do as governor? Why, he issued orders restricting missionary effort of any sort, Catholic or Protestant. He proposed to have peace while France was trying to assimilate that country. He called the Muslim sheiks together, and he assured them that no Mohammedans would be disturbed in the exercise of their faith. He kept his word. He may have displeased some missionaries, but he grounded French civilization in Algeria, and he did it in the only possible way, too—by proving to an alien race and religion that the French were friends to both, not enemies. . . .

"In the name of religion, of civilization, of common sense, give the Catholic Filipinos at least a chance to know us as we really are, that we are not out there to stir up religions as well as political hate. A Minneapolis soldier the other day actually sent home from Manila as trophies from the Philippines Catholic vestments. What sort of civilization is that to introduce into those islands? We must assure the Filipinos without delay that no churches will be looted, no vestments stolen, that Catholic churches and monasteries will be respected everywhere; that what we are introducing is a civilization under which Catholics and Protestants have equal rights under equal state protection."

Dr. J. G. Schurman, chairman of the Philippine Commission, took a similar view, it will be remembered, upon his return to this country. He called attention to the fact that notwithstanding their deep-seated opposition to the friars, the Filipinos are faithful in their allegiance to the Pope. Time and time again, he said, their leaders, in conference with him, would end their bitter

denunciation of the religious orders with the words, "But, nevertheless, you must not think we are not devout Roman Catholics." He said further:

"This religious attitude is something that we must as a nation take into account. We must not go over there thinking that the Filipinos are heathen still. There may be a small field for Protestant missions in the islands, but I am inclined to think that the Roman Catholics will continue to have the advantage."

Now that President McKinley has concluded a treaty with the Sultan of Sulu, a Mohammedan archipelago which forms a portion of the Philippine group, by the terms of which it is apparently agreed that the religious customs of the country, including polygamy and slavery, shall not be interfered with, the cup of the American missionaries is full, thinks the *New York Evening Post*:

"It thus appears that Mohammedanism and Romanism are to have free course and be glorified in the Philippines, with the sanction of our Methodist President, while the Protestant missionary societies are practically to be warned off the preserves. It is Dr. Burchard's 'rum, Romanism, and rebellion' over again, with the addition of polygamous and slaveholding Mohammedanism flying the American flag. Or, to quote the sententious language of the *Manila Freedom* of July 7: 'Expansion carries with it the Bible, bullets, and beer.'

"Where the Bible is coming in it is hard to say; but the bullets are certainly flying and the beer is flowing. This very number of *Freedom* contains no less than thirteen display advertisements of beer and liquors. It reads, in fact, like a brewers' organ, and fairly reeks of the bar-room. We recommend, by the way, the reading aloud of a file of *Freedom* at the next meeting of the missionary boards. It would show them the pious and uplifting influences now active in Manila in the name of America. This daily paper describes itself as 'an American paper for the American soldier,' but its tone is uniformly of low vulgarity and profanity. For example, it closes an editorial discussion of the question of local taxation with the following choice words: 'The whole damn thing is assuming the proportions of a huge joke.' Missionaries are barred out, but *Freedom* is there to give the Filipinos a daily sample of American refinement and religion.

"All these are depressing facts for the missionaries, who have good reason to think they have been badly buncoed by Mr. McKinley. He has effusively joined them in pious thanks to Providence for having taken us to the Philippines, has shrewdly availed himself of the great political aid they have rendered him, and now is leaving them in the lurch. It is enormous shipments of beer which have so far been the chief result of his policy, and exports of the Bible to the Philippines are distinctly discouraged. The missionaries have our sympathy."

President Schurman and others who have had opportunities for knowing the truth have explicitly denied, however, that the accusations of church sacrilege made against American soldiers in the Philippines are true, altho the Roman Catholic papers from New York to San Francisco continue to make the charge, and one paper even gives a photograph showing a company of American soldiers encamped before the altar in the nave of a church, with their clothing and other impedimenta hanging from the walls and side decorations of the sacred edifice. The American flags and American uniform are unmistakable. The *Chicago Inter Ocean* says on this subject:

"The *New World* of this city, printed, under date of August 12, an article charging American soldiers in the Philippines with church desecration and other 'most revolting atrocities.' The statement was anonymous, but was published with the remark that the writer was a man of high character. A briefer and less pretentious utterance on the same subject and to the same effect, said to have been made by 'Private Prendergast, U. S. I.,' was printed in connection with the anonymous statement. The most extravagant language was used in presenting this indictment against American soldiers, and the publication of the whole article led the German Catholic societies to meet and condemn in extreme terms the army of the United States in the Philippines.

"As no such charges had been made by any daily newspaper in the United States, *The Inter Ocean* began an investigation to

determine the origin of them. It obtained emphatic and sweeping denials from General Anderson, himself a Catholic, from Gen. Charles King, and from President Schurman of the Philippine Commission. All of these gentlemen, until recently in the Philippines, denounced the statements as wanton slanders, and made it clear that the persons responsible for church desecration in the Philippines were rebels and not Americans.

The Inter Ocean at once attempted to identify and locate this "Michael Prendergast," and discovered from the army roster that "there is no Michael Prendergast of the Sixth United States Infantry" as charged, and that the only person of that name who has been in the army during the past five years has not been in the Philippines, but on detached service at Jefferson Barracks, Mo. Neither, according to the investigations of *The Inter Ocean*, are there any stolen ecclesiastical vestments on exhibition in any shop in St. Paul or Minneapolis.

IS CHRISTIANITY MAKING PROGRESS AMONG THE JEWS?

IN many Jewish circles it is regarded as a well-established fact that no Israelite becomes a Christian except for sordid reasons. Christians, on the other hand, point to such cases as Neander, Pick, Philippi, and others prominent in church and state as evidence of the fact that the Gospel is a power also among "the lost sheep of the house of Israel." A careful statistical study of this problem is found in *Nathanael* (Nos. 3 and 4), the mission journal published by Professor Strack, of the University of Berlin. The article, which covers nearly fifty pages, is from the pen of Pastor de le Roi, himself a convert, who has published a three-volume work on the subject. The substance of his article is as follows:

In the present nineteenth century the attitude of Israel toward modern civilization has been completely changed, and this change has been of a kind that paved the way for a recognition of the claims of Christianity among this people. Before the present century, both by choice and by necessity, Israel sought absolute isolation from the rest of the natives, and did not seek to enter into the life and development of the peoples in the midst of whom they lived, preferring to remain a religious communion by themselves, not influencing others nor being influenced by them.

Largely through the efforts of the philosopher Moses Mendelssohn, this attitude has been changed, and the whole modern Jewish type of life has become something new. Mendelssohn demanded of his fellow religionists that they should become a part and portion of the peoples among whom their lot had been cast, and be not only Jews, but also Germans, French, or English. It was thought that such a union could be effected without any detriment to the religious views of the Israelites; but in this respect those who advised the innovation were seriously mistaken. Modern civilization is essentially a product of Christianity, and participation in its best work is possible only by recognition, to greater or less extent, of the principles of Christianity. Moreover, the new attitude of the Jews could not but make them more susceptible to the same influences that have given to other peoples their unique type of culture and civilization. In this way the ground was prepared for a greater influence of the Gospel on the Israelites, and this influence has been at work all along with good results.

The only reliable basis, however, for a computation of the extent to which Christian principles have become a factor in modern Jewish life is that of actual statistics. Such statistics are accessible from the Protestant, the Roman Catholic, and the Greek Catholic churches, as also from the many special mission societies and from the official lists of converts as reported by the statisticians of Germany. Taking all these sources together, and putting only a conservative estimate on their data, we have the remarkable fact that Gospel work among the Israelites has, from the point of numbers, been relatively more successful than among any other people of the world. The summary of the accessions made to the Christian church from the Israelites since the begin-

ning of the present century, as collected from all the reports of baptisms, are as follows:

Received into the Protestant church.....	72,740
Received into the Roman Catholic church.....	57,300
Received into the Greek Catholic church.....	74,500
Total.....	204,540

Then, too, in the case of "mixed marriage," *i.e.*, marriages between Jews and Christians, it has been demonstrated a hundred times over that the gains in conversion of parents and children are in nearly all cases in favor of Christianity, and the accessions from this source have been during the past hundred years nearly 20,000, making in round numbers nearly 225,000 additions to the Christian churches from the Jews during the present century. These baptisms are, as far as the leading countries are concerned, distributed as follows: Russia, 84,500; Austro-Hungary, 44,760; Great Britain, 23,500; Germany, 22,500. A regular proportion has not been maintained in these additions, the lowest numbers being in the sixth and seventh decade. At present the average additions per year number as follows:

Protestant church.....	1,450
Roman Catholic church.....	1,250
Greek Catholic church.....	1,100
Mixed marriages.....	1,450
Total.....	5,250

These figures are increasing each year, and it is becoming more and more apparent that the Protestant type of Christianity is proving more attractive to the Israelites than either of the Catholic churches.

These conclusions are in part corroborated by the figures published in the new annual, the well-known *Jahrbuch* for 1899, of the Church of Germany, edited by Pastor J. Schneider, of Elberfeld, which (pp. 201-210) enters fully upon the question, supplementing to a considerable extent the account of *Nathanael*. From this source we extract the following data:

The number of conversions from Judaism to Christianity in Germany has increased right along. Twenty-five years ago the average number was about 65, but of late years it has been about 500 and more, most of these taking place in Berlin. Among these converts are many philologists, jurists, and other educated men.—*Translations made for THE LITERARY DIGEST.*

MUSIC AS A SUBSTITUTE FOR CREEDS.

MOST churches of the present day call in music as an important adjunct of religious service. Canon S. A. Barnett, of Toynbee Hall, London, seems to go farther and to suggest that, in the slums of London, music may advantageously be made a substitute for other forms of religious service.

Mr. Barnett writes in *The International Journal of Ethics* and thus describes the effect of music upon those dwelling in the Whitechapel district:

"In this district a crowd has been found willing, on many a winter's night, to come and listen to parts of an oratorio or to selections of classical music. The oratorios have sometimes been given in a church by various bodies of amateurs who have practised together for the purpose; the concerts have been given in schoolrooms on Sunday evening by professionals of reputation. To the oratorio men and women have come, some of them from the low haunts kept around the city by its carelessly administered charity, all of them of the class which, working for its daily bread, has no margin of time for study. Amid those who are generally so independent of restraint, who cough and move as they will, there has been a death-like stillness as they have listened to some fine solo of Handel's. On faces which are seldom free of the marks of care, except in the excitement of drink, a calm has seemed to settle and tears to flow, for no reason but because 'it is so beautiful!' Sometimes the music has appeared gradually to break down barriers that shut out some poor fellow from a fairer past or a better future than his present; the oppressive weight of the daily care lifts, other sights are in his vision, and at last, covering his face or sinking on his knees, he makes prayers which

can not be uttered. Sometimes it has seemed to seize one on business bent, suddenly to transport him to another world, and, not knowing what he feels, has forced him to say, 'It was good to be there.' A church filled with hundreds of East Londoners, affected, doubtless, in different ways, but all silent, reverent, and self-forgotten, is a sight not to be forgotten or to be held to have no meaning."

Mr. Barnett observes that the mental workings of the nineteenth century have brought about indifference to religious beliefs, as beliefs, and that they no longer arouse inspiration either in the upper or lower classes. "The sense of something better than their best," we are told, "making itself felt not in outward circumstance but inwardly in their hearts, has often been the spring of effort and of hope. It is because the forms of present-day religion give so little help to strengthen this sense that so many now speak slightly of religion and profess their independence of its forms. Religion, in fact, is suffering for want of expression." The writer continues:

"Morality for the mass of men has been dependent on the consciousness of God, and with the lack of means of expression the consciousness of God seems to have ceased. On this ground alone there would be reason for making an experiment with music, if only because it offers itself as a possible means of that expression which the consciousness of God supports. And, on the other side, there is the natural fitness of music for the purpose."

"Music then would seem fitted to be in this age the expression of that which men in their inmost hearts most reverence. Creeds have ceased to express this and have become symbols of division rather than of unity! Music is a parable, telling in sounds which will not change of that which is worthy of worship, telling it to each hearer just in so far as he by nature and circumstance is able to understand it, but giving to all that feeling of common life and assurance of sympathy which has in old times been the strength of the church. By music, men may be helped to find God who is not far from any one of us, and be brought again within reach of that tangible sympathy, the sympathy of their fellow creatures."

THE MUTUAL MISUNDERSTANDING OF CHRISTIANITY AND BUDDHISM.

DR. THEODOR SCHULTZE, whose biography has just appeared in Germany, was one of the deepest students of Oriental religions in Germany and was often called "the German Buddhist." He believed that through a knowledge of the great doctrines of Eastern metaphysics, "the future regeneration of the religious consciousness of Europe" would be found, and that the "dry bones of Christian church life in Germany would receive new life impulses." *The Open Court*, Chicago, in a review of this biography, says of him:

"Schultze accepts Pfeiderer's view that Christ, finding it impossible to realize His aim of founding a religion of life by energetic efforts, came to the conclusion that He could attain His aim through suffering, which induced Him to submit to His innocent death on the cross. Schultze accepted the original Christianity as the religion of love, but repudiated the later development of dogmatism, and declared that we ought not to speak of the triumph of Christianity over the Greek or Roman paganism, but of that of the Greco-Roman paganism over Christianity. In comparing Buddhism with Christianity, he says: 'It is remarkable that while we send missionaries to India, our scholars study Brahmanism and Buddhism, not for the purpose of refuting them, but for profiting through a knowledge of them.' In a controversy which is the last literary production of Schultze, he said: 'Altho I never thought of being a Buddhist missionary, I must own that if, according to my opinion, Christianity and Buddhism are compared impartially as factors of human culture, and questioned according to their real value for mankind, one must give the preference to Buddhism; and I hope that this view will be recognized more and more in Christian countries whose inhabitants are, after all, only nominally Christians.'

"Professor von Schroeder made a reply to Schultze, and insisted

on giving the preference to Christianity. Schroeder said: 'Buddhism is the grandest attempt of mankind to attain civilization by one's own power; Christianity, however, is the religion of the revealed love of God, which gives us salvation and a life of eternal bliss as a gift. . . . In Christianity, everything depends upon the person of Christ; in Buddhism, upon the right doctrine. . . . The lack of Buddhism is that it is without God, without the service of God, and without prayers.' In fact, Schroeder adds that Buddhism is not a religion at all, for 'what is religion but a belief in a higher spiritual being (or beings) who live in a sphere above man?'"

In the opinion of the writer in *The Open Court*, such disputes, like all religious misunderstandings, arise from a primary failure to comprehend the real meaning of the terminology of a rival religion, and in the false presumption on the part of each religion that "it alone is in possession of the truth":

"This arrogant and intolerant spirit sometimes urges its devotees to do great and good deeds, but as a rule, and particularly in the intellectual field, it does more evil than good. The misunderstanding between Christianity and Buddhism, the two greatest religious systems of the world, each of which, while proclaiming the doctrine of universal love, despises the other as false, heretical, atheistic (in the sense of being immoral), is chiefly due to just this mental prepossession and false religious conviction. But there is another cause which tends to create misconceptions. I refer to the difference of terminology. Symbol is the key to things spiritual, and since we mortal beings are not capable of communing with one another as pure spirits, we must make use of symbols or words, which, however, being subject to differences, may in spite of their helpfulness become at once the source of serious misunderstandings. Now, Buddhist terminology is so different from that of Christianity that all superficial students of it invariably fail to grasp its significance, and, not being conscious of their lack of knowledge, they are only too willing to ascribe their misconceptions to the religion itself."

RELIGIOUS NOTES.

THE Convocation of the Church of England has carried a resolution to the House of Bishops asking that a revised burial service or a new form be provided for cremations. There has been a rapid growth of public opinion in England in favor of cremation as against burial, particularly among people whose opinion has especial weight in the church.

ARCHBISHOP IRELAND of St. Paul, who has just returned from an extended trip abroad, says in regard to Leo XIII.: "While in Rome I saw the Pope frequently. The Holy Father was looking remarkably well. His physical condition, tho not robust, seemed on the whole excellent. I saw him both before and after the operation performed last spring. His mind is as vigorous as ever, and altogether he is a wonderful old man, who will probably live in the full possession of his faculties for years to come. He is still much interested in public affairs, and has a high regard for the United States."

THE number of petitions for divorce in England is increasing of late. This year there are 720 for absolute divorce as compared with 683 cases last year. Twice as many husbands as wives bring suits to this end. Says the *New York Observer*: "Some of the particulars of these statistics are surprising; for example, actors, musicians and sailors send the fewest applications for divorce, being only 2.8 per cent. of the whole. Publicans and hotel-keepers provide 3.6 per cent.; engineers, architects, and professional men 3 per cent., while the store-keepers stand highest on the list of petitioners with 6.2 per cent."

THERE will be no Parliament of Religions at the Paris Exposition, but instead a congress for the scientific study of religion. Says *The Interior*: "It will treat religion purely from a social and historic point of view. The *Chronik d. Chr. Welt*, for May 25, outlines the program as follows: (1) Religions of the uncivilized races of America before Columbus; (2) Religions of the extreme Orient; (3) Religions of India, and (4) of Persia; (5) Semitic religions, including Egypt; (6) Religions of Greece and Rome; (7) Germanic, Scandinavian, and Slavic religions; (8) Christian religions. The Congress will meet the first week of September, 1900. The opening and closing sessions will be in the exposition building, the rest in the Sorbonne."

FATHER THOMAS E. SHERMAN, the son of General Sherman, says that the problem of Puerto Rico is not so much one of government as of religion. He does not believe, says *The Independent*, that Protestants can succeed in proselytizing the Catholic population, altho the Puerto Ricans' hatred of all things Spanish has led them away from the church. He says: "Fifty Spanish priests have left the island, and no one regrets their departure. The bishop did a cowardly thing in my opinion. He returned to Spain as soon as we got there, and nothing has been heard from him since. I despise Spanish methods, I care not whether in ecclesiastical or governmental matters. The poor natives are without religion. . . . The Spanish Government richly deserved to lose these islands, and I hope the Americans will prove better and more faithful to their charge than have the Spaniards."

FOREIGN TOPICS.

THE WAR IN THE PHILIPPINES.

A GUINALDO'S appeal to the powers for recognition as a belligerent has been so far without success, altho the refusal of the Chinese Government to permit horses purchased for our army in the Philippines to leave for Manila, on the ground that horses are contraband of war, comes near to being such a recognition. But if official encouragement is wanting, public opinion throughout the world, as expressed in the journals, is strongly on the side of the Filipinos. *The Week*, Toronto, says:

THE TAMING OF THE WHITE ELEPHANT.

UNCLE SAM: "He's a fine brute, but he takes a tarnation time to tame. I wonder if friend John would buy him?"

["The feeling throughout America of dissatisfaction at the conduct of the Filipino war is growing daily and threatens a serious political danger to the administration."—*Daily Paper*.]

—Punch, London.

"God opened the door, pushed us in, and closed it. No man on earth or angel in heaven can now take us out." So says Senator Frye in arguing for the retention of the Philippines. So might say any hurglar who had succeeded in entering a house. If Providence has pushed in the American invaders and closed the door upon them, it has also emptied its hockets upon them, drenched them with rain, caused their expedition to stick in the mud, sent a good many of them to the hospital, snpplied their enemies with ammunition, and at last taught the Filipinos to shoot low. A heathen poet fond

out that men often take their own desires for divine inspiration."

Military experts have much fault to find with the conduct of the war on our side. A Japanese officer expresses astonishment that our War Office hopes much from the use of cavalry. He says in the *Nippon*, Tokyo:

"The attempt of America to make use of cavalry in the Philippines, where the roads are in a worse condition than in Formosa, will certainly afford splendid marks for Filipino sharpshooters. It is pitiable to think of the fate that awaits the American cavalry in the Philippines. When the horses will be buried neck-deep in quagmires and men caught in the hrambles and shrubs, the insurgents will rise from their ambush and slaughter them wholesale the same as the Japanese cavalry were treated by the Formosan rebels at Sankakuyo."

Reports of excesses committed by our soldiers in Manila are published in Manila papers, and receive wide international publicity. The *Democracia*, Manila, relates:

"In a restaurant in the Calle de Magellanes, the soldiers not only beat the waiter, a poor Chinaman, because he would not give them drink without payment, but smashed bottles, plates, and vases. No one was punished. In the Calle de Santa Potenciana, three American soldiers got into a private house, and were busy breaking open a trunk. The woman of the house came upon them and shrieked for help, and the men escaped."

On the other hand, it is reported that the Filipino insurgents retaliate by refusing quarter to Americans and putting to death with extreme barbarity such as fall into their hands. As these reports reach the American public—thus many of our foreign exchanges reason—the anti-expansionists, under Bryan's leadership, will gain sufficient strength to render a Republican victory in 1900 very improbable. *The Globe*, Toronto, says:

"A brilliant and successful campaign in the Philippines would no doubt have a considerable influence on American public opinion, but it can not be said that there is popular enthusiasm for fighting the natives like the enthusiasm for the war with Spain. What were the elements of that enthusiasm? There was indignation at what was, upon no sufficient evidence, supposed to be the wanton and treacherous destruction of the *Maine*; there was the war spirit, pride in the feeling that the United States had risen to the position of a great naval power, and there was a genuine feeling that a free nation was taking the part of an oppressed people against cruel and despotic oppressors. . . . The Filipinos had certainly not hlow'n up the *Maine*; they were not Old-World intruders on the American continent; they were not oppressing anybody nor curtailing anybody's liberty; but they were issuing proclamations which bore an uncomfortable resemblance to the American Declaration of Independence. It was inevitable that the circle of advocates of war should diminish under these circumstances. . . .

"But the most serious change in public opinion is the feeling that the nation is no longer engaged in an enterprise which harmonizes with its most cherished ideal. . . .

"There is therefore much reason to believe that the heart of the American people is not in the war which is now dragging its slow length along in the Philippines, that the natives of those islands have a large body of sympathizers in the United States, and that their case will furnish the theme for powerful appeals in the mouths of orators like Bryan, who already holds a strong position as the champion of the masses of the people of the United States."

Some time ago many British and British colonial papers rejoiced to think that the Philippines, so long as the United States claims possession, will be a guaranty of American "good behavior," and *Saturday Night*, Toronto, explained that our new possessions would keep us husy until Canada has outgrown all danger from American land hunger. *The Saturday Review*, London, now points out that, if "imperialism" declines, "Anglo-Saxonism" also must decline. "For," says this paper, "upon President McKinley's filibustering propensities and our support of it was unfortunately built up the vision of an Anglo-American alliance."

Very remarkable is the tone of the Spanish press, which makes an open bid for the friendship of the Tagales, in terms which amount to a practical recognition of Filipino independence. The *Epoca*, Madrid, says:

"Tho the end of the struggle at present going on in the far Eastern islands is far from certain, it shows already that a policy of violence and conquest may be fatal to the strong as well as the weak. President McKinley finds that the conquest which, he supposed, had been accomplished by a single naval battle, may cost his country great sacrifices and himself his reelection. The Tagales, by their valorous resistance to the American invasion, render an important service to civilization. They draw attention to the glaring discrepancy between the precept of the United States, adopted when the Americans fought for their own independence, and the practise of to-day, when they refnse it to the Filipino people. Their argument is extremely weak. They claim that the Filipinos can not govern themselves. If that were true, if they did not possess the necessary qualifications, the Filipinos could not maintain so unequal a struggle. In the first place they show a proper national spirit, akin to that which enabled the Spaniards successfully to resist the Napoleonic invasion at Saragossa and Gerona; and, secondly, they reveal great aptitude for political, military, and civil organization. For in onr days war more than ever requires discipline, ready resources, authority, administration, and at least some indnstrial enterprise. Few

people, we take it, would have thought the Filipinos capable of showing so much aptitude.

"One thing only reduces the merit of this national resistance in the eyes of the world, and arouses doubts whether the Filipinos are really civilized enough to understand sentiments of humanity. Europe can not understand why Aguinaldo and the Filipino Government should refuse to liberate their unfortunate Spanish prisoners. For the reason given, *i.e.*, to enforce official recognition of the Tagal republic on the part of the Spanish Government, is surely only a pretext. True, we have retired from those distant possessions definitely, do not even dream of reconquering them, want no revenge, and are not vindictive. Precautions on the part of the Filipino administration are unnecessary as far as Spain is concerned. On the other hand, the mother country, which needs rest more than anything else to obtain her normal condition, should not be asked to furnish the United States anew with a *casus belli*."—*Translations made for THE LITERARY DIGEST.*

M. DELCASSÉ'S VISIT TO RUSSIA.

THE visit of M. Delcassé, the French Minister of Foreign Affairs, to St. Petersburg set many diplomats to speculating. De Blowitz, the Paris correspondent of the London *Times*, informs his paper that the Czar wishes to abdicate, and that M. Delcassé went to talk Nicholas II. out of his purpose. The *Temps*, Paris, thinks M. Delcassé merely went to Russia for a kind of vacation trip. It says:

"Our foreign ministers may not, like flowers, fade in the brief space of a morning, but the uncertainty of our parliamentary régime and King Demos render vast plans and long-deferred hopes very difficult by reason of the short official life granted to ministries. Hence a minister must not be blamed if he manages to combine pleasure with business by visiting Count Muravieff merely to strengthen the good relations between France and Russia."

The *Matin* thinks it very likely that M. Delcassé wished to discuss with the Russian Minister of Foreign Affairs the meagre results of the Peace Conference. The *Journal des Débats* says:

"As usual when there is talk of increasing the number of the friends of France, many Englishmen comfort themselves with the idea that incompatibility of temper and divergence of interest will prevent a good understanding among the nations of the Continent. Both in 1877 and in 1898 France was, as Gladstone would have expressed it, within appreciable distance of a conflict with Great Britain. In each case, Great Britain was encouraged in her aggressive attitude by the general situation in Europe and by the condition of France in particular. It is, therefore, not to be wondered at that Great Britain endeavors to sow seeds of discord and distrust as soon as the other nations show a tendency to live in harmony. It is to the interest of the nations on the Continent that they should live in concord. British interests demand a very different state."

The *Figaro* hints that the approaching struggle in South Africa, and the more distant but inevitable conflict between Great Britain and Abyssinia may have formed subjects for discussion between the French and Russian foreign ministers. The *Novoye Vremya*, St. Petersburg, believes M. Delcassé came to inform the Russian Government that, despite the commotion caused by the Dreyfus case, the Government of France is stable. The St. Petersburg *Herald* believes that the recent *rapprochement* between France and Germany is the most important subject for discussion. It says:

"Russia wants peace, hence the leading circles in Russia are delighted to find that Germany and France are on good terms. It relieves official Russia from the suspicion of sowing distrust between the two Western powers to serve her own ends. It is clear that the French Minister of Foreign Affairs finds it necessary to discuss this important subject with his Russian colleague, and that Russia will endeavor to be the honest broker between the two others. The position is a difficult one, but the prize is worth the exertion. Once peace is firmly assured in Europe, colonial matters may be regulated upon a better basis."

Despite such expressions in the Russian press, many English papers believe that Russia is strongly opposed to a Franco-German *entente*. "Russia does not wish to see the idea of a war of revenge abandoned in France," says the London *Globe*, and it expresses itself further to the following effect:

It matters little to us whether Germany seeks to establish friendship with France or not. It seems to us, indeed, that the Germans should prefer to stand well with peoples of the same race as themselves; but if they choose to ally themselves with a Latin nation rather than with the Anglo-Saxons of Europe and America, we need not complain. Our naval strength permits us to watch developments with composure. We will increase our own fleet as our enemies increase theirs, and as we have no large standing army, the task is not so difficult.

The *Spectator*, London, believes that Russia can easily be withdrawn from the coalition if Great Britain promises her Constantinople "or any other prize in Central Europe." Without Russia, France and Germany could do nothing, thinks the paper. It further supposes that France will attack Belgium, and Germany Holland. The *Spectator* thinks there might be some pretty pickings for Great Britain if Germany and France would attempt to deprive their smaller neighbors of independence. It says:

"It is true, dangerously true, that if the two powers limited themselves to the seizure of Belgium and Holland, they could bring to bear the full weight of their armies, with which neither England nor America is competent to contend. That is said to have been Gambetta's idea, and Gambetta's ideas still weigh in France; while every German thinks of Holland as naturally by the laws of geography an appendage of the German empire. But is either Belgium or Holland worth having as a subjugated, and therefore costly, province unless its colonies go with it?—and until Great Britain had been defeated neither the Kongo Free State nor the glorious Eastern archipelago could be approached without British consent. We should simply do what Canning did when it seemed that Napoleon would conquer Spain—that is, we should tear from the subjugated state the possessions which rendered it worth subjugating."

Such remarks do not, however, seem to have any alarming effect in the countries for which they are intended. "The expressions of the British press show that the English feel uncomfortable," says the *Handelsblad*, Amsterdam, "and they reveal plainly enough that the British conscience is not clear." In Belgium, too, a similar spirit prevails. The *Independance Belge*, Brussels, says:

"We do not believe that a Franco-Russian-German Triple Alliance, pointed ostentatiously against England, is within the range of probabilities. But it is evident enough that the aggressive attitude of the English in questions in which important German, French, and Russian interests are engaged, necessitates an exchange of views as to how the appetite of 'Her Gracious Majesty's' insolent subjects may most easily be resisted. For this no alliance is necessary, and yet the English seem to think that without one no concerted action is possible."

The German papers do not join in the war-cry set up in some other quarters, but declare that Germany wants, above all things, to be left alone. The *Vossische Zeitung*, Berlin, says:

"The Treaty of Frankfurt stipulates that 'there shall be peace and friendship forever between France and Germany.' The 'friendship' meant is not exactly what Cicero mentions in his *De Amicitia*. It is merely a state in which the nations show each other good-will and perform inexpensive little acts of diplomatic courtesy. But France has taken a very peculiar view of the matter. No other land in Europe has acted in such a way after an unlucky war. For thirty years France has shown deep hatred of Germany, for thirty years France has dreamed of 'revenge' and prepared for it. The younger generation of Frenchmen, since the Fashoda incident, hate England even more than they hate Germany. But they want us to assist them in obtaining 'revenge' for Fashoda if they are to forget Sedan. That is not our meaning. We seek first and last to get along without friction with any nation."—*Translations made for THE LITERARY DIGEST.*

WHEN KAISER WILHELM SPEAKS.

THE strong individuality of the present Emperor of Germany has reduced the personal responsibility of his Ministers to a comparatively small degree. It is *he* that is attacked by the opposition when party strife grows fierce, and *his* opinions are quoted by his partisans in support of their argument. Hence it has been found impossible to prohibit parliamentary criticism of the Emperor's speeches, and the immunity granted to the monarch in countries where he or she is merely a figurehead no longer exists in the case of Kaiser Wilhelm, as the following account, condensed from the *Echo*, Berlin, shows:

During the debate on the so-called *Zuchthaus Vorlage*, the bill which threatens with hard labor all who interfere with the liberty of the individual to obtain work, Herr Roesicke, the member for Dessau, referred to some speeches made by the Emperor. It is impossible for the monarch to inform himself correctly on all points, said Herr Roesicke; he must in many cases trust to his councillors. Had these advisers done their duty properly, the Emperor would not have endeavored to back the bill with his influence. Minister Brefeld informed the honorable member that the speeches of the monarch must not, in a constitutional country, be mentioned in a debate. The honorable member for Dessau, however, pointed out that the imperial words to which he had referred were published in the government gazette, the *Reichsanzeiger*, and he appealed to the Speaker of the House. President Ballestrem agreed with Herr Roesicke, despite the protests of the minister.

This is distinctly an innovation in parliamentary usage. The Radicals and Socialists are delighted with the attitude of the president of the Reichstag, as his decision enables them to criticize the Emperor's speeches in the only place where the *désempêché* laws are ineffective—in Parliament. The Conservatives point out that the influence of the crown is likely to be increased rather than diminished, as the Emperor's friends now also may refer to his opinions. The officials evidently are not very pleased, for a most daring fraud was committed in connection with this matter. We refer again to the *Echo's* account:

"When Herr Roesicke had pointed out that the Emperor's speech was published in the *Reichsanzeiger*, President Ballestrem replied: 'That changes the matter; in that case you may, in a proper manner, refer to the speech.' The official stenographic report, however, contains this version: 'That changes the matter; provided the speech was in the official columns of the paper, you may, in a proper manner, refer to the speech.' But President Ballestrem declares publicly that he made no such proviso, and now people are curious to find out how that 'correction' got into the stenographic report."

President Ballestrem is not willing to prosecute the official who made the "correction," especially as it has been neutralized. The Socialist *Vorwärts*, Berlin, nevertheless thinks some one should be punished. It says:

"That a petty official committed this forgery is not likely. Undoubtedly it was committed or caused by some very powerful personages. When we remember how displeasing was Graf Ballestrem's ruling to all courtiers and other reactionaries, how anxious these people are to treat as tabooed all personal acts of the Emperor, however much influenced by party politics such demonstrations may be, then it is not difficult to find the guilty ones. Morally this forgery is as bad as the forgeries committed by Henry and consorts in France. The Reichstag must see to it that the guilty ones do not escape punishment."

The Liberal *Tageblatt*, Berlin, points out that the immunity from parliamentary criticism enjoyed by most constitutional sovereigns can not be maintained in the case of Kaiser Wilhelm. We condense its remarks as follows:

The impulsive individuality of the present Emperor tends to destroy the idea of an ever-silent sovereign. The Kaiser has spoken, written, telegraphed, without the assistance of ministers; has sometimes, when the moment was auspicious, expressed on

board of some ship what he believed to be the opinion of the entire nation. In the presence of such political acts, the old parliamentary doctrine falls to the ground. It would be tactless to refer in Parliament to his private views. No one would mention, for instance, that Emperor William I., shortly before his coronation at Versailles, expressed his dislike of the German crown in letters to his near relatives. . . . In strictly internal affairs it is possible even now to stand by the established parliamentary usages. The monarch makes known by a speech that a law, say an anti-strike law, is necessary. The ministers of state propose such a law and thereby accept the responsibility before the legislature. But how about foreign affairs? Suppose the Emperor's congratulatory telegram to President Krüger, which aroused among the English a perfect storm of hate against everything German, had led to war? It was a very effective act, despite the fact that no minister countersigned it. Could the Reichstag have ignored it?

The old maxim that the crown may not be drawn into parliamentary debates can only be upheld so long as the wearer of the crown does not personally enter into debate. Otherwise he must be content to be called before the parliamentary judgment seat. — *Translations made for THE LITERARY DIGEST.*

IS CONSCRIPTION COMING IN ENGLAND?

ENGLISHMEN are apt to pride themselves on their freedom from enforced military service. Yet it is thought in some directions that they may ere long be unpleasantly reminded of the fact that this freedom is subject to change. The Englishman of the cities joins the army only when starvation forces him to do so, to desert again as soon as possible. The English "clodhopper," tho he is certainly not extinct, is becoming too scarce to keep the ranks recruited. The Germans, who furnished more than 50 per cent. of the men needed by Britain at the beginning of the present century, have decided to fight for themselves if they fight at all. The Indian army, tho it answers very well for colonial purposes, is hardly fitted to be sent against white men. The *Nieuws van den Dag*, Amsterdam, speaking of this obvious necessity to find the necessary recruits in Great Britain, says:

"Small tho the British army is, it must be replenished. But that is difficult. The Englishman does not like to become a soldier, least of all in times of comparative prosperity. Hence many of the regiments are far below their paper strength, and Lord Wolseley, the commander-in-chief, as well as other officers, hints at enforced service. Such a measure would be unpopular, but it will have to be resorted to. No other course seems open. The Government has, therefore, reminded the people that the obligation to serve actually exists. Legislation is only needed to extend it. The Minister of War suggests that all persons between eighteen and thirty-five years be registered at their place of residence. Each county will be credited with the number of volunteers it furnishes for the army. The rest must be gathered in by conscription; but men of means will be permitted to buy themselves off, or to furnish a substitute."

Service in the militia alone is contemplated at first; but the militia will soon be made to serve abroad. There is, however, a hope that this calamity may be averted. The *Nieuws van den Dag* correspondent continues:

"There is a plan to accept recruits for the army at a very tender age, and raise them for their future calling as soldiers, at the same time teaching them a trade, so that they may not be helpless when they leave the army. Service in the militia, however, is even now compulsory, and only suspended from year to year by special act of Parliament. This ballot act is passed with such regularity that many Britons do not know they are liable to be drafted into service. The official warning has not been received with much enthusiasm."

The Westminster Gazette says:

"If the Peace Conference has produced some unanticipated results it has also been attended by some rather ironical circum-

stances. There is irony in the fact that we should be threatening war in South Africa, and that our War Minister should be reminding us rather ominously of the dormant conscription which exists even in the British empire, at the very moment when we are standing for peace and arbitration at The Hague. Ministerialists will, of course, tell us that South Africa is a region where these principles do not apply, that they are meant for the relations of the independent countries of Europe, and that the paramount power would demean itself by submitting a controversy between itself and a subordinate African state to any such method of settlement. This is as may be, but there is no reason why even a paramount power should not behave with self-possession and dignity."—*Translation made for THE LITERARY DIGEST.*

The Succession to the Czar.—The Czar of all the Russias and his wife are still young, and it is quite possible that a son may yet be born to Nicholas II. Hence the death of the Czar's brother George, who was the heir apparent, did not cause as much sensation as it otherwise would have caused. Yet the romance of his life and the ever-recurring rumor of the Czar's intention to abdicate create a lively interest in the Russian succession. The *Frankfurter Zeitung* says:

"When Alexander III. was attacked by his last illness, the interest of all was diverted to his heir Nicholas, and his brothers were forgotten. One did not hear again of Prince George until he wanted to marry. A young Grusinian princess had captured his heart, and Alexander III., after some hesitation, consented to a morganatic marriage. Prince George was always very delicate, and this was the reason why his marriage was permitted. Since his death, the youngest brother of the Czar, Grand-Duke Michael Alexandrovitch, has become heir apparent. This ends the male succession for the present. Were Prince Michael to die, the Czar's eldest daughter, Princess Olga, would become heir apparent, and after her her sisters. If a son is born, he will, of course, have precedence."

It is said that the late Prince George could have preserved his life and even that he could have become fairly strong, like the Czar, had he exercised greater care; but he became an enthusiastic bicyclist, and overtaxed his weak lungs by fast riding.—*Translation made for THE LITERARY DIGEST.*

FOREIGN NOTES.

CECIL RHODES has been created an honorary doctor at the University of Oxford. But this was not done without vigorous protest on the part of most of the professors, who, when their objections were not accepted, appealed to the press to make it known.

"THE Sudan is being rapidly covered with a network of telegraph wires," says *The Electrical Review*. "It is expected that the telegraph will be 1,000 miles south of Khartoum at the end of the year. This means the practical joining up with Uganda, and as Rhodes's telegraph is approaching Tanganyika the transcontinental telegraph may be expected to be finished early next year."

THE Japanese courts of justice, since the beginning of July, 1899, have been completely reorganized. There is now a supreme court, seven courts of appeal, 49 provincial high courts, 298 county courts, 1201 local magistrates. The legal code, modeled chiefly after the German, has been translated into English by a German professor of law, Dr. Lönholm. The objection to the English and American system was that it is not definite enough, favors too much the rich and powerful, and opens the door to corruption. Such, at least, was the verdict of the eminent Japanese lawyers who for nearly twenty years sifted the laws of the world to find a code suited to their country. Curiously enough, the German code, a work of excessively slow growth, will not take full effect until 1900, or a year later than the Japanese code which has been shaped after it.

ACCORDING to official statistics, published in *Le Temps*, Paris, the Department of the Seine contained, in 1867, 7,805 mental alienates. In 1896 it contained 21,700, nearly thrice as many. At the asylum of Ville-Evrard, out of every 100 patients alcoholism was given as the cause of mental disease in 22. Statistics show nearly the same growth throughout rural France. The whole country is complaining of crowded asylums, insufficient accommodations, etc., and every official report dwells on alcoholism as the cause. "If," says the *Temps*, "we grant that victims of alcoholism form the great battalion of the army of vice, misery, and crime, we can not deny that we are standing on the brink of a great national disaster, and we can not understand the utter carelessness with which Parliament and the public authorities treat this great public danger—or their complaisance toward the furnishers of this poison that menaces France with death."

MISCELLANEOUS.

THE PROPER DISCIPLINE OF WIVES ACCORDING TO THE KALEVALA.

THE Finnish epic poem called the "Kalevala," the oldest portions of which were probably composed three thousand years ago, throws interesting light upon the primitive social and marriage customs of the Finns. The three chief characters of the "Kalevala" are the minstrel, Wainamoinen; Ilmarinen, the magic blacksmith; and Lemminkainen, the wizard. The blacksmith pays court to the Daughter of the Rainbow, who is called "the fairest daughter of the Northland." An account of their bridal and of some of the amenities of married life in those days is thus given by a writer in a late number of the *New York Times*:

"The wedding feast prepared, the beer brewed, the guests feasted, Osmotar, daughter of Osmo, gives the Rainbow bride advice:

Thou must acquire new habits
Must forget thy former customs
Like the mouse, have ears for hearing,
Like the hare, have feet for running.

"But the quick ears and the nimble feet are for the service of her husband and his family. The 'Bride of Beauty' must rise early, light the morning fire, fill the bucket from the 'crystal river flowing,' feed the kine and flocks, 'with pleasure'; gather fagots from the woodland, bake the barley-bread and honey-cakes, wash the birchen platters clean, amuse the sister's baby, entertain the stranger, 'tend well the sacred sorb-tree' and other vegetation; spin, weave, make clothes, beer, 'lend the needed service' when the 'father of my hero husband' bathes. The week ended, she 'must give the house a thorough cleaning.' And all the while she must wear the 'whitest linen' and 'tidy fur shoes' for her hero husband's glory. And she must not gossip in the village, tell of neglect or ill treatment, to bring shame to her kindred and disgrace to her husband's household. Ostomar, daughter of Osmo, counsels the bridegroom also:

Never cause the Bride of Beauty
To regret the day of marriage;
Never make her shed a teardrop;
Never fill her cup with sorrow."

But strict marital discipline must be maintained. Those were the days when there were no women's clubs, but clubs for women.

To thy young wife give instruction
Kindly teach thy bride in secret.
In the long and dreary evenings,
When thou sittest at the fireside;
Teach one year in words of kindness,
Teach with eyes of love a second;
In the third year teach her with firmness;
If she should not heed thy teaching,
Should not hear thy kindly counsel
After three long years of effort,
Cut a reed upon the lowlands,
Cut a nettle from the border,
Teach thy wife with harder measures.
In the fourth year, if she heed not,
Threaten her with sterner treatment,
With the stalks of rougher edges.
Use not yet the thongs of leather,
Do not touch her with the birch whip.
If she does not heed this warning,
Should she pay thee no attention,
Cut a rod upon the mountains,
Or a willow in the valleys;
Hide it underneath thy mantle,
That the stranger may not see it;
Show it to thy wife in secret,
Shame her thus to do her duty;
Strike not yet, tho disobeying,
Should she disregard this warning,
Still refuse to heed thy wishes,
Then instruct her with the willow,
Use the birch rod from the mountain,
In the closet of thy dwelling,
In the attic of thy mansion.

HOW TO TUNE A BELL.

MOST musical instruments have to be tuned from time to time. A bell, however, need undergo this operation only once. When it has been adjusted to the proper note, it requires no additional adjustment, as it does not "get out of tune" like a guitar-string or an organ-pipe. To offset this advantage, it can not be so exactly tuned as either of these, so that a chime of bells, poetical as it is, is rarely musically pleasing to a good ear. The method adopted in tuning bells in a modern foundry is described in *La Nature* by M. L. Reverchon. He writes:

"Open a bell-founder's prospectus and you will invariably find the following statement: 'I guarantee to furnish at the first casting, and without retouching, perfectly tuned bells.' This commercial formula has, like others of the same sort, only a relative value. A bell is a musical instrument of too complex form, and its theory is too imperfectly understood, for the reality to be equal to such promises.

"The bell as a musical instrument must be regarded like an organ-pipe. The physical laws of pipes are roughly applicable to it. In consequence, of two bells of identical outside appearance and the same total diameter, the thinner will give the lower note; of two bells of equal thickness and equal diameter, the shorter will give the higher note. Thus, to raise the pitch of a bell it must be filed off at the mouth in order to shorten it; while to lower the pitch the inside must be scraped off to make it thinner.

"Fig. 1 represents the tuning of the great hour-bell of the cathedral of St. Peter at Geneva . . . which weighs 1,610 kilograms [3,500 pounds] and gives the note E.

"The operation of tuning is performed as follows: The bell is firmly fastened by its neck (Fig. 2) to the tuning apparatus. If its pitch is to be lowered, a fixed engraving tool is presented to it at the point marked '1.' The bell is revolved slowly, so as to scrape off a thin turning of bronze, and this is continued, more and more metal being taken off, till the point '2' is reached. During the operation the bell gives out a continuous note whose pitch grows lower and lower. The tuner, who must have a perfectly correct ear, compares this note to the pitch of his tuning-

FIG. 1.—THE GENEVA HOUR-BELL BEING TUNED.

fork. As soon as the bell and fork are in unison he stops the motion. That is all. Thereafter the bell may join its voice to those of its companions without fear of discord.

"When the pitch is to be raised, the bell being mounted as in the preceding case, the burin is fixed opposite the mouth and attacks the lip (3). As the operation proceeds, the metallic note grows sharper. The tuning-fork indicates the moment when the right pitch is reached.

"M. Thybaud remarks that it is easier to lower the pitch of a bell than to raise it, which is easily understood.

"Without cutting too large a strip from the lip, a bell can not be raised in pitch more than a semitone. To raise it still more,

FIG. 2.—DIAGRAM ILLUSTRATING BELL-TUNING.

the edge would have to be made absolutely flat and the bell would lose its bell-shape. Bells have, however, a thickness sufficient to allow of their pitch being lowered as much as a whole tone. M. Thybaud even mentions certain bells which, like that of Mor-treux, have such great thickness that they can easily be lowered two tones."—*Translation made for THE LITERARY DIGEST.*

Longevity of Animals.—The following interesting table has been compiled by E. D. Bell for the purpose of demonstrating that the full term of life of an animal bears a constant ratio to the period required to reach maturity. He finds that the former period may always be calculated by taking the cube-root of the square of the latter and multiplying by 10.5. The table, which we reproduce from *Nature*, London, shows that this agrees very closely with the results of observation. In this table the letters "f. t. l." signify "full term of life" and "p. m." "period of maturity":

Animal.	OBSERVATIONS.			f. t. l. by calculation.

CORRESPONDENTS' CORNER.

Professor See and His New Theory.

Editor of THE LITERARY DIGEST:—In your issue of July 8, 1899, Mr. C. H. Warring refers to the fact that in the article in *McClure's Magazine* announcing Prof. T. J. J. See's new theory of world formation, no credit is given to Mr. J. Homer Lane for his prior discovery of the law of temperature on which the theory is based. The *McClure* article was only an interview with Professor See, who, in the *Atlantic Monthly* for April, had already given a full account of the new law, and had also given generous and ample credit to Mr. Lane.

TILLAMOOK CITY, ORE.

B. L. EDDY.

FOREIGN POSSIBILITIES OF
AMERICAN COMMERCE.

"I wish to call attention to the compact lately agreed upon between the Austrian and Hungarian prime ministers and expected to pass soon the Hungarian Parliament," writes our consul at Budapest, "according to which Hungary's (or Austria's) will alone is sufficient to give notice of termination of any commercial treaty now binding on the monarchy, among which is included the treaty of 1829 with the United States. The United States recognized the duality of Austria-Hungary in its trade mark treaty of 1871. This duality, at least in commercial administration, is becoming pronounced under the new compact. One feature can not be overlooked—the consular service is now arranged by a 'convention' between the two ministries, not by an article in the compact legislated by the parliaments, as hitherto. The administration of commercial affairs in Austria-Hungary has been theoretically separate, tho joint in action, since 1867, when the two ministries of commerce were founded. On the 10th of April last I received, in common with other consular officers accredited here, a circular note from the minister of foreign affairs in Vienna announcing the publication of Hungarian commercial statistics in the French language, in a review entitled *La Hongrie Economique*, about to appear. This appears to indicate that the imperial and royal common government attaches no small importance to the administration of commerce in Hungary. By the new compact, unless the Austrian situation (race feud) should change and make the Vienna parliament again able to sit, Hungary is assured the right to cause all commercial relations with foreign countries to conform to a new protective tariff, at the end of the year 1903—that is to say, the foreign treaties will all be terminated at that time, and the new tariff, suiting Hungary's agrarian wishes, will be introduced by a special law. The joint administration of commercial affairs will continue, however, until 1907; and by January 1, 1908, Hungary will be able to say whether she cares to continue her union with Austria in commercial and other economic affairs. Hungary would thus attain the position constitutionally held by Egypt and Bulgaria, particularly by the latter, and, like her, make her own commercial treaties independently of the common government. The two men who act as referees in the commercial deliberations of the Hungarian parliament and its 'delegation' are Messrs. Julius Rosenberg and Max Falk, respectively, neither of whom is a Hungarian by race."

Consul Marshal Halstead, of Birmingham writes: The London correspondent of the Birmingham *Post* sends the following information concerning the new regulations for commercial travelers in Russia:

The Board of Trade have received from the foreign office the following translation of an explanatory notice relative to the provisions of the new Russian regulations respecting commercial travelers and their licenses, which has just been issued by the Russian Government. By article 59 of the law of the 8th of June, 1898, which imposes the industrial tax, the right of employing commercial travelers is confined to commercial firms which have paid the tax in question under class 1 and to industrial enterprises which have paid the said tax under the first three clauses. This provision applies equally to commercial firms and to industrial enterprises which may or may not possess businesses of the same kind in Russia. The tax under class 1 amounts to 500 roubles (\$257) in the case of commercial firms, and to 500, 1,000, and 1,500 roubles (\$257, \$515, and \$772) in that of industrial enterprises. Moreover, every commercial traveler must pay a personal tax of 50 roubles (\$25.75) annually. Industrial enterprises which have no business of the same kind in Russia, but which carry on a wholesale trade in the empire through their commercial travelers, are placed on the same footing as commercial enterprises, and consequently pay a tax of 500 roubles, instead of that of 500 to 1,500 roubles imposed in the

SUCCESSFUL INVESTMENTS

BY
SALARIED PEOPLE

You earn your salary because you put yourself in the hands of others, and following their guidance you successfully accomplish your tasks; in other words, you need help to earn.

Have you ever sought intelligent help in saving what you have earned?

At least ninety-five per cent. of bread-winners are on salary, under the direction of others. If you cannot earn without guidance, isn't it safe to say you need help in saving, which is so much more difficult?

We can guide you to successful profitable saving from your salary, even if it is so small you have thought it impossible to spare anything from it.

Ask for "Our Plan"—it is interesting and costs nothing.

case of industrial enterprises. In view of the fact that the industrial tax is raised by the issue of industrial licenses, commercial travelers who wish to provide themselves with personal licenses must present for inspection either the original or a duly attested copy of the licenses issued to their employers. Commercial travelers in the employment of commercial firms or of industrial enterprises which are not provided with licenses according to the regulations, will not be permitted to carry on business until their employers have taken out the licenses in question, either on personal application or through their commercial travelers. Commercial firms or industrial enterprises provided with licenses according to the regulations may have an unlimited number of commercial travelers in their employment, on condition that each of these commercial travelers shall take out annually a personal industrial license of 50 roubles (\$25.75).

Consul Martin, of Chinkiang, transmits a notice from the local commissioner of customs imposing a likin charge on rice. It reads:

"A likin charge of 5 candareens [the candareen is the hundredth part of the tael. The Chinkiang tael was valued at 68.6 cents gold on April 1, 1899] per 150 catties (200 pounds) on rice shipped at this port by steamer is to be introduced on the 15th instant. This tax is payable by native shippers of rice at the likin office previous to its being passed at the custom-house, and its payment will be certified to by the impression of a special likin seal on the application to ship, which will be accepted at the custom-house as proof. THE IDEAL COUCH BED AT LAST!

SENT ON APPROVAL TO LITERARY DIGEST READERS

SPECIAL OFFER We are so confident of the many merits of the Leighton Iron Couch Bed that upon receipt of the price we will send it to any reader of THE LITERARY DIGEST who mentions this offer and the date of this advertisement. It can be kept and tried for ten days, and if not satisfactory it can be returned and we will cheerfully refund the money.

Greatest Comfort of Springs

Frame Entirely of Metal ..

Greatest Economy of Space

For the first time a Combination Couch and Bed is offered to the public which combines in high degree the merits of comfort, compactness, attractiveness, and absolute cleanliness.

Light and Clean ..

.. Neat and Compact ..

.. Strong and Durable

THE ONLY COMBINATION COUCH BED WHICH CAN BE KEPT ABSOLUTELY FREE FROM ALL VERMIN

THE IMPROVED "LEIGHTON" AUTOMATIC IRON COUCH BED

GUARANTEED FOR FIVE YEARS

The disadvantages of former couch beds and the dangers of the "folding beds" have been obviated in this comfortable and convenient couch bed. The regular sizes are as follows: closed, 25 inches wide by 6 feet 4 inches long; one side open, 39 inches wide, 6 feet 4 inches long; open full width, 50 inches wide, 6 feet 4 inches long.

For the Doctor's Office

It is the ideal couch and bed for the busy doctor's office. ..

For Seashore Cottages

Easily movable and compact. It is splendidly fitted for cottages.

For Country Homes

It admirably supplies the frequent want of "a spare bed." ..

For Business Offices

It combines rest, comfort, and furnishing for the office. ..

For Schools and Colleges

For dormitories or small college rooms it is an unexcelled bed. ..

For Flats and Apartments

Where space is at a premium it is a positive luxury. ..

AS A COUCH

In this form it is an ornament and useful furnishing for any room.

PERSONALS.

THE youngest member of the new Congress is Martin H. Glynn, chosen by the voters of the important Albany county district of New York State. He is twenty-seven years old, and his whole career offers a shining example of those equal opportunities which form the chief glory and privilege of American citizenship. He was born in the beautiful town of Kinderhook, N. Y. The future Congressman's early years were spent on a small farm, and, at the Union Free School of the neighboring village of Valatie, he pursued the usual studies preparatory to entering college. Young Glynn's parents were not greatly blessed with this world's goods, says *Success*, but the boy's ambition was not to be thwarted by any obstacle. He had determined to obtain a collegiate education, and never lost sight of his purpose. At various periods of his early life he worked on the farm, as an accountant, and in the capacity of a teacher, but always kept hammering away at his books in his own studies. After finishing at the public schools, he worked by day and studied the classics by night until he was fitted for college. He entered Fordham College, New York City, in 1890, and was graduated, four years later, at the head of a large class, carrying off most of the honors and prizes of his collegiate course. The reputation he has won caused his alma mater, last year, to honor him with the degree of master of arts.

Since leaving college he has, within five years, become a competent journalist, and is now chief editor of the *Albany Times-Union*, one of the most influential and widely circulated newspapers of

the interior. He was admitted to the bar soon after taking up his residence in Albany, and, for so young a man, enjoys a considerable practise. Finally, he has entered the fierce competition of practical politics, and borne off one of the capital prizes.

THE treaty between the Spanish and Filipinos was signed in December, 1897; four months later, in April, 1898, General Primo de Rivera turned over the command to General Augustin, whose inaugural address announced that the royal government meant to carry out a system of reform which it was fondly "studying with the deliberation requisite in affairs of such importance." This obvious trickery says Lieutenant Calkins in *Harper's Magazine*, was not the lowest expedient which Augustin was forced to employ; three weeks later, while Manila lay helpless under the guns of the American squadron, a consultative assembly was formed, composed largely of recent rebels. Even Baldanero Aguinaldo, the brutal cousin of the humane Don Emilio, was invited to join this absurd council. Naturally, Don Pedro A. Paterno was made president of the assembly which he had planned and promised in his famous treaty. Only two meetings were held before the majority resumed their revolutionary allegiance. Henceforth Paterno was reduced to drafting loyal addresses and projects of constitutional compromise. Among all his still-born petitions the most curious relates to his reward for his services as a negotiator. He asked the bounty given to Columbus—a Castilian dukedom and a perpetual pension—besides \$1,000,000 in hand; all this for the futile treaty of Biaknabat6. The sordid side of this compact can not be ignored. It is charged that Aguinaldo took a bribe, and that he did not "stay bought"—a charge of deeper import to the trading politician than to the historian, after all. It can be shown by the records of the English courts at Hongkong that his share of the fund was one thirty-seventh part of \$400,000 (silver), and that an injunction restrained him from grasp-

ing more. One of his former cabinet brought suit in April, 1898, and his claim was thus recognized. Aguinaldo may be blamed for delaying the distribution of this trust fund, but it is to be remembered that he had reason to doubt the intentions of Spain toward the Philippines, and that every week of delay in carrying out the contract for reform was bound to deepen his distrust. Moreover, after the destruction of the *Maine*, he must have counted on advantage to his cause from the relations between Spain and the United States. That America had any direct intentions concerning the Philippines he had no reason to anticipate. Therefore he kept his revolutionary council and their funds well in hand, counting on getting their signals to make that fund available for renewing the war when fortune favored the cause. The money seems to have been made to assist in the purchase of arms for the conquest of Cavite province in May, 1898, that campaign having been fought with weapons purchased abroad or captured from the Spanish troops, and not with the remnants which the Filipinos were allowed to take from the arsenal after its capture by Admiral Dewey.

PRINCE CHILKOW, the Russian minister for railways, worked as an ordinary mechanic in the locomotive works at Liverpool, after which he became a railway guard, and afterward station master at an English town.

AN YU, a Chinaman who enlisted in the United States navy in 1884, and who was on the flagship *Olympia*, is now an invalid from some sort of lung trouble, and has, accordingly, received a pension of \$30 a month. He has the distinction of being the first Chinese pensioner of the Government.

HERR HERRMANN SCHULZE, of Delitzsch, to whose memory a monument was unveiled at Berlin last week, was one of the most interesting figures in the commencement of the great Socialistic movement in Germany. By birth and training he had no sympathy with the working classes. His father was a burgomaster of his native town, and the young Schulze was educated for the law. He served as judge in Berlin and elsewhere, and in 1848 was chosen to represent his native district in the National Assembly at Berlin. During his term he was made a member of a committee to investigate the distress then prevailing among the working classes. As a result he devised a system of cooperation and resigned from the magistracy in order to devote his life to the work. He established cooperative savings and loan institutions and numberless cooperative societies for the purchase of raw material to be used in manufacture. He died in 1883.

THE French have laid claim to Admiral Dewey on the ground that he descends from an Huguonot family named De Hnoy, and the Belgians have put in a plea for him as De Wey.

MISS E. P. BAGLEY recently died in St. Helena, at the age of ninety. She was one of the few remaining persons on that island who had known and spoken with Napoleon—when he was a prisoner there.

ARIZONA furnishes us with a woman jockey, Emma Bagwill, who is one of a very few women who ride in regular races against jockeys of the opposite sex. She began riding at the age of twelve years, and to the Indians about Carson is still known by her maiden name of Emma Trapp. She suspected that her husband, who had some running horses, was being defrauded by dishonest jockeys, and determined to help him by doing the riding herself.

RUSSELL SAGE, at eighty-three, says he can feel that his has been an absolutely successful life. "Everything I have tried for I have got," he says. "All my ideals I have realized. Of course, now I have to improve things, to work right on and carry on my work. But I am satisfied."

A Remarkable Uncle.—"My uncle grows strawberries so big that six will fill a quart box." "I'd be ashamed to have an uncle who would use that kind of quart boxes."—*Chicago Record*.

Uneasy.—"We must stand by the Administration!" roared the orator. "But the Administration keeps shifting about," pleaded one of the tired members.—*Philadelphia North American*.

Needed Them.—"Julius, I thought you weren't going to speak to the Smiths any more." "Well, Julia, I had to borrow their little boy to see me send off these rockets."—*Detroit Free Press*.

May Catch Him Now.—"Good news from the Philippines," he said, as he looked up from his paper. "What is it?" "It is reported that Aguinaldo is overtrained."—*Chicago Evening Post*.

A Distinction.—LANDLADY: "Isn't this a good chicken?"

BOARDER: "It may have been a good chicken morally, but physically it was a wreck."—*Judge*.

How to Tell.—MARTHA: "Do you really believe those are real diamonds that Mrs. Karet wears?" MINNA: "I hardly know what to think. They look genuine; but she talks enough about them for rhinestones."—*Boston Transcript*.

Found Out.—"Tell Mr. Cuthbert I'm out." "I have already told him madame is in." "Then say when you came upstairs you found me out." "But, madame, he already says he has found you out, and that is why he must see madame."—*Pick-Me-Up*.

No Chance.—"Yes, sir; I have always felt that my legislative career was a dead failure." "Why so?" "Just because the party I represented was so overwhelmingly strong in the legislature."

DWELLING house in the city of Elizabeth, N. J., built one hundred years ago, has always been painted with Pure White Lead and Linseed Oil—nothing else.

There is not a crack, blister, blemish or imperfection of any kind in the paint. Makers of mixtures, beat this record if you can!

Be sure the brand is right. Those in margin are genuine, and made by "old Dutch process."

FREE

By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

ARTIFICIAL DIGESTION.

Science has made great strides in the last century. The achievements in the science of the preparation of foods are truly wonderful.

A chemist who has been making a series of experiments with a view of rendering cereal foods easy of digestion, has discovered that uncooked, or improperly cooked cereals, were, to a great degree, responsible for chronic stomach troubles from which countless thousands suffer.

These experiments show that by a certain treatment, the grains can be artificially digested, and the starch which abounds in cereals converted into dextrin, thus not only rendering the combination of grains, which is called Granola, easy of digestion, but giving it that rich, nutty flavor that every one so much enjoys.

This achievement marks a new era in the scientific preparation of foods, and a series of experiments in the greatest laboratory of hygiene in this country convinces the makers that Granola is one of the greatest discoveries in the food line that has been produced in this century.

These experiments not only show that Granola can be digested by the weakest stomach, but that its manner of preparation and the grains that enter into it, give this palatable food three times the nutrition and strengthening properties of beef, making it the most economical and nutritious food in existence.

Granola needs no preparation by the cook, all it requires is the addition of a little milk, and a delicious meal is ready in a second at a cost of one cent a person.

Leading grocers can supply Granola. Each package bears a picture of the famous Battle Creek, Mich., Sanitarium.

EUCALOL CURES CATARRH COLDS HAY FEVER

EUCALOL has cured thousands, and will cure you. To prove its merits we will send FREE on receipt of 4 cents in stamps, a 25 cent package of EUCALOL.

THE EUCALOL CO., 106 Fulton St., New York.

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent postpaid including the best work ever published on the great value of lung gymnastics, by Dr. Patchen. Send 2-cent stamp for testimonials to G. HYGIENIC SUPPLY CO., BOSTON, MASS.

that a single vote was worth little or nothing."—*Cleveland Plain Dealer*.

Creditors Uneasy Too.—BRIGGS: "It makes me uneasy to owe a cent."

GRIGGS: "I'm glad that I don't feel that way."

BRIGGS: "Why?"

GRIGGS: "Why? I'd have the St. Vitus' dance."—*Puck*.

The Fatalist.—BACON: "I see a Cuban radish grown this year near Manacas weighed eight pounds."

ROBERT: "I knew something would happen as soon as we got a foothold on Cuban soil."—*Yonkers Statesman*.

Where He Was.—"Mr. White," said a lawyer to a witness in the box, "at the time these papers were executed you were speculating, were you not?" "Yes, sir." "Were you in oil?" "I was." "And what are you now in?" "Bankruptcy," was the solemn reply.—*Tit-Bits*.

In Philadelphia.—AERONAUT: "I'm going to Philadelphia next week to give a balloon ascension and want some handbills printed."

NEW YORK PRINTER:—"Yes, sir; how would this do?" "Professor Parryshoot will rise from the dead at 4:30 sharp."—*Puck*.

A Little Bird.—The military man walked nervously back and forth till his spurs jingled like sleigh-bells. Stopping abruptly before the woman who had confronted him, he asked: "How do you know all these things about my past?" "A little bird told me." "'Sdeath!" he hissed; "another round-robin!"—*Washington Star*.

In Kansas.—"Here's an example of how familiarity breeds contempt," he said, as he looked over the top of his paper at the rest of the family. "What is it?" "This is a Kansas paper, and under the head of 'Local Jottings' it says: 'Three or four cyclones ripped through the village since our last issue.'"—*Detroit Free Press*.

Speaking from Experience.—MASTER: "Tombs, this is an example in subtraction. Seven boys went down to a pond to bathe, but two of them had been told not to go in the water. Now, can you tell me how many went in?"

TOMBS: "Yes, sir; seven."—*Tit-Bits*.

Deliberate.—"You villagers seem to be a rather deliberate lot of people." "I s'pose we be. There wnz a feller drowned down in the creek a spell ago. He yelled 'Help, help!' afore he went down th' last time, an' th' editor of th' village paper heard him an' went back to the office an' put in his paper two 'help wanted' ads. an' charged 'em up to th' estate, by gum!"—*Cleveland Plain Dealer*.

Poor Dewey.—"It's too bad," said Mrs. Corn-tassel. "What's the matter?" inquired her husband. "I'm kind o' sorry for Mr. Dewey. He seems to be a nice accommodatin' man, who wouldn't want to hurt anyone's feelin's. But if he drinks all the drinks an' wears all the clothes that have been named after him he's goin' to be mighty uncomfortable."—*Washington Evening Star*.

Held Up.—MRS. JAGGS (time 2 A.M.): "What in the world kept you so late?"

MR. JAGGS: "W-why (hic), m'dear, jus' as I was comin' (hic) 'long, firsh' shing know'd was held up by sbik or sheven highwaym'n on (hic) darksh street."

MRS. JAGGS: "Well, it's a good thing they happened to be there to hold you up. You never could have done it yourself."—*Chicago News*.

Confused.—"Well," said the Filipino chief, "have you succeeded in inciting those back-country Tagals to rebellion?" "I made some progress," was the answer; "I have at least made them realize there is some sort of unusual disturbance in progress." Did you fire their hearts with patriotism? "Not exactly. It'll take time. I asked one of them who the greatest Filipino is, and he

HEAD OFFICES
BERLIN-FRIEDENAU.

said he wasn't sure whether it was Atkinlador Aguinson."—*Washington Star*.

The Ways of Providence.—WIDOW JACKSON: "W'y, it was like dis way, parson. My husband wen up on de bill-top to pray for rain and got struck by lightning."

PARSON JOHNSON: "But yo' musn't lose faith in prayer, sister."

WIDOW JACKSON (complacently): "Oh, no, parson! Dat proves de Lord do answer prayer. Not always in de way we ask for it, but in a way dat'll be best for all hands." *Judge*.

Out of Date.—"What's that?" asked the rich man, who was buying a few paintings. "That's Pegasus," replied the dealer. "Pegasus, you know, was a winged horse." "Send it back to the artist and tell him to put the wings on an automobile, and I'll buy it," said the rich man.—*Chicago Evening Post*.

Current Events.

Monday, August 28.

Several new solvers have written concerning time-limit for solution, etc. We haven't any time-limit. Send solution as soon as possible. If you do not see your name with the solvers of a problem, you will understand that your solution did not reach us in time, or else you failed.

The Saratoga Tournament.

NEW YORK WINS INTERSTATE MATCH.

The twelfth annual midsummer meeting of the New York State Chess Association began at Saratoga on August 28. In the match for the Staats-Zeitung Cup Lipschutz won. In the Interstate match, Massachusetts failed to send a team, so that the old rivals—New York and Pennsylvania—had it all to themselves. New York was represented by Lipschutz, Halpern, Marshall, Hanham, Karpinski, Weeks, and Roething. Pennsylvania sent Kemeny, Voigt, Bampton, Stuart, Young, Shipley, and McCutcheon. The score stood:

New York.		Pennsylvania.	
Lipschutz	6½	Kemeny	4½
Marshall	4½	Shipley	4
Halpern	4	Bampton	4
Weeks	3½	Voigt	3½
Roething	3	D. Stuart	2½
Karpinski	2½	Young	2
Hanham	2½	McCutcheon	2
Total	26½	Total	22½

Lipschutz won first prize, Kemeny and Marshall divided second and third prizes, and Shipley, Bampton, and Halpern divided fourth and fifth prizes.

In 1897, New York won by a score of 25½ to 23½, while last year Pennsylvania made the astonishing score of 30 to 19.

Nebraska Chess-Association Tournament.

The first summer tournament of the Nebraska Chess-Association was played at Dannebrog, August 2, 3, and 4. The date selected was unfortunate, inasmuch as more than half of the members who expressed a desire to be present were, for a variety of reasons unable to attend. Only nine took part in the tournament, but they had an enjoyable time and played very good Chess for amateurs. Those present were Dr. A. E. Bartoo and C. O. Rettenmayer, Arcadia; F. W. Biddle

and J. M. Brunner, Omaha; John L. Clark, Platte Center; C. Q. De France, of Lincoln; Nelson Hald and M. F. Winchester, Dannebrog; and Judge S. H. Sedgwick, York. Thirty-four out of 36 scheduled games were played. Mr. Biddle won first place with the title of Over-the-Board Champion of the Association for 1899.

The following game between N. Hald and C. Q. De France, president and secretary respectively of the association, shows how the secretary played a Pillsbury trick on the unsuspecting president.

Games from the London Tournament.

LASKER AND PILLSBURY'S SECOND GAME.

The first game between these two young masters was a Draw. The second game should also have been a Draw; but the American wasn't satisfied with this, and in trying to win, he lost. The turning-point of the game is Black's 22d move. He had put up an almost perfect defense, but now he attempts an attack, which permitted the white Lasker to institute proceedings which weakened Black's King's-side Pawns and, finally, won of them. This is a splendid example of Lasker's end-play.

Chess-Nuts.

Miss Mary Rudge is Woman Champion of the World.

Paris is to have the next great Tournament. The masters will make 1900 an epoch-making year in Chess-history.

A correspondence match between twelve players representing King's County, N. Y., and Cook County, Ill., known as the Brooklyn-Cuba match, has been finished after two years' play. Brooklyn won by the score of 6½ to 5½.

The Literary Digest

VOL. XIX., No. 12

NEW YORK, SEPTEMBER 16, 1899.

WHOLE NUMBER, 491

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE RECONVICTION OF CAPTAIN DREYFUS.

ON Saturday last the court-martial at Rennes which retried Captain Alfred Dreyfus on the charge of treason returned a verdict of guilty. After deliberating behind closed doors for two hours, the President, Colonel Jouaust, put the following question (the form prescribed by the Court of Cassation in its instructions for retrial):

"Is Alfred Dreyfus, brevet captain Fourteenth Regiment of Artillery, probationer on the General Staff, guilty of having in 1894 entered into machinations or held relations with a foreign power or one of its agents to induce it to commit hostility or undertake war against France, or procure it the means therefore, by delivering the notes and documents mentioned in the documents called the bordereau, according to the decision of the Court of Cassation of June 3, 1899?"

CAPTAIN ALFRED DREYFUS.

(Portrait made by the Paris police after his degradation, showing how his buttons and insignia of rank were removed.)

ces," and set the punishment at ten years' imprisonment in a French military fortress—in Corsica, according to the newspaper reports. The condemned man received his doom quiet-

ly. He is given a month's respite before sentence begins. At this writing, it is not clear whether his five years' solitary imprisonment on Devil's Island will affect his new sentence, he himself and some others believing it will wipe out the new penalty, and that he will be freed next month. Colonel Jouaust, president of the court-martial, and Major Coupois, clerk of the court, however, hold that he must serve the full ten years. Application for appeal to the Court of Revision was made by Dreyfus immediately after the verdict.

The European press, so far as quoted in the cablegrams, is generally unsparing in its condemnation of the verdict.

According to the cablegrams, the English papers are unanimous in condemning the outcome of the trial. *The Daily Mail*, London, says, "Rennes is France's moral Sedan." *The Daily Telegraph* declares: "This infamous judgment disgraces France, dishonors her army, insults the Kaiser, and offends the best principles of humanity. There seems nothing left for France but a revolution and a war that will reduce her to the level of Spain."

The German press is represented to be especially indignant. *The Cologne Gazette*, one of the most influential of German dailies, says:

"It is a cowardly verdict, in the barbarous spirit of the Middle Ages. By this crime the judges have imposed a line of demarcation between France and the rest of the world, which, altho it will not prevent diplomatic intercourse or stay the common exchange of products, will, according to all the notions of right, justice, honor, tolerance, and ethics which the civilized world bears with it in the twentieth century, form a barrier only to be removed by time and laborious effort."

The National Zeitung, Berlin, remarks that "even the worst enemy of France could not have wished what has happened."

The Russian press also joins in the chorus of condemnation. The revisionist papers of France are bitter. *Le Siècle* has opened a subscription for a monument in front of the Palais du Justice at Rennes "to remind future generations of this outrage on justice." Journals of Austria have already begun to agitate against sending exhibits to the Paris Exposition next year, on the ground that "the present state of things in France renders it unsafe to send exhibits." Two or three of the clerical journals of

MAJOR ESTERHAZY,

Who Wrote the Bordereau.

Rome, and the antisemite press throughout Europe, approve the verdict.

The tone of American newspaper comment is strongly condemnatory, and is fairly represented by the following quotation :

A Blow against Christianity and Humanity.—"The verdict at Rennes is not a crime against the Jews wholly. Insensate and diabolical racial hatred was undoubtedly one of the incentives to the Dreyfus persecution. This was an active provocative of the conspiracy, but it is nevertheless a minor consideration. The offense is much broader than that. It is a blow at Christianity and humanity as well. The chorus of indignant protest in the United States and in England lifts the unjust condemnation of Dreyfus into a grievance of civilization itself. It is a blur on the escutcheon of the French republic, in whose welfare the sister republic beyond the sea has fraternal interest. Almost everything has happened in France. Is the tragic and ghastly history to be reenacted?"—*Public Ledger, Philadelphia*.

The Shame of France.—"With the conviction of Dreyfus, France has entered upon a new epoch. She has cast aside the garb of civilization and donned that of a Dyak of Borneo—a mere head-hunter.

"With this unjust verdict, directed primarily against the Jews,

she has placed herself in the rear guard of civilized nations. Her watchwords: 'Liberty, Fraternity, and Equality,' should be changed to 'coercion, hatred, and bigotry.'

"These new judges have well earned their ignoble epaulets. The grand army will reward them.

"But how will France expiate the crime? In blood, perhaps. Most certainly in a cycle of shame and reproach.

"The conviction of Dreyfus is only the beginning of the national humiliation. With every day, week, and month of the long years of Dreyfus's imprisonment the cloud will grow, and blacken and broaden until 'French justice' becomes a proverb whereby to typify the judicial murder of an innocent man."—*The Journal, New York*.

The Crime of the Century.—"It is, in truth, the crime of the century which the majority of the second court-martial have committed, for, in their purblind resolve to shield from castigation a gang of military scoundrels, they have conspired not only to sacrifice an innocent man, but to aim a deadly blow at the repute and welfare of their country. Neither let them imagine that no Nemesis awaits their perfidious and cruel deed. If the foul wrong shall be unredressed by the military Court of Review or by the Court of Cassation, there lies an appeal to the great assize wherein the nations are arrayed as jurors. The voice of that

sovereign tribunal is already heard. Heartfelt compassion will attend the unfortunate Dreyfus to the prison to which he is reconsigned, and scorn will chase his judges to their dishonored graves."—*The Sun, New York*.

"What is it that has brought France so low? The disease that is sapping her life is militarism. If not actual war, it has been an 'armed peace' so long that the only conception of national strength and safety now current in the country is bounded by firing manuals, rapid-fire guns, and 'autumn maneuvers.' The birth-rate is hopelessly declining, the limit of the taxing power of the nation has been reached, and now the military idol must have its sacrifice in the person of the hated Jew. This is a national tragedy. It forms a chapter worthy to follow Waterloo and Sedan."—*The Republican, Springfield*.

"It does not seem possible, under the circumstances, that the Government of France can permit the punishment of this alleged crime to take place. If Dreyfus had been acquitted, the course of the Government and the condition of the country could have been foreshadowed with some degree of certainty. As it is now, the future of France is doubtful and dubious in the extreme. To have Dreyfus sent back to punishment would constitute a seeming victory for the military party; but it would arouse such a tide of indignation among the intelligent, thinking portion of the French people that either the present military system would go down before it, or a political revolution fatal to republican institutions would take place in France."—*The Herald, Boston*.

Various phases of the trial which are likely to be of permanent interest are discussed in the following extracts:

Colonel du Paty de Clam.
General Chanoine, former Minister of War.

General Billot, former Minister of War.
General Zurlinden, former Minister of War.

SOME OF THE ENEMIES OF DREYFUS.

COLONEL SCHWARZKOPPEN
Former German Military Attaché at Paris.

ALPHONSE BERTILLON,
The Handwriting Expert.

COLONEL PANNIZZARDI.
Former Italian Military Attaché at Paris.

French Distinction between Public and Private Law.—"French justice," as witnessed in the Dreyfus case, is a thing scarcely conceivable to those whose ideas of justice are rooted in the principles of Anglo-Saxon jurisprudence. In France the doctrine prevails that the administration of government ought to be free to act upon its views of the public welfare, without let or hindrance from the courts of the law. Hence, in France, private law, or the regulation of the rights and duties of individuals among themselves, is treated as one branch of jurisprudence; while the law, which deals with the principles of government and the relations of individuals to the state, is regarded as something of an entirely different kind.

"On the other hand, the Anglo-Saxon draws no distinction between public and private law. To him all legal rights and duties of every kind form one universal system of positive law, and so far as the functions of public individuals are not regulated by that law, they are purely matters of personal discretion. It follows that every legal question, whether it involves the power of a public officer or the construction of a private contract, comes, under our system, before the ordinary courts. In France, as in every other country, questions of justice must indeed arise in the course of public administration; but as these do not concern the rights of man against his neighbor, they are not classed in France with private law. On the contrary, it is felt that, unlike questions of private law, they ought not to be decided solely by the application of abstract principles of justice between man and man, but must be considered from the standpoint of public policy.

"Here, then, we have explanation of what, to our thinking, seems an utter travesty of justice in the Dreyfus case. France is morbidly sensitive about the army. Fear of betrayal is deeply rooted; and tho Dreyfus may not be guilty of treason, and almost certainly is not, yet French sentiment is overwhelmingly in favor of his punishment as a deterrent of treason and warning to traitors. Public policy, it is insisted, demands it; and, even tho Dreyfus be innocent, 'What,' they ask, 'is the suffering of one man compared with the safety of France?'"—*The Oregonian, Portland.*

A Medieval Heritage.—"Testimony has been admitted in the Dreyfus trial day after day which would be excluded from a hearing as to disorderly conduct in the average American police court. The procedure followed seems to have been devised with the view of defeating rather than advancing the cause of justice. Counsel for the defense must sit in silence while witnesses for the prosecution are making speeches calculated to arouse the prejudices of the court. Military chiefs in the chamber of the Lycée, whose evidence has been heard over and over again, are permitted to jump upon the platform and make contradictions and explanations at their pleasure. The counsel for the government is of so little consequence that the presiding judge now and then bids him keep silent, and it is noticeable that when he is permitted to talk he has nothing to say. . . .

"The judges and counsel alike are the victims of a Middle-Age system, and have become inured to it. Measured by our standard, it is an abominable system, but our standard can not be applied to France, because the French do not think as we do. The bloodiest revolution that the world has known, and one that tore feudalism to pieces, wrecked thrones, and destroyed dynasties, was not able to disturb a code which had come down with little change from the days of Charlemagne. Even the great Napoleon could only modify and amplify it in places. He was not able to reform it.

"French law under the republic to-day is in many respects the same as it was under Henry IV. and Louis XVIII. It is the one relic of barbarism that France has never been able to shake off completely."—*Inter Ocean, Chicago.*

Are the French Becoming Crazy?—"Only one thing is clear. That is, that their hearts and souls are corrupt. They suspect everybody. They fear everybody. Germany is an incubus upon them always, and the harlot is their succubus. Their hatred is the evidence of their terror. 'Anger is the egg of Fear.' Fear explains all the unreason of the trial, an unreason which reaches its climax in justifying forgery and perjury as necessary to truth. Dreyfus is guilty, they say. But there is no proof! Very well, they forge it. The attorney of Dreyfus points out the forgery. What of it? Yes, it is a forgery, but, nevertheless, Dreyfus is guilty. Every document incriminating Dreyfus is forged. Even the scrap-book called the dossier is crammed with forgeries. Nevertheless the Jew is guilty. Fear of the Jew is so great that, when they can't maintain the forgeries, the Jew-baiters attempt to murder his lawyer. Fear of the German is not all the fear that fills France. They fear England, Russia, Austria, Italy. They fear Truth and Justice. The court which tries Dreyfus sits under the gaze of the superior officers of the army, and those superior officers arise from time to time and solemnly asseverate their belief that Dreyfus is guilty, but they don't produce a fact against him. They call on him to prove a negative. They state no facts. Therefore, he can not disprove them. They admit that their documents are false. And they talk like strutting fools. Their speech is pompous, bombastic fustian. Never once does any one in the drama seem to realize that he is absurd, or that his pose is preposterous. They are all straining after Hugoesque sententiousness. Tartarin is in them all. Their heroics are all opera bouffe. Could there be anything funnier than Jules Guérin, barricaded in his shop, and defying the authorities in hectic and frothy French, while sympathizers stand beneath the windows and applaud? Think of writers like François Coppée and Maurice Barres shrieking for Dreyfus's life, solely because he is a Jew. And then the Jew-haters turn against the Jesuits, altho another faction believes that the Jesuits are behind all antisemitism. Furthermore, the leading organs opposed to Jews are controlled by Jews. Behold anarchists joining hands with monarchists and Bonapartists! See the brave mob breaking crucifixes and

images of Mother Mary, and spitting in the holy-water fonts, and trampling the eucharist under foot! Behold a member of the nobility in charge of the army, and protecting the republic under the peasant President, Loubet! Was there ever such a patch-work, such a crazy-quilt performance under the sun? Hardly. Carlyle might master a descriptive article on the chaos, but no one else would dare attempt it—this portrayal of a colossal funny episode, without a gleam of perception of humor by the dramatis personæ. Humor is sanity. The French are crazy—except about five men, Loubet, De Galliffet, Zola, Piquart, Labori. As for Dreyfus—there's no such real person. This creature who is the center of the lunatic turmoil is an illusion and delusion. The real Dreyfus, the innocent Dreyfus, is not seen. The French, with fear-crazed brains and hate-distorted vision, see only a monster. It is much to be feared that the crazy crowd will not be brought to its senses until De Galliffet wheels out the Gatlings, and makes them sputter death into the mob."—*Commercial Appeal, Memphis*.

Influence of the Army.—"The honor of the army dominates French society and patriotism like an insensate fetish. No matter what is revealed, the army must be revered as impeccable. The acquittal of Dreyfus will be an impeachment of the General Staff."

"Not one of the officers composing the court is a general. The president is but a colonel. For such a court to give more weight to the testimony of Colonel Picquart and officers of inferior rank than to the elaborate arguments of the procession of generals who have appeared before it to secure confirmation of the previous judgment would be little less than mutiny, according to French military ethics. In the language of athletic contests, all the high officers of the army are doing 'team work' against Dreyfus, and the spectacle is calculated to demoralize the courage of every dissenting subordinate who has not the faith and conscience of a martyr."—*The Herald, Boston*.

"A Bas les Protestantes."—"The fact that French Protestants were conspicuous in the effort to bring about a revival of the Dreyfus case has attracted the notice of *The Outlook*, and an incomplete but representative list of these non-Jewish 'Dreyfusards' is reprinted in that paper. On the roll appear such names as Brisson, formerly Premier, Krantz, formerly Minister of War, Scheurer-Kestner, formerly vice-president of the senate, Loew, presiding judge in the criminal branch of the Court of Cassation, Senator Jules Siegfried, Jules Laroche, ex-governor of Madagascar, Dean Brunton of the University of Paris, several other distinguished educators, and Francis de Pressense of the *Temps*.

The anti-Dreyfusards noticed this conspicuousness of the Protestant element in the ranks of their opponents long ago, and made a characteristic use of it. Paris has heard 'Down with the Huguenots!' this strange year, as well as 'Down with the Jews!'—*The Courant, Hartford*.

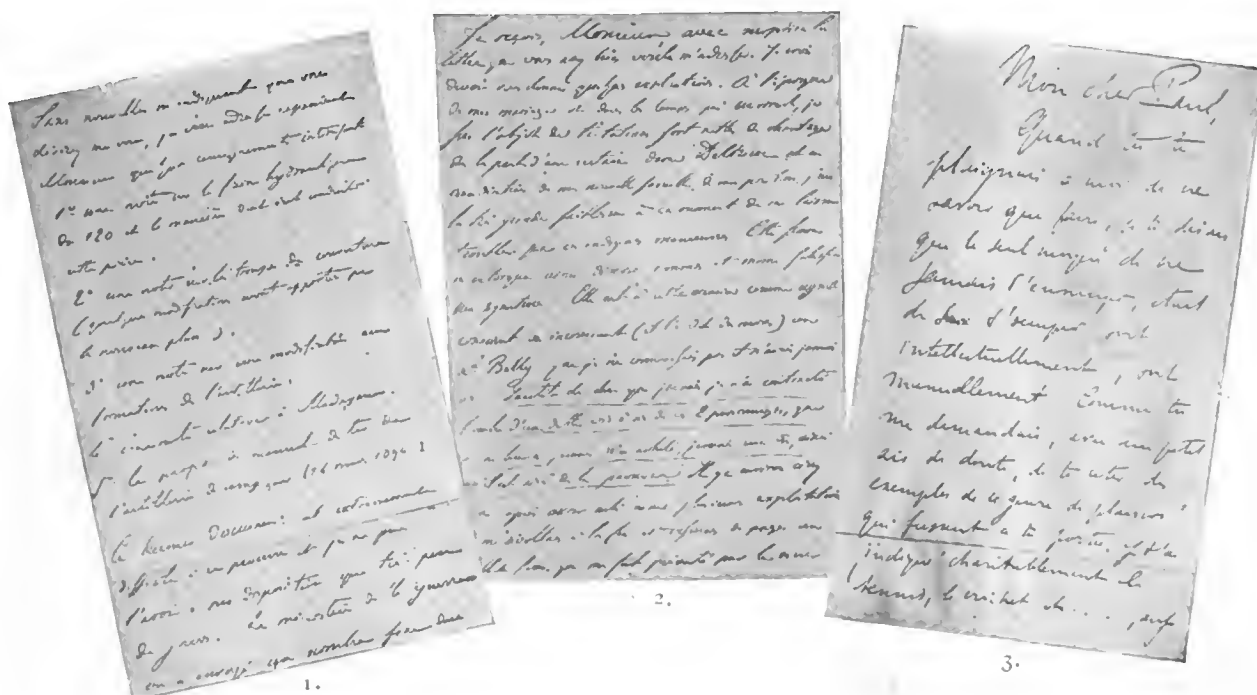

Not Evidence Enough to Hang a Dog On.—"But two facts have been brought out against the prisoner. One is, that Dreyfus did have special facilities for obtaining the secret information indicated by the caption of one of the five documents enumerated in the bordereau—the points of concentration for the troops of couverture in the Eastern territorial region in the event of mobilization. Dreyfus himself has admitted this now, altho he denied it at first. This tells against him. The other point established so far is that Dreyfus was of a prying, inquisitive disposition. It is needless to say that proof of the latter would not be considered admissible evidence in an American court. The first fact brought out against him, the proof of opportunity, is, after all, merely an inculpatory presumption, having its interest and importance in the fact that unlike almost all the other evidence so far advanced by the prosecution, it constitutes evidence that would be admitted and would have weight in an American court.

"This is the position, therefore, of the case to-day—two points established by the prosecution, one trivial and inadmissible in any court where truth and justice are desired, the other merely affording ground for an inculpatory presumption. But giving these facts all the weight and more than they deserve, there has not been evidence enough produced against the prisoner to hang a dog on. They count for nothing in the face of such duplicity and such plain proof of a conspiracy as were shown by Captain Freystaetter's confrontation of Mercier and Maurel."—*The News, Baltimore*.

A GEORGIA citizen who has a son fighting in the Philippines has addressed the following rimed note to General Otis:

"General Otis,
Please take notice—
Yonder, 'crost the foam,
We need field hands
In these here lands—
We're wantin' Billy home.
"He's fit an' fou't
Fer nigh about
Six months thar, 'crost the foam
We jest won't mention
Any pension
If you'll send Billy home."

—Frank L. Stanton in *The Constitution, Atlanta*.

1. The original bordereau upon which Dreyfus was convicted. 2. Letter written by Esterhazy. 3. Letter written by Dreyfus.

THE BORDEREAU AND ITS AUTHORSHIP.

THE PRESIDENT'S PHILIPPINE POLICY.

IN two speeches made recently, one at Ocean Grove, N. J., before the Methodist camp-meeting, and the other at Pittsburgh, in welcoming the Tenth Pennsylvania volunteers back from Manila, President McKinley laid down, in terms more definite than any used by him before, the Administration's policy in the Philippines. At Ocean Grove he declared this policy to be:

"Peace first; then, with charity for all, establish a government of law and order, protecting life, property, and occupation, for the well-being of the people, a government in which they shall participate under the Stars and Stripes."

To the Pennsylvania regiment, and through it, to the nation at large, he recounted how the war in the Philippines was brought about through "the treachery and duplicity of the insurgents"; how, pending the ratification of the treaty of peace with Spain, orders from Washington forbade any act on the part of our army at Manila that might provoke hostilities:

"The first blow was struck by the insurgents. Our kindness was reciprocated with cruelty, our mercy with a Mauser. The flag of truce was invoked only to be dishonored. Our soldiers were shot down when ministering to the wounded Filipinos. Our humanity was interpreted as weakness, our forbearance as cowardice. They assailed our sovereignty, and there will be no senseless parley—no pause until the insurrection is suppressed and American authority acknowledged and established."

Our rights and status in the Philippines he defined in these words:

"Peace brought us the Philippines, by treaty cession from Spain. The Senate of the United States ratified the treaty. Every step taken was in obedience to the requirements of the Constitution. It became our territory and is ours, as much as the Louisiana purchase, or Texas, or Alaska. A body of insurgents, in no sense representing the sentiment of the people of the islands, disputed our lawful authority, and even before the ratification of the treaty by the American Senate were attacking the very forces who fought for and secured their freedom."

While the policy laid down is criticized severely by anti-expansion journals, general satisfaction is expressed at the fact that it has been so definitely outlined. The support of the policy is represented in the following comment by the *Chicago Evening Post*, which, though generally independent, is one of the strongest supporters of the present Administration.

What is to Follow Peace?—"The President takes all the responsibility for the Philippine war, and he announces that there will be no more parleying, 'no pause until the insurrection is suppressed and the American authority acknowledged and established.'"

"And what is to follow peace? 'A government under the undisputed sovereignty of the United States, a government which will do justice to all and at once encourage the best efforts and aspirations of these distant peoples and the highest development of their rich and fertile lands.' The Philippines, in fine, are treated now as American territory, as much as Puerto Rico and Alaska, as much as Louisiana was after the purchase. This is the executive's policy. This is the policy he is now pursuing and commending to the people. The people, acting through Congress, are at liberty to modify this policy. They have the right and the power to give the Philippines independence at any time. The executive has not the authority to take any such step. He keeps the fruits of the war, the fruits of the peace negotiations. As we have already said, the Republican Party will follow the President and come out for permanent retention of the Eastern islands. The Democrats will oppose it and appeal to the electorate. We shall thus have a great, a vital, a truly paramount issue, dictated by events not manufactured by politicians of brief authority."—*The Evening Post (Ind.)*, Chicago.

The People Behind the President.—"We do not believe he [the President] has greatly mistaken the will of the people. We believe that what he has done in the Antilles and the Philippines has been a correct as well as a faithful interpretation of what the

people of the United States desired to have done, so far as they knew their own desire. . . . Doubtless there have been mistakes, and even blunders; but we have all been equally concerned in them, and the President is without question more anxious than anybody else can be to retrieve them. It is to be hoped they may yet be retrievable. We believe the people of the United States are behind the President in this matter. And in any case, we repeat, it is cruel and outrageous to impose solely upon him a responsibility that, at every stage and every step, he has shown himself willing and even anxious to divide with us."—*The Times (Dem.)*, New York.

Adverse comment is along the lines of the following:

The Weakness of the Argument.—"Perhaps the weakness of his argument lies in his assumption that the Filipinos had no right to take advantage of our ignorance and our inability to understand their aims and purposes. 'Our humanity was interpreted as weakness,' complains the President, 'and our forbearance as cowardice.' This is all true enough; but whose fault was it? If we could not understand the Filipinos, how could we expect them to understand us? The plain truth of the matter is that the United States undertook a job that they had no fitness for. This Government was utterly lacking in experience in dealing with the Oriental peoples. It was ignorant of the nature of the people it was trying to deal with. The Administration knew nothing about their manners, their customs, their laws, or their methods of thought. The belief was prevalent that if we chucked them under the chin and promised them a wise government in the event of their being good, they would be good, and patiently wait for the Administration to toss them sugar-plums and bon-bons."

"Our own ignorance is largely responsible for the fact that the Filipinos failed to realize that our intentions were good and our purposes philanthropic. A little intelligent diplomacy might have prevented any conflict whatever; but we had none of that brand of diplomacy in stock, and out of our own inexperience trouble was bred. Even when the insurrection began the Administration failed to appreciate the seriousness of the situation. An insufficient force was sent to the islands to coerce the natives, and a commission was appointed to persuade them to be good at a time when the Krag-Jorgensen was the only argument that could carry conviction to their minds. . . ."

"It had been better if the Administration had realized the difficulties of its task at an earlier day; but there is nothing to be gained now by crying over the spilt milk. It is the future that the American people are chiefly interested in, and if the Administration has finally realized that the Malay mind is more susceptible to the crack of a Krag-Jorgensen rifle than to the rhetorical niceties of a proclamation, there is a possibility that we shall see the speedy end of a situation that reflects no credit whatever upon the intelligence or the resources of the American people."—*Evening News (Ind.)*, Detroit.

"AGUINALDO'S CASE AGAINST THE UNITED STATES."

A FILIPINO, writing from Paris as "an authorized personal representative of Aguinaldo," but who, "for diplomatic reasons, considers it unwise to attach his signature," presents in the September *North American Review* a notable statement of "Aguinaldo's case against the United States." The American people, he declares, are deceived as to the Filipinos and the state of affairs in the Philippines—deceived by General Otis, who has been "deliberately falsifying the reports of the Philippine campaign to suit public vanity." "We Filipinos," he says, "have all along believed that if the American nation at large knew exactly, as we do, what is daily happening in the Philippine Islands, they would rise *en masse* and demand that this barbaric war should stop." We have been deceived, he maintains, all along the line:

"You have been greatly deceived in the personality of my countrymen. You went to the Philippines under the impression that their inhabitants were ignorant savages, whom Spain had kept in subjection at the bayonet's point. The Filipinos have been described in serious American journals as akin to the hordes of the Khalifa; and the idea has prevailed that it required only

some unknown American Kitchener to march triumphantly from north to south to make the military occupation complete. We have been represented by your popular press as if we were Africans or Mohawk Indians. We smile, and deplore the want of ethnological knowledge on the part of our literary friends. We are none of these. We are simply Filipinos. You know us now in part; you will know us better, I hope, by and by."

There are savages in the Philippine Islands, he admits, but "we are not on that account a barbarous, uneducated people, as our records show. Your Senators even admit that our political documents are worthy of a place in the archives of any civilized nation." To the charge that the Filipinos can not govern themselves, he replies:

"With equal reason you might have said the same thing some fifty or sixty years ago of Japan; and, a little over a hundred years ago it was extremely questionable when you also were rebels against the English Government, if you could govern yourselves. You obtained the opportunity, thanks to political combinations and generous assistance at the critical moment. You passed with credit through the trying period when you had to make a beginning of governing yourselves, and you eventually succeeded in establishing a government on a republican basis. . .

"Now, the moral of all this obviously is: Give us the chance; treat us exactly as you demanded to be treated at the hands of England, when you rebelled against her autocratic methods."

Reviewing the history of the war with Spain up to the arrival of General Merritt at Manila, he says:

"You went to Manila under a distinct understanding with us, fully recognized by Admiral Dewey, that your object and ours was a common one. We were your accepted allies; we assisted you at all points. We besieged Manila, and we prevented the Spaniards from leaving the fortified town. We captured all the provinces of Luzon. We received arms from you. Our chiefs were in constant touch with your naval authorities. Your consuls vied with each other in their efforts to arrange matters according to the promise made to us by your officials. We hailed you as the long-prayed-for Messiah.

"Joy abounded in every heart, and all went well, with Admiral George Dewey as our guide and friend, until the arrival of General Merritt. Either on his own responsibility, or by orders from the Government at Washington, this general substituted his policy for that of Admiral Dewey, commencing by ignoring all promises that had been made, and ending by ignoring the Philippine people, their personality and rights, and treating them as a common enemy.

"Never has a greater mistake been made in the entire history of the nations. Here you had a people who placed themselves at your feet, who welcomed you as their savior, who wished you to govern them and to protect them. In combination with the genius of our countrymen and their local knowledge, you would have transformed the Philippine Islands from a land of despotism, of vicious governmental methods and priestcraft, into an enlightened republic, with America as its guide—a happy and contented people—and that in the short space of a few months, without the sacrifice of a single American life."

Our first mistake was in assuming that we could purchase from Spain that which she "never had in her possession and never would have had the right to sell if it had been under her control." The responsibility for the deception practised upon the American people and President is laid upon General Merritt, with his "ultra-military ideas" and then upon General Otis and his censorship:

"Therefore, we Filipinos say: 'Recall General Otis, give the Peace Commission a free hand, try rather methods of fair dealing, make our countrymen believe that you are sincere, and be sincere and just in your dealings with them. Suspend the order for these rabble volunteers, the scum of your country, whom you propose to send across the sea to die of the effect of the climate, and you will find you can do more in a month than you will do by force in twenty years. Your scheme of military occupation has been a miserable failure. . . .

"Our friend, Admiral Dewey, will undoubtedly have something to say to your President when he reaches home. He caught the generals of the Philippine people, and if he had been left alone

many valuable lives would have been spared and many millions of treasure saved."

Admiral Dewey's views on the Philippine question have been eagerly and persistently sought for the past year, but the admiral's modesty and dislike of publicity have baffled the interviewers. A considerable newspaper discussion has been had over an alleged interview with Dewey on August 21, at Naples, by a correspondent of the London *Daily News*. In it the admiral was represented as opposing the retention of the Philippines, as declaring that he was never in favor of violence toward the Filipinos, and asserting his confidence in their ability to govern themselves. A number of cablegrams to him elicited the reply that he would neither affirm nor deny the interview.

On May 24 last the New York *Journal* published an interview with Admiral Dewey at Hongkong, in which he was reported as saying:

"We will never part with the Philippines, I am sure, and in future years the fact that anybody should have seriously suggested it will be one of the curiosities of history."

Press opinion on the alleged *Daily News* interview is shown by the following representative comments: The New York *Evening Post*, which opposes expansion, asserts that, without claiming the interview to be authentic, the "sentiments are in accord with the admiral's already expressed views":

"If Admiral Dewey said this, it would be, we maintain, only a logical development of the views he has publicly expressed. If the Filipinos are capable of self-government, then a war upon them to make them submit to our yoke is indeed an abnormal state of things which should at once cease. If we began to use violence through a criminal blunder, the sooner we admit our hideous mistake the better all round."

The New York *Times*, which favors expansion, declares that even if the interview were authentic, which it regards as not in the least probable, it does not see how the advocates of the "drop-'em-and-run policy" can extract much comfort from the interview, especially as the admiral is represented as saying that the insurgents "will have to submit to law," altho the interview does not make him state definitely what law and how it is to be applied.

The action of the mass-meeting of Chicago-platform Democrats at Cooper Union, this city, on Labor Day, in cheering for Aguinaldo, has also been the subject of warm newspaper comment. At this meeting, Congressman John J. Lentz, Democrat, who represents the Twelfth Ohio district, in a speech on imperialism, said:

"When the great citadel of American liberty is being destroyed it is time for us to abandon the question of monopoly, and to rush to the rescue of the institutions founded by Jefferson and fostered by Lincoln. If you murder Aguinaldo you destroy one of the heroes of the world. Why should not Aguinaldo be honored and cheered for saying with Patrick Henry, 'Give me liberty or give me death'?"

This declaration was received with loud and prolonged cheering. Ex-Governor Altgeld, of Illinois, also spoke in praise of Aguinaldo. The "imperialistic" press denounce this as treasonable. The Philadelphia *Press* (Rep.) says, under the heading "Disloyal Silver Men":

"It looks as tho the free-silver Democrats were getting ready to make Aguinaldo their party leader. At the meetings held the last two days in Rhode Island ex-Governor Altgeld, of Illinois; Congressman Lentz and Gen. A. J. Warner, of Ohio; Senator Tillman, of South Carolina, and other of the most prominent advocates of Bryan have made addresses. They all praised Aguinaldo in a way that would amaze foreigners. . . . That Aguinaldo started a war on the Americans and has been killing just as many of them as possible is nothing to the Bryan anti-imperialist crowd. They seem to regard Aguinaldo's success in killing Americans as commendable.

"The old veterans gathered in Philadelphia can remember

what would have happened during the Civil War if a public meeting had been held here or in Rhode Island to cheer Jefferson Davis and denounce Lincoln as a 'murderer.' But the gathering addressed by Altgeld, Lentz, and others in Rhode Island was not a bit more disloyal than would have been a gathering in the North during the Civil War to cheer Jefferson Davis and denounce Lincoln. It is a strange thing that at a Democratic free-silver meeting the name of the man responsible for the loss of so many American lives should be cheered as that of 'one of the world's heroes.'

The Philadelphia *Inquirer* (Ind. Rep.) calls Lentz's speech "treason and anarchy," and points out

"that men like Altgeld and Lentz, when they are telling the people that their liberty is in danger and that the republic is going to smash and all that diabolical idiocy, never seem to remember that they themselves are living examples of the fullest liberty. How long would such men be permitted to utter treason and give aid and comfort to an enemy in any country in Europe? They would be in jail."

The Washington *Times* (Dem.) thinks that such speeches will only serve to help the Republican Party. It says:

"The Lentz position lacks originality as well as respectability. It infringes the patent of Hoar and the copyright of Atkinson in their own territory. We are in favor of protecting them against that sort of thing, especially when their vested rights in the infamy of supporting Tagal rebels against the Stars and Stripes are assailed by outsiders. The country can readily understand how a Nestor of political Pecksniffs like the senior Massachusetts Senator can laud and morally assist the enemies of his country. Medford rum and sugar are sufficient to account for that. Neither is it difficult to appreciate the attitude of Atkinson. St. Elizabeth's is full of abler anti-expansionists than he. But there is naturally some astonishment, which in the present instance we do not share, when a male person calling himself a Democrat deliberately attempts to steal the treason thunder of the Boston Filipino Junta, to preach it to men who have imbibed the honest, expansive Americanism of Jefferson, Jackson, and Polk with their mothers' milk.

"What people of the Lentz order think they are working for we are at a loss to conceive; but we can tell them what the result of their anti-American idiocy will be without the slightest doubt. It will give the Republican Administration, with its shameful record of Eaganism, Sampsonism, Algerism, Carterism, and a return to the political spoils system in the civil service a new lease of power. The American people will never put a party in control whose representatives throw mud on their flag and apotheosize murdering rebels against its authority."

The Atlanta *Constitution* (Dem.) says the Democratic Party should not be held responsible for an individual's opinion:

"In a general way, these episodes are to be expected. They belong to the heat of the moment. When a very earnest man feels a call to enter a protest against events that seem to him to be carrying the republic away from its traditions, it is natural that he should give a vigorous turn to his language. But the fact to which we desire to call attention is this—that Mr. Lentz is merely giving loose reins to his own opinions, and, in these Filipino matters, does not represent the Democratic Party which as yet has made no definite declaration on the subject."

AMERICAN SENTIMENT ON THE TRANSVAAL DISPUTE.

THE press of America have not entered very largely upon the question of the rights and wrongs involved in the controversy between Great Britain and the Transvaal Republic. Editorial reviews of the subject are confined for the most part to the chances of war and to its probable results if it comes. On the latter point there can hardly be said to be two opinions. Great Britain, it is thought, will win because she can not afford to lose; but the Boers will give her army the hardest task it has had for many years.

The Brooklyn *Eagle* and the Washington *Times* are the most outspoken of American journals in opposition to the Boers. "There is a narrow spirit in the Transvaal," says *The Eagle*, "that must be widened by force if there is no other way to do it. The country. . . needs a larger infusion of the modern life and methods that the English will put into it. If it persists in ignoring the progress that is expected of other nations it does so at the peril of its statehood."

The Times says:

"The defiant stubbornness displayed by the Boers, in the face of their hopeless position, would be incomprehensible in any other people. Being what we know them to be, it is not surprising. Great Britain will be put to a terrible expense in blood and treasure to teach them the lesson that Sir Evelyn Wood should have been allowed to administer when he had them cornered at the end of the former war. The statesman [Gladstone] responsible for his not doing so, as well as for the murder of Gordon Pasha, is dead and gone, but the evil results of his paltering policy live after him."

Many other journals blame both parties to the dispute, the Boers for their unprogressiveness, the English for their aggressiveness. The Boston *Herald* thinks the contest a needless one, "provoked by wrong-doing on both sides." The Memphis *Commercial Appeal* thinks that Britain is "technically and legally wrong," but "right on general principles," the Boers having "violated the fundamental principles of popular and representative government."

Far the larger number of American journals that express any decided views on the merits of the controversy side with the Boers, while admitting that they are open to criticism. The New York *Times* thinks that overt interference by the English is "outrageous" and armed interference will be "infamous." The New York *Sun* regrets to see the British Government "drifting toward a conflict in which it may have neither a legal nor a moral right to claim the sympathy of the world." The Boston *Journal* thinks that Mr. Chamberlain is not after increased representation for the Uitlanders, but after "the crushing of the independence of the Transvaal." The Baltimore *American* thinks the grievances of the Uitlanders "grossly exaggerated," and that they are the excuse, not the cause, of the present British attitude. The Kansas City *Times* finds a likeness in the British attitude to our attitude in the Philippines, and thinks this double attempt at "shooting republics to death" suggests a reversion to fifteenth-century methods. The Omaha *World-Herald* runs the same parallel, the attitude of each nation being that of "a great power seeking the destruction of the weaker for the purposes of gain and conquest." Great Britain's position is "nothing but simple robbery." The Chicago *Inter Ocean* argues against the English claims point by point, and finds that Mr. Chamberlain's real purpose is "the subjugation of the Transvaal." The Chicago *Chronicle* fears that one result of war will be a horrible uprising of the natives against all the whites of South Africa, for which Great Britain will be responsible, and "the stain upon its escutcheon will be redder than the color of its banner." The Tacoma *Ledger* entitles its editorial "Cecil Rhodes's Oppression," and thinks the Boers "have the sympathy of other nations."

TOPICS IN BRIEF.

THE earth makes a revolution every twenty-four hours, and Santo Domingo is a close second.—*Chicago Journal*.

CARROWS: "I see Aguinaldo has again been driven back." Sutherland: "Is that an official despatch or the truth?"—*Life*.

IN case Mr. Bryan should succeed next year there would be a chance of Mr. Hogg succeeding Mr. Root in the War Department.—*Washington Post*.

ANY one who knows whether or not Oom Paul is bluffing can impart the information to the British Foreign Office and receive a reward.—*Chicago Record*.

LETTERS AND ART.

GIRLS' NOVELS IN FRANCE—AND AMERICA.

IT is admitted that England invented the modern novel for girls. Charlotte M. Yonge, Rosa Nouchette Carey, "The Duchess," and numerous other widely known writers have had for an audience a multitude of English *jeunes filles*. But the young girl across the Channel was long guarded from this kind of reading. Since the time of the second empire, however, a school of French writers, of which Mme. Craven is the acknowledged head, has arisen, who seek to teach the *jeune fille* of Paris and the provinces how to look upon life—chiefly from the standpoint of love and marriage. In *The North American Review* (August), Mme. Yetta Blaze de Bury devotes an article to this branch of French fiction, and her conclusion is that such romantic books as the "Récit d'une Sœur"—now in its fortieth edition—are laying up widespread unhappiness for whole generations of *jeunes filles* by mischievously teaching them to regard their future husbands as lovers, instead of promulgating the orthodox French doctrine that husbands are "mere embodiments of marriage and the family." She says:

"The weak point in this innovation would appear to be that it reveals to our young girl readers only the noble and generous side of love, and too easily persuades these young hearts that men are, as a rule, chivalrous and only too ready to marry girls without fortune.

"Already the so-called harmless 'Tauchnitz' had sown hurtful illusions in the minds of those who were destined to the '*mariage de raison*,' since the awakening was much more bitter for girls that had regarded their husbands as lovers than for those that had taken the common-sense view and looked upon their future husband as the embodiment of marriage and the family.

"If every book in the Tauchnitz edition showed, together with the infidelities we seek to hide from our girls, the hard lessons taught by such conduct, as Goldsmith does in 'The Vicar of Wakefield,' then 'girls' novels' would be reasonable enough. The sentimentality of Saxon marriages, set forth in English and American novels, has led so many French girls to transform the solicitor's clerk who marries them into a hero of the romantic kind, that one might almost conclude there is a 'Tauchnitz' in the innermost heart of many of our 'Emma Bovaries.'"

It was upon the English novel for girls, as represented in the Tauchnitz editions, that the new French school of Mme. Craven, Mme. Bentzon, and Mme. Caro was founded. In conclusion, Mme. de Bury says:

"In our opinion, the true 'girls' novel' is the one that accentuates the rôle of personal responsibility instead of diminishing it, the novel, in fine, such as it is conceived by Mme. Caro and Mme. Bentzon, the novel which enables girls to see clearly into their own hearts. The taste for the things of the soul, the preference the French woman has for seeking to know what is going on in the heart, is peculiarly manifest in the child, who among us will be much more interested in Cinderella's thoughts and feelings than in the splendor of the godmother's coach."

The London *Academy*, in commenting on this dictum, says:

"A sense of personal responsibility is exactly what the 'young person' lacks, especially in France, where nothing but marriage gives to a woman the license to think for herself. Therefore, if the young person's novels are to be didactic, let them be didactic in fostering this sense. Here springs up a larger question, Should the young person's novels be didactic? Why must the young person, any more than the emancipated wife, be compelled to eat bread with her cake? Why should she learn out of school hours? Why, in her special case, should fiction be strained beyond the simple sincere presentation of life, or part of life? We fancy that Mme. de Bury, had she chosen to touch these points with precision, would have declared against any sort of overt or covert didacticism; her phrase, 'accentuate the rôle,' might mean anything or nothing. But, the fact is, Mme. de Bury

is not disposed to take the girls' novels of France, even the best, too seriously. Her concern for them is strictly that of the disinterested observer, as would be expected from a lady who is not afraid to satisfy a more jaded taste. Nearly at the beginning of her article she inquires: 'What necessity is there for a girl to read novels?' We should reply, 'In France, none.' In France, where girls not only act but think at the word of parental command, it would certainly be simpler to forbid all girls' novels by general social edict. No revolution would follow.

"But in England, where the girl is a force, and in America, where the girl is paramount, the question of girls' novels has, or should have, an authentic importance. It would richly repay consideration; and, like most questions which would richly repay consideration, it is neglected by sociologists. If Mme. de Bury had written, for instance, on 'Girls' Novels in America,' she would have performed a service instead of merely producing a diversion. Who, except American girls, knows anything exact of girls' novels in America—one of the great influences everlastingly at work in the formation of the national character? Probably, since in the republic of letters the United States form a suburb of London, the girls' novels of America are much like the girls' novels of England. If so, we take them to be sufficiently feeble."

The fame of Laura Jean Libby and Bertha M. Clay apparently has not reached the academic shades of London.

Very little is really known of girls' tastes, says *The Academy*—even by their mothers:

"We are apt to assume that they are what we think they ought to be—an absurd and perilous assumption. We may be sure that whatever the literary taste of the average girl is, it is not catholic. In this connection there never was a wilder theory than that which says: 'Turn the average healthy girl into a good library and she will instinctively choose what is good for her.' She will do nothing of the kind, for girls are human beings, tho we use every effort to conceal the fact from them and from ourselves."

THE LOVE-LETTERS OF BALZAC.

THE pathos of Balzac's life, the disappointments and chagrins from which the man of genius should have been free, become more and more apparent as one reads his letters to Mme. Hanska, published in the *Revue de Paris*. Mme. Hanska was the love of his life, the friend of his soul; to her he writes of his hopes and his fears; he tells her his every anxiety, and talks to her without circumlocution or reserve.

On July 3, 1840, he writes to her as follows:

"I have come to the end of my patience. I think that I shall leave France and carry my bones to Brazil in a foolish enterprise which I choose because of its folly. I shall burn my letters and my papers and leave only the Jardies [Balzac's home], and I shall confide the little things which I wish to keep to the friendship of my sister. She will be a most faithful dragon and will guard these treasures.

"I shall give power of attorney to some one to sell my works, and then seek the fortune which fails me here. I shall return rich, or no person shall know what has become of me. It is a project long delayed, but this winter shall see it put into execution with a relentless tenacity. My work here will never pay my debts; it is necessary to do something else. I have only about ten years of real energy left. If I profit not by them, I am indeed a man lost. Out of all the world you are the only one who shall know of this. Certain circumstances may hasten my departure; however, you shall in any case receive my adieux. A letter stamped from Havre or from Bordeaux will tell you all.

"You ask certain details of the life of Victor Hugo. Victor Hugo is an excessively spiritual man; he has as much common sense as poetry. In conversation he is delightful, a little like Humboldt, but superior to him, and he admits more dialog. He is full of middle-class ideas. He execrates Racine; he speaks of him as a secondary man; he is mad on this subject. He has left his wife for Juliette, and gives this silly reason that his wife has too many children. You will remember that Juliette has no chil-

dren. On the whole, there is more of good than of bad in the man, and the best things are due to his pride. However profoundly we may dissect him, he is an amiable man, besides being a great poet. He has lost a great many of his best qualities, his force and his valor, by the life which he has led. He has loved a great deal."

In August Balzac writes:

"I have attempted a last effort; I have alone made the *Revue parisienne*, as Karr has made *les Guepes*. The first volume has appeared. I still put off my project regarding Brazil. One loves France so much! I can not resist her. I shall undertake now to understand the *Scènes de la Vie Militaire*."

In March, 1841, Balzac, who had just returned from a visit to George Sand, writes:

"Chopin is always there. She [George Sand] smokes *cigarettes* and nothing else. She does not rise until four. Then Chopin has finished giving lessons. One must mount a straight and narrow staircase in order to reach her. Her bed-chamber is in brown; her bed is two mattresses upon the floor à la *Turque*. *Ecco, contessa!* She has pretty little hands like a child. . . .

"I doubt the possibility of living in France in the horrible struggles which consume my life. After my visit to you I think of going to St. Petersburg, and of renouncing France. But I must make a last effort to draw myself from the claws of the publisher to whom I owe 100,000 francs. By working day and night, and engaging myself again for six months in these Herculean literary works, I shall be able to pay this 100,000 francs.

"Besides this, I owe 150,000 francs, and altho age advances and work becomes each day more painful, I have conceived the hope that I may finish paying this horrible debt in eighteen months, especially if I do that which my attorney wishes. It is that the *Jardies* shall be sold, and bought for me under an assumed name, with my funds, in order that I shall be no more pursued by my creditors, and not be obliged to pay interest and costs; and when I no longer owe anything I shall inhabit it again. On the other side, my mother has been ruined by my brother Henry, who is in the colonies, and I have her with me. At last I have almost a majority for my election to the Academy. All this has caused me to renounce the project of going to Russia, and I have signed a contract for ten new volumes to be written this year. I have articles due for the *Presse* and for the *Siccle*; it is necessary to write them before making my journey. Finally, my dear one, I have signed a contract for a complete edition of my books, which are to be brought out by a grand book and publishing house, with an edition *de luxe* and a low price. All these things so great, so important, and so capital, have entered into my last letter; but I have not written, and published, and looked after my business without some reward.

"During two months this letter has been delayed, because I have not had time to write, nor to do anything more than what was forced upon me. The *Jardies* were seized by a creditor who put it to sale; it was necessary to find 50,000 francs in a month, and I found them! It was necessary to publish my books, my articles, and attend to some business, and I was without money, exactly without money. It rained in torrents, and I went on foot to Tassy where my business was, trotting all the day, and writing all the night. First, I have not become mad; second, I have fallen ill. From it comes the necessity of a journey; as soon as I have obtained the result of the diagnosis. The doctors call it a coagulation of the blood, which may affect the brain. I shall go to Touraine in Brittany for fifteen days. On my return, M. Nacquart has condemned me to a bath of three hours each day, and I am to drink three pints of water, and to take no other nourishment while my blood coagulates. I came out of this barbarous but heroic treatment with a clear skin, refreshed, and ready for new struggles. Behold my history in short; if I should enter into details, it would take volumes.

"Dear, I have not received from you one little word since your number fifty-seven, dated December 29. Oh! what is wrong when one is loved as you are loved by me; you are alone in my heart with the misery and the labor, two incorruptible guardians. But why abandon me thus, when you are my only thought, the end and the aim of my life? Since then I have had Wierzbownia in painting, and have found nothing in my thoughts which will compare to your lawn, and the pond beneath your windows, to

your rose garden and to your carpet of green. Oh! what remorse has grasped your heart? Some thought must have detached itself under the brilliant light of your candle, in the evening, in order to say to you: there is one who thinks of you only! Is there nothing to plead for the unfortunate, for the one who suffers; who passes his nights in writing articles and books, for the pretended poet, for myself in fact, for the traveler to Neuchâtel, to Geneva, and to Vienna, who does not find himself at your side this moment because the journey will cost a thousand crowns—to speak to you in the abhorred language of business—and a thousand crowns and the library are two terms irreconcilable?

"Yes, it is six months since your last letter to me. I have always some real reason for my silence, and you have none for yours. You should write three times to my one, and it is I who write two letters to your one! Ungrateful heart! Here are my excuses: I have published the 'Priest of the Village' (a work still incomplete); I have just put into three parts the 'Memories of Two Brides,' which will appear in a month; I have just published 'A Mournful Affair'; I have published in the *Siccle*, 'Les Lecarnus'; I have published in the *Presse* 'The Two Brothers'; I am about to publish 'The Peasants.' I have done a great deal of useless work in order to live—work that I call useless because it is outside of the work of my life, and so, if it is money gained, it is time lost. Oh! my dear, to have the woman I love, a little bread, and a corner, tranquillity, and moderate work is all I wish. . . .

"My sister wishes me to marry. She has among her friends a god-daughter of Louis Philippe, the daughter of the son of this braggart who has been elevated to the throne of the French. I laughed aloud; in the first place, I said to her, I do not wish to marry a woman younger than thirty-six, or even forty."

We make one more quotation, from a letter of July 15:

"No letters from you; this gives me the greatest anxiety. I began to give myself up to the most absurd ideas. At last I have been to consult a somnambulist to find out whether you are ill. Several days after, I went to have the cards read for me by a very famous sorcerer. After making the combinations with his cards, this fortune-teller, in explaining the possibilities of the future, told me, with an incredible exactness, of particular happenings in my past life. This man, without an education and extremely vulgar, uses the choicest expressions while he is with his cards. The man with his cards is another being from the man without his cards. He did not know me from Adam or Eve, and I did not know at two o'clock that I should consult him at three, and he told me that until to-day my life had been a continuation of struggles where I had always been victorious, but now I am going soon to have my tranquillity. I hope, indeed, that he speaks the truth. After all, he has not told me whether I shall be married soon, and this was my grand curiosity."—*Translation made for THE LITERARY DIGEST.*

THE SECOND NEWLY DISCOVERED DUMAS MANUSCRIPT.

WE have already spoken of the first of the two stories by the elder Dumas, recently discovered in manuscript, and shortly to be brought out in England (see *THE LITERARY DIGEST*, June 15 and 24). Mr. Home Gordon, to whom the task of translation into English has been assigned, now gives further information about the second story, which, he says, will probably become the more popular of the two. In *The Outlook*, London, he thus speaks of the plot and chief characters in the tale:

"The scene is no longer laid in Derbend, as in the first tale, but is shifted farther north, into what is now geographically termed the Terek territory. . . .

"With his wonted keen sense of the picturesque and tragic, Dumas has chosen an interesting hero, who forms an unconventional figure. The concluding lines of the volume show that to all posterity, since 1819, his name has been transmitted as a traitor to both Tatars and Russians. Torn between his love for the daughter of a turbulent chieftain and his growing affection for the Russians, he has been taught to regard as his hereditary

foes, the young hero acts with an impulsive cruelty which entails hopeless ruin.

"The story commences with a lively description of a Tatar village festival interrupted by a squabble between some Russian troops and the unruly tribesmen. The latter are instigated by the *noukiers* of an indomitable insurgent, Achmet Khan. This fierce chieftain violates the laws of hospitality, which are so strong in the East, in the house of Ammalat Bey. The latter sees nothing for it, after the treacherous murder committed under his roof, but to cast in his own lot with Achmet, who is the chieftain of Avarie. Received as the guest of the Khan in his castle of Khurzuk, Ammalat falls in love with his host's daughter, Seltanetta, who is only sixteen. If all Tatar maidens enjoy such liberty before marriage, and are subsequently guarded with such severity after the holy ceremony, it seems a matter of surprise that they ever decide to plight their troth."

After giving further details of the incidents in the tale, the writer thus characterizes the tale, which he thinks from its striking interest is likely to have a large sale among English readers:

"In many ways this romance is sharply contrasted with its companion. To begin with, it possesses one of those elaborate prefaces in which Dumas reveled. He professes to be rearranging for French readers the skeleton of a novel left by a Russian sent to Siberia. This is a characteristic touch very familiar to students of the prolific writer. In the present tale, no patches of humor are introduced, but the story is taken in rather an irregular fashion without any prolix digressions, and is seen to be gradually emerging from a series of almost separate though vivid scenes.

"In this story, as in the previous one, the abstract of which I gave in another article, the feminine interest is subordinate. This is appropriate and true to Mohammedan life, in which women play so subordinate a part. Even the Koran is a gospel for men, and the female followers of the Prophet have to enter Paradise in the guise of houris, thus in heaven only existing to gratify the sterner sex."

It is a curious and almost unprecedented fact that this posthumous story by a great writer will first see print in a foreign tongue; for it may be years before copyright arrangements are made with the French publishers of Dumas's works.

MAETERLINCK ON THE DRAMA OF TO-DAY.

IN the opinion of many close observers of literary and dramatic tendencies, the drama of the present day—in spite of much that is shallow and ephemeral, and in spite of much local degradation of popular taste—shows indications of a revival along lines of essential human interest and depth of treatment which may again make it the popular vehicle of the world's best thought, such as it has been at recurrent intervals of history. A great modern master of the drama, Maurice Maeterlinck, in an article in *The Cornhill Magazine* (August), gives an interesting analysis of the present conditions of the drama as contrasted with those of other days, in the course of which he enlarges considerably on his idea of the "static drama" (see *THE LITERARY DIGEST*, August 13, 1898):

"The first glance that we throw on the drama of the day would seem to reveal, as its chief characteristic, the weakening, the progressive paralysis, so to speak, of exterior action; further, a most ardent tendency to penetrate ever more deeply into human consciousness, and attribute still greater importance to moral problems; and last of all we are struck by the search, so far still very timid, for a kind of new beauty that shall be more spiritual, more abstract, than was the old. It can not be denied that adventures on the stage of to-day have become far less extraordinary and far less violent. Bloodshed has grown less frequent, passions less turbulent; heroism has become less rigid, courage less material and ferocious. People still die on the stage, it is true, as in reality they still must die; but death has ceased—or will cease, let us hope, very soon—to be the indispensable setting,

the inevitable end, of every dramatic poem. It is rarely, indeed, in our own life—which, though it be cruel perhaps, is cruel only in hidden and silent ways—it is rarely indeed in our life that death puts an end to the more violent of our crises; and for all that the theater is slower than the rest of the arts to follow the evolution of human consciousness, it will still be at last compelled, in some measure, to take this into account."

The legends of the ancient fatalistic drama, the romantic adventures of Italian, Spanish, and Scandinavian legend which form the groundwork of the Renaissance drama of England and the Continent and also of the Romantic period of the French and German stage, no longer, says Maeterlinck, correspond with "a deep, and actual, and living reality":

"If a youth of our own time loves, and is confronted by obstacles not unlike those which, in another order of ideas and events, beset Romeo's love, we know perfectly well that nothing of all that which made the poetry and grandeur of Romeo and Juliet's love will shed beauty upon his adventure. The entrancing atmosphere of a magnificent, passionate life no longer abides with us; nor have we the brawls in the street, the sanguinary or sumptuous episodes, mysterious poisons, or fastidious tombs. Gone, too, is that grand summer's night—the night that owed all its grandeur, its charm, its comprehensibility even, to the shadow of an heroic, inevitable death, that lay heavy upon it. Strip the story of Romeo and Juliet of all those beautiful ornaments, and we have only the very simple and ordinary desire of a noble-hearted, unfortunate youth for a young girl whose hand is denied him by her obdurate parents. . . . And the same remarks would hold good if we chose to imagine a man of our time to be as jealous as Othello was jealous, possessed of Macbeth's ambition, as unbappy as King Lear, or, like Hamlet, wavering and restless, crushed by an impossible, harassing duty."

Maeterlinck thinks that the drama of to-day can not, if it is a genuine and true art, revive the themes of olden days. Such dramas are necessarily artificial, "an impossible marriage of past and present." He continues:

"Let us consider the drama that actually does represent the reality of our time, as the Greek drama and that of the Renaissance represented the reality of theirs. It is in a modern house, and between men and women of to-day, that this drama unfolds itself. The names of the invisible protagonists—which are the passions and feelings—these are the same more or less, as of old. We see love, hatred, ambition, jealousy, envy, and greed; the sense of justice and idea of duty; pity, goodness, devotion, piety, apathy, selfishness, vanity, pride, etc. But altho the names of these ideal actors have not changed, how great is the modification of their aspect and qualities, their extent, and habits, and influence; not one of their ancient weapons is left them, not one of the marvelous ornaments of days long gone. It is seldom that cries are heard now; and bloodshed is rare, while tears are but seldom seen. It is in a small room, round a table, close to the fireside, that the joys and the sorrows of men are determined. We suffer or bring suffering to others, we love and we die, there, in our corner, wherever we happen to be; and it were by most singular chance that a window or door would for one instant fly open under the pressure of extraordinary despair or rejoicing. Accidental, adventitious beauty exists no longer; nor is there poetry now in externals. And what poetry is there—if we choose to probe into the heart of things—but borrows nearly all its charm, nearly all of its ecstasy, from external elements?"

But altho the modern dramatist will strive to probe deeply, as did Shakespeare, into the inner thought-world of man, *action* will always "be the sovereign law, the essential demand of the theater." The new French drama initiated by Dumas fils, which exists almost solely on the portrayal of exceptional problems—such as "should the 'faithless' husband or wife be forgiven?" "Is it well to revenge 'infidelity' by 'infidelity'?"—is in Maeterlinck's opinion too adventitious in its interest and too abnormal in its content to fill the place of a universal drama of human life. It is from the Teutonic stock that we find this great drama chiefly unfolding:

"The loftiest point of human consciousness is reached by the

dramas of Björnson, of Hauptmann, and, above all, by the dramas of Ibsen. Here we attain the limit of the resources of modern dramaturgy. For, in truth, the further we go into the consciousness of man, the less struggle do we find. We can not penetrate far into any consciousness unless that consciousness be very enlightened; for it matters not whether the steps we take in the depths of the soul that is plunged in darkness be one or a thousand, we shall find therein naught that is new, that we have not expected; for darkness everywhere will be like unto itself. Whereas a consciousness that is truly enlightened possesses passions and desires that are infinitely less exacting, more peaceful and patient, more salutary, abstract, and general than are those that have their abode in the ordinary consciousness. And therefore it follows that we shall come across far less struggle, or that at least the struggle will be far less violent, between these passions that have been enhanced and ennobled by the mere fact of their having become loftier and vaster; for if there be nothing more savage, destructive, and turbulent than a dammed-up stream, there is nothing more tranquil, beneficent, and silent than the river whose banks ever widen."

Apparently Maeterlinck's new drama will be a drama of the Golden Age to come, when the human soul is no longer a stunted or warped soul. In this good time "prejudices that call for tears will no longer be found there, or the justice that demands unhappiness. . . . No duties will be discovered therein but one alone, which is, that it behooves us to do the least possible harm and the utmost good, and love others as we love ourselves." This is a charming picture, and no doubt the drama that pictures it forth will be equally so. Unhappily even Ibsen, who is forced to take the human heart and its incomplete ideals and passions as he finds it at the present day, surrounded by a life of hollow conventions, and confronted by the cant moralizings handed down by an ancient line of grandmothers, must deal with the problems of the half-regenerate man:

"Here we descend at times very far into the depths of human consciousness, but the drama remains possible only because in our descent there goes out with us a singular light—red, as it were, and somber, capricious; unhallowed, we might almost call it—a light that illumines only strange phantoms. And in truth nearly all the duties which form the active principles of Ibsen's tragedies are embittered and morbid; they are duties whose home is without, and no longer within the healthy, enlightened consciousness; and duties we believe to have discovered outside this zone are often most closely akin to a sort of morbid and gloomy madness. It must not be imagined, however—as it would indeed be far from my thoughts—that these remarks of mine in any way detract from my admiration for the great Scandinavian poet. And, indeed, if it be true that Ibsen has offered but few helpful examples, elements, precepts, to the morality of our time, he is still the only dramatist who has seen a new poetry and set it forth on the stage, and succeeded in enwrapping it with a kind of somber, ferocious beauty and grandeur (too ferocious and somber even for it to be general or definite); as he is the only one who has borrowed nothing from the poetry, beauty, and grandeur of the violently illumined dramas of antiquity and the Renaissance.

"But until such time as the human consciousness shall contain more useful passions and fewer nefarious duties, and the theater of the world shall consequently present to us more happiness and fewer tragedies, we must still recognize the existence, at this very moment, deep down in the hearts of all men of loyal intention, of a great duty of charity and justice which undermines all the others. And it is perhaps from the struggle of this duty against our egoism, indifference, and ignorance that the veritable drama of our century shall spring into being. Hauptmann has made the attempt in 'Die Weber,' Björnson in 'Au delà des Forces,' Mirbeau in 'Les Mauvais Bergers,' de Curel in 'Le Repas du Lion,' but, all these very honorable endeavors notwithstanding, the achievement has been not yet. Once this gap has been bridged, on the stage as in actual life, it will be permissible perhaps to speak of a new theater—a theater of peace and happiness, and of beauty without tears."

DREYFUS AS THE "ELEVENTH MUSE."

THE interest felt by the whole world in the trial at Rennes has been displayed, among other ways, in so profuse a downpour of verse that a London weekly, *The Outlook*, remarks that Captain Dreyfus is rapidly becoming a sort of Eleventh Muse—apparently Mr. Kipling is the Tenth. Besides the array of poetasters who have essayed to touch the lyre to this theme, two well-known poets—one English and one American—have lately struck some resounding notes in the cause of freedom and justice. The London *Chronicle* of August 24, prints the following lines by Mr. Stephen Phillips, in appeal to France:

"Oh, by that soldier whom thou couldst not shake,
That ever-breaking heart thou couldst not break,
That dying body that refused the dust,
That solitary brain that would not rust;
With suicide an opiate put by,
And madness a rejected luxury;
And by that woman sleepless for a sail,
That widow with no grave whereon to wail;
By all the inflaming injury and sense
Of most intolerable innocence;
Arise! Arise!"

The most notable utterance in verse that has thus far appeared is the following poem by Edwin Markham, in *McClure's Magazine* (September):

I.

"A man stood stained: France was one Alp of hate,
Pressing upon him with the whole world's weight.
In all the circle of the ancient sun
There was no voice to speak for him—not one.
In all the world of men there was no sound
But of a sword flung broken to the ground.

"Hell laughed its little hour, and then behold,
How one by one the guarded gates unfold!
Swiftly a sword by Unseen Forces hurled . . .
And now a man rising against the world!"

II.

"Oh, import deep as life is, deep as time!
There is a Something sacred and sublime
Moving behind the worlds, beyond our ken,
Weighing the stars, weighing the deeds of men.

"Take heart, O soul of sorrow, and be strong!
There is One greater than the whole world's wrong.
He hushed before the high Benignant Power
That moves wool-shod through sepulcher and tower!
No truth so low but He will give it crown:
No wrong so high but He will hurl it down.
O men that forge the fetter, it is vain;
There is a Still Hand stronger than your chain.
Tis no avail to bargain, sneer, and nod,
And shrug the shoulder for reply to God."

NOTES.

STEVENSON'S works have taken a great "slump" in the market, according to the London correspondent of the *New York Times*. He attributes it to over-puffing, and especially to the policy followed by his publishers of printing every schoolboy scrap and piece of nonsense verse they could obtain until the public, between expensive editions and cheap editions, became "satiated and nauseated."

MR. W. L. ALDEN writes from London that "David Harum" has reached a second edition there, but can hardly be called popular. He says (in the *New York Times*): "People apparently buy it to find out why the book has had such a run in America. The dialect and the people of 'David Harum' are too foreign to be appreciated by the English reader. You might as well expect an American to appreciate a story written exclusively in the dialect of Somersetshire."

APPROPOS of some recent talk of a dramatic censorship in imitation of the English one, of which the English themselves are heartily sick, the following true story of the Turkish dramatic censor (from the *Springfield Republican*) is of interest. "The London *Daily News* tells how a Greek benevolent society in the Turkish capital recently issued a printed appeal to the Hellenic society in Stamboul for some benevolent object, and backed up the plea with a citation from one of the epistles of St. Paul to the Galatians. Two days later a police official called to demand the address of Paul, who was to be charged with the use of seditious language. The printer prudently kept a grave face, but deferentially hinted to the official that Paul had been dead a long time. 'How dare you trifle with me?' roared the commissary, and forthwith the offending printer was arrested. When he told the same story to the censor, that official was equally enraged, and the publisher languished in jail until the Greek patriarch confirmed the statement that Paul was not accessible for prosecution."

SCIENCE AND INVENTION.

A TROLLEY ROAD IN KOREA.

THE opening of the first trolley line in Seoul, Korea, through American enterprise, is made the subject of an interesting descriptive letter from the spot by a correspondent of *The Railway Age* (Chicago, July 21). The occasion offered many striking

TRACKLAYING OUTSIDE THE CITY NEAR THE IMPERIAL TOMBS.
Courtesy of *Railway Age*.

KOREAN LABOR—GRADING AT FIFTEEN CENTS PER DAY.
Courtesy of *Railway Age*.

opportunities of contrasting the applied science of the West with Oriental ways and modes of thought. Writes the correspondent :

"The opening of an electric railway in Seoul, the capital of Korea, on the first instant caused great excitement throughout the country, many Koreans coming from a distance to be present on the occasion.

"It was difficult to ascertain what were the expectations of the people, as they imagined all sorts of things, but it seemed that the majority expected the overhead trolley wire would pull the cars along. One very gratifying feature, however, was the entire absence of all superstition, forming a marked contrast to the fears of the Chinese a few years back when railways were first introduced in that country.

"When the machinery was set in motion at the power-house the scene was truly a gay one. All the cabinet ministers, many officials of the Emperor's household department, military and civil officers, city officials of all kinds, etc., were present, and formed a typical Oriental picture, in their rich and handsome silken costumes, all eager to participate in the introduction of a 'progressive step' so great as an electric railway.

confidence, and all of them quickly found seats. The streets had been lined with soldiers, but notwithstanding these precautions the greatest care was necessary owing to the enormous throngs of people.

"An average speed of five miles per hour was maintained, except in one instance, where the track was well guarded, and it was impossible to resist the temptation of discomfiting the police, a number of whom had been instructed to run ahead of the cars; a rate of twelve miles was made for a short distance, quickly leaving the worthy policemen in the rear, to their great consternation and the indignation of their chief, who was riding in the car. No mishap of any kind occurred, and after returning to the

power-house a messenger arrived from the Emperor requesting that a special trip be made in order to afford him and his suite, and the crown prince and his suite, an opportunity of inspecting the cars. This was promptly complied with. His majesty and the court generally looked on the scene from the palace gates, near the United States legation, and the Emperor expressed his pleasure and approval of the new enterprise and its successful introduction. Prince Ye Chai Toon, the head of the household department

Leading Stockholders.

THE ELECTRIC RAILWAY IN KOREA.

a little later on toasted the electric company and said many nice things concerning America and its people.

"Some of the rules established for the operation of the railway are curious. For instance, it is not considered necessary in America to announce that females may ride as well as males; but this forms the subject of the first rule in the schedule issued by the Seoul Electric Company. Can it be possible that so practical a thing as a street-car will eventually lead to the destruction of the custom, centuries old, of secluding women, and permit them to travel in open carriages instead of being shut in a closed chair, little else than a closed box?

"Again, the company, like others we have heard of in Europe and America, has been confronted with the 'hat' difficulty. This time it is in regard to the men and not women. For ages past men in Korea have worn huge straw hats when in mourning for the loss of a relative. These hats are truly of enormous size—at least as large as a bushel basket—and the Koreans have drifted into the custom of wearing them as sunbonnets. But it now appears that another of their ancient practises is in jeopardy; for the bushel basket must go or treble rates must be charged the wearers.

"The fares vary, according to distance, from 2 to 15 cents. This creates surprise, because the people can not understand why it costs less to ride so rapidly in a beautiful carriage than in a sedan chair, which can only be carried by coolies.

"In order to accustom the citizens of Seoul to the new method of traveling, and to facilitate the operations of the company afterward, the opening celebrations were practically continued for a full week, until it became possible to run cars, quite as crowded as a Chicago State Street car, at a high rate of speed, and the sum-total of accidents amounted to breaking the leg of a dog, who was rather indifferent about getting out of the way. This fortunate result was largely contributed to by the aid of the officials of the United States legation, who were indefatigable in securing arrangements that assisted in preventing accidents . . . a task involving much anxiety, when the fact is remembered that the Koreans knew nothing of railways or of electricity, and that in Cairo, Egypt, about sixty people were killed during the first week of the street cars in that city."

A SCIENTIFIC SPECULATION.

WHAT would an observer, moving away from the earth at nearly or exactly the velocity of light, see when his eye was directed toward our globe? This question was discussed long ago by those fond of curious scientific speculation; but Abbé C. Begon, who writes in *Cosmos* (Paris, July 1), arrives at some novel conclusions. He says:

"Suppose that the eye moves with the luminous waves and at an equal speed with them. In this case, according to the author of a recent article, it will see an infinitely small phase of the phenomenon at which it looks, but it will continue to see this phase forever.

"Is this quite certain? It seems, on the contrary, that the luminous object, after appearing to the eye with the rapidity of lightning, would then disappear forever. The reason is that, in order that the retina may perceive the waves of light it must be disturbed by these waves and thus participate in the vibratory movement of the source. Now, the eye that moves with a light ray is at rest with relation to it; nothing, therefore, will be perceived. The well-known comparison with waves formed on the surface of water may aid us in understanding this. If a small floating body is in the path of these waves it receives a vertical to-and-fro movement, and participates in the oscillations of the liquid surface without being displaced horizontally. But if this floating body has a horizontal speed equal to that of the waves, what will happen? If it is on the top of a wave, it will stay there.

If it is in the trough between two waves, it will stay there also, and because of its horizontal motion it will have no oscillatory movement. It should be the same, one would think, with the eye, in the case we are discussing. It receives a vibration only at the moment when it begins to be transported by the light-waves; immediately afterward the vibration ceases and it perceives nothing more.

"Suppose now that the observer moves faster or slower than the light-waves. The duration of the phenomena will be evidently increased or diminished, as other writers have shown, but the luminous object will generally appear of new colors, which will completely alter its appearance. Something should happen analogous to the effect obtained with a phonograph. When the speed of a tune increases or lessens with the velocity of rotation of the cylinder, the pitch falls or rises at the same time.

"For our hypothetical eye, the colors of the luminous object ought to change from the red end of the spectrum toward the violet or from the violet toward the red, according as the duration of the phenomenon seems to be lessened or increased. We may even add that if the speed of the eye is too great with relation to that of the light, the colors of the object will mount above the violet and will become invisible to the ordinary eye. In like manner the colors might fall below the red and also become invisible. But if we assume that the eye in question has an infinite sensitiveness, and perceives both infra-red and ultra-violet radiations, it will see entirely new colors, which may be varied at pleasure."—*Translation made for THE LITERARY DIGEST.*

THE "BLIND SPOT" IN THE EYE.

ALL students of physiological optics know that the retina of the eye is not uniformly sensitive to light, but contains a small spot that is practically blind. We are not usually conscious of the existence of this spot, but it may be revealed to us by careful and appropriate observation. A French experimenter has recently discovered a new and more direct method of observing it, which is described by Dr. Curt Schmidt in an article on "Electro-optical Miscellany" in *Der Stein der Weisen* (Vienna, July 1). Says Dr. Schmidt:

"As is well known, the place where the optic nerve enters the eye (the optic papilla) is very slightly sensitive to light, and is hence named the 'blind spot.' Its existence may be shown by means of a diagram like the accompanying one. One eye is closed with the hand and the diagram is held about 25 centimeters [10 inches] in front of the face, so that the upper boundary is horizontal, the star being before the closed eye and the black ring before the open one. If the head be held upright and the star be regarded fixedly, the white area in the center of the ring will fall on the blind spot of the retina and will therefore be

invisible, so that the ring will appear as a complete black disk. The white center will be seen again whenever the eye looks at some other spot than the star, or the diagram is held at a less or a greater distance.

"Ordinarily the blind spot is not recognized as a deficiency in the field of vision. August Charpentier has described in the Pro-

ceedings of the Paris Academy (1898) two experiments in which it is possible to make the blind spot directly visible. In a dimly lighted room, before a uniform white wall, open and shut the eyes several times a second so that the field of vision is suddenly lightened and darkened alternately. Two oval dark spots will then be noticed whose position and size show that they are the projections of the two papillæ. These dark spots, with proper timing of the movement of the eyelids (four a second with Charpentier's eyes) become alternately lighter and darker than the background—darker when the eyes are opened and lighter when they are shut. The experiment succeeds equally well with one eye.

"Still more surprising is the second experiment. Hold the eyes lightly closed in daylight, so that the field of vision appears uniformly red. If the eye be now directed suddenly and strongly inward and somewhat downward, the neighborhood of the papilla is distorted. It appears as an oval bright ring, and the papilla itself shows within it as a green, more or less dim spot, very well defined and clearly distinguished from the background."—*Translation made for THE LITERARY DIGEST.*

WILL ELECTRICITY GIVE US HIGH SPEED?

A GOOD deal has been written recently on the coming high-speed electric transit, the prophets varying in their estimates from 80 to 200 miles an hour. Meanwhile steam locomotives are occasionally doing short spins at the former speed, and the highest achievement of electricity is represented by 30 miles an hour or so. *The Engineering News* in a recent editorial (August 17) is inclined to laugh at all these high-speed prophets and to decry the merits of electricity as a developer of great velocities. It says:

"It is a little curious how universally it appears to be assumed that if it were desired to run trains at speeds of say 100 miles per hour, electricity would be the power adopted. In the present state of the art it must be said that nothing has ever yet been accomplished in the way of high speed on an electric railway, even experimentally, beyond what the steam locomotive is doing in actual service, week in and week out. The fast schedules on the New York Central and on the Philadelphia and Reading's Atlantic City line have proved that locomotives can be regularly run at speeds up to 70 miles per hour and upward, and that with safety and regularity. If it is desired to increase these speeds to 100 miles per hour, locomotive designers could be found, we are sure, who would undertake to provide a machine to accomplish the work, assuming, of course, that the train load would also be lightened. It is frequently said that the fact that the locomotive is a reciprocating machine, while the electric motor is a rotary one, gives the latter an advantage in the matter of high speeds. As an abstract proposition this is doubtless true, but the locomotive has by no means reached its limit in the matter of speeds. Larger driving-wheels, lighter reciprocating parts, and more careful balancing are some of the means by which higher speeds could be made as feasible as are the speeds at present reached. It is worth noting that none of our present-day locomotives use drivers as large as those in use many years ago on some famous English locomotives of high speed. Another argument occasionally heard is that the high-speed electric motor would be much less severe on the track than the locomotive; but this argument, again, is based on theory rather than practise. As a matter of fact, the standard electric railway track now uses a rail nearly twice the depth of the standard steam railway rail, and this practise has been forced upon the electric railways by the impossibility of keeping up their joints with any lighter construction.

"Evidently the electric-motor designers have also some problems to solve before they will be ready to put in bids for a 100-mile-per-hour service."

A New Incandescent Lamp.—The accompanying illustration shows a new form of electrical glow-lamp which has been experimentally successful in France and is about to be manufactured there on a large scale. The lamp, which is named the Desaymar, from its inventor, will give, it is claimed, a considerably brighter light than the ordinary glow-lamp of the same size,

at a less cost. Says *The Western Electrician*, which gives credit for its data to *L'Electricien*, Paris: "A glance at the picture will show the peculiarities of this lamp, which, like all incandescent lamps, has the bulb, the vacuum, and the filament through which the current courses, heating the carbon to incandescence. The carbon, in place of being simply a loop, however, is made to coil around a vertical tube in the center of the bulb. This tube is made of a special composition, and is said to give to the lamp a much greater illuminating power, in addition to that obtained by the peculiar form of the filament, at an economy, it is claimed, of 40 to 50 per cent. of the current used. Ordinary incandescent lamps of 16-candle power, says the French journal [cost] . . . about 8 centimes [1.6 cents] per hour. Many experiments have been made which give results showing that the Desaymar lamp of 16 candle-power shows a maximum cost of 4 to 5 centimes [0.8 cent to 1 cent] per hour. This economy in an extensive plant would be no inconsiderable item, and should be an incentive to the more rapid installation of electric plants. An important establishment is being installed at Rueil for the manufacture of these lamps, based on the experimental tests, which have been carefully and extensively made."

DESAYMAR LAMP.

A SOCIETY FOR COMMUNICATION WITH MARS.

PROPOSITIONS for communicating with the supposed inhabitants of Mars have not been altogether confined to the yellow journals, and it has remained for a member of the Astronomical Society of France to write a book on the subject, embodying a sober proposition to form a society and to raise funds for the purpose of opening communications with the Martians. This book, entitled "Communications with Mars," by M. A. Mercier (Paris, 1899) is thus treated by a reviewer in *Cosmos* (August 19):

"The author assumes in the first place that Mars is inhabited, and in the second place that its inhabitants are vastly more clever than we poor human beings. Then he inquires by what means we may establish communication with these celestial neighbors. Unfortunately, the author nowhere proves to us that Mars is inhabited; he presents very well some old arguments that seem decidedly out of date after the recent careful studies of the astronomers who have been lately occupying themselves with this planet. The arguments unfavorable to his thesis he completely neglects. Even admitting his claim that Mars is inhabited, why must we suppose also that these inhabitants are wise men? It would be a very narrow idea to clothe these beings with an intellectual organization analogous to our own—a mind (let us say the word, altho our author does not use it); we may just as well assume that the problematic dwellers on Mars are reptiles, occupied in eating each other up.

"As to the great engineering works on the surface of the planet, we know now what to think of all this.

"Finally, M. Mercier makes an appeal to the friends of science for a fund to be used in attempts to communicate with Mars.

Money might doubtless be invested in a more remunerative fashion, but if money thus placed would probably be lost, it would at least be lost honestly. There is no promise of dividends and none would be paid. A society that fulfils its engagements is a rare bird."—*Translation made for THE LITERARY DIGEST.*

Measuring the Color of the Blood.—Measurements of the red coloring-matter of the blood have recently been described by Dr. George Oliver, who has used in making these measurements

Lovibon's ingenious tintometer by which the color of a substance or liquid is matched against standard colored glasses, graduated from colorless glass up to the strongest tone that can be graded accurately. Dr. Oliver, according to *Chambers's Magazine*, gave a full account of the method, which is now in use at most of the hospitals and universities, in the Croonian Lectures before the Royal College of Physicians of London last year. It is this red coloring-matter that conveys the oxygen from the lungs to wherever it is required in the body, and the general health depends largely on the presence of the correct amount of this material in the blood. An excess generally indicates gout, while a deficiency causes the disease known as anemia, so common among young women. It is painful to look down the scale of the curve and see what a pitiful condition it is possible to be reduced to by anemia. So delicate is the method that the variations in the blood between breakfast and bed-time can be traced quite easily. During the day a continual destruction of the red corpuscles is going on, and this deficit is made up during sleep. Among other interesting things, Dr. Oliver found that he and a companion who assisted him were as healthy in London as they were in Switzerland, taking the state of the blood as a criterion. His experiments were made twice a day for a considerable length of time, and the condition of his blood improves steadily the whole time, from which it would appear that a little systematic blood-letting is good for the constitution.

OPENING OF THE ATBARA BRIDGE.

THIS bridge was formally opened on August 26 last. The story of how an American firm, the Pencoyd Iron Works of Philadelphia, secured the contract for this bridge, needed by Lord Kitchener to complete, at short notice, his railroad to Khartoum, has already been told in these columns, and what a tempest in a tea-pot was raised thereby among British engineers and bridge-makers. *The American Machinist* remarks that no better commentary on the achievement could be desired than Lord Kitchener's speech at the opening of the bridge. He said, as quoted in that journal:

"The construction of this magnificent bridge, I think, may fairly be considered a record achievement. So far as the failure of the efforts to place the construction order in England is concerned, I think it demonstrates that the relations between labor and capital there are not sufficient to give confidence to the capitalist and to induce him to take the risk of establishing up-to-date workshops that would enable Great Britain to maintain her position as the first constructing nation in the world.

"But as Englishmen failed, I am delighted that our cousins across the Atlantic stepped in. This bridge is due to their energy, ability, and power to turn out works of magnitude in less time than anybody else. I congratulate the Americans on their success in the erection of a bridge in the heart of Africa. They have shown real grit far from home in the hottest month of the year, and depending upon the labor of foreigners."

Some of the English papers do not take such a kindly interest in our success as the Sirdar takes, and are suggesting that the bridge may be a failure. One of them (*The Evening News*, London) says:

"It now remains to be seen whether the bridge, built in America, on lines condemned by British engineers, will be able to stand the Atbara's rushing floods."

To this *The American Machinist* rejoins very pertinently:

"The floods, of course, can attack only the piers and abutments, which were not built in Philadelphia, and we really have built so many bridges as to have full confidence in the success and endurance of our work."

Discovery of Diamonds in China.—"It has recently been announced," says *Cosmos* (August 12), "that the Germans have discovered diamond-mines in their new concession in China, and that they base the most brilliant expectations on the report

of the geological expert by whom the discovery was made. M. Fauvel, a Frenchman, formerly a custom-house official in China, reminds us that this fact was already known and that Abbé David, the well-known missionary, announced it in 1875. He found diamond-dust and even small diamonds in the residue of the charcoal bricks that are used in Peking, and even in the street dust of the city, doubtless from the refuse of this combustible. Besides, the existence of the diamond was not unknown to the Chinese; altho they never employed it as a gem, their workmen had long used it for the tips of drills, especially those for piercing porcelain—another of our most recent inventions that has been known in China from time immemorial. The search for small diamonds for this purpose has little in common with the great enterprises that enrich or ruin men in a few days. Poor wretches put on straw sandals and walk along the beds of brooks that are reputed to contain the precious mineral. Small diamonds penetrate into the straw, where they are held, and the sandals, after removal from the feet, are burned; it only remains to recover the treasure from the ashes. This occupation, however, scarcely supports those who exercise it. It is plain that these small bits of diamond in the rivulets must come from some unknown deposit, and the location of these deposits is what the German scientists are seeking to determine."—*Translation made for THE LITERARY DIGEST.*

Soda-Water to Relieve Hunger.—Water charged with carbonic-acid gas—in other words, soda-water—is now prescribed as a palliative for hunger, especially for an abnormal sense of hunger due to disease. Says *Modern Medicine*, which gives us this information: "Carbonic-acid gas has the singular property of lessening the sense of hunger, and may profitably be remembered in dealing with cases of diabetes in which bulimia [abnormal hunger] is a prominent symptom. The seat of hunger is found in the solar plexus. By the use of water charged with CO [carbonic acid] the branches of the solar plexus distributed through the mucous membrane of the stomach are influenced in such a way that the abnormal irritation of the plexus, which is the foundation for the ravenous hunger often present in diabetes and certain forms of indigestion, may be greatly mitigated, if not wholly appeased. Water charged with carbonic-acid gas may likewise be employed with advantage in many cases of hyperpæsia in which there is a sensation present in the stomach described by the patient as a gnawing sensation, 'goneness,' emptiness, etc."

The Maximum of Physical Force.—A German physician, according to *La Gazette Médicale*, Liège, Belgium, has been investigating this subject and details results obtained from 10,000 separate experiments made with a dynamometer of his own invention. "Represented graphically the average strength of a man in sound health is shown by a nearly parabolic, but irregular curve, whose apex is at the age of about thirty-one years. An adult of 17 years should be able without difficulty to raise a weight of 126 kilograms [277 pounds]; at 20 years his dynamometric strength is 144 kilograms [317 pounds]; at 31 it reaches 200 [440 pounds], descending to 154 [339 pounds] at 40 years, to 149 [328 pounds] at 50, and to 112 [246 pounds] at 70 years. From similar experiments made on the natives of Togoland it appears that the muscular strength of negroes—contrary to the general opinion—is nearly equal to that of the white race."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

"A NEWLY married couple in Portland, Me., who are both deaf and are trying housekeeping without a servant, have devised an ingenious substitute for a door-bell," says *Electricity*. "When a caller presses the electric button all the lights in the house flash up, and his presence is made known."

DR. DANIEL GARRISON BRINTON, M.D., the ethnologist, died at Atlantic City, N. J., on July 31, at the age of 62 years. He was born at Westchester, Pa., graduated from Yale College in 1888, and served in the medical corps of the army in the Civil War, receiving the brevet rank of lieutenant-colonel. "It was, however," says *The Scientific American*, "as an anthropologist that Dr. Brinton was known all over the world. He was most deeply interested in American ethnography and ethnology, and his knowledge of American languages enabled him to publish a series of books that won him world-wide reputation for profound learning."

THE RELIGIOUS WORLD.

THE COMING THEOLOGY.

WITH the close of the nineteenth century progressive minds in all religious organizations are looking forward into the coming era, and forecasting in a hopeful spirit the religious conditions that will prevail as a result of the profound scientific, social, and theological movements which the present century has

inaugurated. A significant editorial article dealing with the future of Christian theology from an orthodox standpoint lately appeared in *The Interior* (Presb.). The writer points out that all the signs point to this as the beginning of a new epoch, and that just as in secular and religious history the new tendencies of the time have been materialized and brought into play, so to speak, by some great man—a Copernicus, a Luther, a Bacon, or a Darwin—so now we may expect the appearance sooner or later of some great modern religious in-

CHRISTIAN SCIENCE, SPIRITUALISM, HIGHER CRITICISM, THEOSOPHY, UNITARIANISM, LIBERALISM, INFIDELITY, RATIONALISM, SKEPTICISM, AND AGNOSTICISM.

(Courtesy of Christian Cynosure.)

terpreter and prophet, who shall harmonize the new spirit of religion with the new life and ideals of man. The writer says:

"The present condition of theology is that of a great number and variety of partialisms. We have had no great theologian since the Reformation who was not a partialist, confining himself to one truth with its immediate foot-hills, and antagonizing other partialists who were exalting some other truth. Perhaps the most striking example is seen in Arminius and Calvin, both of them extreme partialists; the one carrying human freedom to the extent of absolute self-sufficiency, and the other carrying the divine Sovereignty to the extent of fatalism. Every denomination stands upon a partialism, some of their specialties so small and insignificant that to divide the disciples of Christ into warring sects over them can have no other source or motive than human obstinacy, egotism, and perversity.

"It is argued that these partialistic sects are necessary in order that each separate constituent of the whole body of theological truth may be maintained and emphasized. We agree with this view in the present conditions.

"The progress of knowledge in the past fifty years has been tremendous. The Baconian method of acquiring it has been pushed to perfection. All knowledge is nearly or remotely related to religion, so that religious faith is constantly seeing hidden sides under new lights. The result is a great increase and prevalence of doubt. This doubt is of all degrees and of all extents. And yet religious faith is not diminishing—it is increasing and becoming year by year more vigorous in its growth, and more fruitful. This is proof and demonstration of the unapproachably important fact that doubt does not go to the essentials of the Christian faith. It goes, as it can safely go, and beneficently go, to this or that partialistic explanation of the facts."

These are conditions, says the writer, which have preceded and led up to every great epoch in human history. The coming Christian prophet of the new era, the writer naturally thinks, will be a man who believes in the essentials of theology as viewed by the orthodox Christian body to which the writer belongs. Further, he says, he must have the following desirable qualities:

"He must be a man of great intellect and of great love for God and for his fellow men—a great head and a great heart; of great courage and steadfastness also, that he may not quail in the storm that will beat upon him from every side.

"It is possible, however, that he may come and go without observation. The Athenians laughed at Plato's *mots*, but they knew nothing of Plato the philosopher. Copernicus wrote in cryptograms, in order that he might conceal himself from his contemporaries. More than an hundred years passed after Shakespeare's death before the world knew that he had lived and written. So God sometimes comes in the thunder and the earthquake and fire, as to Moses, and sometimes in the still small voice as to Elijah.

"The nature of this reform, we may infer from those of the past—and indeed from every great epoch-making work of discovery—will be in divine simplicity. All the tendencies of human thought are toward that unity which concentrates in God.

"We may hope for such an epoch also, because the Scriptures point to it as the culmination of Christian history. Of those readers who have followed these thoughts, not a few will say 'True—but the prophet will not be a mere man. No man is adequate to such a work. The coming Man will be the returning Lord.' So may it be. 'Amen. Come, Lord Jesus, quickly.'"

WILL ENGLAND BECOME ROMAN CATHOLIC?

AN English Roman Catholic, Mr. Walter Bagot, has written a rather pessimistic article in the Italian review *Nuova Antologia* on the prospects of the Roman church in England. A translation of it appears in *The Living Age* (July 29). Mr. Bagot says:

"With the death of Cardinal Manning there died, as well, all true and genuine progress of the Roman church in England, and there was at the same time inaugurated an epoch of ecclesiastical agitators and demagogues whom Manning would never have encouraged. The truth is that Roman Catholicism in England, far from being a progressive movement, is and has been for several years quite stationary, if not on the decline.

"Yet the Catholic press, both English and foreign, assures us that no month passes without a considerable number of converts being received into the fold of the Roman church, and every little while their papers publish imposing lists of these conversions. We also read of new churches built, of the foundation of monasteries and religious houses—in short, of a general stir, which is supposed to signify an extraordinary activity and an increasing development on the part of the Catholic church of Great Britain. Now, in point of fact, no one has ever thought of denying the missionary zeal of the Roman church under all circumstances, but as for the spread of Catholicism among my fellow countrymen I shall try to show that it has only been a superficial movement, influencing neither the thought nor the real religious sentiment of the Anglo-Saxon race.

"Having seen the superb Catholic churches of London and the other English cities so crowded with devout worshippers of both sexes, while the functions of the Roman faith are performed with a luxury and pomp hardly to be found in Rome itself, what wonder if the foreigner remains impressed and goes away after mass firmly persuaded that the triumph of Catholicism in England can be the affair of but a few years at the most. How is the foreigner to know that of that crowd which he has seen present at the service three fourths are probably not Catholics at all and have not the slightest intention of submitting themselves to the spiritual authority of the Pope?"

The number of conversions are few, says Mr. Bagot, and of little weight as to their caliber:

"If we examine closely the much-vaunted conversions to Cath-

olicism we shall find that only a very few of the converts are of a caliber which enables them to exercise any strong personal influence over the thought of the people. Among the recruits that the Catholic church has enlisted in England during the last twenty-five years there are barely a dozen prominent persons. Men of science, of letters, and of politics, one and all, save for the rarest exceptions, are conspicuous by their absence from the list of the converted; it is not among these that Catholicism gains its new adherents.

"The majority of the conversions occur among tradespeople and women of the middle class in the great cities. Now, it is perfectly evident that to one who is concerned merely with the form of faith professed by a human being, the soul of a cheesemonger is just as valuable as that of a minister of state. But, from a practical point of view, the value of a conversion depends essentially on the intellectual or social position of the convert. . .

"Now, while statistics show us that Roman Catholicism in England is stationary, with a tendency to retrograde, the international Catholic press and clergy assure us that it is steadily on the increase. How are we to reconcile these contradictory statements? That the spiritual part of Catholicism has made noteworthy progress during the last fifty years is an undeniable fact. The development of the 'Oxford movement' has led to a reform of the Anglican on the lines of the Catholic church. There is not a function of the Roman church which is not imitated by the Ritualists. 'But this would seem to show,' Italian readers will exclaim, 'that Catholicism is really becoming popular among the English!' Not at all! There is no Roman Catholicism without the Pope, and in the Anglican churches every one is free to be his own pope. One large section of the Anglican church has imitated the spiritual and dogmatic stand of the Roman church, but it has omitted all its political side and has raised up in these last forty years a self-styled Catholic church, which gets on very well without any pope and wants nothing to do with one.

"The hierarchy of the Roman church in England, no less than the Vatican, views this pseudo-Catholicism with scorn; but at the same time with a certain satisfaction, because they fancy that it is their game which the Ritualists are really playing when they accustom the English public to those dogmas and doctrines which belong in reality to the Holy Roman See. This supposition is, however, another illusion of which they will eventually be disabused. . . . Recent events in England show clearly that there is a limit to the tolerance of the Roman Catholic religion, which not even the Anglican church could pass without the traditional Protestantism of the English nation rising in revolt. Unluckily for the hopes of the Roman Catholic party this robust Protestantism explodes over precisely those doctrines which are integral and essential parts of the Roman faith, as the supremacy of the Pope and compulsory confession. . . .

"There are many other circumstances, social as well as dogmatic and political, which will always present insuperable obstacles to the conversion of my country to Roman Catholicism. To dogmatic questions I have not wished to allude, since my aim in this article has been to make clear to Italian readers the true position of Roman Catholicism in England, and to set before them arguments and official statistics which to my mind fairly prove that the international Catholic press and the English Roman Catholics are cherishing illusions which are founded on absolutely erroneous views of the religious and political opinions held by the vast majority of my countrymen."

This article has attracted wide attention, particularly from the Anglican press. *The Churchman* (August 12) says:

"The real test of the prospects of a church is less in the census than in the marriage register. Here we find that in every two hundred marriages one will be Jewish, eight Roman Catholic, twenty-four nonconformist, twenty-nine without religious ceremony, and an hundred and thirty-eight according to the Anglican rite. As far as statistics go, we may stop here. With one Roman marriage to seventeen Anglican, there can be no great peril for the coming generation.

"Indeed, it would be most wonderful and inexplicable if there were. As soon believe that a whole generation should 'eat of the insane root that takes the reason prisoner,' as that, with the memories of Edward the Confessor and Thomas à Becket, of 'the intolerable abuses and arbitrary injustices' (the words are Mr. Bagot's) of the curia before the blessed Reformation, of its 'in-

trigues and insatiable ambition' afterward, with the spectacle of southern Europe and Ireland before their eyes, and the glories of emancipated England in the spacious days of Elizabeth in their minds, Englishmen should invite a gratuitous national peril and their own individual humiliation."

Roman Catholic papers appear to avoid taking issue with Mr. Bagot directly, but several papers have devoted considerable space to an endeavor to prove from various sources that Catholic progress in England is steady. *The New York Catholic News*, for example, says:

"So much has been said in England to the effect that the Catholic church in that country is not growing at all, if it is not actually declining, that the *London Tablet* has taken up the subject of Catholic progress, and in a series of able articles that journal has demonstrated that Catholicity in England indeed is moving onward. Those who say that the church in England is at a standstill try to prove their assertion by referring to the marriage statistics. *The Tablet*, tho, by means of these very statistics, demonstrates the contrary. . . .

"*The Tablet* writer points out that two facts, however, remain for our consolation, and may serve to abate any undue pessimism founded on the marriage returns in England. 'First, our Catholic marriage rate goes on steadily increasing. Secondly, it now exceeds ten thousand, and never since the Reformation was higher than it is at the present moment. We do not wish to imply that it is as high or advancing as it ought to be, or that it is not adversely affected by a number of causes, religious, economic, and administrative, which we may hope to see remedied. But we wish to point out that the natural inference to be drawn from the facts and figures of the marriage rate is certainly not that the Catholic body is stationary or decreasing in numbers. On the contrary, they afford plain proof that we are increasing. But they prove also what was already abundantly well known to all of us, that owing to a variety of difficulties and drawbacks, probably most of all to the constant leakage among the children of the poor, and of mixed marriages, our Catholic progress, while solid and sustained, is not so great or so rapid as it could be and ought to be."

The Tablet, however, says that other statistics are available to prove that Catholicism in England is advancing. During the year 1897-98, no less than 8,366 converts were received in England and Wales, and the ocular evidence of the church's expansion is to be seen on every hand, in almost every town and district.

"The older and long-established churches in the towns see their far-reaching districts cut off into manifold separate missions, each with its own staff of clergy and its own congregation, while the mother church seems as well filled and flourishing as ever. The number of our clergy has trebled, and yet in almost every diocese there is need and work for more. Convents, monasteries, colleges and schools, centers of spiritual life and of learning, have multiplied throughout the land, and are constantly increasing. Such are, in main outline, the salient features of the actual record of the Catholic church in England. Only those who have a reason for closing their eyes or blindfolding the eyes of others, will question the plain fact written upon the face of the land that our Catholic progress in England is steady, solid, and undeniable. We do not forget for a moment that our progress is hampered in many ways by hostility from without, and by our own unworthiness from within, and that thus it is smaller and slower than it ought to be. But when we have said all this and more, it still remains true and a subject for devout thankfulness by every Catholic in the land that never since the days of the Reformation was our position more strong and our prospects more promising, and our work more consoling than they are at the present moment."

The New York Observer (Presbyterian), commenting on Mr. Bagot's article, attributes most or all of the apparent progress of Roman Catholicism in England to the influx of the Irish Roman Catholic working classes:

"Examining the actual conditions more closely, it appears that there are hardly any Roman Catholics of pure English race

among the lower classes, the most of those who profess that faith being of Irish descent. It is easy to judge what their influence will be in propagating the faith among the English people. Moreover, admitting the frequent conversions claimed by priests and the Catholic press, and that these converts remain faithful to the church, Mr. Bagot declares, 'that of these converts, among whom the feminine preponderance is overwhelming, about ninety per cent. are advanced in years. Among them are not a few clergymen, already married and fathers of Protestant families, who, with an abnegation worthy of the highest praise, have listened to the voice of their conscience and had the courage to sacrifice the goods of this world for love of that divine truth which they believe they have found in the Roman communion. A certain number of our male converts have become priests; a few women have entered convents. These naturally belong to the younger recruits; and there remains only a very small proportion likely to become the parents of future Catholics. This fact should be sufficient to convince the impartial observer that the so-called Catholic movement in England is sterile.'

POINTS COMMON TO CHRISTIANITY AND JUDAISM.

IN his "Over the Teacups" Oliver Wendell Holmes says: "If the creeds of mankind would try to understand each other before attempting mutual extermination, they would be sure to find a meaning in beliefs which are different from their own." It is in accord with the spirit of this passage that the Rabbi L. Weiss, in an article printed in *The Hebrew Standard* (August 11), endeavors to point out the teachings and customs which the Jewish and Christian systems have in common. He says:

"To draw a parallel between Judaism and Christianity at this late date, after Christianity has numbered nearly nineteen centuries since its birth, they would supposedly be utterly incomparable; and so they are, in theory and theology; but not in purpose. The theory of salvation through vicarious atonement, and the theology of three godheads in one, are decidedly un-Jewish; but the purpose, to perfect the virtue and morality of mankind, to lift the human character to loftier planes, to prepare the soul for a purer, holier life—in a life beyond this life—fully agrees with the aims of Judaism; only that the ways and methods of this preparation are different one from the other."

Many Jewish ceremonial customs which seem singular to Christians are in reality, says the rabbi, the origin of well-known usages among Christians. Thus the wearing of hats in the synagogue finds its Christian counterpart in the miter of the Catholic bishop and the biretta of the priests—for in the Jewish faith all worship with covered heads to indicate that all are priests, in accordance with the saying: "Ye shall be to me a kingdom of priests." Again, wine has been the symbol of strength and joy for unnumbered ages of the Jewish faith, and in orthodox synagogues, on the Sabbaths and other holy days, the reader raises a cup of wine and pronounces a benediction over it. Mass and Kiddush are thus the same in origin:

"The church fathers adopted simply different names and ascribed different meanings to the ceremony; but it is the same in appearance as that of the Jewish 'Kiddush,' meaning hallowing or sanctification. It was customary—and is still so with orthodox Jews—that on the eve of the Day of Atonement innumerable candles were burned in the synagogue, brought there by individuals in memory of some dear departed ones. To strangers it was an impressive scene, whether they knew their meaning or not. They greeted the eye with a solemn glimmer; and the Catholic church seems to have adopted the custom, thus having the many lights burning during its solemn mass. The mass itself is borrowed from the Jewish *Masik Neshamoth* (memorial for departed souls), which is held during the services on each concluding day of Jewish holy days, with this difference, however, that the Jews pray each for his own beloved ones, led by the reader, while in Catholicism the priest reads the mass."

The first fifteen bishops of Jerusalem, the earliest center of Christianity, were circumcised Jews, says Rabbi Weiss; therefore it is not singular that a religion whose first founders and apostles were almost wholly of the Jewish race should have drawn much of its ceremonial from Jewish sources, even altho later its wider contact with Hellenic, Roman, and Oriental religions should have added to this much from so-called pagan sources. So also there is practical identity between the chief ethical doctrines acknowledged by Jews and by Christian believers:

"Love thy neighbor as thyself!" they promulgate with Christian devotion, proclaiming as the doctrine of Jesus, their Savior; but whether or not they think to acknowledge that those were the words and teachings of Moses, given to Israel (see Lev. ix. 18) nearly two thousand years before the dawn of Christianity, it is a stubborn fact, nevertheless.

"Whatsoever ye would that men should do unto you, even so do ye unto them," is the Golden Rule so sweetly declared as the teaching of the Savior; yet the fact is that Hillel, shortly before Jesus flourished, gave it as a maxim to a heathen inquirer in these words: "Whatsoever is hateful to thee, do it not to thy neighbor" (Talmud, Sabbath 21, b).

"In short, we have really more in common—more that is Jewish and Christian alike—than deep-hued sectarians are willing to recognize. We can readily agree with Lessing when he makes the Jewish Nathan say to the Christian monk:

"Heaven bless us!
That which makes me to you a Christian
Makes you to me a Jew."

"In other words, the same deeds, conduct, and dealing—the same virtues and qualities that make the Christian also make the Jew."

RELIGION AND JAPAN.

FOR a year past there has been much activity in religious circles in Japan. Each religious community, aware of the changes which the entrance of Japan into the family of great powers must bring about, has been endeavoring to extend its influence as much as possible. The Buddhists even demanded to be recognized as the state church, a claim resented by the Shintoists. The *Nippon*, Tokyo, which favors Buddhist pretensions, asserts that Shintoism "is not really a religion." It continues (as quoted in *The Japan Weekly Mail*):

"Shinto has to do with the past, and the past only. It rivets a man's attention on the graves of his ancestors and does not ask him to give any thought to what lies beyond his own grave. Buddhism, on the contrary, answers all the requirements of a religion, and has the immense advantage of having been long ago adapted to Japanese customs and traditions. It was, in fact, the religion of the state in pre-restoration days, and it has every title to be restored to its old place. . . . That the Christians should enjoy perfect freedom to profess and practise their faith is a constitutional principle. But there can be no question that the tenets of Christianity are opposed to the traditions which form the bases of Japanese nationalism, and that such a creed could not be officially recognized without doing violence to much which the nation cherishes. Besides, there is reason to think that official recognition of Christianity would involve complications with foreign powers. Official recognition carries with it the duty of inspection, and occasionally of interference. It is not in the genius of Christianity to endure interference of any kind. All intrusions of officialism would be resented, and the sequel would be troubles not unlikely to involve foreign intervention."

The *Kobe Herald*, the only secular foreign journal in the far East which, as far as we are aware, defends the theory that European and American civilization is in the first place Christian civilization, nevertheless admits that Christianity has little chance in Japan. In an article entitled "The New Era," the writer bitterly assails the Japanese idea that Japan has only to thank herself for the place she occupies to-day, and he is not sure whether

Japan's rejection of Christianity will not throw her back into barbarism. He says:

"The wave of agnosticism and materialism that swept over the Christian realms a decade or more since recoiled upon these shores. What wonder that Japan failed to see the wisdom of acknowledging the superiority of the only Eastern religion which has subdued and renewed the West? She could in a day or a year adopt the institutions which centuries of Christian thought and effort had evolved, and this she did. . . . Our only desire is to remind the statesmen of Japan and those who have entrusted to her power over the lives and liberties of Aryans that it has yet to be demonstrated whether she can, for mere considerations of policy, conform to the requirements of an ethical system whose key she has resolutely and proudly refused. In other words it has yet to be demonstrated whether this nation, which still holds doggedly to the superstitions of Shintoism, can keep pace with the Christian or so-called Christian nations whose trappings and externals she has so successfully copied."

Japanese religious papers treat the subject in very moderate language. They point out that Japan was highly cultured when the Christians of Charlemagne's time were barbarians, and that she never became barbarous after. The Japanese are unanimous in the conviction that no amount of refinement, of justice, of gentleness, would save Japan from being treated as an inferior if her good sword did not ward off the aggression of the Christian powers. But they have no objection to the admission of Christians to equal rights. A typical argument is the following summary from an article in the *Tetsugaku Zasshi*, Tokyo:

"Neither in Europe nor in America is the religion of Christ faithfully followed by any government. No amount of twisting of the meaning of texts would suffice to prove that the American worship of the almighty dollar, or that the seizure of territory practised by Europeans, is Christian. It amounts to this, then, that in the West the Christian religion is followed when it does not come into conflict with state interests, but no further. When Christ's commands and the exigencies of modern politics are in direct opposition to each other the former have to give way. With Christianity in Japan the same rule will doubtless be followed, says Mr. Kimura, and hence there is no real objection to Christianity being publicly recognized subject to the above condition."

The *Rikugo Zasshi* advances another argument against the granting of special privileges to Christians:

"If Christian sects be brought under the control of the government in this way, the confusion will be considerable, as there are at least thirty or forty sects to be represented. The only safe course for the government to take is to cut off its connection with all sects and to leave them to manage their own affairs."

Besides Christians, Buddhists, and Shintoists, other religions denominations are pushing themselves forward as much as possible. The Jews are not idle, and even the stylish Parsees demand a hearing which, considering the Quaker-like exclusiveness they practise in India, is extremely flattering to the Japanese. The *Tayo*, however, itself a Christian paper, points out that only one religion is really making converts in Asia—Mohammedanism. Mohammedanism, thinks that paper, seems to take hold more firmly among the masses of imaginative races than other faiths. It says:

"Of the 200,000,000 of converts to Mohammedanism, 60,000,000 are Africans, 700,000 Europeans, and about 130,000,000 Asiatics, distributed as follows: Central China, 40,000; Mongolia and adjoining provinces, 598,000; Siberia, 73,000; Asiatic Russia, 6,478,000; Afghanistan and Belochistan, 5,500,000; British India, 49,550,000; various East Indian islands, 31,700,000. While Buddhists are wrangling in Japan over state patronage and such like questions, the creed of the great prophet of Mecca retains its hold on the minds of millions of devotees without any state aid whatever, and shows itself to be stronger than any of the governments with which it comes into contact."

DREYFUS AND FRENCH CATHOLICISM.

IN a book recently published under the title "The Dreyfus Case," F. C. Conybeare, writing from the standpoint of an anti-Catholic Englishman, tries to trace the source of the trouble in France to the influence exercised over the French character by the Catholic church. The Dreyfus case has been possible, he says, because of "the general want of backbone and private judgment" among the citizens of France, and he proceeds to account for this lack as follows:

"This want of initiative and of moral courage is the result of Roman Catholic training, more especially of the confessional, which in Latin countries is so worked by the priests as to extinguish all faculty of private judgment, and even of independent moral criticism. Thousands of Frenchmen emancipate themselves on reaching manhood from the dogmas of their church, but not from the mental and moral habits which its discipline has impressed upon them. French Freemasonry, the religion of the anti-clericals, is in itself a symptom of these habits. Why need a secret society in order to combat the usurpations of the priests? Why not fight them in the open, as we would in England? The French Protestants and the Jews seem to be the only people in France who have a moral courage of their own, and the reason is that they have escaped Catholic methods of training. Indeed, to remain a professing Protestant at all in a country where the dominant religious traditions run the other way, demands considerable strength of character. These considerations explain why the Huguenots have almost to a man come forward from the first to protest against the iniquities of the War Office. To them belong such name as Réville and De Préssensé, and, I might almost add, M. Loyson."

Mr. Conybeare goes on to say that the conspiracy against Dreyfus has not provoked a single protest in "the great and dignified Gallican church," and that an appeal made by Mme. Dreyfus to the Pope some time ago "was ignored and treated with contempt," while the entire weight of the Vatican was cast against her. The old Royalist families "have captured the French army" and these families "are entirely swayed by the Jesuits."

RELIGIOUS NOTES.

A CLEVER contemporary, says *The Herald and Presbyter*, in referring to the Methodist Council on Long Island, which after investigating charges against a minister returned the somewhat novel verdict, "Not guilty, but unfit for the ministry," adds this comment: "A man need not be a knave to disqualify him for the work of the ministry. It is enough that he be proved a fool."

The Michigan Advocate advises the preachers of its denomination (Methodists) not to insist too strongly that the ladies of their congregations remove their hats. "One may get into trouble," it says, "by dictating in a matter wherein he is quite ignorant. The style of hat, the season, the weather, the amount of hair, its arrangement or disarrangement, are all factors. Be deferential and be careful."

IN Dr. H. K. Carroll's summary of religious statistics for 1898 in the *New York Christian Advocate* he shows that in the United States there were in 1890 111,036 ministers, 150,046 churches, and 20,618,307 communicants. In 1898 there were 143,320 ministers, 187,100 churches, and 26,657,960 communicants. In Dr. Carroll's compilation 148 denominations are represented. But he says: "There are only 29 which have 100,000 or more communicants each, while 26 have less than 1,000 each. Not a few are in progress of decay, and will soon disappear."

THERE are now three societies in America each claiming to be the sole representative of Theosophy. The first split, says the *London Light*, occurred when Mrs. Annie Besant made grave charges against Mr. Judge, the secretary of the American section of the Theosophical Society, a few years ago. The American section believed in Mr. Judge and declared its independence, but some lodges in America continued their allegiance to the International Theosophy Society, of which Colonel Olcott was the founder and is still the head. After Mr. Judge's death, and the retirement of Mr. Hargrove as president of the recalcitrant American society, Mrs. Tingley reigned in Mr. Judge's stead. Says *Light*: "Mrs. Tingley called a convention in Chicago, and constituted the 'Universal Brotherhood.' She had a resolution passed appointing her head and placing absolute control in her hands, retaining the power to expel members without trial. This was disapproved of by many, who split off in protest against the absolute power vested in Mrs. Tingley. They formed the Theosophical Society of America, under the leadership of Dr. Buck."

FOREIGN TOPICS.

JULES GUÉRIN AND THE ANTISEMITES.

ONE of the most embarrassing features of the Dreyfus case has been the fact that a large proportion of Frenchmen are firmly convinced that a conspiracy exists between the Jews and certain foreign governments, and that there is certainly a conspiracy for the overthrow of the republic. The *Echo*, Berlin, describes the situation as follows:

"The Government was aware that reactionary discontents would attempt to demonstrate against the republic. Tho it is difficult to tell what faction would gain the upper hand if the present form of government were overthrown, it is certain that monarchists of all shades hope to profit by the prevailing unrest. The Ministry, however, has acted. Royalists and imperialists, members of the Patriot League and of the Antisemite League, have been arrested. Unfortunately, one of the chiefs of the Antisemites M. Guérin, escaped with a number of friends to their club house in the Rue Chabrol, where they have barricaded themselves. The Government has no wish to make martyrs of these people, hence the police are content to blockade the place until the last of these would-be heroes is tired of his voluntary imprisonment."

At the present writing the antisemites still hold out in their stronghold. The *Journal des Débats*, Paris, says:

"M. Guérin, we are informed, is really the most reasonable person in the 'fortress.' He realizes that his position is untenable. But he is as much the prisoner as the chief of his little band. The minds of these men have become disordered by the reading of sensational, partizan papers; they believe themselves heroes, and regard the men at the head of affairs as a collection of villains, bent upon destroying France and dishonoring her army. We believe the trouble could have been avoided if the authorities had acted with more promptness and secrecy in making the arrests which were deemed necessary."

The *Soir* believes that the Duke of Orleans is in the Rue Chabrol, and that the Government is anxious to get the Orleanist pretender into its power alive. But there is no foundation for this and other wild stories circulating among the people. Throughout the rest of Europe the press express confidence in the republican government. The establishment of a new monarchy requires above all things a strong man, such a towering individual as has not yet been found; and a peaceful French republic is more desired by the monarchist neighbors of France than a restless, unstable monarchy. The *Speaker*, London, says:

"The 'revolutionists' have been plotting, since February of last year, to rouse monarchical, Catholic, and anti-parliamentary feeling with the aid of a few 'ward politicians' and roughs; they have disseminated badges and political jewelry; they have kept their Pretender in readiness, and they have occasionally published their plans and expressed admiration of their own enterprise in their own press. But nobody can suppose they have any considerable following, even if they had among them the ability to run a revolution or to maintain their work when it had been achieved. . . . It is just possible that these conspirators might have succeeded, with the aid of their market porters and butchers' laborers, and the 'heelers' of these latter (if we may adopt an expression from the municipal politics of New York), in seizing the Ministers and upsetting the present régime. We do not suppose they could have kept together very long, or even agreed on the terms of a *plébiscite*. But they would have unloosed forces that they could not control, and then a general might have been welcomed by the comfortable classes and the peasantry as a savior of society, and the rank and file, which would not have followed in a merely nationalist or Orleanist movement, would have followed to restore order readily enough. The experience of this week at the Rennes trial does not, it is true, encourage the belief that such a leader is to be found among French generals to-day. But a *coup d'état* once made under such circumstances might have been accepted by the mass of the propertied classes and the peasantry, as the *coup d'état* of 1851 was accepted as a *fait accompli*.

It is true the French people are infinitely better politicians now than they were then. But they are also, perhaps, more pacific; they have more to lose, and they have had more abundant experience of social disturbance and suffering."

Yet the Antisemites are not without sympathizers outside of France. The *Deutsche Tages-Zeitung*, Berlin, the organ of the Prussian Agrarians and antisemites, points out that the Jews, tho they continually ask for equality, make it impossible for members of other religious bodies to grant it because a Jew is always ready to ridicule the faith of others, and always furious if his own religious conviction is not treated as something too sacred to be profaned by the *Goyims*. Referring to an article in the Berlin *Tagesblatt*, in which the writer compares Maître Labori and his wife to Michelangelo's Pietà, the *Tages-Zeitung* says:

"That the Jewish penny-a-liner does not in the least realize the blasphemy of his comparison, we are quite willing to believe. And that is why we have often advised our Jewish fellow citizens to keep their hands clean, or otherwise, from Christian figures. If they are in need of a symbol for comparison, let them choose it among their own people and their own religion."

But even if antisemitism is strong in France, it is not sufficient to encourage a rebellion against the present régime, for the French Jews, as a rule prosperous, educated men, rarely commit the mistakes complained of by the German, Austrian, Russian and Hungarian antisemites whose organs are papers like the *Deutsche Tages-Zeitung*. Hence the opinion gains ground that ex-Police Commissioner Blanc is right in calling Jules Guérin's antisemitism "merely a cloak for royalist machinations."—*Translations made for THE LITERARY DIGEST.*

FREDERIC HARRISON'S APPEAL TO LORD SALISBURY.

THE controversy between Great Britain and the Boers has brought out nothing more eloquent than the appeal addressed by the well-known English Positivist, Frederic Harrison, to the Prime Minister calling on the latter to take the reins from the Colonial Minister's hands and into his own. The appeal was published in *The Daily Chronicle* of London (Aug. 30), and reproduced in full in Cape Town papers.

Mr. Harrison begins by asserting that it seems an unnatural thing that the country should be on the verge of a formidable war while the Prime Minister and Minister of Foreign Affairs (Lord Salisbury holds both offices) is "more or less in the background." That the moving power in this crisis rests with the colonial office is a mere accident, says Mr. Harrison, or detail of official arrangement; and he presses vigorously the point that "it is not the business of the colonial office to embark this empire in a foreign war." Such a war as seems impending is "an imperial question, if any can be." He speaks of the contest as "a tremendous international struggle, wherein the entire empire is certain to be strained, if not brought to extreme peril, by opening its vulnerable sides at once to all its enemies and its rivals." Mr. Harrison continues:

"No legal quibbling about suzerainty can persuade us that the South African republic is a part of the empire. If it is not part of the empire it must be a foreign state, even tho it be one over which by agreement Great Britain has some control. But this control is solely concerned with the external, not with the internal, relations of the republic. The point in dispute solely relates to the internal relations of the Transvaal. No one pretends that the dispute concerns the dealings of the republic with foreign nations. Therefore, the cause of war, if war there is to be, arises from matters between Great Britain and the home affairs of a republic which is not within the empire, not within the dominions of the Queen."

Mr. Harrison speaks further of the possible war as one "which

the majority of Englishmen know to be mean and unjust," due to the pushing power of "noisy, arrogant, and trading groups of men organized and intriguing for their own ends," whom the colonial department, face to face with local interests, is not strong enough to resist.

Leaving then the immediate object of his appeal, the transfer of the case from Secretary Chamberlain's hands, Mr. Harrison proceeds to argue the case for the Boers as follows:

"Measured by the compromises with foreign nations which you may justly claim to have brought to a successful issue, the concessions already accepted by the republic are indeed decisive. From nine years to seven years, from seven to five years, from one demand of the Uitlanders to another, the Boers have given way. They have already conceded the whole of the original demand made on them, and have even added more. And at every fresh concession Sir Alfred Milner is instructed to make further demands, until throughout the Transvaal, and we may well add at home, the impression prevails that it is not concession of claims which is sought from the republic, but submission, humiliation, and loss of independence. Is this how negotiations have been carried on when you, my lord, as head of the Foreign Office, have dealt with Russia, Turkey, France, or the United States? This is not negotiation. It is war—war of naked aggression; war wherein the Boers will not yield without a desperate struggle, and after bloody combats; a war which can not be closed by a few victories, nor the traces of it wiped out by a few promises or proclamations; a war wherein many true and patriotic Englishmen devoutly trust that the Boers may not be ultimately crushed. 'Bella geri placuit, nullos habitura triumphos.'

"The negotiations," as the new diplomacy calls its efforts to goad the Boers into dogged resistance, are things unknown to the real diplomacy of our Foreign Office as understood by yourself and your predecessors. If the Transvaal is not part of the empire, within the colonial dominions of her Majesty, it must be an alien power. To force an alien power by threats of war to take over British subjects to its own allegiance, to convert loyal subjects of the Queen into alien republicans, this is a grotesque perversion of all public law, as understood between nations. As the sole object of forcing on an alien power a large body of new citizens is to enable them to betray their acquired allegiance, and to master the state in the interests of their confederates—to be, in fact, the Wooden Horse admitted into the Boer Troy—it is obvious that this irreducible minimum of the new diplomacy is a transparent trick. To play it upon any European power would arouse ridicule and contempt. It may seem fine policy to the Colonial Office, which is largely engaged with savages and their white masters; but it is unworthy of the Foreign Office and of the traditions which you uphold in its dealings with civilized powers.

"All the talk about 'sovereignty' and 'paramount power' which fills the Rhodesian press is mere darkening of the case, as irrelevant as the gossip and scandal rehearsed to the court at Rennes. Whatever 'sovereignty' means, or does not mean, it can not empower Great Britain to force her own citizens on the Boer republic. The burgher franchise is an absolutely domestic matter, and it is not claimed that 'sovereignty' covers domestic legislation. If 'sovereignty' gives no good title to the Queen to require that her own discarded subjects shall be taken over as alien republicans, still less can this right be due to the fact that she has the 'paramount power' in South Africa. For 'paramount power' is a phrase more vague and arbitrary than 'sovereignty'; and in the absence of specific treaties and conventions it can mean nothing more than a claim to be the strongest, the most preemptory, the readiest to put might before right.

"These are claims and pretensions which the best part of your public life, my lord, has been occupied in resisting. The United States have claimed to be the paramount power in the transatlantic continents, as France has on the Niger, as Russia has in the Balkans and Northern Asia. Our constant policy, our honorable traditions—they are very largely my lord, your policy, your traditions—have been to require that the paramount power shall submit to international engagements, to public law, and to justice as between the weak and the strong. We as a nation, you as Minister, have steadily resisted the claim of any power calling itself paramount to seize what it can and to coerce those who refuse to be despoiled. If the Colonial Office defies these honorable traditions, if the new diplomacy is to develop also a new moral-

ity, a new public law, whether moved by timidity or by pique, it remains for the chief Minister of the crown and the head of the Foreign Office to maintain our record of freedom and of justice, before we are dragged into a war the wickedness of which is certain, but the end of which no man can foresee."

WHY DREYFUS WAS MADE A VICTIM.

ON the theory that Dreyfus is an innocent and persecuted man, what motive can be assigned for the deep-seated hatred and vast conspiracy against him—an obscure captain of artillery? The explanation that this "conspiracy" was the beginning of an anti-Jewish movement was accepted until it appeared that no other Jews were forced from the army, altho there are many of them in it. The idea of an anti-Jewish movement that began and ended with one man had to be abandoned. The editor of *The National Review* (London) now advances the theory that the very men who have been testifying against Dreyfus are themselves the traitors, and that they have been making Dreyfus their scapegoat, depending upon anti-Jewish feeling to aid them. The editor of *The National Review* says:

"What was the original motive for this hideous plot against an innocent and obscure man? Why from the first was it deemed necessary to destroy Dreyfus? Whose interests were involved? The answer to these questions is so obvious as often to escape notice. Prominent members of the French headquarters staff, all of whom, remember, are miserably underpaid, from General de Boisdeffre, with his £1,000 a year, down to Commandant Henry with his £200, were engaged in 1894, as for years past, in increasing their incomes by selling confidential information to the foreign military *attachés* in Paris, of whom Major von Schwarzkoppen (as he then was representing Germany) was the most important. Esterhazy acted as the outside broker. He received, in addition to a regular retaining fee from that *attaché*, special fees for any specially valuable documents he might be able to deliver. As he was only an ordinary regimental officer he could only be of use as the conduit pipe of the traitors inside the War Office, with whom he necessarily had to share the plunder. We know that when he originally offered his services to Major von Schwarzkoppen, the latter at once said to Esterhazy, 'Show me your credentials,' and only consented to employ him on being satisfied that 'the firm R' commanded all the secrets of the War Office. That the gang made a pretty good haul is indicated by the report of a French Ambassador at a foreign capital, who, in 1897, informed his Foreign Office that Esterhazy was said to have received no less than 200,000 francs (£8,000) from this traffic. The reader will at once point out that such being the state of the case it was the interests of the gang to keep things quiet, and, above all, to avoid the sensation and scandal of a court-martial. Unluckily, some one not in the swim—probably Colonel Cordier—had seen the *bordereau*, which Esterhazy had left for Major von Schwarzkoppen in the ordinary course of business, together with the packet of documents enumerated therein. Major von Schwarzkoppen duly received the enumerated documents, which the German War Office possesses to this day, while the Italians possess facsimiles thereof, but he never received the *bordereau*, and never knew of its existence until it was published in a French newspaper, for it was stolen by a French spy from the German Embassy and brought to the French War Office, and there seen by the outsider before the guilty parties had a chance of destroying it. To save Esterhazy, whose detection would have involved their own exposure, it was imperative to fasten this compromising document upon some one who would act as 'a lightning conductor,' in Mr. Conybeare's expressive phrase. Dreyfus was selected because, being a Jew, he would arouse the frenzy of the anti-semites, who at that time were rather graveled for matter. Having denounced him as guilty of their own crimes the gang commenced to forge and lie in order to procure his conviction, and having secured it, it was equally necessary to maintain it by similar methods. The 'leakages' from the War Office were greater after Dreyfus was in the Devil's Island than they had been before.

"It will be seen that we must not insult the intelligence of such as Generals Boisdeffre and Gonse and the Colonels Henry and

du Paty de Clam by suggesting that they ever thought Dreyfus guilty. General Mercier also always knew him to be innocent, but allowed himself to be terrorized by the gang, after which he became one of the worse criminals of all, and secretly submitted documents to the court-martial of 1894 which he knew to be irrelevant or false, as is shown by his subsequent suppression of them."

CHINA AND THE POWERS.

NOT a few Englishmen warn their Government that a war with the Transvaal may prevent Great Britain from displaying her power to the fullest advantage in the far East, where much more than a few gold-mines is at stake. Sir Lintorn Simmons, in *The Nineteenth Century*, expresses himself to the following effect:

The famine, Russia is spending another \$40,000,000 on her fleet. At the same time countless millions are sunk in the Siberian Railroad. Is it reasonable to suppose that Russia means peace? She already has 120,000 men in the far East, but these are dependent upon ocean communication for their food and ammunition. Once the railroad is finished, China will become the vassal of Russia. British capitalists are unwise if they hasten that evil day. No European power can stop Russia. Japan alone is able to do so. But the most effective bar to Russian aggression would be an efficiently trained and organized Chinese army. Russia can not be ready before 1904. By that time China should be placed in a state of defense.

This is a much more pessimistic view than is expressed in the "John Downright Letters" to the *London Letter*. In these the writer maintains that Great Britain is mistress of the situation, but that it would be wise to obtain the help of the United States and Japan. The writer says:

"I suppose that we can not at the present day prevent Russia encroaching on Manchuria and Mongolia so far as opposing her by land is concerned, but with an alliance on the lines above set down we could readily check her advance on the seaboard or on the neutral territory, as we should only have to capture or destroy her fleet—a simple matter—and from time to time as a means of protesting when occasion demanded, we could blow up Vladivostok, Port Arthur, and Talien-Wan. We could turn the gulf of Pechili into the far eastern Black Sea, holding the Dardanelles in the shape of Wei-hai-wei on the one side and Korea on the other. . . . No doubt, the Germans would be glad enough to work in with the above-mentioned alliance; and, in fact, I should be for 'letting 'em all come' within reason. We might even take in France, when she has had enough of her one-sided alliance with Russia; for a very doubtful modicum of *la gloire*, whatever that may be, can not prove satisfying in the long run."

Lord Charles Beresford, in his work on the breaking up of China, declares that China can be kept alive, politically speaking, if she is given time; and *The Edinburgh Review* suggests as a first step the choice of a new capital, further from the Russian frontier. *The Celestial Empire*, Shanghai, nevertheless fears that the reform of China is impossible, as corruption and lying are too firmly established. It says:

"Throughout the land in almost every yamen justice sides with the biggest purse. Magistrates are allowed a good deal of rope even under the shadow of the walls of Peking. But near the central Government things are, generally speaking, conducted in a fair way, as compared with the cruel and wanton oppression by the officials of outlying parts. It would be good policy for the Chinese to keep friendly with the Mohammedans of Kansuh and northern Shansi and Chihli, but the reverse is the case. . . . But altho the Mohammedans are treated in a more cruel way than others, the Chinese themselves are dreadfully oppressed by the bad class of officials one so often comes across on the borders of the country. Their conduct would be tolerated in none of the quieter parts, but they take full advantage of their isolation and the usually disturbed state of their districts to line their pockets in the most glaringly illegal ways. Thus they have estranged, and are continuing to estrange, the hearts of the people from the

government of Peking. . . . Russia is having her way prepared for a southward march by the very men who should be on the alert to stop her."

Another great difficulty is that the Chinese Government seems utterly unable to comprehend the value of truth in official documents. "To this day the people in the interior are not aware that the great powers are not exactly China's vassals," says the *Ost-Asiatische Lloyd*, and it quotes from an official Chinese publication to show how an official censorship is utilized to impress the Chinese with an undue idea of their country's importance and prestige. Thus the momentary check received by Italy, when that country made its first attempt to acquire San Mun, was described as follows:

"The rebellion of the Italians has been quelled, and their emissary has been sent home for the present. It is to be hoped that the heralds of the other tributary states have learned the lesson and will in future show the respect due to China, their high suzerain. Not to say that our Government will be wanting in generosity. There is no objection to granting coaling-stations and the like to these poor foreigners, if they humbly ask for such favors, for our generous and wise government still believes with the Great Sage [Confucius] that mercy should temper stern justice."

The Chinese Government, however, is under no delusion, and despite information to the contrary—drawn chiefly from English sources—people who should know declare that China has begun to accept Japan's overtures, and that a powerful Asiatic alliance is a probability. The Kobe, Japan, *Herald* says:

"The presence of Messrs. Liu and Ch'ing in Tokyo has given rise to a considerable amount of discussion in the Japanese papers, and the opinion at first entertained—that no significance should be attached to their visit—has given place to the view that they are here for a special purpose of the highest importance. . . . Japan being particularly friendly the question of a reciprocal alliance was broached through Li Sheng-tu, the present Minister at Tokyo, but as there were several matters of the most vital importance on which the shrewd Empress Dowager wished to consult with the Mikado and his highest ministers, the treatment of which, moreover, required the utmost secrecy, she cast about for some trusted person or persons to act as secret envoys for her. . . . Liu and Ch'ing were accordingly telegraphed for, and being willing to do whatever they were commanded, the Empress Dowager penned an autograph letter to the Mikado as credentials for her envoys."

On the other hand, Japanese envoys have visited China, but the two governments deem it unnecessary to inform the press with regard to these affairs. The *North China Daily News* says:

"So important was secrecy considered to be that the Japanese admiral took no interpreters from Japan with him, one of the chancellors of the Japanese consulate-general at Shanghai being specially detailed for that purpose. One object of the Japanese admiral's visit to the Yangtze is stated in reliable quarters to be a demand or proposal that Japan be given the monopoly to exploit mines and lay railways in one of the Liangkiang provinces. But whatever errand he is now engaged in, one thing seems to be certain, that British interests in the Yangtze valley are totally ignored by China."

The *Correspondent*, Hamburg, declares that Japan actually offered to return to China the fleet taken from her in the war of 1894-95, if China would permit her navy to be trained and supervised by Japanese officers. The *Neue Freie Presse*, Vienna, quotes a German diplomat recently returned from the far East to the following effect:

The partitioning of China is not likely to take place in the near future; the jealousy of the powers is too great for that. Moreover, China has undoubtedly found a strong hacker in Japan, and much of the resistance offered to European powers is due to this fact. Marquis Ito was actually intended for the position of Prime Minister by the Chinese Emperor, and he would have begun to reform China had the Emperor been able to maintain himself in power.—*Translations made for THE LITERARY DIGEST.*

SOUTH CAROLINA'S DISPENSARY SYSTEM
IN JAVA.

THE Government of Java, which is regarded throughout Europe, except perhaps in Great Britain, as the best model of colonial administration, has managed to reduce the opium habit in some parts of the colony. A kind of "dispensary system," similar to that in force in South Carolina for the sale of liquor, has been employed, which is thus described by the Amsterdam *Handelsblad*:

"The main object was to take the trade out of the hands of the opium-joint keepers, who were mostly Chinese. This was done by furnishing good opium at low prices at the government stores; but as the vendors have no interest in the matter, and as the natives are taught to notice the degrading effects of opium-smoking, the demand for the drug has fallen off. In 1895, 16,223 taels were sold, 14,408 in 1896, 11,391 in 1897. No doubt the decrease is slightly due to business depression, but there are better reasons. Smuggling has been rendered less profitable than when the trade was in the hands of Chinese dealers.

"Many opium-smokers have left the colony, many have died, and but few persons have been led to contract the habit. This last is the result of government supervision. Formerly the Chinese did their best to find new customers. Opium was given away free to the laborers, and much was sold on credit. If a smoker reformed, he received notice that he would be denounced as an opium smuggler and sent to prison, a small quantity of opium being secreted among his belongings to produce proof of his guilt. Poison was often mixed with the opium, so that the reformed smoker should suffer pain if he abjured the pipe, and erroneously ascribe these pains to the abstinence from opium. In fact, a smoker can abstain from pure opium without ill effects. On the other hand, opium was recommended to the sick and the young as a panacea for all ills.

"All this has ceased since the Government has become the only dealer in opium. When once the entire colony has been freed from dens, when only an insignificant number of smokers remains, stricter rules may be applied, and the time may not be far off when natives who 'hit the pipe' will be rare indeed."—*Translation made for THE LITERARY DIGEST.*

One Way of Catching the Trade of China.—The enterprising merchant who turns to foreign countries for new markets is often seriously disappointed by the refusal of the foreigner to buy his goods. In China, the label and the wrapper seem to have a surprising effect at times upon the sale of an article. The Prussian Secretary for Trade and Industry publishes a paper on the subject, from which we take the following:

Some articles are regarded as distinctly European in China, and may safely be presented in wrappers of European pattern. Others, not exclusively manufactured abroad, must be sent with wrappers and labels to suit the taste of the natives. Glaring colors should be used, especially green, light blue, and red. Chinese ideas of humor must be taken into consideration. Thus the tiger is a very popular label, but he must not be represented as he is. He should be presented with an extraordinarily long body, enormous tail, and in all sorts of fantastic attitudes. Another very popular figure is the ape. Picture him standing on his head, the hind legs stretched upward, the tail, as it were, lashing the sky. But any grotesque animal may strike the fancy of the Chinese customer. Pictures of umbrellas, tobacco and opium pipes, temples, ships, flags, are also popular, as well as scenes depicting parades, weddings, etc. The best quality of goods may be rejected unless the wrapper and label advertise them in such a manner as to suit the fancy of the customer.—*Translation made for THE LITERARY DIGEST.*

To Germans, Frenchmen, and Americans, who are used to regard the uniform of their country with respect, the contempt with which the average Englishman treats the Queen's soldiers is a revelation. Two American ladies who invited a soldier, a distant relation, to dine with them at a swell hotel were informed that a private soldier could not be served. It should be remembered, however, that until recently the British soldier was nearly always from the dregs of the nation.

MISCELLANEOUS.

MARK TWAIN ON THE JEWS.

EARLY last year Mark Twain published an article in *Harper's Magazine* relative to the recent antisemitic outbreak which he had witnessed in the imperial Parliament in Vienna. His description of the violent, deep-seated hatred of the Jewish race disclosed in that remarkable scene of riot and disorder made a deep impression on many Hebrew readers, and letters have continued to reach him from Jews in America asking him to give his explanation of this widespread racial hatred, evidenced in so pre-eminent a degree in Russia, Austria, and France, and even occasionally showing itself in America. One Jew writes to him:

"The show of military force in the Austrian Parliament, which precipitated the riots, was not introduced by any Jew. No Jew was a member of that body. No Jewish question was involved in the Ausgleich or in the language proposition. No Jew was insulting anybody. In short, no Jew was doing any mischief to anybody whatsoever. In fact, the Jews were the only ones of the nineteen different races in Austria who did not have a party—they are absolutely non-participants. Yet in your article you say that in the rioting which followed, all classes of people were unanimous only on one thing, viz., in being against the Jews. Now will you kindly tell me why, in your judgment, the Jews have thus ever been, and are even now, in these days of supposed intelligence, the butt of baseless, vicious animosities? I dare say that for centuries there has been no more quiet, undisturbing, and well-behaving citizens, as a class, than that same Jew. It seems to me that ignorance and fanaticism can not alone account for these horrible and unjust persecutions.

"Tell me, therefore, from your vantage-point of cold view, what in your mind is the cause. Can American Jews do anything to correct it either in America or abroad? Will it ever come to an end? Will a Jew be permitted to live honestly, decently, and peaceably like the rest of mankind? What has become of the Golden Rule?"

In the current (September) number of *Harper's Magazine*, Mark Twain tries to answer these questions. More than once, he says, Jews have observed to him that in all his works there can be found no uncourteous reference to their race; and he declares himself wholly free from all prejudices of race, color, caste, or creed, except one national prejudice—apparently anti-Gallic. He even has no prejudice against his Satanic majesty; indeed, he thinks that the acknowledged lord of four fifths of the human race deserves consideration and a fair chance to narrate his side of the case. With all these qualifications, therefore, Mark thinks he is particularly well fitted to discuss the Jewish question. He finds that there are six points worthy of consideration in the letter given above:

- "1. The Jew is a well-behaved citizen.
- "2. Can ignorance and fanaticism alone account for his unjust treatment?
- "3. Can Jews do anything to improve the situation?
- "4. The Jews have no party; they are non-participants.
- "5. Will the persecution ever come to an end?
- "6. What has become of the Golden Rule?"

Mark Twain thinks we must grant point number 1, for many reasons:

"The Jew is not a disturber of the peace of any country. Even his enemies will concede that. He is not a loafer, he is not a sot, he is not noisy, he is not a brawler nor a rioter, he is not quarrelsome. In the statistics of crime his presence is conspicuously rare—in all countries. With murder and other crimes of violence he has but little to do; he is a stranger to the hangman. In the police court's daily long roll of 'assaults' and 'drunk and disorderlies' his name seldom appears. That the Jewish home is a home in the truest sense is a fact which no one will dispute. The family is knitted together by the strongest affections; its members show each other every due respect; and reverence for the

elders is an inviolate law of the house. The Jew is not a burden on the charities of the state nor of the city; these could cease from their functions without affecting him. When he is well enough, he works; when he is incapacitated, his own people take care of him. And not in a poor and stingy way, but with a fine and large benevolence. His race is entitled to be called the most benevolent of all the races of men. A Jewish beggar is not impossible, perhaps; such a thing may exist, but there are few men that can say they have seen that spectacle. The Jew has been staged in many uncomplimentary forms, but, so far as I know, no dramatist has done him the injustice to stage him as a beggar.

"The Jew has his other side. He has some discreditable ways, tho he has not a monopoly of them, because he can not get entirely rid of vexatious Christian competition. We have seen that he seldom transgresses the laws against crimes of violence. Indeed, his dealings with courts are almost restricted to matters connected with commerce. He has a reputation for various small forms of cheating, and for practising oppressive usury, and for burning himself out to get the insurance, and for arranging cunning contracts which leave him an exit but lock the other man in, and for smart evasions which find him safe and comfortable just within the strict letter of the law, when court and jury know very well that he has violated the spirit of it. He is a frequent and faithful and capable officer in the civil service, but he is charged with an unpatriotic disinclination to stand by the flag as a soldier—like the Christian Quakers.

"Now if you offset these discreditable features by the creditable ones summarized in a preceding paragraph beginning with the words, 'These facts are all on the credit side,' and strike a balance, what must the verdict be? This, I think: that, the merits and demerits being fairly weighed and measured on both sides, the Christian can claim no superiority over the Jew in the matter of good citizenship.

"Yet in all countries, from the dawn of history, the Jew has been persistently and implacably hated, and with frequency persecuted."

As to point 2, the writer thinks that fanaticism *alone* does not account for this, indeed for hardly any of it, tho he once thought otherwise before he had studied the question. He refers to the ancient story of Joseph and his attempt to corner a stupendous corn market in Egypt, centuries before the crucifixion. The same hatred and distrust were present then. Again, he comes down almost two millenniums later to the time of one of the Latin historians. Christianity was then hardly known to the world at large, but the historian says that "some Christians were persecuted in Rome through error, they being *mistaken for Jews*." Clearly, then, the prejudice is international and interracial, independent of religion or epoch.

What *is* the origin of the feeling? Take note of the fact, says the writer, that in Egypt, in Rome, in Austria, and in other countries of the world, the Jew has lived as a *nation apart*. With all his "splendid capacities and all his fat wealth, he is today not politically important in any country." Yet there are 6,000,000 Jews in Russia, 5,000,000 in Austria, and 250,000 or more in the United States. Contrast with this the history of the Irish race, who, tho alien in blood, religion, and customs to the great mass of the people among whom they settled, have taken an important part in the government of the country from the day they first set foot on the soil. It is, Mark Twain thinks, this failure of the Jewish race to take an active interest in the government of the several peoples among whom they have settled—even more than their exceptional ability to crowd out their competitors in business, or than the alleged unpleasant personal traits which ages of almost exclusive devotion to commercial ideals would naturally bring with it—which is accountable for the suspicion and dislike with which they are regarded in every nation of the earth.

With respect to points 3 and 4, he thinks the situation *can* be improved, and he makes the following suggestion:

"In our days we have learned the value of combination. We

apply it everywhere—in railway systems, in trusts, in trades unions, in Salvation Armies, in minor politics, in major politics, in European concerts. Whatever our strength may be, big or little, we *organize* it. We have found out that that is the only way to get the most out of it that is in it. We know the weakness of individual sticks, and the strength of the concentrated fagot. Suppose you try a scheme like this, for instance: In England and America put every Jew on the census-book *as a Jew* (in case you have not been doing that). Get up volunteer regiments composed of Jews solely, and, when the drum beats, fall in and go to the front, so as to remove the reproach that you have few Massenas among you, and that you feed on a country but don't like to fight for it. Next, in politics, organize your strength, band together, and deliver the casting vote where you can, and where you can't, compel as good terms as possible. You huddle to yourselves already in all countries, but you huddle to no sufficient purpose, politically speaking. You do not seem to be organized, except for your charities. There you are omnipotent; there you compel your due of recognition—you do not have to beg for it. It shows what you can do when you band together for a definite purpose.

"And then from America and England you can encourage your race in Austria, France, and Germany, and materially help it. It was a pathetic tale that was told by a poor Jew in Galicia a fortnight ago during the riots, after he had been raided by the Christian peasantry and despoiled of everything he had. He said his vote was of no value to him, and he wished he could be excused from casting it, for indeed casting it was a sure *damage* to him, since no matter which party he voted for, the other party would come straight and take its revenge out of him. Nine per cent. of the population of the empire, these Jews, and apparently they can not put a plank into any candidate's platform! If you will send our Irish lads over here I think they will organize your race and change the aspect of the Reichsrath."

As to points 5 and 6, Mark Twain thinks that on the score of religion the persecution has already ceased; on the score of trade and race prejudice, he thinks it will continue:

"I suppose the race prejudice can not be removed; but he can stand that; it is no particular matter. By his make and ways he is substantially a foreigner wherever he may be, and even the angels dislike a foreigner. I am using this word foreigner in the German sense—*stranger*. Nearly all of us have an antipathy to a stranger, even of our own nationality. We pile gripsacks in a vacant seat to keep him from getting it; and a dog goes further, and does as a savage would—challenges him on the spot. The German dictionary seems to make no distinction between a stranger and a foreigner; in its view a stranger *is* a foreigner—a sound position, I think. You will always be by ways and habits and predilections substantially strangers—foreigners—wherever you are, and that will probably keep the race prejudice against you alive."

The Golden Rule still exists and continues to sparkle, says Mark Twain; but, unlike Mayor Jones, he thinks it has no relevancy to business; and the Jewish persecution is a business passion. In conclusion, he says:

"If the statistics are right, the Jews constitute but *one per cent.* of the human race. It suggests a nebulous dim puff of star dust lost in the blaze of the Milky Way. Properly the Jew ought hardly to be heard of; but he is heard of, has always been heard of. He is as prominent on the planet as any other people, and his commercial importance is extravagantly out of proportion to the smallness of his bulk. His contributions to the world's list of great names in literature, science, art, music, finance, medicine, and abstruse learning are also away out of proportion to the weakness of his numbers. He has made a marvelous fight in this world, in all the ages; and has done it with his hands tied behind him. He could be vain of himself, and be excused for it. The Egyptian, the Babylonian, and the Persian rose, filled the planet with sound and splendor, then faded to dream-stuff and passed away; the Greek and the Roman followed, and made a vast noise, and they are gone; other peoples have sprung up and held their torch high for a time, but it burned out, and they sit in twilight now, or have vanished. The Jew saw them all, beat them all, and is now what he always was, exhibiting no decadence, no infirmities of age, no weakening of his parts, no slowing of his energies, no dulling of his alert and aggressive mind. All things are mortal but the Jew; all other forces pass, but he remains. What is the secret of his immortality?"

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Refrigerated beef coming from America is admitted into France in accordance with the official decree of May 26, 1888, concerning fresh meats imported from abroad. Such meat must be imported through the customs office specially designated for that purpose and must undergo a sanitary inspection at the port of entry. The tariff for this inspection is 1 franc (19.3 cents) per 100 kilograms (220.46 pounds), and for no fraction of that weight. In accordance with this decree, the meat should be presented as complete animals, either entire or cut in halves or quarters, according to the usual custom of the butchers. The different pieces must correspond exactly, with the lungs naturally attached, and the adhering intestines of the chest and stomach should bear no trace of "scraping or scratchings."

Fresh pork is not allowed to enter France. In accordance with a decree of December 4, 1891, salted pork alone can be imported under certain conditions, the most important being that the pork must be thoroughly salted.

As to preserved meat (so called), up to the present time its importation has not been subjected to any sanitary regulations on the part of the French authorities. Its introduction is subject to the payment of the duties provided for in article 19 of the customs tariff, as follows: Preserved meat in cans, 20 francs (\$3.86) per 100 kilograms (220.46 pounds), if direct to France from the United States, or 23.60 francs (\$4.54) if through another European port or depot. This includes the weight of the tins or pots and the exterior packing.

Since Cuba, Puerto Rico, and the Philippines have come under the régime of the United States,

Tailor-Made Suits \$5.00

OUR new Fall and Winter costumes and cloaks are exclusive in style and distinctly different from the ready-made garments. When wearing one of our styles you do not run the risk of meeting other ladies wearing garments which look exactly like yours. There are hundreds of firms selling ready-made suits and cloaks such as you see everywhere, but we are the only house making fashionable goods to order at moderate prices. You may select from our catalogue any style that you desire and we will make it especially

to order for you from any of our materials. Any suggestions that you wish to make can be carefully carried out.

Our new Fall and Winter Catalogue illustrates an exclusive line of ladies' costumes and cloaks, selected from the newest Paris models, and the fabrics from which we make our garments comprise only the very latest novelties.

Charming Costumes and Tailor-Made Suits, faultless in cut and finish, \$5 up.

Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up.

Jaunty Capes, \$4 up.

New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, etc.

We pay express charges everywhere. Write to-day for Catalogue and samples of the materials from which we make these garments; we will send them to you free by return mail. Be sure to say whether you wish the samples for Cloaks or for Suits, and we will then be able to send you a full line of exactly what you desire.

there have been exported from the consular district of Rotterdam, Holland, to these new possessions large quantities of cheese and candles. During the past six months (October 1 to March 3), there have been issued at this consulate and the agency at Schiedam two hundred and thirty-eight invoices for the islands named, and, with the exception of a few shipments of gin, these invoices have mostly covered shipments of cheese and candles. To Cuba there have been shipped 514,974 pounds of cheese and 44,000 pounds of candles; and to Puerto Rico 121,682 pounds of cheese and 435,188 pounds of candles. To Manila a considerable quantity of these two articles has also been shipped, but the exact amount can not be ascertained, as invoices for the Philippines are not always taken out, merchants here claiming it is unnecessary. The cheese has principally been of the "Edam" and "Gouda" varieties, and the candles mostly the ordinary stearin articles for domestic use.

Consul Thackara sends the following from Havre, under date of April 27, 1899:

"I have to report, for the benefit of American shippers, that the Campagnie Générale Transatlantique is about to inaugurate an additional regular freight and emigrant service between Havre, Bordeaux, Pauillac, and New York, and vice versa. This service will be carried on by chartered English cargo boats, the first steamer being the *Woolloomooloo*, of 3,521 gross tonnage, sailing from Havre May 9 next and from Pauillac May 12. The departures for the present will take place every three weeks, and the average time to New York from Havre, via Pauillac, will be fourteen days. The rates of freight, which will be considerably reduced, are subject to special agreement. I have been informed by one of the officials of the company that the tariff will be about one half that of the regular rates. The emigrant service has not been perfected as yet."

"LINENE" Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

PERSONALS.

SARASATE, the Spanish violinist, was born in Pamplona, Spain, in 1844. While a very little boy he was taken to Paris, and at the age of twelve years was entered to study music at the conservatoire. In 1859 he began a series of successful tours, visiting all parts of Europe and North and South Africa. He has composed a number of brilliant fantasies, and has brought out several delightful arrangements of Spanish airs.

PETER PORTER, of Niagara Falls, claims to have proved, by long and careful study, that it was Champlain and not Cartier who made the first reference to Niagara Falls in literature.

THE New York *Tribune* says that Zygmunt Milkowski, the Polish author and soldier, has sent word to the Polish National Alliance that he will visit his countrymen in the United States and attend the demonstrations in memory of Frederic Chopin, for which the Poles are preparing. Milkowski has written a number of historical works under the pseudonym of "Theodore Thomas Jez." He was born on March 23, 1824, and was graduated from the Odessa University.

ADMIRAL DEWEY has written to some of his old friends in Vermont this story about his colored cabin boy, Jim: When a war-ship goes out for target practice it is the custom to place all glass, chinaware, and other fragile articles in the hold of the ship—as close down to the keel as possible—in order to prevent their breakage by the concussion that follows the firing of the guns. This led to an amusing incident at Manila, after the destruction of the Spanish fleet. Life on board the *Olympia* was gradually settling down to its accustomed routine and dulness, when one day at luncheon Commodore Dewey asked Jim where some dish that he missed from the table had gone.

"I ain't had no chance to git it yit," was Jim's answer, "since I put it in de hol' just befo' dat target practice you had de udder day, Commodore."

ÉMILE ZOLA, during his enforced exile in England, was almost always busy with his pen. On arriving in London he went first to the Grosvenor and later he lived at Wimbledon and at Norwood, in lodgings. He was in need of socks one day, and, after a search of some length, finally found a shop in Buckingham Palace yard and a very dull shopman in charge of it. "Here," the romance-maker has recorded in his diary, "were socks of all sorts, to suit all tastes, all purses, and all climates—but all of them so huge! I look at one pair; it is too large. Then the shopman shows another, and another—all too big. Then impatiently, and perhaps rather abruptly, I hold out my fist for the man to measure it, and thus gauge the length of my foot, as is done in Paris. But he does not understand me. He draws back close to his shelves, as if he imagines that I want to box him. And when I again lift my foot to call his attention to its size, he shows even greater concern. Fortunately an idea comes to me. I take one of the mmmmoth socks that are lying on the counter, and fold parts of it neatly back, so as to make it appear very much smaller than it is. Then the shopman suddenly brightens, taps his forehead, climbs his steps again, and pulls yet more boxes and parcels from his shelves. And here at last are the small socks! So I choose a pair and pay the bill. And the man bows his thanks, well pleased, it seems, to find that in thrusting out my fist and raising my foot I had been actuated by no desire to injure him."

It may cause surprise in America that a man of Zola's attainments and wide experience of men and affairs should not have picked up enough of the English language to enable him to do a little ordinary shopping in England. But it is true—and this incident illustrates it—that at least one hundred English-speaking persons learn French where one Frenchman or Frenchwoman learns English. There is some reason for this, but not enough to justify the wide disparity.

KOTEDSILK

Ideal underwear for men, women, and children.

A double fabric, with silk next the skin.

Agreeable to those who cannot wear wool.

Will neither stretch nor shrink and remains silky to the end, no matter how carelessly washed.

Adapted for out-of-door sports or indoor wear.

Men's lighter fabric gusset adds to comfort and shapeliness.

THE NEW INSULATION CURE FOR

Rheumatism and Sleeplessness.

We are daily receiving most wonderful reports of the success of **Slayton's Electric Switch Glass Bed Casters** in treating the above diseases, and pains in muscles and bones, sciatica, neuralgia, nervous weakness and general debility. The treatment is based on the famous Dr. Brown-Séguard's theory that these diseases arise from an excessive flow of electricity from the body to the earth. Stopping this flow by insulation, in the vast majority of cases, cures the ailment. Nearly 10,000 have been sold since Christmas, and none were paid for before proving their merit.

FREE TRIAL. Send 17c. to pay postage and we will send you a set of Casters, on condition that at the end of one week you either return the Casters by mail (if unbenefted) or send us \$3, the regular price. State whether for woodco, iron or brass bedsteads.

THE SLAYTON ELECTRIC CASTER CO. (Ltd.),
25 High Street, Tecumseh, Mich.

THERE isn't a Tooth Brush made except the **Prophylactic** that really does what it is designed for. The

Prophylactic Tooth Brush

gets the teeth clean. Other brushes get them pretty near clean. "Pretty near" causes decay. Teeth always decay from without.

SOLD ONLY IN A YELLOW BOX—for your protection. Curved handle and face to fit the mouth. Brushes in irregular tufts—clings between the teeth. Hole in handle and hook to hold it. These mean much to cleanly persons—the only ones who like our brush. Adults' 35c. Children's (2 sizes) 25c. By mail or at dealers. Send for our free booklet "Tooth Truths."

FLORENCE MFG CO.,
14 Pine Street, Florence, Mass.

little looking after also, the good man secured a seat by his side at the dinner table and remarked pleasantly, "This is Mr. Bronco Bill, is it not?" "Yaas." "Where were you born?" "Near Kit Bullard's mill on Big Pigeon." "Religious parents, I suppose?" "Yaas." "What is your denomination?" "My what?" "Your denomination?" "Oh—ah—yaas. Smith & Wesson."—*Argonaut*.

The Tactless Preacher.—A story comes from Oklahoma which shows that a clergyman may have a pretty wit, and yet be a little lacking in tact. In the course of his sermon, the Rev. Mr. Newby, new pastor of the Christian church at Guthrie, interjected the question, "How many of you have read the Bible?" Fifty hands went up. "Good!" said the preacher. "Now how many of you have read the second chapter of Jude?" Twenty-five hands were raised. A wan smile overspread the minister's face. "That's good; but when you go home read that chapter again, and you will doubtless learn something to your interest." Of course, they found that there is no second chapter of Jude, and, of course, no matter how they may attempt to laugh it off, the victims of the clerical pleasantry are not likely to love their pastor any the more because of the "rise" he took out of them at that time.—*Boston Transcript*.

"HONESTY is the best policy." Nobody contradicts it.

Your dealer can get lamp-chimneys that almost never break from heat, or those that break continually. Which does he get? Which do you get?

Macbeth's "pearl top" and "pearl glass" are tough against heat; not one in a hundred breaks in use. The glass is clear as well as tough. They are accurate, uniform.

Be willing to pay more for chimneys that last till they rot, unless some accident happens to them.

Our "Index" describes all lamps and other proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

—The Transvaal reply to the British Government is received in London.

—The United States Minister at Tokyo, Japan, notifies the State Department that the Japanese Government has opened to foreign trade 22 additional ports under the operation of the new treaties.

Thursday, September 7.

—It is announced from Washington that "there will be a vigorous renewal of the campaign in Luzon as soon as the rainy season ends; there is no intention of superseding General Otis."

—The preliminary agreement regarding an Alaskan boundary *modus vivendi* has been reached between Secretary Hay and the British chargé d'affaires in Washington and sent to London for approval.

—The National Encampment of the G. A. R. elected Col. Albert Shaw commander-in-chief and appoints a committee to see the President with regard to pension matters.

—Senator Beveridge of Indiana, recently returned from the Philippines, has a long conference with the President.

—General Otis cables to the War Department that the inhabitants of the Island of Negros have accepted the sovereignty of the United States, and have expressed a desire for the establishment of a republican form of government.

—Gen. Benjamin F. Tracy presents the claim of Venezuela before the Arbitration Commission at Paris.

Friday, September 8.

—General Shafter, in a letter to a friend in Chicago, makes his first public denial of the charge that he was not under fire at Santiago.

—John D. Archbold testifies in defense of the Standard Oil Company before the Industrial Commission in Washington.

—Rear Admiral Henry H. Pickering, commandant of the Boston navy-yard, dies at Boston.

—The British cabinet council considers the Transvaal troubles and announces that "England will not relinquish her suzerainty over the South African Republic."

—Eduardo Romana is inaugurated president of Peru.

Saturday, September 9.

—Captain Alfred Dreyfus is again condemned by the court-martial at Rennes, and sentenced to ten years' imprisonment; the verdict is received calmly at Paris, but riots take place at Rennes.

—The Transvaal accepts England's proposition for a conference, and the outlook is less warlike.

—James B. Eustis, former Ambassador to France, dies from pneumonia after a short illness at Newport.

—The President approves the recommendation of Secretary Gage that Appraiser Wakeman be not removed.

Sunday, September 10.

—France quietly accepts the rendering of the verdict in the Dreyfus case. Great indignation over the verdict is expressed in Great Britain, Germany, and the United States.

—Admiral Dewey sails on board the *Olympia* from Gibraltar for New York.

—News from the Peary expedition is received at Newfoundland; all the party are well.

To Relieve Lassitude

Take Horsford's Acid Phosphate.

A few drops added to a half a glass of water, relieves the feeling of lassitude so common in mid-summer. A pleasant and wholesome tonic.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

The Finest Library in the World

Produced by the master minds of two continents, and accepted as the standard authority in Schools, Universities and Libraries

WE say the finest library in the world with a thorough knowledge of the work and the men who have made it. Here is a library that represents the grandest thoughts of the master minds of all ages. A library that has been produced by the foremost living authors of the world. It represents the combined efforts of men of letters such as ANDREW D. WHITE, WILLIAM DEAN HOWELLS, ANDREW LANG, DEAN FARRAR, HENRY JAMES, Prof. J. P. MAHAFFY, Hon. W. E. H. LECKY, Prof. EDWARD DOWDEN, Pres. DANIEL C. GILMAN, Hon. JOHN BIGELOW, Prof. J. B. MCMASTER, Dr. HENRY VAN DYKE, Hon. LESLIE STEPHEN, Dr. LYMAN ABBOTT, Col. T. W. HIGGINSON, Prof. RICHARD T. ELY, PAUL BOURGET, FERD. BRUNETIERE, JOHN BURROUGHS, Hon. CARL SCHURZ, PAUL LEICESTER FORD, LAWRENCE HUTTON, and over 200 others of notable literary prominence.

The monumental task of selecting, arranging and publishing in convenient form has been admirably done by CHARLES DUDLEY WARNER, as Editor-in-Chief, with the cooperation of HAMILTON WRIGHT MABIE and other able Associate Editors, assisted by the following advisory council from our leading institutions of learning:

Harvard University—Prof. CRAWFORD H. TOY, A.M., LL.D.

Yale University—Prof. THOMAS R. LOUNSBURY, LL.D., L.H.D.

Columbia University—Prof. WILLIAM M. SLOANE, Ph.D., L.H.D.

Columbia University—Prof. FRANKLIN MATTHEWS, A.M., LL.B.

Cornell University—Prof. WILLARD FISKE, A.M., Ph.D.

University of Michigan—President JAMES B. ANGELL, LL.D.

University of California—Prof. EDWARD S. HOLDEN, A.M., LL.D.

Catholic University of America—Prof. MAURICE F. EGAN, A.M., LL.D.

Tulane University—Prof. ALCEA FORTIER, LL.D.

University of the South—Prof. WILLIAM P. TRENT, M.A.

University of Chicago—Prof. PAUL SHOREY, Ph.D.

Bureau of Education, Washington, D.C.—WILLIAM T. HARRIS, LL.D., U.S. Commissioner of Education.

The Association makes this the first announcement of the NEW EDITION just completed. It contains hundreds of new illustrations and new features which greatly increase the value of the LIBRARY. Full particulars of this edition, the modest price, and extremely easy terms of payment which we can now offer LITERARY DIGEST readers will be sent promptly on application.

		Resigns.	

Notes by One of the Judges.

(a) This is the Bird defense, not often used, as it gives Black a cramped game.

(b) No need to hurry the castling. P-K 5 should now be played.

(c) If Black desires to drive the B, his better way is P-R 3.

(d) Loses a move; should have gone to K 2 at once. White fails to take advantage of the position.

(e) White is forced to make a defensive move, showing that Black has thus far outplayed him.

(f) An absurd move. B-Kt 4 is indicated. Followed by Kt-B 3, he frees his Q B and gets the better game.

(g) A very hazardous move.

(h) Evidently the best move for Black. B-R 5 is the move. If 13 B-R 5, P-Kt 3; 14 Q-Kt 4, Kt-B sq; 15 Q-Kt 3, and White has a powerful attack.

(i) Another lost and useless move. He needs his B on the K's side. He should play Kt-B 3. He refrains from getting his pieces into play, while Black is getting ready for an onslaught.

(j) Black had a stronger line of play: B-Kt 3, P-B 4; B-B 2, then Q-Q 3.

(k) What is the use of this move?

(l) Kt-K 5 is the move.

(m) Forced.

(n) Driving the B when he'll do most good.

(p) Black had a pretty thing here: 23... B x R P: 24 P x B, Q-B 4; 25 Kt-Kt sq, Q-K 4; 26 Kt-B 3, R x Kt.

Games from the London Tournament.

THE WINNING GAME.

"With this brilliant game Herr Lasker made sure of the first prize."—*The Field*, London.

Vienna Opening.

2 Kt-Q B 3	2 Kt-K B 3	18 R-K Kt sq	18 P-K Kt 4
3 P-B 4	3 P-Q 4	19 B x P (d)	19 P x B
4 P-Q 3	4 Kt-B 3	20 R x P	20 Q-K 3
5 B P x P	5 Q Kt x P	21 Q-Q 3	21 B-B 5
6 P-Q 4	6 Kt-Kt 3	22 Q R-K R sq	22 B x R
7 P x P	7 Kt x P	23 Kt x B	23 Q-B 3 ch
8 Kt x Kt	8 Q x Kt	24 B-B 3	24 B-B 4
9 Kt-B 3	9 B-K Kt 5	25 Kt x P	25 Q-K Kt 3
10 B-K 2	10 Castles.	26 Q-Kt 5	26 P-B 3
11 P-B 3	11 B-Q 3	27 Q-R 5	27 R-K 2
12 Castles	12 K-R-K sq (a)	28 R-R 5	28 B-Kt 5
13 P-K R 3	13 B-Q 2	29 R-K Kt 5	29 Q-B 7 ch
14 Kt-Kt 5	14 Kt-R 5	30 K-Kt 3	30 B x B
15 Kt-B 3	15 Kt x P	Resigns.	
16 K x Kt (b)	16 B x P ch		

Notes.

(a) Notice Black's development. Every piece is ready to strike.

(b) B-B 3 gives a fairly even game.

(c) If K x B, Black would mate in a few moves.

(d) He prefers to give the B for two P's than to be smothered by the Ps.

Concerning Black's 17th move, P-K B 3, Emil Kemeny says: "He could have played B x R, and, having three passed Pawns on the King's side, his game would have been the preferable one; but it is doubtful whether a win could have been enforced. The move selected is far superior and deserves, perhaps, more credit than the sacrifice of the Kt or of the Bishop, tho it is pretty certain that Black had this continuation in view when he played (15) Kt x P. The object in view is to prevent White from freeing his game by playing Kt-Kt 5, or eventually Kt-K 5, and also to prepare the advance of the K Kt P, which will prove disastrous to White."

Lasker doesn't often do anything as brilliant as this, beginning with his 15th move.

SCHLECHTER TRIES "BRILL" ON LASKER.

Giucco Piano.

SCHLECHTER.	LASKER.	SCHLECHTER.	LASKER.
White.	Black.	White.	Black.

2 Kt-Kt 3	2 Kt-B 3	14 Kt x Kt (d)	14 Q-B 3
3 B-B 4	3 B-B 4	15 K-R-K sq	15 Q-Q sq
4 P-B 3	4 Kt-B 3	16 Q x Q ch	16 R x Q
5 P-Q 4	5 P x P	17 R-K 2	17 P-K R 3
6 P x P	6 B-Kt 5 ch	18 Q-R K sq	18 P-B 3
7 Kt-B 3	7 Kt x P	19 R-K 8 ch	19 K-B 2
8 Castles (a)	8 B x Kt	20 Kt-R 7	20 R-B 2
9 P-Q 5 (b)	9 Kt-K 4	21 R-R 8	21 P-Kt 4
10 P x B	10 Kt x B	22 Q-R 8	22 B-Kt 2
11 Q-Q 4	11 P-K B 4 (c)	Resigns.	
12 B-Kt 5 (d)	12 Kt x B		

Notes from the Hereford Times.

(a) Mr. Steinitz invented this variation in the Giucco Piano opening, and Mr. Lasker has before now exposed its weak points.

(b) This is, however, quite new. It must be noted that in the state of the score Herr Schlechter was compelled to play for a win, and he therefore played desperately.

(c) A less astute adversary might have tried to save the piece, and perhaps have lost the game in the end. By giving back the piece Black remains with a Pawn ahead, and a safety game.

(d) The only move to maintain any attack. If 12 Q x Kt, Black would reply 12... Q-B 2.

(e) Now correct, as if 13 Kt x Kt ch, 14 P x Kt, and Black could no longer save the game.

(f) If 14 R-K sq ch, Kt-K 3; 15 P x Kt, P x P; and Black should win.

(g) The only move, and which proves that there was certainly some method in White's rashness. But the attack now collapses.

Chess-Nuts.

Rumor says that Lasker has agreed to play Janowski for \$2,000 a side and the Championship of the World.

Paris is to have the next great tournament. The Masters will make 1900 an epoch-making year in Chess history.

A correspondence match between twelve players representing Kings County, N. Y., and twelve of Cook County, Ill., known as the Brooklyn-Chicago match, has been finished after two years' play. Brooklyn won by the score of 6½ to 5½.

The Literary Digest

VOL. XIX., No. 13

NEW YORK, SEPTEMBER 23, 1899.

WHOLE NUMBER, 492

Published Weekly by

RUNK & WAONALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always** be given.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

PENSION COMMISSIONER EVANS AND THE GRAND ARMY.

AT the recent encampment of the Grand Army in Philadelphia of the Republic, an effort was made to place that organization on record as opposed to Commissioner Evans's administration of the Pension Office. For a year or more criticism of Mr. Evans has been rife in certain quarters. The case against the commissioner is stated by the *Philadelphia Press* (Rep.) as follows:

"The encampment objects to Order No. 225, issued June 9, 1893, by Pension Commissioner Lochren, with the approval of the then Secretary of the Interior, and asks for the restoration of Order No. 164, issued October 15, 1890. It is just as well to be entirely fair in this matter. Order No. 164 was revoked under President Harrison's administration by a decision promulgated January 7, 1893. Order No. 225 made no change whatever, excepting that it required pensions granted while Order No. 164 was in force to be revised and made to conform to the interpretation of the law under the Harrison administration. That work of revision was stopped when Commissioner Evans came into office. As far as possible he nullified Order No. 225.

"These 'orders' in the Pension Office are based on semi-judicial decisions. The law provides a method of determining disputed points under the pension laws. The final decision rests with the Secretary of the Interior. In accordance with that law a decision was given on January 7, 1893, which revoked Order No. 164, stating that it had been misconstrued in the Pension Office. In that decision the following statement was made:

"The Secretary of the Interior in approving Order No. 164 did not intend that small rates should be added together—as, for example, three or more rates of 2-18 in order to make a rate under the provisions of said act. A man may have two or more separate afflictions, either one of which, considered singly, entitles him to a 2-18 rate under the old law, and yet in the aggregate they may not disable him for the performance of manual labor to a much greater degree than either of them existing alone."

"That is the point of the dispute. The Grand Army committee

thinks that these separate rates for various disabilities should be added together and the applicant given a pension accordingly. That was what Commissioners Raum and Tanner did under Order No. 164. But Secretary Noble, under whom Order No. 164 was issued, declared, with the approval of President Harrison, that Order No. 164 had been misconstrued, and it was revoked. The Interior Department held that under the law of 1890 a pension could only be given when the applicant was unable to earn a support by manual labor. That has ever since been the method of determining whether or not a pension should be granted under that act."

The Press then goes on to defend the course of the present commissioner and the President.

"A decision given in the Bennett case under the Cleveland administration took the same ground as that in the Weike case under the Harrison administration. The misapprehension that some of the Grand Army men are under is that Commissioner Evans could overrule those decisions given by higher authority. He has no such power. Neither has President McKinley. He can no more overturn those decisions in the Interior Department than he could decisions in the regular courts. There is no officer under the Government that has such power. But if some case should come before the Interior Department, in deciding which the previous decision could be overturned, that would be the only way the result could be accomplished. The last decision would then rule, as in the case of a Supreme Court decision. But unless the Secretary had good law for the change he could not make it.

"The point which the Grand Army should remember is that President McKinley can not change these orders any more than can Commissioner Evans. It is a matter for congressional action. The Grand Army was wise in recognizing that fact, and in appointing an able committee to bring the matter to the attention of Congress."

Comment on the alleged grievance and the attitude of the encampment is along following lines:

Growth of the Rolls.—"There is, in fact, no respectable sentiment anywhere in the country against a liberal policy toward the men who suffered because of their war services, or toward their widows or their dependent children. To the extent that the claims of the applicants for pensions are well established, and they show themselves to be entitled to this consideration, the allowances are extended without demur, even with eager willingness. The taxpayers bear the tremendous burden of this budget without complaint so long as they are satisfied that the money is going to deserving persons within the scope of the pension laws.

"At the same time the people have reason to feel that in the lapse of years the point has been reached at which the pension roll should cease to grow, when it should even begin to dwindle, as death carries away the heroes of the sixties, and their widows, and as their dependent children reach years of maturity and become self-supporting. It is clearly impossible for the pension appropriation, which now reaches a total sufficient even to maintain a standing army of European size, to continue year after year to attain the same aggregate and even steadily to increase. . . .

"It is felt by many taxpayers, without abating in the slightest from their grateful generosity, that the best interests both of the nation at large and of the deserving pensioners demand that the appropriations now begin appreciably to diminish through the exercise of greater care and a wiser discrimination in the distribution of the pension money. This can be effected without depriving any veteran or his widow or children of any legal right or sentimental consideration to which they may be properly entitled. Thus an issue arises at this juncture between the deserving and undeserving claimant or pensioner. The former is best

protected in his enjoyment of the country's beneficence by the exclusion of the latter from the rolls. In the proportion that the unworthy ones are admitted to the bounty of the republic the patriotic patience of the people will be strained even toward the worthy ones."—*The Evening Star (Ind.)*, Washington.

Commissioner Entitled to Thanks.—"It is true that Commissioner Evans has refused many applications for pensions. If he had not done so he would have permitted the Treasury to be robbed of many millions of dollars. It is absolutely necessary that a close guard should be kept over the pension roll to prevent the perpetration of fraud, and the man who is faithful to his duty as pension commissioner must bring down upon his head the wrath of those whose wicked designs he thwarts.

"The most ferocious attacks upon Commissioner Evans have been made by the pension attorneys, whom he has prevented from defrauding both the Government and pensioners.

"There were on the records of the pension bureau when Mr. Evans came into office the names of over fifty thousand attorneys, or claim agents. To-day the number is 18,491. The other names were dropped for various reasons, many of them because of fraudulent practises. The amount paid to these claim agents last year, every cent of which came out of the pensions granted to veterans or their widows, or orphans, was \$476,961, as compared with \$702,000 the preceding year. In other words, the commissioner saved to the veterans last year \$253,039 by reducing to that extent the amount paid to the claim agents.

"There is every reason to believe that Commissioner Evans has made an honest and effective fight upon attempted and actual frauds in the Pension Office, and he is entitled to the thanks of the country for so doing."—*The Journal (Dem.)*, Atlanta.

The Turning-Point in Pensions.—"Thirty-four years after the close of the war the pension list contained the names of 991,515 beneficiaries. That there should have been such a number was in itself evidence of gross and palpable fraud. The annual pension payments have been enough to support the armies of any European power, altho the people of Europe are supposed to groan under the burden of militarism. There has been no groaning in this country. Occasionally there has been protest, but in the fear that some worthy applicant would be disappointed, a dozen unworthy have been permitted to draw unearned pay. Money has been paid to dead men, to those who never saw service, to bogus widows, and bearded orphans.

"At length there has come a turn in the tide. Last year it is true that 37,077 names were added to the roll, but more than this were dropped. The pension bureau has declined in instances to support widows who have remarried, and has given recognition to the fact that an orphan who has reared a family of his own may not with propriety draw on the Government for sustenance. Pension sharks have been detected, and the outcry of the Grand Army that the old soldier was not getting his due was found to have arisen from the circumstance that in many instances the 'old soldier' had never borne arms. There is not the slightest disposition to bar from the operation of the pension law any who deserve its aid. There never has been such disposition, but a lesson has been drawn from experience, and this opportunity for deception has been curtailed. It is shown by the record that of 16,077 applications for pensions due for injuries or death in the war with Spain, only 295 have yet been allowed."—*The Argonaut (Ind. Rep.)*, San Francisco.

Attribute of the New Commander.—"The new commander-in-chief, Col. Albert D. Shaw, is described as always having been in favor of liberal pensions. There is nothing that can fairly be said against Colonel Shaw on this score. We all of us believe in liberal pensions. The trouble has been with many leading members of the Grand Army, not that they believed in liberal pensions, but that they did not insist on their being awarded equitably. They went so far as to claim that all ex-soldiers should be pensioned whatever their physical or their financial condition, and it was small consequence if the bummers and the swindlers were accorded the same treatment that was bestowed upon the soldier with the fairest record. If the new commander is not one of these, so much the better for the Grand Army. The large majority of its members, we believe, would have him quite different."—*The Transcript (Rep.)*, Boston.

Consideration Necessary.—"The proposition to add \$60,000,000 to the pension burden ought not to be adopted without a few

moments' consideration. Our pension payments are already the object of the astonishment and contempt of all civilized nations—astonishment that we should be able to bear them without bankruptcy, contempt that we should be willing to bear so large a part of them for deserters, malingerers, tramps, and people who never served in the army at all. That the prodigality with which pensions have been given to the undeserving has made paupers of thousands is perfectly well known. We have a new crop of pensioners coming on, and the widows of those now on the roll will stretch out far beyond the crack of doom."—*The Courier-Journal (Dem.)*, Louisville.

"The late national encampment at Philadelphia did not censure Pension Commissioner Evans, as the shyster wing of the grand army of claim agents fully intended it should. That shame to the honest old soldiers was averted, anyhow. Indirectly the encampment advertised its discontent with certain features of his administration by asking President McKinley to revoke certain rulings (dating back, we are told, to President Harrison's time) and by arranging for an appeal to Congress if President McKinley says 'No.'

"The grievance of the attorneys is the gain of the old soldiers. They should have given Commissioner Evans a vote of approval and thanks."—*The Courant (Rep.)*, Hartford.

"It is not Commissioner Evans who stands condemned by the Grand Army. It is the Grand Army that stands self-condemned, throttled by sharpers when it should have accorded commendation to the commissioner, bullied when it should have fought manfully to protect a friend, fooled and led away by rapacious and loud-mouthed professional patriots when it should have resented the leadership that has prevailed upon the organization to sanction advice to the President and the Commissioner of Pensions that they can not act upon."—*The Times (Ind. Dem.)*, New York.

Since the encampment, Commissioner Evans has issued a statement denying the charges brought against him by former Commissioner Tanner, and accusing the latter of putting improper and insulting questions to applicants for pensions. These questions, says Mr. Evans, have not been asked during his own incumbency.

The Parcels-Post Treaty with Germany.—The parcels-post treaty just adopted with Germany is of especial interest as the first one arranged by the United States with any European government. The convention goes into effect on October 1, and by it is inaugurated a postal service under which articles of merchandise may be exchanged by mail between the two countries. No package may weigh more than eleven English pounds; its length may not exceed three feet and a half nor its circumference six feet and it must be so bound that its contents may be easily examined. No correspondence or written matter will be allowed inside. The postage in the United States is fixed at twelve cents a pound.

The daily and weekly press heartily commend the treaty. Says *Bradstreet's*:

"Parcels-post conventions have been arranged with several countries in Central and South America and the West India Islands. The negotiations with Germany were begun nearly a decade and a half ago, but were delayed for one reason or another until now. The signing of the convention with Germany is a source of much satisfaction to the authorities at Washington, and the same is doubtless true of official circles in Berlin. The importance of the agreement on its own basis merely will be very great, owing to the conditions affecting trade between the two countries. It will, of course, bring the two countries into closer trade relations than they have hitherto enjoyed. It will be of special service to American firms who do business through sending samples, and will thus, as well as by affording a handy and comparatively inexpensive means of expressage, greatly facilitate an already rapidly expanding trade. From another point of view, the negotiation of the treaty is hailed with the greatest gratification in official circles. It will aid in dissipating the idea

which has gained currency in some quarters that there is any feeling of unfriendliness between the two nations, and it will assist greatly in bringing about a state of affairs which will render the existence of even minor sources of friction a thing of the past."

CORNELIUS VANDERBILT.

It is generally admitted that the late Cornelius Vanderbilt (whose sudden death occurred last week) used wisely and helpfully the large fortune that he inherited and which by careful management he increased to a figure variously estimated all the

THE LATE CORNELIUS VANDERBILT.

way from \$100,000,000 to \$150,000,000. The following tribute from the *Hartford Courant* reflects the general tone of the press:

"He had a real sense of his duties and responsibilities. He did not give himself up to money-getting, nor to selfish enjoyment. He did not starve his mind and soul to fatten his bank account; he was never the Dives of the parable. He gave generously of his time and personal energy as well of his money to the affairs of his church and the public charities of his city. He was a benefactor to

education; whether Yale and Columbia have even yet received their last from that liberal hand will not be known until the will is opened. Best of all, he tried to brighten and widen the lives of the men working for wages on the Vanderbilt roads. If he had done nothing but that, it would still be certain that when he died he did not leave all his treasure behind him."

The *Philadelphia Ledger* thinks he will be remembered chiefly for his "courteous demeanor, his cleanly life, his honesty, and his true democracy." Commenting upon his "preeminence in the world of stocks and bonds," the *Baltimore Herald* says:

"Notwithstanding vast wealth, he was possessed of simple tastes and avoided ostentation. Unlike some other American millionaires, he did not hold this country in contempt."

The *New York Times* observes:

"It was very fortunate for Mr. Vanderbilt that he should not have grown up with the notion that he was to be a rich man, that he should have grown up with the notion that he had to earn his own living. For it is to this expectation and to the habits that are formed of it, that all the masculine virtues are due. Without this stimulus of necessity the majority of mankind would be pretty poor creatures. . . . Mr. Vanderbilt had this great advantage of 'bearing the yoke in his youth.' Possibly his character would have withstood the ordeal of a bringing-up as the heir apparent to many millions. At any rate, that ordeal was spared him. And at any rate, the resulting character was very fine. Until he was disabled by illness, no clerk, no brakeman, in his employ worked so hard as he. In his Newport palace there was a little plain office in which the master of millions wrestled with the cares he could not escape. No 'government' ever devised by men could have distributed his income with so conscientious and intelligent a care as he distributed it himself. His benevolence was not a matter of impulse, but of duty, and accordingly his great and numerous benefactions, made always after taking anxious counsel, 'are likely to last.' He has left behind him no more

conscientious business man, no rich man more conscious of his stewardship, no better American citizen. And he takes with him to the grave the sorrowful respect of all who knew him."

Cornelius Vanderbilt, the second child and eldest living son of the late William H. Vanderbilt, and grandson of "Commodore" Cornelius Vanderbilt, the founder of the family fortune, was born at New Dorp, S. I., November 27, 1843. His birthplace had been given to his father by his grandfather, at a time when the family was still in humble circumstances. After an academic education, at the age of eighteen, he entered the Shoe and Leather Bank of this city as a clerk. He then became connected with the banking house of Kissam Brothers. At the age of twenty-two, through the influence of his grandfather, the "Commodore," he was made assistant treasurer of the Harlem Railroad. He advanced to the position of vice-president of this road, and also of the New York Central. In 1883 he became chairman of the board of directors of the New York Central. Besides railroad matters, Mr. Vanderbilt was interested in religion, philanthropic art, and educational institutions and subjects. The range of his activities may be seen from a list of the business enterprises and benevolent projects with which he was connected at the time of his death.

He was then president of the Canada Southern Railway, vice-president and director of the Beach Creek Railroad, president of the Detroit and Bay City Railroad, director of the Cleveland, Cincinnati, Chicago and St. Louis Railroad, director of the Detroit and Chicago Railroad, director of the Dunkirk, Allegheny Valley and Pittsburg Railroad, director of the Hudson River Bridge Company, president of the Joliet and Northern Indiana Railroad, president of the Leamington and St. Clair Railroad, president of the New York and Harlem Railroad, president of the Niagara River Bridge Company, president of the Spuyten Duyvil and Port Morris Railroad, director of the Wagner Palace Car Company, director of the West Shore Railroad, director of the West Shore and Ontario Terminal Company, director of the Toledo, Canada Southern and Detroit Railway Company, director of the New York Central and Hudson River Railroad, and a dozen other affiliated railroads. He was a vestryman of St. Bartholomew's Church, a member of the finance committee of the Protestant Episcopal Board of Foreign Missions, a member of the executive committee of the International Young Men's Christian Association, vice-president of the local Young Men's Christian Association, a trustee of the Seamen's Mission of the Protestant Episcopal Church, a trustee of the Hospital for the Relief of the Ruptured and Crippled, a trustee of the General Theological Seminary of the Protestant Episcopal Church, a trustee of the Bible Society, a trustee and chairman of the executive committee of St. Luke's Hospital, a trustee of the Society of St. Johnsland, a trustee of the Cathedral of St. John the Divine, a director of the Improved Dwelling Association, vice-president of the Eye and Ear Infirmary, a director of the Home for Incurables, a director of the College of Physicians and Surgeons, and a director of the Sloane Maternity Hospital. He was a trustee and chairman of the executive committee of the Metropolitan Museum of Art, a trustee of the Museum of Natural History, and a trustee of Columbia College.

SULU SLAVERY AND THE CONSTITUTION.

MANY papers which favor expansion and uphold the general policy of the Administration in the Philippines do not sanction the arrangement made with the Sultan of the Sulu Islands, by which he is given an annuity, and by which polygamy and slavery are permitted in his dominions in return for his allegiance. According to the despatches, our treaty with the Sultan provides that any slave in the archipelago may purchase his freedom by paying his owner \$20, and some papers think that in this way slavery will soon come to an end; but the despatches do not tell us what facilities the Sulu slaves have for obtaining the necessary \$20. Many papers reprint, in connection with the provi-

sions of the treaty, the Thirteenth Amendment to the Constitution of the United States, which reads:

Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

An interesting feature of the situation, in view of the treaty's toleration of slavery, is the praise accorded to it by some of the Republican papers of the North, and the opposition of the Southern Democratic papers. The New York *Tribune* (Rep.) says that the news of the treaty "is to be received with sincere satisfaction," and that the agreement "is of the happiest omen for the future government of that important part of the archipelago." The New York *Commercial Advertiser* (Rep.) calls it "an exceedingly wise and practical arrangement." The New Orleans *Picayune* (Dem.) denounces it as an "astonishing anomaly," and says that, if actually concluded, the "Constitution of the United States will have to be changed to meet the new conditions." The *State*, of Columbia, S. C. (Dem.), calls it "comic opera."

An editorial which has been widely commented upon appears in *The Yale Review* (August). President Hadley is one of the editors of *The Review*, and, tho he denies the authorship of the editorial in question, he does not disclaim agreement with the sentiments expressed. The editorial declares that "despite the mists of cant that have been studiously thrown about our position," it is becoming clearer to an increasing number of people that "we have undertaken just what Spain had on her hands in Cuba—the reduction of an unwilling people to subjection"; and that the thing for the United States to do is to "turn back on conquest" and offer the Filipinos "self-government and protection against foreign aggression." It then refers to the inconsistency in recognizing the local autonomy of the Sultan of Sulu, and in refusing to recognize the local autonomy of the Filipinos in the northern islands:

"If we are to rule the Sulu archipelago through the Sultan, why not rule Luzon through Aguinaldo? His abilities have been amply tested. In this matter we find both example and warning in the experience of England and Holland with Malay dependencies. England in the Malay peninsula has had a problem somewhat similar to ours, but by a policy of conciliation and concession to native feelings she has ruled through the native princes for twenty-five years four protected states. There has been only one brief outbreak, and that was at the beginning. On the other hand, we learn something of the heartbreaking weariness of conquering Malays and of making them stay conquered, from the contest of the Dutch in Achin in Sumatra. The Dutch undertook to conquer and annex the Achinese in 1873. Achin is less than half the size of the single island of Luzon, and its population is about one quarter of that of the Tagals alone. After four years a temporary pacification was secured; 60,000 Dutch soldiers had perished in the field and hospitals, and \$80,000,000 had been expended. But that was not the end. In 1881 the Achinese broke out again, and ever since there has been a wasting and desultory warfare. If such has been the experience of an old colonizing power familiar with the East for three centuries, why should we as novices be more successful in the same course of conquest? Our own ideals, humanity, the experience of other powers, and the lesson of the last months all unite to enjoin upon us to forsake our present course and to make a fair trial of the policy of conciliation and sympathy."

The Omaha *World-Herald*, in an editorial which has some of the ear-marks of Mr. Bryan's pen, calls the treaty infamous, and proceeds as follows:

A Compromise with Dishonor.—Under the protecting folds of the American flag the slave trade will flourish in Sulu. The sanctity of home and family is violated; the wife is sold from her husband, the child from its mother's arms. The lash of the slave-driver falls on the quivering back of the cowering human chattel in Sulu; falls with the sanction of President McKinley, under the permission granted in the treaty negotiated by General Bates, his military representative. The slave's one recourse, on soil shadowed by the Stars and Stripes, is to purchase his freedom at the market price.

"Polygamy and concubinage is the law of the land in Sulu—a law ratified, permitted, and indorsed by President McKinley's Administration through the treaty with the Sultan. The sacred names of wife and mother are stripped of every ennobling quality and made synonymous for shame, with the knowledge and consent of the Government at Washington, in the islands over which the debauched Sultan of Sulu administers American law, and is paid therefore \$500 a month by the grace of William McKinley.

"The American people, through their authorized representatives, have weakly and shamelessly compromised with dishonor. Vice and lechery, wrong-doing and crime are legalized that the American flag might wave undisturbed over the harem of the Sultan and the slave pens of his plantations.

"What now will high-minded Christian men and women think, who indorsed forcible annexation that 'Christianity and civilization might follow in the wake of the flag'? What will ministers of the gospel of 'peace on earth, good will to men' say to this all-conclusive proof that the present administration makes war not to civilize, not to Christianize, but simply and solely to possess? What will American citizens who are proud of their heritage of lofty ideas and principles of freedom and equality say to this shameful abandonment of the teachings for which the blood of American manhood has flowed in rivers to the sea? What possible excuse can be offered for the consummation of this liaison with Moslem morals and pirates' ethics? This is not a question that will admit of any talk of 'expediency.' No possible theory of 'expediency' can explain the necessity of virtue embracing vice, of the incorporation of a foul and deadly cancer into a healthy political organism. If slavery is wrong in America it is wrong in Sulu. If it was not to be permitted beneath the Stars and Bars, neither may it be fostered under the Stars and Stripes.

There is no geography in right and wrong. The ethics of God are eternal and all-embracing. To do or permit evil under the specious plea that good may follow is the criminal sophism of all the ages. From it have sprung the wars and persecutions, the crimes and follies that have darkened the history of church and state. As surely as from

good comes good, so from evil comes evil."

Following are other representative comments from different sections of the country.

THE WAR BIRD ABOUT TO GET BUSY.

THE WAR EAGLE: "I guess this is my job, here in the Philippines, Dovy. You had better fly along home for a spell."

BE CAREFUL, WILLIAM, THAT TREE IS ABOUT TO BREAK.

—The World, New York.

The Treaty Illegal?—"If the Sulu Islands are subject to the jurisdiction of the United States, then slavery can not exist there for one moment legally. The Constitution specifically applies the prohibition of slavery, not simply to states nor to territories

GRIN AND BEAR IT, UNCLE; HE COST \$20,000,000, YOU KNOW.

—The World, New York.

as such, but to all places subject to the jurisdiction of the United States. Hence the treaty negotiated by General Bates, even if it were adopted at Washington, and even if Congress were to pass a law legalizing slavery in the Sulu Islands, would still be illegal, because no law and no treaty can be recognized by the American courts in defiance of the Constitution.

"The reasons for this statement are almost self-evident. As regards slavery no treaty made by the United States and no law passed by the United States Government can be regarded as having any force at all so long as it is in direct conflict with any specific provision of the Constitution. The Thirteenth Amendment to the Constitution declares specifically that 'neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.'

"As regards polygamy, the treaty is also worthless unless Congress sees fit to amend or to repeal the Edmunds law, which prohibits polygamy within the territory of the United States. The Supreme Court has already decided that a law of Congress is higher than any treaty. Hence no treaty adopted without the consent and legislative action of the House of Representatives can be operative to annul or to suspend the effect of the Edmunds law. The treaty with the Sultan of Sulu, then, so far as regards upholding slavery and polygamy, does not bind the United States in any constitutional or legal way."—*The Advertiser (Rep.)*, Boston.

The course of the Administration in concluding the treaty is defended and approved by a number of journals in a line of reasoning of which the following from the Columbus (Ohio) *Evening Dispatch* (Ind.) is representative:

Congress will Do What is Right.—"The terms of the treaty agreement, negotiated by General Bates and the Sultan of Sulu, as reported in the press despatches, have evoked some criticism, because of the apparent recognition of the institution of slavery as it exists in those islands. The essential paragraphs of the agreement, as stated, are as follows:

"The sovereignty of the United States over the entire archipelago is acknowledged."

"Any slave in the archipelago is given the right to purchase his freedom by paying the owner the sum of \$50."

"Over against these provisions, the critics place this section from Article XIII. of the Constitution:

"Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction."

"With this they feel that they have made a strong case against the treaty by which the Sultan of Sulu accepts the sovereignty of the United States. But are they not hypocritical? Are they not, on the fragmentary evidence that they have at hand, straining a point to find fault with the Administration? The conditions that are found in the Philippines are not such as prevail in the United States. The difficulty of dealing with them is apparent from a moment's consideration of the centuries of Spanish domination and the fighting that has followed the assertion of the sovereignty of this nation. The transformation from savagery and semi-savagery to civilized manhood is not to be accomplished in the twinkling of an eye. Those people can not be one thing one day and its diametrically opposite the next. Even in the American flag and the American name there is no such miraculous power as that. The transformation could not be effected except by the exertion of such physical force as would annihilate the natives."

"The essential thing now is the establishment and the general recognition of American sovereignty. The rest will in due time take care of itself. It is to be noticed that the treaty which recognizes the existence of slavery in the Sulu Islands also provides one way for its extermination. The trend of events is in the right direction from the very outset. Other means may be found by Congress, for to that body is given the constitutional power to enforce the prohibition of slavery quoted above."

"Slavery can not endure under the flag. It will be exterminated, and the determination to that end will be none the less strong, if common sense is employed in the reform."

Like Comic Opera.—"In truth, nothing more bizarre than our Sulu policy was ever put into comic opera. We buy the islands from Spain and then proceed to negotiate with a local sovereign

for the right to style them ours, paying him an annuity for the privilege. We are a democratic republic, yet we seek to embrace a despotic sultan as a fellow citizen, a subject, a pensioner, and a coequal sovereign, all rolled into one. We cheerfully accord him absolute power over the lives, liberty, and property of a couple of hundred thousand newly created 'wards of the nation,' while in neighboring islands we endeavor to suppress with shot and shell the attempt of other 'wards of the nation' to govern themselves under republican forms and laws; for we can not trust Aguinaldo with any power, but we can trust a Mohammedan emperor with all powers. We refused for many years the right of self-government to one of our own territories because it permitted polygamy, and made it change its religious creed in that respect and outlaw the practise of plural marriage before we allowed it to enter the Union; yet we seek to assimilate the Mohammedan polygamists of the Sulus with all their practises unrestricted. We professed it a duty we owed to Christianity to subjugate the Catholic Tagals of Luzon in order that we might convert them to our ideas of religion; but we make a treaty with the Sultan of Sulu excluding from his island any American missionaries who may want to go there and convert the Mohammedan inhabitants thereof. We make it a boast—the 'dominant element' among us, at least—that we fought each other for four years, sacrificing hundreds of thousands of lives and billions of property, in order that 'the reproach of slavery' might be removed from our territory; but we recognize slavery in our Sulu territory and protect it.

"The one thing we insist upon is that the flag of the Sultan of Sulu, which is probably a bandana handkerchief, shall be decorously folded away, and that over this curious combination of imperialism, Mohammedanism, polygamy, and slavery there shall float the flag which our amiable President regards as a porous plaster for all public and private ills. It is all very funny."—*The State (Dem.)*, Columbia, S. C.

MR. BRYAN'S REMEDY FOR THE TRUST EVIL.

MR. BRYAN has a new cure for the "trust" evil. It is, in brief, the enactment by Congress of a law compelling every corporation doing business in a State other than that in which it is incorporated to operate under a federal license. In an interview at Tifton, Mo., a few days ago, he explained his ideas as follows:

"There is no question that we can control the trusts if we want to. Now, as to the plan I have suggested, the licensing of trusts, the idea is that the Government should say that no corporation should do business in any State in which it was not incorporated, except under the license issued by the federal authorities. This license should be posted in the trust's plant in a conspicuous place and kept there, and there should be a penalty of penitentiary sentence for one to do business with a corporation not having such a license, or for a corporation to run in any State save the one where it is incorporated, without this license."

"The license should be issued under such restrictions as would make monopoly impossible. Organizations should be prohibited from watering their stock; the capital should be limited, and they should be compelled to file statements of earnings, expenses, profits, etc., as a railroad does. It would be such an easy matter then to regulate the capitalization and business that monopolization would be impossible."

"The States can not handle this. We must strike at the root of the thing and make a monopoly of anything an impossibility. The federal Government must take up the question and bring it to a successful culmination."

Mr. Bryan was a delegate to the trust conference which met last week at Chicago (September 12-16), and he presented this plan to the conference. Following are representative comments on the proposition:

Will Not Meet the Case.—"This proposition involves many interferences with the business of corporations chartered by the States, and all have in view a purpose to prevent such corporations from becoming monopolies. 'The capital should be lim-

ited,' says Mr. Bryan. He probably would find that the Supreme Court would hold that such limitation would be unconstitutional. At all events, he would encounter the objection of the whole business community, because it is generally recognized that the present success of American manufacturing is due in no small degree to the liberty of manufacturers to expand their establishments indefinitely. If the capital of corporations is to be limited, moreover, where would the dividing line be drawn?

"Purely repressive action such as is suggested by Mr. Bryan will not meet the case. It will not be found advisable to say that such a thing as a monopoly shall not exist. If the Constitution should be amended so as to permit the things Mr. Bryan aims at, a very different program for the regulation of trusts would suggest itself to wise statesmanship. Returns to the Government, rules as to capitalization, and some plan for taxation might be required, but freedom to increase a business to an unlimited extent would not be sacrificed. That would imply a halt in the country's economic progress.

"Mr. Bryan says we must make a monopoly of anything an impossibility, but will he have the courage of his logic and say that labor organizations should not be permitted to exist for the purpose of controlling the workmen in different trades? . . . Would Mr. Bryan also assume a censorship over trades-unions and require them to take out license certificates alleging that they are not seeking to monopolize the labor market?"—*The Express (Ind. Rep.)*, Buffalo.

Hardly Definite Enough.—"The idea is hardly definite enough to warrant or permit detailed examination. If it implies that the licensing is to be the exclusive privilege of Congress, the question arises whether the States will care to relinquish their present important right of prescribing the conditions upon which foreign corporations may do business within their jurisdiction. Some States may not trust Congress to provide restrictions drastic enough. Texas and Missouri, for example, will scarcely be satisfied with the requirements likely to be imposed by Congress. On the other hand, certain progressive States may be more liberal than Congress itself, and prefer the wholesome and natural restraints of supply and demand to legislative interference with trade and commerce.

"Still, Mr. Bryan is to be congratulated on having abandoned shallow commonplaces and sweeping abuse for a positive idea that at least invites consideration."—*The Evening Post (Ind. Rep.)*, Chicago.

Of Doubtful Constitutionality.—"We must admit that we do not see exactly how the consumer or the laboring man would be benefited by such an arrangement. He would have to pay the tax himself in the increased cost of the article which he bought, for even Mr. Bryan must know that the tax is one element in the cost of production.

"However this may be, the constitutionality of the remedy is doubtful. Congress, it is true, has power to regulate commerce between the States; but the exercise of this power must be uniform throughout the country. The Constitution protects the States not only against the favoritism of Congress, but against unjust and discriminating laws passed by themselves. No tax may be levied on articles exported from any State. It would seem as if the license which Mr. Bryan proposes would be in its essence such a tax on the product of the trust sold in the State in which it is not made. Whether this is so or not will appear in the course of the further examination of the trust problem by lawyers and judges."—*The Daily Eagle (Dem.)*, Brooklyn.

Features of Practical Efficiency.—"Col. William J. Bryan's remedy for the trust evil has at least the merit of novelty, and presents certain features of practical efficiency. His suggestion is that Congress shall make use of its constitutional authority in the regulation of interstate commerce by requiring all trusts to take out a United States license before engaging in business outside the State in which they have a corporate existence.

"Why should not this be done? It seems clearly to lie within the prerogatives of the federal Government to exact such a condition, and, following out Colonel Bryan's suggestion, the issue of a license for interstate operation of a trust may be made to depend upon the faithful report, by the licensed monopoly, of its capital stock, its earnings, the amount of 'water' in its capitalization, the ratio of its dividends to money actually invested, and other things which the public desires to know.

"The existing anti-trust laws of the United States statute-book are impotent in practise. It may be the fault of those who are charged with the execution of the law, or it may be the fault of the laws themselves. The fact itself is notoriously apparent. Why should not an experiment be made with the suggestion of Colonel Bryan, which is quite in line with the regulations established by the Commonwealth of Massachusetts for the protection of its citizens, but which is a novelty in the broader field of federal legislation?"—*The Post (Dem.)*, Boston.

THE BANKERS AND THE GOLD STANDARD.

THE American Bankers' Association held its annual session in Cleveland September 5-7. Reports of officers showed that the organization comprises 3,915 members, representing banks with a combined capital, surplus, and undivided profits of \$1,230,192,191, and aggregate deposits of \$4,501,367,328. The feature of the convention attracting most general interest was the adoption of the following resolution:

"The bankers of the United States most earnestly recommend that the Congress of the United States at its next session enact a law to more firmly and unequivocally establish the gold standard in this country by providing that the gold dollar, which under the law is the unit of value, shall be the standard and measure of all values in the United States; that all the obligations of the Government and all paper money, including the circulating notes of national banks, shall be redeemed in gold coin, and that the legal-tender notes of the United States when paid into the Treasury shall not be reissued except upon the deposit of an equivalent amount in gold coin."

This declaration is received with approval by the Republican papers generally and those Democratic journals which have all along favored the gold standard. The *Chicago Times-Herald* (Rep.) says the convention did what the "sensible men of the country expected it to do." The *Minneapolis Tribune* (Rep.) calls the resolution "comprehensive, clear, and sound." "It reflects the sentiment and desire of the whole business world," says the *New York Mail and Express* (Rep.). "This pronounced position," says the *New York Evening Post* (Ind. Dem.), "is important and encouraging." The *Louisville Courier-Journal* (Dem.) approves the resolution, but regards it as superfluous, as we "already have the gold standard." A similar position is taken by the *New York Sun*, which is for gold, but which insists that Congress can not settle the question any more than it has already done. "It is the right attitude," says the *Pittsburg Dispatch* (Rep.), referring to the resolution, and "it places the association upon solid political and financial grounds." "That is just the trouble," observes the *Kansas City Times* (Dem.), which continues as follows:

"The American Bankers' Association is now a political organization, and it goes without saying that at the proper time it will be found cooperating with the Republican Party. It declares unequivocally for the gold standard, and it will bring all the power of its influence as an organization and as individual banks upon Congress to enact a law making gold, and only gold, the standard and measure of value. This is the first time in the history of the association that it has identified itself with politics. Hitherto it has carefully avoided even the appearance of leaning toward any political party, but now it publicly announces that it will undertake to influence national legislation. To establish the gold standard there will have to be a willing Congress, which, if the present Congress is not, will oblige the association to participate in the nomination and election of candidates for Congress until the necessary majority is secured."

OBSERVER (Old Mars): "I wonder what those new lines on the surface of our sister planet can be. They don't look as if they were canals." Observer No. 2: "Perhaps they are merely boundary lines. The trusts may have agreed upon an amicable division of the earth."—*Chicago Tribune*.

DEATH OF EX-MINISTER EUSTIS.

JAMES B. EUSTIS, formerly United States Senator from Louisiana, and later American Minister to France, died last week at Newport, of pneumonia, at the age of sixty-five. Mr. Eustis's qualities and place in American history are summed up by the *Springfield Republican* as follows:

THE LATE JAMES B. EUSTIS.

"He was a very thorough lawyer, an eminent member of the Louisiana bar, a Confederate soldier, a member of both branches of the Louisiana legislature and Senator from that State for eight years. There is a particular interest in him in this region because he was a grand-nephew of William Eustis, surgeon in the Revolutionary army, Secretary of War from 1807 to 1813, Minister to Holland, Congressman and governor of Massachusetts from 1823,

when he was seventy years old, until his death in office, two years later. Thus this Louisianian, who has been repeatedly described as of an 'old creole family,' was on the contrary a man of New England ancestry and antecedents, for his father, George Eustis, was born in Boston, Mass., and was graduated at Harvard in 1815, removing to New Orleans two years later. There George Eustis became a very important personage. James Biddle Eustis was born in New Orleans August 27, 1824, and was graduated from Harvard law school in 1854, tho his classical education was received elsewhere. He entered the Confederate service at the beginning of the Rebellion, and served as judge advocate on the staffs of General Magruder and Joseph E. Johnston. Besides holding the offices which have been mentioned, he was one of the committee sent to Washington to confer with President Johnston concerning Louisiana affairs in reconstruction times. His first term in the Senate of the United States was brief, owing to the extraordinary condition of political affairs in Louisiana, which had deprived of his seat P. B. S. Pinchback, the negro elected in 1873 in the last election conducted in that State in which the negro vote was given a show. Eustis was elected in 1876 to fill a vacancy which the Republicans declared did not exist, and he did not take his seat until late in 1877. He served until 1879, and after some years of service as professor of civil law in the University of Louisiana, he was elected to the United States Senate for six years. On the expiration of this service he resumed his professorship in the State university. President Cleveland appointed him Minister to France at the beginning of his second administration, when he succeeded Thomas Jefferson Coolidge of Boston."

country Commissioner Peck reports no withdrawals. Trade circles in Belgium are urging the government officially to withdraw, and a similar feeling has been manifested in Austria and Italy.

There is said to be a movement on foot in the United States to induce Congress to sever this nation's connection with the Exposition, and the name of the representative who will introduce the resolution is given. The *Washington Evening Times* is vigorously pushing this project. Referring to a meeting in that city that took action in favor of the boycott, it says:

"Within the next ten days similar gatherings will be reported from every important city in the Union, and by the time Congress meets in December there will be few Representatives uninstructed by their constituencies as to what they must do to prevent national participation in the French fair. The American people are thoroughly aroused. They will angrily resent any action on the part of the Executive calculated to defeat the boycott."

The *Baltimore American*, referring to an appeal by Max O'Rell to the British to suppress their exhibitions of enmity to France, thinks the world-wide rebuke of France is "gratifying," and says: "The universal denunciation of their [the French General Staff's] conduct, and the numerous threats to boycott the Exposition, have startled them out of their complacency, and the good work should be kept up. Pressure is the only thing that can influence such men."

The *Salt Lake Herald* thinks the boycott the "most effective remonstrance" to "bring France to a sense of her infamy." The *Baltimore Herald* thinks that unless something is done to stay the tide "the material success of the Exposition will be seriously diminished."

In the main, however, the American journals do not encourage the boycott either through congressional or individual action. The *Richmond Times* thinks that the proposed congressional action "is not to be seriously considered." The *New York Herald* thinks a boycott would be "more than a mistake; it would be a gross injustice." The *Boston Daily Advertiser* refers to a boycott resolution adopted without a dissenting vote by the Boston school committee, and advises the committee against the mistake of using this kind of a weapon. The *Brooklyn Times*

MAZEPPA!—The Inquirer, Philadelphia.

calls the boycott a suggestion of "crude minds." Archbishop Ireland and Goldwin Smith are among those who have published protests against the boycott, the former calling it "puerile," and the latter refers sarcastically to our lynchings, and asks: "Suppose Dreyfus had been a black man!"

BOYCOTT OF THE PARIS EXPOSITION.

RESENTMENT for the reconviction of Dreyfus has taken the form of an attempt in many countries to organize a boycott of next year's Exposition in Paris. In England the movement is especially strong, many public meetings having been held to forward it. According to the secretary of the Royal Commission, fifteen "important houses" had up to last Sunday withdrawn from participation—fifteen out of two thousand that make up the British and colonial exhibit. In Germany, the Imperial Commissioner reports but one withdrawal up to the same date. In this

LETTERS AND ART.

EDOUARD ROD ON AMERICAN UNIVERSITIES.

THE two American characteristics which most impressed M. Rod, the eminent French critic, during his recent visit to this country were the national taste, and the respect for traditions. Having few or no traditions of their own as yet, Americans seek to create or borrow them, he remarks; and in this work the universities constitute the most important mechanism for connecting the European culture of the past with the new civilization of the West. He says (in *The North American Review*, September):

"It seems to me, however, that the American universities have not only an American physiognomy, but that each has its own peculiar character; each seeks its ends by means of its own choice. Strolling through the beautiful avenues of Cambridge, for example, I thought of the peaceful retreat which certain small towns of Germany offer to science, where the student is far from the turmoil of the world, where the university buildings never fail to recall to the memory the '*templa serena*' of the poet. In New York and Chicago, on the contrary, the universities, altho isolated as far as possible, are hardly more than episodes, if I may say so, of the maelstrom of life that carries them along with it. Am I mistaken? Yet I imagine that the young men who are preparing themselves there for the work of life will become, almost of necessity, men of action, fighters; while others, who are brought up in quiet centers already possessing some consecration of age, will retain in their inmost nature the taste for more deliberate reflection, in which they will love to take refuge sometimes as in a sanctuary."

M. Rod was much impressed by the practical and professional features which exist at Cornell side by side and on equal terms with the study of the sciences and humanities. The innovation of a continuous academic session at the University of Chicago also appeared to him worthy of notice by older institutions. But it is the perfection of the material equipment of American universities that seemed to him most astonishing:

"We have no idea whatever of such conveniences. We content ourselves with old buildings which have sometimes stood for several centuries, and which are restored and retouched, as well as may be, from time to time to adapt them, as far as possible, to the needs of the moment. When hygiene discovers that the air must be renewed, windows are put in the walls. They are built higher and flanked with wings and additions, when an increase in the number of students requires. We wait until they burn down before building new ones; but they do not burn down, for they are solid. They leave much to be desired. We love them, however; for, if they no longer answer present requirements, they have made us what we are. Their walls crumble, their floors are worn, and in their halls we breathe the odor of ancient things; but this odor is dear to us; we love to breathe the past which it represents, the bygone days which it has preserved. And we think, not without pride, of all the glory which has been gathered there, of the illustrious teachers who have taught in those chairs, of the great men who have sat on those age-worn benches. That is no reason, however, for not marveling at the modern equipments, so admirable in their completeness, which may be seen at New York, at Chicago, at Philadelphia, and even in universities of less importance. There is not a single detail that is not perfect. After a visit to them, one seeks—even with some spirit of opposition—for something to criticize, and one finds nothing. It is too good; we have to look elsewhere if we must find fault."

Contrary perhaps to the impression which prevails among some people in America, M. Rod thinks he has found this fault in the fact that American universities require too much of their overworked professors. He does not make the assertion, however, that the American student is overworked:

"I liked greatly the little I saw of student life. The students with whom I had the opportunity to talk familiarly delighted me

with their frankness, their good will, their mixture of precocious maturity and juvenile qualities, of brightness and seriousness.

"It is very delightful to see these vigorous, healthy, robust young men devoting sufficient time to hygiene and thus avoiding the evils of overwork. Indeed, overwork must be an empty word here, judging by the leisure they have and the very intelligent way in which they employ it. Representations of plays—ancient and modern, French, English, German, or Greek—games of cricket, baseball, football, athletic exercises, clubs of all sorts furnish activity enough to fill all the hours of the day, all the days of the term, and all the terms of their course.

"But when do you find time to work?" I asked one of them.

"He answered: 'Sometimes.'"

"As a matter of fact, their work is done, and, I have a thousand reasons to believe, well done. Their very pleasures are of service to them."

THE GENIUS OF GOETHE.

THE sesquicentennial celebration of Goethe's birth was celebrated on August 28 throughout Germany with a pomp and magnificence seldom or never accorded to any but a military hero. Weimar and Frankfurt were of course the centers of the festivities. A recent writer thus describes the little capital of the German principality:

"Decadent capital as it is in the eyes of the mere student of politics, to the student of literature Weimar is hallowed for all

GOETHE.

After the painting by Joseph Stieler, 1828.

time as the shrine of a demigod. Yet it seems hardly aware of its own distinction. Down in a hollow of the rolling hills around it, Weimar appears to withdraw itself from the inquisitive eye. One finds a fringe of suburbs, where the stucco fronts, now so common in German domestic architecture, play a principal part, but the heart of the town is as yet lightly touched by modern inroads. Alleys guiltless of sidewalks still loiter among the leading streets; the traveling-booth is seen in the public square; the taverns, consequential, possibly, in their day, have degenerated into respectable mediocrity. But Weimar is merely faithful to itself and to its early unspotted simplicity of life. The ghosts and the traditions of the past continue all powerful. The central point of interest is, of course, the Goethe house, now transformed into a museum for the preservation and exhibition of Goethe's cabinets of natural history and rich art collections, which possess not only a personal but a scientific interest."

The London *Spectator* (August 26) speaks of Goethe as "the

great modern poet, the Welt-kind," who said that he did not know what patriotism was, and congratulated himself on its absence from his mind, since it obscured a true view of the world, and turned from its true aims the human culture which was more precious to Goethe and which he thought more essential to human progress than all the politics of the earth. Says the writer :

"The intellect of Goethe was one of the loftiest ever known to man. It is not, we think, a typically German intellect, for the German mind tends to concentrate itself on some one definite problem, and to explore that problem in all its ramifications. But Goethe surveyed the world as a whole; he saw life steadily, like the old Greek poet; nothing escaped those glorious eyes. He reminds one rather at times of those many-sided Italians of supreme genius in that he passes from world to world in the universe of human knowledge with the ease of a master. Yet his was not a superficial glance. He himself said that everything he had achieved had cost him infinite pain and sorrow, the few traces of it were visible on that noble face. We think of him as a kind of bright Olympian, the recipient of fairy gifts, the child of fortune; some writers even ascribe to him a sort of selfish indifference and picture him sitting apart, as in Tennyson's 'Palace of Art,' holding no form of creed, but contemplating all. But the poet usually justifies his own way of existence, and the inner life of renunciation and intellectual conflict may be as heroic as the seemingly splendid career of the orator and the statesman who claims the willing homage of millions. It is again, we say, a question of which kind of influence is more potent for good in a nation's life. German national consciousness has hitherto found its expression in the slighter but more patriotic Schiller rather than in the greater man who, when Germany was at death-grips with Napoleon, stood aside from the struggle and even expressed admiration for the nation's mighty foe.

"No serious student of Goethe's life will assume that because he did not work in an obviously patriotic temper, because he did not compose martial poetry like Körner, or urge young students to the field of battle like Fichte, therefore Goethe did not care for the great land that had given him birth. He was the last man to undervalue the importance of the influence of soil, of *milieu*, on the writer and the artist, as witness his luminous criticism of Burns and of Scott. That he did not care for Germany is disproved by countless conversations with Eckermann. One recalls, for instance, his longing that Germany might find or develop as free and adequate expression for her culture and literature as France. It is impossible to charge such a writer and teacher with indifference to his country. Were the charge true, Frankfurt would be justified, no doubt, in celebrating to-day the birth of so wonderful a person, but it would be as a mysterious human product rather than as a great German poet that the old imperial city would give expression to her feelings of admiration."

The Saturday Review (September 2) says :

"The claims of Goethe are not put so high now as Carlyle would have put them. The younger generation may delight in the tableaux of 'Faust,' in its diabolic wit, humor, and cynicism, in its beautiful and pathetic songs, but it asks in doubtfulness, where is the wonderful philosophy which was once supposed to unveil the mysteries of earth and heaven and in the mind of man? We are, perhaps, too much inclined to think, after further experience of the German language, that some of Goethe's prestige in the minds of his original admirers arose from their pride at being able to read him at all. Now that we have got over our reverence for the language in which he wrote and come to recognize it as one of the greatest obstacles to the idea of cosmopolitanism in literature cherished by Goethe that man ever invented, we are, it may be, a little too much inclined to suspect that Goethe's philosophy takes us no further than any other into the heart of things. Margaret is the creation that still lives and by which we are moved. Faust himself is not interesting; and Mephistopheles, the new model of the old devil, tho very clever, is no longer impressive. Ordinary men may well doubt whether, on the whole, German is worth the extreme fatigue of learning, except to read the lyrics and ballads of Goethe, Schiller, and Heine. If we except 'Faust' none of the German dramas are of the greatest, and outside the poetical and the higher imaginative literature, which is not very extensive, we could do very well

with translations. The fact seems to be that the small group of distinguished contemporaries of Goethe who are rightly the pride of Germany were greater men than they were authors; and this is above all true of Goethe. It is as true as it has become commonplace to say that his was one of the finest intellects that has appeared in the world. From his beautiful youth to his magnificent old age he took captive the imagination of Europe. And it

GOETHE.

Bust by Rauch, 1820.

was a peculiarly sensitive Europe tho of the eighteenth century, as witness the effects on it of *Héloïse*, *Clarissa*, and *Werther*. We must judge of Goethe as we do of Rousseau and Richardson, not by their present but by their past influence upon thought and literature.

"It is natural that Goethe's influence should have particularly acted upon England and again reacted from England back upon Germany. England became acquainted with Goethe through a translation by Scott of Goethe's first book, '*Götz von Berlichingen*,' and Goethe welcomed the genius whom he himself had stimulated and caused his fame to spread in Germany. Under the same auspices, too, Byron made his début in Germany and was proclaimed as 'the greatest product of modern times.' That is hardly our present judgment; and if in Goethe's case we are not quite sure that his fame is established securely above the vicissitudes of opinion, we must remember that even Dante and Shakespeare have had their periods of eclipse."

The Academy and other papers quote the well-known lines of Matthew Arnold on Goethe, which seem to sum up with remarkable penetration the leading characteristics of his mind :

He took the suffering human race,
He read each wound, each weakness clear;
And struck his finger on the place,
And said : *Thou ail'st here, and here!*
He looked on Europe's dying hour
Of fitful dream and feverish power;
His eye plunged down the weltering strife,
The turmoil of expiring life—
He said : *The end is everywhere,
Art still has truth, take refuge there!*
And he was happy, if to know
Causes of things, and far below
His feet to see the lurid flow
Of terror, and insane distress,
And headlong fate, be happiness.

ADA NEGRI: PEASANT GIRL-POET OF ITALY.

SIX years ago, in a remote village of northern Italy, a new light, of strenuous and alluring power, appeared in the literary firmament of Italy. Without influence, or press patronage, or official friends, a girl of hardly twenty published a book of verses which almost at once made her known in every corner of Italy and which was received with wonder and praise by distinguished critics. In England and America, however, the poems of Ada Negri—which have not as yet been translated into English—are known only to a few. The London *Queen* (July) publishes an article by the late Canon Bell giving some details of her life and translations of some of her most characteristic verses.

The father of Ada Negri was a poor laborer in the mines, and her mother a wool-weaver. The latter early recognized her child's genius, and to give Ada the opportunity of studying in the Normal School of Lodi she spent years of arduous toil at the wool factory, altho she was frail and consumptive, and was frequently compelled to be for weeks at the hospital. It was thus with drops of blood and sweat that her daughter's dreams of future greatness were nourished; but this martyrdom was rewarded when Ada became old enough to repay in part these years of sacrifice. Says Canon Bell:

"At the age of fifteen Ada was summoned to teach in the college for girls at Cotogno, where she was lodged, and where she received every month twenty lire. Here she remained a year, when she was appointed to the post of mistress at Motta-Visconti, where, full of faith and courage, she devoted herself to her scholars, who numbered about eighty, and sorely tried her patience with their noise and obstinacy, as with difficulty she sought to beat into their heads even the letters of the alphabet. She used to return to her mother after school hours were over with burning hands, and her anxious parent could not avert the fear that her daughter would be attacked by illness. The poor school-mistress was, in reality, leading two lives, one away from her humble home, stern and firm to duty, the other rendered beautiful by imagination, when she was free to think, and to let her mind roam at will through all that was grand and sublime, and illuminated by the 'light that never was on land or sea.'

"She had never seen the sea nor the mountains, not even the hills or a lake; nor could she say she knew the wonders of a great city, since her only knowledge of Milan was derived from her passage from Porta Torinese to the Porta Romana, as she left Lodi to pass the holidays with her mother. A new vista opened to her eyes in the great populous city when some friends, who wished to give her pleasure, asked her to visit them for two days, at the time when the exhibition made everything brilliant and gay. It was a new life to her. The pleasure-seekers passed in files before her eyes with every display of luxury, of beauty, and of grace. The art treasures she saw at the Brera astonished her, filled her with emotion, transported her; the magic enchantment of distant lands and peoples brought her among those natives of the East and those houses that in her dreams had appeared before her dark eyes.

"Then she returned in her wooden clogs and peasant dress to the school in the retired country town, to pursue her avocation, doing violence to her genius, with few books to feed the mind, but with much courage, with boundless love for her mother, and with the noblest ideals before her. Here for seven years she taught by day, and wrote her lyrics of love and sorrow and sympathy by night. So she lived and toiled for seven years, when at last the hour of justice struck, and the tardy reward came in sudden recognition and fame. Through all her sorrows and struggles the cry of genius that rebels against being buried alive sounded loud and clear as a bell, and would not be silenced—

"Son poeta, poeta, e non m'arride
Luce di gloria."

("I am a poet, a poet, and the light of glory does not mock me.")

The pervading sentiment of Ada Negri's poems, says Canon Bell, is an ineffable tenderness for the suffering and the poor, a spirit of self-sacrifice and noble altruism. Most of her poems are in a minor key. The following graceful verses testify to the fact

that through all the outward semblance of schoolmistress and peasant the heart of Juliet nevertheless glows beneath:

ROSA APPASSITA (THE WITHERED ROSE).

Haply it loved, and loved but all too well,
Is weary now, and sinks at last to rest.
Haply it suffered more than one can tell,
And folded lies upon its own stem's breast.
Leaning, with tremulous and timid dread,
Downward its sorrowful and drooping head.

I know not what a dark and hidden tale
The day reveals, now hasting to a close,
But pungent fragrance scenting all the gale,
And borne from this most fair disflower'd rose,
Invades with sweetness all the lonely room
That evening shadows thickly veil in gloom.

And in me now is born one great desire:
I would be bitten fiercely to the heart,
Kiss'd on the mouth, with one long kiss of fire.
And thus would prove life's ecstasy and smart.
The madness of the triumph that it knows,
The madness of its bitterness and woes.
Hark! the bell strikes—'Tis Ave that it saith:
Oh, sad and fading! oh, thou hapless flower,
Consumed with passion even unto death!
O rose, with fragrant sweetness for thy dower,
Hear me! I would not die before I've proved
The joy—the ecstasy—of having loved.

A SINGULAR LITERARY SURVIVAL.

IT is not very generally known that the "poor whites" of the Southern States, who still survive the changed conditions brought about by the Civil War, have a ballad literature of their own which presents points of interest to the student of popular lays and of folk-lore. Mr. C. E. Means, in *The Outlook*, New York (September 9), gives an account of their surroundings and some specimens of their ballads.

In his "Making of the West," these "poor whites," or, as they are called by the negroes, "poor buckra," are said by Theodore Roosevelt to be "the descendants of indentured servants and redemptioners who had fled from the plantations on the coast from their severe masters and squatted on the hills at the foot of the mountains." Thence came their hatred of the wealthier classes. Among most of them there exists a pure strain of English blood, shown partly in such surnames as Rochester and Abernathy, but chiefly in their interesting dialectic recasts of many of the old English ballads preserved in Bishop Percy's "Reliques." The original spirit and story of these are preserved in the "poor buckra" version, but with curious variations of local color and phraseology. Mr. Means, by way of comparison, gives the text of the well-known Percy ballad of "Lord Thomas and Fair Elinor," together with the corresponding poor buckra lines. He says:

"The first four verses of Percy's ballad, used to introduce characters and circumstances, are lost in the poor buckra version. It opens with the visit of Lord Thomas to fair Elinor, and her question, 'What news?' at once brings the announcement of his wedding. She cries out, 'Very bad news!' and thus the information of their love is understood. Her mother's warning is shorter but quite as positive. Her determination to go, as announced in her dressing servants and self in their best, is quite as positive as if she had spoken out her disregard of her mother's advice.

Tingled at the ring

is more euphonious than

Knocked there at the ring.

Fair Elinor's arrival at Lord Thomas's door has the reiteration of the Percy version, but a more dramatic turn is given when—

He took her by her lily-white hand
And led her up the hall,
And thar he sot her at the head of the bed,
Amongst the neighbors all.

This marked honor shown by the bridegroom to his old sweet-

heart ignited the spark that was fanned to so fierce a flame by fair Elinor's own bad-mannered and ill-natured strictures on the bride's swarthy skin in comparison with her own fairness."

The ballad in Percy's "Reliques" relates that after the "browne girl" has shown her resentment by stabbing her rival Lord Thomas avenged the death of his first love, and

Cut off his bride's head from her shoulders,
And threw it against the wall.

The Nemesis in the poor buckra version has it:

Lord Thomas he had a little keen sword,
It was both keen and small,
He took and cut off the brown gal's head
And *kicked it* against the wall.

As he went shuffling over the floor,
The p'int stuck in his breast.
Was ever three earthly lovers so soon
Sent to their heavenly rest?

With regard to this pious ending of the poor buckra ballad, Mr. Means says that it has evidently been tinkered by some one of religious proclivity:

"'Earthly lovers' hurried off to 'heavenly rest,' despite jealous rage and murder, even if Lord Thomas's death was accident and not suicide, smacks of revival meetings, at the outer edge of which the poor buckra sometimes, perhaps, 'got religion.'"

The writer says that it is only a question of a few years before the poor buckra and their ballads will no longer exist:

"With the changed conditions of industry in the South, the poor buckra will probably in a score more of years disappear. So far, I do not believe that they have been induced to become factory operatives. The crackers gladly take the position, but the poor buckra lives mostly on the edge of towns—in the winter selling little packages of pine, in the spring bringing ferns, in the summer blackberries. As the country becomes more populous and thrifty there is less room for him."

TOLSTOY REVISED AND UNREVISED.

ANY one who has read Tolstoy's "Kreutzer Sonata" knows that, even when the most worthy purpose inspires him, his work can not always be counted on as appropriate to the pages of a popular magazine. When his latest novel, "Resurrection," was withdrawn by Tolstoy's agent in England from the pages of *The Cosmopolitan*, after the first instalment of twelve chapters had been published, because of the alterations made by the editor of the magazine, it was supposed that these alterations were such as were rendered necessary by Tolstoy's unshrinking treatment of the social evil. The complaint made by Tolstoy's friends, however, goes farther than that. His literary style and social views were also, as charged by Mr. H. P. Archer in the *London Chronicle*, flagrantly misrepresented; in fact, the American censorship "would have been remarkably thorough even for Russia." This censorship is the more resented because the work was written as a labor of love, the proceeds to go to the aid of the persecuted Doukhobors, and, according to Tolstoy's statements to Mr. Archer, the distinguished Russian had never written any other work that "so utterly captured him." Mr. Archer goes on to specify the nature of the changes made in the author's manuscript:

"For instance, Tolstoy describes a girl of fifteen running swiftly, 'her firm young legs moving rapidly.' The censor objects to 'legs' as indecent, and makes her 'supple limbs' move rapidly. Nekhludoff, the hero, is described as being 'quite pure' at the age of nineteen. Too suggestive, decides the censor; 'still quite unfamiliar with the ways of the world' is a more delicate way of putting it. 'This unmarried woman had a baby every year.' 'Badly cared for, with no particular ideas of the ethics of life, she had lived in a desultory way,' is the elaborate circumventing phrase of Tolstoy's censor. Tolstoy nowhere says she was badly cared for, and does not mention her deficiency of ideas of the 'ethics of life.'"

Tolstoy applies the scriptural command, "Judge not that ye be not judged," to courts as well as to individuals, and this attitude, as expressed in "Resurrection," required more editing:

"The description of the trial of Maslova is instinct with a gentle irony, reflected in the characterization of the court officials and the description of the proceedings. It is impossible here to detail the numerous alterations made in this court scene. The chapters are cut about, transposed, and altered throughout—rewritten in fact. The omissions, almost without exception, are those passages expressing Tolstoy's conviction of the error of men judging one another, and without these passages the chapters are comparatively colorless and dull."

Tolstoy also takes occasion to express his condemnation (with Henry George) of the private ownership of land; but "the censor actually alters the whole thing, and corrects the novel so that the emphasis is removed from a condemnation of private land-owning in general to a condemnation limited to the cruelty and injustice practised under Russian landlordism."

As the Russian censor altered the same passages so as to absolve the land system of Russia while condemning that of other countries, the American censor's course has a sort of poetical justice in it.

Another of the counts in Mr. Archer's indictment is that Tolstoy's simple and unpretentious style is changed into a more florid style; as, for instance, the sentence, "He slept under the trees," becomes "He took his siesta under the trees"; and, "she remembered her present position" becomes "some remembrance of the past came to mind in contrast with her present position."

WHAT MAKES A BOOK SELL?

EMERSON said: "There is no such thing as luck in literature." No doubt his meaning was that whatever is real and true in a literary work will always find ultimate recognition. But that a certain element of chance—a clever title, a theme and manner suited to the moment, a fortunate reception and exploitation by critics and publishers—has an important effect upon the immediate sales of a book can hardly be a matter for debate. What is the nature of these popularity-breeding qualities? Can they be analyzed, estimated, and set down, so that a candidate for fame may rightly judge concerning the fateful moment for launching his literary bolt, and rightly estimate all the other requirements for success? A writer in *The Critic* (September), Ellen Burns Sherman, sets out to discover these, and lets us into the secret of some of them. She says:

"It is a fact that the contents of a book, more than anything else, determine its destiny. All other influences that affect its sale are more or less ephemeral. Notwithstanding the possible variety of their contents, all successful books have been written in obedience to Sidney's maxim, 'Look in thy heart and write'; or in accordance with another, less known and accredited, 'Look in thine imagination and write.' The first precept faithfully followed gives the world such books as 'Ships that Pass in the Night,' 'Beside the Bonnie Brier Bush,' and 'At the Cross Roads'; the second, tales like 'Gil Blas,' 'Monte Cristo,' and 'The Prisoner of Zenda.' When an author is great enough to be able to keep both of these precepts simultaneously, the result is a masterpiece like 'Les Misérables,' 'Anne Karénina,' or 'Romola.' Beyond all question, the most indelible writing fluid is a mixture of ink and the author's own heart's blood. The warm human pulse whose beats may be heard in Lamb's and Stevenson's essays largely accounts for their popularity, while the absence of the same vital throbs in most of the essays of Landor and Pater partly measures the difference in the size of their editions."

Genuine humor—"of the pungent, effervescent kind that has made Mark Twain's editions resemble those of the Bible"—and brevity are important points, says Miss Sherman. A book may be solemn and succeed—witness the deep and wellnigh unre-

lieved seriousness of "Robert Elsmere"; and a book may be lengthy and yet live and flourish in the popular fancy—witness the long-drawn-out "Heavenly Twins" and "Qno Vadis." But the ideal length, says Miss Sherman, is that of "Ships that Pass in the Night" and "The Kentucky Cardinal." The name of the publisher, too, particularly if the book is a first venture, is an element in its success. But time, title, the critics, advertising, and even—singularly enough—the cover of the book all have a more or less important bearing upon the hold which it secures:

"It really matters little when a book is written, if it is only written while the subject-matter is still fresh and vivid to the author. The time of publication, however, may very naturally affect the sale of a book. When a nation is at war, or otherwise engrossingly engaged, it can not give its undivided attention to books that celebrate the piping times of peace. On the other hand, the circulation of 'Uncle Tom's Cabin' would show that the literary iron is never so hot for striking as when the war nerves of the public are excited. Any national crisis, when the people are listening for an authoritative voice, is the author's golden opportunity. Such was the one seized by Swift when he wrote the Drapier's Letters, and by the author of 'The New Gospel of Peace.'

"In the order of the importance of its market value the title of a book should have been mentioned before, inasmuch as the title can be made, and often is, a poetical prophecy of the contents of a volume. There is not a little commercial value, also, in oracular titles which pique the curiosity. 'The Heavenly Twins,' 'The Woman Who Did,' 'The Quick or the Dead,' 'She,' and 'The Damnation of Theron Ware' are illustrations in point. A proper name is less committal than almost any other kind of title, and yet there is sometimes much in the sound of a name that attracts or repels. 'Trilhy' was evidently not a bad name with which to conjure. 'The Honorable Peter Stirling,' tho not instantaneously captivating to the ear or eye, was an almost exact verbal presentment of the strong qualities of the character who bore it.

"Another seemingly external cause that affects the circulation of a book is its cover. If the author selects the design of his cover himself, no slight index of his taste is given before the book is opened. During the holiday season, especially, the covers of a book have an increased influence on its sale. This might not be so if all book-buyers were literary, or even readers; but that is far from the case. Any one who has listened to the comments between clerks and customers over book-counters will need nothing further to convince him of the important rôle played by the covers of book in its circulation.

"The mention of the critic's part in aiding or retarding the sale of a book may seem somewhat tardy—but we no longer live in the age of Keats, when a genius could be snuffed out by a malicious reviewer. Relentless, persistent, and efficient advertising is a positive and well-tried means of getting the public attention. Without advertising of some kind, even an excellent book may for a long season blush unseen, as many an author to his cost testify. Few people are aware how much of the material success of certain well-known periodicals is due to the skilful management of the subscription department. The sales of a book worth circulating may be similarly pushed in the hands of a competent man.

"But after one has searched out all the visible causes that make a successful book, there remains a large percentage of result that can only be accounted for by what Solomon called 'chance'; and that factor may have entered into every other apparent cause. A casual remark of a friend, or a wandering glance into a book, opened at random, may have given the happy inspiration for a title or a plot. Or, perchance, a grim tragedy that threatened to make havoc of his happiness may have furnished an author the theme that brought him fame and fortune. In like manner, every move made, from the conception of a book to the last word of its last chapter, is somewhat conditioned and modified by unsought and often unrecognized forces over which the author has no control."

The Education of the Artist.—Mr. W. H. Low believes that art training in America is in many respects built upon unsound foundations. While it is true that the artist should be born, and should possess a vocation so strong as to enable him to

overcome all obstacles and errors of teaching, it still remains true that the countries where art most flourishes are those which have the best art schools. In a recent number of *Scribner's Magazine* he says:

"How do we in America train our artists? By commencing where wiser men leave off, by beginning at the top, by opening the doors of the university to those who lack the common school. For the many manifestations of art as applied to industry there is hardly a beginning in the way of schools, and Palissy the potter, and Cellini the goldsmith, are left to get their training as best they may, while we assiduously devote ourselves to the cultivation of future Raphaels. It is in these lesser branches of art that a graduated scholastic training can be best applied, and it is a reproach to our professed practical character that we have flown too high, and, by a system of artificial incubation, have attempted to bring out great numbers of fledgeling artists equipped after a manner to paint pictures, if perchance they have in their minds any pictures to paint. If we reflect how very few names survive in the long history of art, how rare it is that any artist bears an inspired message to his time, or to the world, this wholesale application of a high-art education seems futile, silly, and cruel."

A still graver fault lies, Mr. Low thinks, in the lack of purpose which prevails in our schools, with their figure-drawing and "studies," the possibility of the student's expressing a thought through the medium of his art being thrown aside. These schools seem to Mr. Low to be established "on the pretension that it is only necessary to show a pupil how to paint, and not of the least use to help him to know what to paint."

Mr. Low thinks that the ideal art school would correspond nearly to the "shops" of the sculptors and painters of the Renaissance period, such as still exist in some studios in Paris and elsewhere. Here the pupil sees the practical side of art, illustrated by the methods of a master.

NOTES.

WE are to have the opportunity of seeing Mme. Bernhardt as *Hamlet* next year. Mr. Grau has, according to a recent London despatch, signed a contract with her for a "farewell" American tour, to begin in November 9, 1900. She will also appear in Edmond Rostand's new play "L'Aiglon," to be produced for the first time in Paris next December. The author and his friends have great hopes of this play, which is said to be even superior to "Cyrano de Bergerac."

MR. STANHOPE SAMS, a student of the Rubáiyát, says in the *New York Times*, that the spelling of the name of the Persian poet should be 'Umar' instead of Omar. In explanation he writes: "I can only say that the spelling 'Umar' is the way in which the immortal tentmaker wrote his own name. Moreover, there is no letter or sound of 'o' in the Persian. The accent, or stress, is on the last syllable, both of 'Umar' and of 'Khay-yám,' as is the case with all Persian words, with perhaps a dozen exceptions. When written 'Omar,' there is a noticeable tendency to pronounce the name with the first syllable stressed, which is anathema to the real student of 'Umar.' It may be added that the apostrophe in 'Umar' and other Persian words stands for an unspoken consonant gh, which had already disappeared in pronunciation at the time of 'Umar.'"

MALLOCK, the author of "Is Life Worth Living," has in his recent novel "Tristram Lacy" drawn portraits of a number of well-known English men and women. "As might have been expected," says the *New York Times*, "his drawing has been inspired by a spirit of delicately incisive satire. Mrs. Norham, with her altruistic movement for ethical culture and equality through education, is a thinly disguised portrait of Mrs. Humphry Ward. Lord Runcorn may be a composite picture, but it is an unmistakable portrait of Disraeli. Mrs. Dickson, the seductive emancipated novelist, irresistibly suggests Mme. Sarah Grand. Tristram Lacy himself, without being a close portrait of the Right Hon. Arthur James Balfour, is sufficiently so to make the resemblance of more than usual interest. Those who know well the social and political life of London will recognize other figures."

IN a competition lately organized by *St. Nicholas*, the following list of books most suitable for a young person's library took the first prize: *Ivanhoe* (Scott); *Quentin Durward* (Scott); *Pathfinder* (Cooper); *Last of the Mohicans* (Cooper); *Jungle Book* (Kipling); *Westward Ho!* (Kingsley); *Arabian Nights*; *The Rose and the Ring* (Thackeray); *Wonder Book* (Hawthorne); *A Tale of Two Cities* (Dickens); *Christmas Stories* (Dickens); *Poems of Longfellow*; *Works of Shakespeare*; *Treasure Island* (Stevenson); *Child's Garden of Verses* (Stevenson); *Tom Brown at Rugby* (Hughes); *Pilgrim's Progress* (Bunyan); *Sketch Book* (Irving); *The Man Without a Country* (Hale); *Robinson Crusoe* (Defoe); *Gulliver's Travels* (Swift); *Alice in Wonderland* (Carroll); *Uncle Remus* (Harris); *Jackanapes* (Ewing); *Wild Animals I Have Known* (Thompson). *The Academy* (August 19) quotes this list with qualified approval. "Surely not the 'Works of Shakespeare' for children?" it says.

SCIENCE AND INVENTION.

WHAT THE MICROSCOPE TELLS US ABOUT METALS.

THE new science of metallography—the microscopic study of the structure of metals—as it has been pursued for ten or fifteen years past, is becoming very important to the engineer. Its mechanical uses are treated in an article in *The Engineering Magazine* (September) by Albert Sauveur, who tells us that it is now regarded as of equal importance with chemical analysis, since the physical properties of a metal are a function of its structure as well as its composition. Says Mr. Sauveur:

"While chemical analysis informs us with great nicety of the ultimate composition of metals, it throws no light upon the character of the treatment to which they have been submitted. A piece of steel, for instance, may receive a thousand different treatments and its ultimate composition remain unaltered throughout, altho such treatments modify its mechanical properties. It is precisely here, where chemistry fails us, that the usefulness of the microscope asserts itself, for the microstructure of metals is extremely sensitive to slight changes of treatment. The character of the treatment is always unmistakably written in the structure; it only remains for us to learn how to read and interpret these structural changes, and to this end our efforts should bend."

Metals are prepared for microscopical examination by polishing and then developing the structures, generally by etching with an acid. The results of such examination may be shown by a brief reference to the modern theory of alloys, which is due to the methods of metallography. Says Mr. Sauveur:

"The modern theory of binary alloys . . . classifies all such mixtures into three classes:

"I. Alloys whose component metals form neither definite chemical compounds nor isomorphous mixtures.

"II. Alloys whose component metals form definite chemical compounds.

"III. Alloys whose component metals form isomorphous mixtures.

"When an alloy of the first group is allowed to cool from the molten state, it gives rise, on solidifying, to the formation of a structural constituent of *constant composition*, whatever the proportions of the two metals in the alloy. It is called the *eutectic alloy*, a name proposed for it by Dr. Gnthrie. Unless the alloy, therefore, has exactly the composition of the eutectic mixture, it contains an excess of one or the other metal. On allowing the molten alloy to cool, when a certain temperature is reached, which temperature *depends upon the composition of the mass*, the metal in excess begins to crystallize and continues to do so on further fall of the temperature, until the remaining portion of the

liquid, which becomes all the while poorer in the metal present in excess, has reached the composition of the eutectic alloy. At that instant the temperature ceases to fall, and the remaining liquid, *i.e.*, the eutectic alloy, solidifies as a whole and at a *constant temperature*. The solidification of the eutectic alloy always takes place at the same temperature, whatever the composition of the alloy. . . .

"Eutectic alloys are not definite chemical compounds; they result from the simultaneous solidification of both metals present. The microscope has shown that they are made up of extremely minute crystals or plates, alternately of one and the other component.

"On account of the minuteness of their constituents, eutectic mixtures often

require very high magnifying powers for their resolution, and they frequently present under the microscope bright interference colors, recalling the appearance of mother-of-pearl.

"Alloys of the first group, therefore, will be composed of crystalline particles of one of the component metals (the one present in excess), surrounded by the eutectic alloy."

Examples of alloys of this kind will be seen in Figs. 1 and 2. In alloys of the class where the metals form a chemical compound, as is the case with copper and antimony, chemical combination first takes place between the proper proportions of the metals, and an alloy is then formed by the remaining metal, if any, with this compound. Examples are shown in Figs. 3 and 4. Alloys of the third class form crystals of the same class, whatever the proportion of the metals.

The methods of metallography have been of great value in the

study of iron and steel. Unhardened steel, Mr. Sauveur tells us, is made up of three microscopic constituents, altho only two are ever present in the same sample. These are ferrite (pure iron),

A. Carbon, 0.09 per cent. B. Carbon, 0.21 per cent. C. Carbon 0.35 per cent.

D. Carbon, 0.80 per cent. E. Carbon, 1.20 per cent. F. Carbon 2.50 per cent.

FIG. 5.—SERIES SHOWING THE MICROSTRUCTURE OF UNHARDENED STEEL.

The clear areas are ferrite, the cross-lined pearlite, and the black areas cementite. The series shows admirably how, as the carbon increases, the ferrite disappears and the pearlite increases until, at 0.80 per cent. carbon, the entire mass is pearlite. With a further rise of the carbon-content, the pearlite in turn gives place to the gradually increasing cementite.

cementite (a chemical combination of iron with cement carbon), and pearlite (probably the eutectic alloy of the two former substances). Steel is thus regarded as an alloy of iron and carbon, belonging to the second of the three classes above enumerated (see Fig. 5).

ARE HALF-BREEDS LESS CIVILIZED THAN THEIR PARENTS?

IT was maintained by Darwin that in so far as hybrids differ from their immediate parents they have reverted to some more remote ancestor. This hypothesis has been severely criticized and was for a time discredited; but it has recently been revived. Prof. J. C. Ewart, F.R.S., an English authority, maintains in a leading article in *The Humanitarian* (London, September) that hybrids of all kinds, including human half-breeds, are almost infallibly characterized by this kind of reversion, so that savage traits are apt to appear, for instance, in a mulatto. He agrees with the native of Zambesi who said to Livingstone: "God made white men, and God made black men, but the Devil made half-castes." At the same time, Professor Ewart is inclined to think that the intercrossing of races is on the whole beneficial to mankind. It is "the world's great melting-pot," out of which both bad and good come, and the fittest survives. The British, he reminds us, are decidedly a mixed race, tho the elements have been well blended together. Of the reversion of interbred animals to ancestral traits the writer speaks as follows:

"In no instance is a hybrid in its mental and physical characters a copy of either of the parents, any more than it is an equal mixture of the parents. There is always something suggestive of wild animals about hybrids; they are shy or timid, precocious, hardy, and more capable of maintaining themselves under adverse circumstances than their parents, and, as a rule, they at first resent being pressed into the service of man—they reluctantly give up their freedom. These peculiarities invest hybrids with a special interest. For quite a long time no explanation of their 'wildness' was forthcoming. To Darwin we are indebted for the suggestion that in so far as hybrids differ from their imme-

diate parents, they have reverted to their more or less remote ancestors."

Intercrossing does not invariably lead to reversion; but may result in progeny which, tho differing from both parents, does not in any way suggest more remote ancestors. When this occurs the cross may be said to be a typical mongrel. The writer continues:

"The usual result, however, of intercrossing distinct breeds is a 'throw-back' to the ancestors of one or both of the immediate parents, or to what Mr. Galton calls the hypothetical mid-parent of the ancestry. In other words, there is reversion, the *reappearance* of certain lost but presumably latent characters, accompanied almost of necessity by the *disappearance* of the recently acquired peculiarities—mental and physical. Obviously reversion may be partial or all but complete—the amount, other things being equal, usually varies with the extent to which the crossed forms differ, the more extreme the cross the greater, as a rule, the throw-back. It should, however, be mentioned that with animals, as with plants, spontaneous reversion sometimes occurs—*i.e.*, reversion not due to the disturbance of the equilibrium supposed to accompany intercrossing."

But this reversion is not the only result of intercrossing; there is still another very important one—the "complete arrest of progressive development." Says Professor Ewart:

"When two forms that happen to be traveling in the same direction are interbred, the progress may be accelerated, but when two forms that happen to be developing in different directions are mated, further progress is in most cases abruptly arrested. It thus appears that intercrossing tends to arrest progress; in some cases it results in the production of mongrels, while in many instances it leads to more or less marked reversion. . . . While interbreeding tends up to a certain point to favor progressive development, and in all cases to fix the type, intercrossing tends to arrest immediate progress in any given direction, and to break down the type, or, as it is sometimes put, the constitution. Intercrossing may hence be said to be democratic, and to make at the outset for mediocrity, while interbreeding is conservative, and by stereotyping the stage already reached, has an aristocratic tendency."

So far, these results are interesting chiefly to the stock-breeder and to the student of biology. But it should be remembered that, according to Professor Ewart, they apply also to the crossing of races of men. Says he:

"In some cases the mixed [human] offspring will closely resemble, externally at least, one of the parents. Travelers have often noticed that the offspring of Mongols, Polynesians, and Red Indians with Europeans are sometimes almost identical with their colored parents. In the same way Eurasians might sometimes pass for Europeans; at other times they are as like Asiatics.

"As a rule, however, half-breeds decidedly differ from both parents, and the more they are studied, the more evident will it become that the differences are due to reversion, to the loss of the more recently acquired characteristics.

"In some cases the offspring will revert toward the ancestors of the father, in others toward the ancestors of the mother. . . .

"That intercrossing one of the higher branches of the human family with a decidedly lower branch should prove unsatisfactory is not to be wondered at.

"In many Europeans the veneer of civilization is amazingly thin, and almost as easily sloughed as the outer skin of a serpent. In some of the less favored nations the veneering process has hardly yet begun. Moreover, as the bent of the European mind may be in an entirely different direction from that, say, of an American Indian or a Kafir, the disturbance induced by intercrossing may be so profound that the mixed offspring are completely robbed of all the finer traits with which centuries of civilization enriched their white ancestry. As the beautiful color and the crown of feathers are lost when the 'archangel' pigeon is crossed with a homer, and as the feathers in the tail may be reduced to one third their number when a fantail is crossed with a common pigeon, so all that has been gained by centuries of civilization may vanish when a European, however pure his lineage, unites himself with a race having a somewhat different origin and

an altogether different history. It is, however, conceivable that the mixing of two distinct races is always accompanied by retrogressive changes, a mixed race may suit better than a pure one some particular areas (*e.g.*, parts of the United States or of the African continent), not so much because they happen to blend readily, but because reversion has led to the production of vigorous, hardy offspring, or to offspring resembling ancestors that had reached in former epochs a fairly high level of civilization."

BENEFITS OF SWIMMING.

"GOD intended us to swim." So writes Adèle Leontine Singer, who is evidently not only an expert herself but a firm believer in the possibility of the ordinary man's or woman's success in this exercise. In *Good Health* (September) she tells us of some of the relations of swimming to health. Says Miss Singer:

"When the ancient Romans wished to express extreme contempt for a man's ignorance, they exclaimed: 'He can neither swim nor write!' These few words are pregnant with meaning to those desirous of learning. In Roman estimation swimming came first, because, forsooth, of what avail is writing to a drowning man? They esteemed swimming as the best exercise to develop strength, courage, and beauty of body, and considered it indispensable to good education. They believed in the symmetrical development of the body, and swimming is the very 'cream' of exercises for bringing about this desired end. As a means to the prevention and cure of disease it has not received nearly its just share of attention. There is hardly a chronic ailment which it would not benefit. First and foremost among its inestimable advantages is that it is an absolutely symmetrical exercise; that is, the entire muscular system is employed in its use, in the same manner with both sides of the body. The limbs, the chest, the abdomen, the back—in short, the whole body is thoroughly exercised in correct swimming. It is at the same time the safest of exercises in that there is no danger of straining any one muscle from over-use, of developing one side or one limb more than another, or of injuring internal organs—all evils likely to occur in most other exercises, especially such as are practised with weights. Far be it from me to underestimate the gymnasium and what it has accomplished, but swimming combines everything that the gymnasium offers, and accomplishes its work in a much shorter time. Especially is this the case where the various instruments necessary in gymnasium work render its practise tedious to many.

"God intended us to swim; in proof of which assertion I would cite the numerous instances in which man in primitive conditions sustains himself in the water without difficulty the first time he is thrown into it by accident or by the design of an enterprising parent. The South Sea Islanders are all magnificent natural swimmers, and as much at their ease in water as on land. Thus we see that civilized man has to a great degree lost the inestimable benefits of the water so abundantly provided by the Creator. Swimming with us, instead of being the natural exercise for practical, every-day use, has degenerated, if I may so express it, into an art or a science which most of us acquire only after long practise."

Of some of the beneficial effects of swimming Miss Singer writes as follows, premising that not the least of them is the necessity for taking deep, long breaths. To quote her words:

"The leg motions are especially valuable for those who have inactive digestive organs. They induce a thorough yet not violent exercising of the abdomen, and undoubtedly assist in the restoration of prolapsed viscera to a proper position.

"The mental effect of swimming, on invalids able to practise it, can not be surpassed. The exercise is so absorbing and interesting that 'peristaltic woes' are forgotten for the time, and those who have slack appetites and slow digestion will receive marked benefit therefrom.

"Swimmers have a poise and carriage of body, a self-control, and a courage gained so largely by no other exercise. It is of course best to learn in childhood or early youth, but I counsel

every one, no matter what his or her age may be, if able to do so, to pursue the art of swimming even 'if it takes all summer.' . . .

"In closing, I would lay special stress on the importance of swimming for women. Take off your corsets and heavy skirts, never to put them on again; beautify your figure and put life into your flabby muscles by a daily practise of swimming.

"Stay in the water until the exercise has put you into a glow, then drying rapidly, finish the good work by a short walk in the sunshine, after which lie down for a short time. Do this steadily a few months, and you will be a new woman in the right sense of the word."

A DISTANCE MEASURER FOR PHOTOGRAPHERS.

THE hundreds of thousands of amateur photographers who swarm over our hills, forests, and sea-beaches during the summer will appreciate an apparatus for the quick and easy estimate of the distance that separates a camera from its object. The clearness of the photograph depends on accurate focussing,

THE STADIMETER (ACTUAL SIZE.)

IMAGE VISIBLE IN THE STANHOPE LENS.

and in taking a snap-shot this must be done entirely by knowledge of this distance—knowledge which is generally dependent on a guess. In *La Science Illustrée* (Paris, August 26) M. Frédéric Dillaye tells us of a simple device that will enable photographers to substitute practical accuracy for such guesses.

This apparatus, the Elgé stadimeter, is composed of: 1. A prism producing a slight angular deviation of the object; 2, a Stanhope lens bearing the microphotographic image of a man, divided by equidistant horizontal lines at whose extremities may be read figures indicating distances in meters; 3, a metallic support with an opening for the prism and a hole for the Stanhope lens; 4, a scale of paper mounted on linen, bearing equidistant lines whose separation corresponds to a variation of distance of 0.20 meter [8 inches]. The description proceeds as follows:

USE OF THE SCALE FOR SHORT DISTANCES.

"If the operator, seeing an object, looks at it through the opening in his apparatus, he will see two images of it—one directly,

through the left side of the opening, the other displaced downward, through the prism.

"The angle of deviation of the prism remaining the same, the two images will appear more separated as the distance of the object is greater. Knowing the vertical separation of the two images and the tangent of the prism's angle of deviation, we can thus find the distance of the operator from the object. The scale is constructed in such manner that this knowledge appears at first sight.

"When the model is less than 8 meters [26 feet] distant he holds the scale vertically as shown in the illustration. The operator holds his stadimeter also vertically and near his eye, so that

USE OF STADIMETER AT LONG DISTANCES

the prism is at the right, and looks at the scale. . . . He perceives simultaneously two images of the scale [as already explained].

"By reading on the upper image of the scale, which is the undeviated image, the number of the division corresponding to the highest mark on the lower image, we have the distance at once. The highest mark on the scale is isolated from the others and placed sensibly more to the right.

"When the model is farther away than 8 meters, as precision is not so rigorously necessary, instead of regarding the scale, attention is fixed on some man near the object to be photographed, or on the model himself, if the model is a person. The photographer then observes on what part of the body of the upper image the top of the head of the lower image falls. Then he looks in the little Stanhope lens, and the number on the horizontal line which, on the image seen in this lens, passes through this part, shows the distance.

"The prism does not give a constant deviation except when it is in a normal position indicated by the laws of optics. In order to enable the operator always to give the prism this normal position the microphotographic image in the lens has at its center a black spot that is directed toward the head of the model or toward the top of the scale, before looking at it through the prism."—*Translation made for THE LITERARY DIGEST.*

THE HEAT OF THE STARS.

IT is scarcely twenty years since our scientific men were hardly able to measure the quantity of heat sent to us from the moon. Now our instruments are so vastly improved, thanks to the work of Langley in this country, of Vernon Boys in England, and of many other astronomers and physicists, that we can not only analyze in detail the radiation from our satellite, but have recently even detected that from some of the most distant stars. Says a contributor to *La Nature* (August 26):

"Hitherto the most delicate apparatus have not enabled us to determine the radiation of the fixed stars. Boys succeeded, it is true, ten years ago, in detecting the radiation of a candle 2 kilometers [$1\frac{1}{4}$ miles] from his telescope; but greater sensitiveness even than this was necessary to measure the heat of the stars.

"Nichols has now taken up this work at the Chicago Observatory, and has adopted as a receiver an apparatus similar to a Crookes radiometer, in which a minute disk of blackened mica is suspended in a rarefied gas by an extremely fine quartz fiber. The image of the source of radiant energy is projected on half of the plate, which is thus made to rotate by an amount proportional to the intensity received. The radiation of the moon gives to the

receiver such an impulse that the image immediately leaves the field. The radiation of the brightest stars is manifested by a feeble but appreciable action. Arcturus, for example, gives a deviation of 0.6 millimeter [$\frac{1}{16}$ inch] on the scale, and Vega a deviation about half as great.

"The sensitiveness of the apparatus is such that, if the image of a candle 24 kilometers [14 miles] distant is thrown on the receiver by means of the telescope used in the experiments, the deviation is 0.1 millimeter [$\frac{1}{16}$ inch].

"The heat that Vega sends us is thus about equal to that which we receive from a candle 10 kilometers [6 miles] distant. This is the first direct knowledge we have had of radiation of such slight degree."—*Translation made for THE LITERARY DIGEST.*

Severed Toes Regrafted.—A colored man recently severed with an ax one of the bones of the first toe just through the head, took the second toe off entirely, and seriously cut and broke the third. "Owing to the distance from the house," says *Modern Medical Science* (July), in reporting the case, "he had to ride on horseback more than a mile, and this, with the slowness of the messenger, caused a delay of four hours before the doctor reached him. Hemorrhage had ceased, owing to the clots. The toes being quite warm from the mass of clot which filled the shoe, no time was lost in placing them in position and suturing the approximated edges, the needle being inserted deep enough to include the tendon on each toe. A dressing of iodoform and boric acid, equal parts, was used, with plain gauze, and the foot bandaged to a splint. In spite of the disadvantages of lack of attention, care, etc., union by first intention occurred over more than half the injury, and there was but little pus where granulation took place. On the third day sensation was present in both toes, and in a week the patient could move them a little on the splint. The stitches were removed on the tenth day, and a good recovery was made. In July the toes were reported to be strong and movable; sensibility was perfect, and, save for a little tenderness, the man said his foot was as good as ever."

Petroleum Paints.—An artist living at Montreuil-sur-Mer, France, M. Salomé by name, is using in his work colors mixed with petroleum instead of turpentine and drying-oil. He claims that this method has many advantages. According to *La Science Illustrée* (Paris, August 12), the artist proceeds as follows: "With the pigment, ground in just sufficient oil to make this process possible, he mixes rectified petroleum in the proportion necessary to obtain the fluidity that he desires. Thus, in ordinary house-painting, for 3 kilos. [6 pounds] of white lead, he would take one quart of petroleum, the lead having been previously ground in about a pint and a half of ordinary linseed oil. In art work, colors ground in oil are used, spread on with petroleum. M. Salomé, who now uses no other method than this in his profession, has received prizes in several exhibitions."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

THOSE who have read the recent article in these columns on the dispersal of hail-storms by artillery will be interested to know that a congress for the discussion of the subject is shortly to meet at Casale Monferrato, Italy. "A large number of medical men, engineers, agriculturists, and meteorologists," says *The Medical News*, "have announced their intention to read papers and to participate in the discussions. . . . It seems that there have been an unusual number of fatalities in Italy during the present summer from lightning. The storm cloud from which the lightning comes is almost invariably charged with hailstones, and it is now suggested that the bombardment of such clouds, hitherto successful in protecting vineyards and olive plantations, might also lessen the danger from lightning."

A MONTHLY magazine devoted to horseless traction, and called *The Automobile*, will make its appearance in New York in October. "There can be no doubt," says *The Tribune*, New York, "that the new periodical will become a potent factor in the evolution of mechanical locomotion. The most important function of the magazine will be its work in the enlightenment of the public as to the benefits that will proceed from the new instrumentality in transit. The history of the bicycle movement shows how gigantic was the task of overcoming the prejudice against that innovation, and what a vast expenditure of energy and money was required before equal privileges with other vehicles was secured. The future of the automobile in this country will be assured, more securely than either in France or England, when once the people comprehend the great advantages of a horseless carriage."

THE RELIGIOUS WORLD.

IAN MACLAREN ON "THE SHADOW ON AMERICAN LIFE."

DR. JOHN WATSON again returns (in *The Outlook*, September 9) to the subject of the impressions made upon him by the secular spirit in America during his recent visit to this country. After showing warm appreciation of the many good traits of a people whom he says he loves, he asks to be allowed one privilege of friendship—the right to speak in warning of the shadow that rests on America—namely, "the strength of the secular spirit, or the tendency to give an undue place to the value and influence of wealth."

He does not wish to be understood as depreciating the spirit of enterprise. "The secular spirit appears, not in a man's industry, nor in his payment, but in the attitude of his mind toward the money which he has earned and received." There is no land where this secular and money-worshipping spirit does not appear as a menace, says Dr. Watson, but here it is virtually omnipresent:

"The friendly visitor to the United States, who is proud of her achievements and delighted by her brightness, stands aghast at the open and unabashed front of secularity. It seems to him as if not merely coarse and unlettered men, whose souls have never been touched either by religion or by culture, but that all men, with a few delightful exceptions, bow the knee to this golden calf, and do it homage. Nowhere is there such constant and straightforward talk about money, nowhere is such importance attached to the amount of money which a man has acquired or possesses, nowhere is it taken so absolutely for granted that the object of a man's work is to obtain money, and that, if you offer him enough money, he will be willing to do any work which is not illegal; that, in short, the motive power with almost every man is his wages. One is struck, not so much by what is said in plain words (altho dollar is a monotonous refrain in conversation) as by what is implied; and what is implied is this—that, if you know the proper sum, any man can be induced to do what you want, even altho his health and his rest and his family and his principles stand in the way."

After speaking of this worship of wealth in politics, he turns to its presence in the Christian church, where, he says, its prevalence is surely one of the greatest ironies of history:

"If the church is anything, it ought to be unworldly, since it was founded as a spiritual society and to be a home for the soul. Of course the church must have her organization, and her affairs ought to be managed with as much care as that of any other corporation. Her servants ought to receive a just support, and in most churches Christ's ministers have never been overpaid. There is nothing dishonorable in the minister of religion receiving a salary, altho there is sometimes something very dishonorable in the poverty of the salary which is offered by the laymen; nor is there anything unworthy in a minister making provision for his family, so that when he dies they may not be left paupers; and there would be something sinful in his neglecting his own household. When one speaks as if a minister should be perfectly indifferent to all worldly affairs, and hardly know what he possesses, then that person is talking cant and nonsense. At the same time, there is no place where the subordination of the material ought to be so strictly in force, and where domination is more scandalous. It is unchristian, and can do nothing but injury, that a minister should be tempted from one church to another solely by pecuniary considerations (the congregation which has no doubt that it can so buy him ought not to receive any minister at all); that the efficiency of a congregation should be estimated by the number of sittings let or the credit balance at the end of the year; that a minister's work should be judged, not by its spirituality, but by its smartness, and that the man who creates the greatest sensation should be judged a better minister of souls than he who builds up character. And, above all, it comes little short of a religious disgrace that a rich man, because he is rich, and for no other reason, should be able to bully a minister, and

practically give him notice to quit; and that, not because the minister has not preached the Gospel, or done his work as a pastor, but because the church under his care has not prospered in dollars. When the visitor to the United States happens himself to be a minister, nothing makes him more indignant than to see how his brethren are alternately tempted and browbeaten by this secular spirit, which is not unknown in other lands, but seems to have attained a perfect height of insolence in America."

Nevertheless, Dr. Watson has great hope of better things. The Augean stable will reach such a condition in time that it will become intolerable. Then Americans will "arouse themselves and clean it thoroughly":

"There can be no question that, whenever any issue of righteousness is put before the nation, the nation decides rightly. What the friends of America desire is that there should be no relapses and sleeping times of the public conscience, but that the strenuous spirit which will always deal with larger abuses should be more constantly brought to bear both upon political and ecclesiastical life, and the secular spirit be so driven both from church and state that no man shall be rich enough to hold the poorest minister of Christ in bondage, no body of men strong enough to deflect the smallest legislature an inch from the path of duty."

THE ENGLISH CHURCH CRISIS AND LORD HALIFAX.

LORD HALIFAX: "I say, let the people stand by their priests!"

The Archbishop of Canterbury: "And I say, let the priests stand by their priests!"—*The Outlook*, London.

All the religious world in England and a goodly portion of the non-religious and irreligious world was set awry on August 30 by the publication of Viscount Halifax's manifesto to the lay members of the English Church Union. This body, of which Lord Halifax is president, exists for the object of furthering the "Catholic movement" in the Church of England; and since the announcement of the archbishop's decision advising against the use of incense and of processional lights (see *THE LITERARY DIGEST*, September 2), some pronouncement of this kind had been looked for. Lord Halifax, after premising that he speaks as a layman to laymen, and does not pretend to advise the clergy as to their attitude toward the "Opinion," proceeds to discuss the document itself. He says:

"I will say that it seems to me to be one of the greatest misfortunes that has fallen on the church since the rise of the Oxford movement; and for this reason: the 'Opinion' does everything that such a document could do to discredit and reduce to an unreality the appeal which the Church of England has ever made to the practise of the whole Catholic church of Christ as supplying her standard of doctrine and ceremonial. That appeal has been the great weapon with which, ever since the suspension of communion with Rome, the Church of England has always met the censures of Rome on the one hand, and the attacks of Puritan and Protestant controversialists on the other. This is a matter of history. The use of incense in divine service (to the consideration of which point alone I shall confine myself) was exactly a matter which surely should have been tested by the appeal to Catholic practise. Consider how the matter stands. No one disputes the fact that the use of incense in public worship was never by name forbidden, tho it was commonly so employed at the time of the compilation of the Book of Common Prayer. The utmost that was done at that time was to omit all reference to the use of incense in the rubrics. In this respect the use of incense stood in exactly the same position as the use of an organ in public worship. Both were customarily used in divine service before the promulgation of the English prayer-book. Neither was mentioned as required to be used in that book; neither was forbidden. Organs, only by use and wont, and by the toleration of authorities, continued to be used. Incense dropped, almost generally, out of use. . . . Ever since the English prayer-book came into use its services have never been performed without some ad-

dition in the way of ceremonial not actually verbally prescribed in the rubrics. Every week our church papers contain accounts of rites and ceremonies often performed by the bishops themselves which are not contained in, nor sanctioned by the explicit directions of, the prayer-book. What are we to think of the justice and righteousness of asserting, in order to put down a particular practise, a principle of interpretation of our formularies which we may confidently say our archbishops and bishops have not the slightest intention of impartially applying all round?"

The same act to which the archbishops refer, says Lord Halifax, as basis for their action, also provides that every one who fails to attend divine service in his parish church or some authorized place of worship each Sunday and holy day, shall be visited by church censures, and fined 'twelve pence' for each offense. It also requires the use of the ornaments of the second year of Edward VI., including the alb and vestment. Are the archbishops going to enforce these provisions likewise? Lord Halifax thinks that no such impartial interpretation of the act is to be looked for. What, he continues, has at this date stirred up the primates to "make this raid on the use of incense"? And then in spite of the protestation of official and personal respect for the archbishops with which he begins his letter, he says in reply to this question:

"Our love for the honor of our church, and our reverence for the episcopal office, make us blush with shame to give the only truthful reply. Our prelates have been stirred into action in order to appease, by the sacrifice of the religious feelings of some thousands of loyal churchmen, the rancors of a profane and blasphemous agitator and his followers, and the threats of sometimes ignorant and prejudiced, but always contentious, political partisans. It is miserable to have to acknowledge it, but it can not be doubted that it is the fact, that but for the recent clamor we should have been left quietly to worship God in peace, and to bring our incense to adorn His worship without molestation."

In conclusion he gives the laity this counsel:

"But whatever course your priests deem it their duty to take, stand by your priests. Help them, if need so require, to bear the pain of depriving their ministrations of a lawful and Catholic adjunct should conscience tell them that they must yield to the 'Opinion,' and be true to them in the dark and difficult days that will be in store for them if they feel that they must resist the officers of the church for the honor of that church which the divine Master bids even bishops to 'hear.' We have been told that in the smallest, as well as the greatest, matters we are bound by an act of Parliament three hundred years old, an act passed in the teeth of the bishops and convocation. If this, indeed, be the case, we will do our best to cut through such bonds, and to reassert those inherent liberties of the church of which, as Mr. Keble said long ago, no Parliament can deprive her; but till that issue is made so clear that none can mistake it, we shall fight our battle as we have been fighting it for the last fifty years, by asserting without flinching the church's rights, and, if need be, by suffering for them. The history of the past is full of encouragement. May it please Almighty God to grant us out of present trouble a peaceful issue, or if a conflict there must needs be, such a measure of success as will best promote the true interests of His church."

The Weekly Register, a London Roman Catholic paper which expresses much sympathy with the High-Church party, tho it thinks many of Lord Halifax's argument are unsound, thus expresses its opinion of the effect of his delivery:

"The drift of Lord Halifax's manifesto is unmistakable; it is a call to resistance, veiled perhaps, but still sufficiently plain. It will probably be responded to by a large section. M. Westall, the vicar of St. Cuthbert's, Philbeach Gardens, has consented, it is true, to surrender the use of incense during the communion service, but he does so because he consented to appear before the archbishops, and that consent, he considers, curtails his liberty of action. And he evidently intends to continue to use incense in processions, the use recommended by Lord Halifax as a *minimum*."

The Daily Chronicle in an editorial comment says:

"The laity who are of Lord Halifax's way of thinking are recommended to support their parish priest if he decides at the bidding of his bishop to yield obedience to the strict letter of the primate's judgment; but they are also to support him if he conscientiously feels that he must rebel. Lord Halifax shows plainly enough that he hopes for rebellion. He can not regard the 'hearing' at Lambeth as the binding judgment of an ecclesiastical court. The 'Opinion' of the archbishops is not 'infallible.' Nothing apparently is infallible but the practise of the Catholic church which Lord Halifax claims to interpret. The parish priest may think that interpretation by the heads of the church, supported by the bishops, is, after all, the only secure basis for canonical obedience. Lord Halifax trusts, however, that he will not think so, and announces that the ritualist priest who stands out for private judgment will be sustained in fighting the battle 'as we have been fighting it for the last fifty years.'"

In the mean time, it is announced that the Bishop of London has sent a letter to his rural deans asking them to inform the clergy of his request that they quietly abandon the proscribed usages. The Bishop of Rochester has written individually to his clergy asking them to conform to the request of the archbishops. One church in London at once suspended the use of incense. Of the half-dozen churches in Brighton, only one has complied. The vicar of a church in Boston, Lincolnshire, had declared his intention to make no change in his services. *The Church Times*, a leading organ of the Catholic party, advises qualified submission. It says:

"We urge no one to hold out against the archbishops' finding if his bishop bids him to acquiesce, but we do urge any one so submitting to make quite clear the grounds of his action. Let him say plainly that by the advice of his bishop he acquiesces for the time being in a wholly unjustifiable restriction, imposed without ecclesiastical authority, by act of Parliament only."

SHOULD THE BIBLE BE DRAMATIZED?

THE Rev. Dr. F. W. Gunsaulus, president of the Armour Institute of Technology and pastor of the Central Church (Congregational), Chicago, lately stirred up much discussion by saying that he believed that the many dramatic incidents and characters in the Old- and New-Testament books should be made use of upon the stage, for the ethical education and spiritual stimulus which they would afford when thus visualized and brought home to the attention of people in a new and fresh light. He says (as quoted in the *New York Herald*):

"There is no question in my mind as to the early alliance of great Christian and Hebrew history, poetry, and legend with the stage. The possibilities of the religious drama are only partially used in the Passion Play of earlier times and in the Passion Play of the present time. The miracle plays upon which Shakespeare laid the foundations of his dramas are more prophetic of the uses which shall be made of sacred history on the stage than they are reminiscent of a past forever gone.

"The genius of tragedy will find its literary resources so richly endowed for dramatic purposes when the dramatist reads his Bible as a book of literature that no question will be asked about the propriety of using Scriptural narrations on the stage. More than this, as seriousness comes into our literary life we will find dramatic art yielding to the demand of the public, and it will furnish such products of genius as will match the art of the painter or the sculptor.

"If it is right and good that Michelangelo should recreate Moses by the chisel, that Raphael should recreate the Transfiguration by the brush, that Browning should recreate Saul by the pen, or Mendelssohn recreate Elijah by musical sound, why may not the various and rich instrumentalities used in dramatic art reproduce, for the same purpose of instruction and culture, the lives and achievements, the disasters and triumphs, of the men and women of the Bible?

"A great preacher is likely to have a great deal of dramatic art

in him, and he is certainly none the worse for being able to tell the story of Judas so that the audience may feel the tragedy of that life and shrink with horror from the possibility of a similar fatality of character. Jesus Himself employed the novel for His parables, or short stories told for a moral purpose. As I have suggested, such a picture as 'The Last Supper,' by Leonardo da Vinci, which at its best added to the religious influence of the church in which it was painted, as did the frescoes by Michelangelo in the Sistine Chapel, is only a drama, or a single moment in a drama, placed before the eyes.

"To place a historical scene or a great poetic legend involving moral teaching before all the senses appealed to by the stage

is surely a greater work. Some time ago an almost unknown man, Charles Heavesage, printed a drama called 'Saul of Tarsus,' and the late Lord de Tabley wrote his poem called 'Jael.'

"Now, I can conceive nothing grander than the drama which might be created out of such stories as these and placed upon the stage. When the genius rises equal to the task of placing the career of Moses in the hands of those able to represent King Lear the amazing resources of literature and the grandest historical episode of early times will be dramatized.

REV. DR. F. W. GUNSAULUS.

"Of course these dramas ought never to be presented under less religious influences than are those under which the Passion Play is given at Ober-Ammergau. I question the usefulness of producing the story of the death of Jesus on any stage, but the reason for this statement lies only in the fact that it is beyond the reach either of intellectual power or moral genius. I can not see, however, why such a drama as might be made out of the life of Nehemiah should not be presented and its presentation produce noble results."

There is, of course, great division of opinion as to the desirability of such a modern innovation. Several preachers, including Dr. W. H. Thomas, of the People's Church, Chicago, and the Rev. S. Parks Cadman, of the Metropolitan Temple, New York, have expressed themselves in favor of the plan. A high literary critic, Prof. Brander Matthews, says:

"Why not? There is no valid argument against a story from the Bible being put on the stage. It has been done, and done reverently, in the past, and quite recently in various countries.

"You, of course, know how the Passion Play was acted at Eastertide everywhere in the early church. During the succeeding centuries it has continued to be presented yearly in some lands. In Mexico it is still enacted annually, as well as at Ober-Ammergau.

"Can the scenes in the life of Christ be reverently portrayed? Certainly. In 1880 the Passion Play was given in San Francisco. James O'Neill, who was educated for the priesthood, took the part of Christ and acted it admirably. The religious drama is being rapidly revived. The 'John the Baptist' of Johannes Sudermann, the great German dramatist, scored a distinct triumph at Berlin recently. The play written by Rostand just before 'Cyrano' was 'La Samaritaine,' an adaptation of the Bible story.

"By all means let some one dramatize the best of the biblical

narratives. The experiment will do no harm and may result in untold good."

The *Detroit News-Tribune*, however, sees in the proposal only another sad result of Dr. Potter's statement that the Bible should be treated as "literature." It says:

"Without doubt, the Bible contains material for the production of plays as sensational, and therefore as profitable to the producers, as anything that has been thus far exhibited. But heretofore such sacrilegious use of divine things has been prevented. It is true, as Dr. Gunsaulus says, that music and sculpture and painting have drawn their highest inspiration from the Bible. Why not, then, the drama?

"Many reasons can be given why it would never do to dramatize the Bible; but one reason is sufficient, and that is the practical reason. The Bible itself is too realistic. It everywhere holds the mirror up to nature and calls a spade a spade. It was written to be read—not exhibited. Some of its stories are to be read in private—not in public. But some of these latter would make the most fetching, the most profitable plays. Once start the Bible drama and playwrights will not be slow to seize on the opportunities which it affords for the production of plays as voluptuous as many that make no pretensions to being religious or even pure.

"Imagine—for example—the possibilities of such themes as 'Ruth,' 'Esther,' 'Absalom,' or 'John the Baptist,' with such scenes as Boaz and Ruth in the threshing floor at midnight; the royal feast in Shushan palace; the scene where the 'many maidens' are brought in by Hegai for the king's inspection, and Esther was chosen. Then, in 'Absalom' would be the scene of Amnon sick in his chamber being waited on by Tamar, the curtain to drop, of course, just as Amnon proves himself to be 'the stronger.' And the scene resulting from Ahithophel's council—the ten women on David's housetop—the curtain falling as Absalom appears. In 'John the Baptist' would be the apprehension of and casting into prison of John. Herod's birthday feast, with Herodia's daughter pleasing Herod with her *danse du ventre*. The scenes shift and the beheading of John in prison is depicted. Again the scene is shifted and Herod's banqueting hall is shown, with the banqueters more riotous and abandoned than before. John the Baptist's head is brought in on a charger, amid shouts and uproar. Tableaux! Curtain! Finale!"

The *Baltimore Herald* says, with regard to this subject of possible irreverence:

"The principal difficulty concerning the presentation of biblical plays would lie in preserving those religious influences which Dr. Gunsaulus says should always prevail at their performance. Irreverent people would be disposed to treat the sacred subjects with levity, and friction might ensue in the course of efforts to hold such light-minded spirits in check.

"Could every one witness a religious drama with the reverence which inspires the Ober-Ammergau peasants when they perform the 'Passion Play,' even captious objectors might cease to criticize such productions. But it could hardly be expected that religious plays, performed for gain, would always preserve their sacred aspect.

"Nevertheless, there will doubtless be those who will argue that the success of 'The Sign of the Cross,' not merely in a pecuniary way, but in the interest it aroused among the religious community, warrants the assumption that Bible plays would receive an equal amount of respect from the public. No doubt they would, but the fact remains that there is a general aversion to seeing Scriptural subjects treated upon the stage.

"Unquestionably, the interest they would arouse could not be otherwise than deep, but their sanctity should be preserved at all hazards."

Victor Hugo on Immortality.—In his old age Victor Hugo's thoughts turned strongly toward the belief which most of humanity possess in a future life. *The Advance* says we may well place the following eloquent words at this time over against the agnostic utterances of Ingersoll:

"I feel in myself the future life. I am rising, I know, toward the sky. The sunshine is over my head. Heaven lights me with the reflection of unknown worlds.

"You say the soul is nothing but the result of bodily powers;

why then is my soul the more luminous when my bodily powers begin to fail? Winter is on my head and eternal spring is in my heart.

"The nearer I approach the end, the plainer I hear around me the immortal symphonies of the worlds which invite me. It is marvelous, yet simple. It is a fairy tale, and it is a history. For half a century I have been writing my thoughts in prose, verse, history, philosophy, drama, romance, tradition, satire, ode, song—I have tried all. But I feel that I have not said the thousandth part of what is in me. When I go down to the grave I can say, like so many others: 'I have finished my day's work,' but I can not say 'I have finished my life.' My day's work will begin the next morning. The tomb is not a blind alley, it is a thoroughfare. It closes in the twilight to open with the dawn. I improve every hour because I love this world as my fatherland. My work is only a beginning. My work is hardly above its foundation. I would be glad to see it mounting and mounting forever. The thirst for the infinite proves infinity."

KIPLING IN THE SUNDAY SCHOOL.

A MEMBER of a Methodist church in Indiana lately made the discovery that in some of Kipling's stories in the Sunday-school library were to be found a number of words which were not quite the best additions to make to a Sunday-school pupil's vocabulary—in fact, that there was an exceptionally choice and varied selection of swear-words. This discovery and the decision of the Sunday-school to exclude Kipling's books from its library have caused much discussion both abroad and at home as to whether Kipling is or is not suitable reading for children. One of the most recent editorial comments is in *The Watchman* (Baptist, September 7). The writer says:

"If 'Captains Courageous' were the book of Kipling's under discussion, we should say that those who have charge of these libraries could hardly do better than to put several copies of it on their shelves and recommend all the boys to read it. The 'Jungle Books,' whether appropriate or not for Sunday-school libraries, are certainly suitable for children; but beyond these, and some stories that could hardly be separated from the books of which they form a part, we should say decidedly that Kipling's works are not fit for a Sunday-school library. Kipling is a great writer, a man of noble ideals, and there is very little in his books that even an extreme purist, if he were sensible, would wish to expurgate; but Kipling is not a writer for half-grown boys and little girls. And even tho the children read him, as probably they do, they should not do so under the auspices of the Sunday-school."

"Some people can never be brought to see that the literature that is appropriate for adults may not be fit for children. They insist upon bringing every book to the standard of *virginibus puerisque*. It is their highest praise of a writer that he never penned a line that a boy or a girl ought not to read. It is probably hopeless to attempt to argue with these people, but despite their dictum it is safe to assume that there are a number of human experiences, upon the portrayal of which it will be useful for the adult to reflect, that the young person should not think about at all. There are few things in the United States that impress the cultivated foreigner more unpleasantly than the practical results of this failure to distinguish between juvenile and adult literature. An eminent Frenchman lately expressed his surprise that young women in the United States freely witness the very plays which in France a well-brought-up maiden on no account would be permitted to attend. We imagine that the plays in question would not do even the maturest person any good, but, barring that point, the French undoubtedly make a just distinction in discriminating between what is appropriate for the general public and for *la jeune fille*.

"In a word, that is why we do not believe that Kipling's works, as a whole, should have a place in a Sunday-school library. It is

not because they are immoral, for they are not; but they are addressed to an audience which has an experience of life, a power of reflection, discrimination, and a maturity which the normal boy and girl ought not to have. They may be unwholesome for boys and girls for precisely the reason that they are profitable for mature men and women."

A CHURCH ON WHEELS.

A DECIDED indication that the Episcopal church in this country is a progressive and not a stationary body is a new church building just completed on the rectory grounds of St. Matthews, Jamestown, R. I. It is the first movable Episcopal church in America. By a curious coincidence, the first stationary church

THE MOVABLE CHURCH OF THE TRANSFIGURATION.

Courtesy of *The Churchman*.

of this religious body was built in Jamestown, Va. In *The Churchman* (September 9) is given an account of this itinerant chapel. The writer says:

"The structure is a plain chapel, 27 feet long and 18 feet wide. A bell tower and adjustable cross project from the front in such a way as to permit passage under telegraph wires. The running gear consists of large, heavy wheels, with under-trusses reaching from axle to rocker-plate. All this is hidden, when stationary, by board under-pinning. There are detachable front and rear steps.

"The interior is a surprise to the worshiper in its beauty and completeness. Its open roof, stained windows, oak pews, rich chancel furnishings, organ, and font, are successfully combined to produce a beautiful albeit tiny house of worship."

The chapel was dedicated May 17, its entire cost being \$3,000. It is located in winter on top of Stork's Hill, Conanicut Island, and is drawn by twenty oxen to Conanicut Park for use by the summer colony.

RELIGIOUS NOTES.

THE German Baptists of America have taken action against the teaching and use of instrumental music in their brotherhood. Elder C. M. Yeant thus explains their attitude: "The church has decided that we shall not have instrumental music in our churches, yet the institutions controlled and owned by the brethren and under the profession of the brotherhood are teaching the very thing the church says they shall not use. The organs are coming into the churches of our brethren, and it is the product of teaching of our brethren. The Gospel is all in opposition to instrumental music, from the fact that the church is to sing for the Lord, and a dumb organ has no soul. We might as well get the gramophone to do our praying for us. There is just as much power and just as much spirit in it."

DR. KENNON, the popular bishop of the rather aquatic West of England diocese known as "Bath and Wells," is distinctly a non-conformist in matters of form and ecclesiastical Grundyism. *The Church Standard* (Philadelphia) says of him: "It has already been told how he cycles about the diocese most unconcernedly with surplice and stole tied on in front. Not long since, he stopped short to rebuke an audience for their undemonstrative reception of his remarks. He was pleading the cause of some mission to a model Bath afternoon audience, consisting mainly of dowagers and ear-trumpets, and, not evoking a single hand-clap or 'Hear, hear' stopped suddenly short, and said, reproachfully: 'What a quiet lot of people you are!' The rebuke went home, the old ladies applauded, and, finally, gave liberally to the collection."

FOREIGN TOPICS.

EUROPEAN COMMENTS ON THE DREYFUS TRIAL.

THE progress of the second trial of Dreyfus has, of course, been watched narrowly and freely commented upon by the newspapers of all lands. Ever since the beginning of September, most of the world has been prepared for the second verdict of guilty. It is too soon (as this number of THE LITERARY DIGEST

FRANCE TO PARIS: "Keep quiet, you madmen! If you go on making such an exhibition of yourselves, you'll ruin mine!"—*Punch, London.*

goes to press) to add to the expressions of opinion on the verdict, made by European journals, and reproduced in our columns from the cablegrams to the daily press. But comments made as the trial proceeded are of almost equal interest. It is evident from these that the direct evidence brought against Dreyfus is regarded as of extremely flimsy character by nine tenths of the civilized world, outside of France, and by many Frenchmen as well; and the circumstantial evidence is the subject of innumerable jokes. In France itself, both the Dreyfus and the anti-Dreyfus press, with few exceptions, lost all semblance of a judicial calmness and argued the case back and forth in a passionate and dogmatic manner. For instance, the *Intransigeant* declared that Dreyfus's guilt is as clearly proven as that of any murderer who is caught bending over the corpse of his victim, the bloody knife still in his hand; while the *Fronde* found proofs of Dreyfus's innocence in the fact that he praised his wife before the court, and the *Figaro* said:

"Unless General Mercier has in his pocket an autograph letter to Dreyfus from the German Emperor, and unless this letter shows plainly that the Emperor was intimately connected with Dreyfus, it is mathematically impossible for the judges to pronounce against the prisoner."

This want of calm judgment, coupled with unmeasured abuse of every one who dares to differ in opinion, is likely, so the *Journal des Débats* (one of the few self-contained French journals) thinks, to lead to the restriction of the liberty of the press in France, a bill for that purpose now pending before the Chambers.

It has been asserted in French papers that only the political enemies of France believe in the innocence of Dreyfus. That is not the case. The press in nations which are wont to draw moral support from France are unsparing in their censure. The *Indépendance Belge*, Brussels, says:

"It is almost incredible that men in high positions are permitted, day after day, to adduce as 'evidence' such matter as has been condemned by the highest court in the land. But these high officials and officers feel that their own unmeasured stupidity is revealed during this trial; they know that their credulity, which enabled Esterhazy and Henry to lead them by the nose, has become patent to all. So they lie and keep on lying, expressing their conviction of Dreyfus's guilt before a court formed of simple soldiers, who are accustomed to respect the opinions of their superiors."

Less gently, the French are censured in countries from which they are politically estranged. Especially do the British jingo papers handle them without gloves. The *St. James's Gazette* says:

"We do not want to go where we will meet forgers, perjurers, torturers, Esterhazys, and 'la fille Pays.' It is defiling to mix with such people, and it is not safe to go where the 'honor of the army' is an excuse for murder—slow murder by form of law, and quick murder by assassins in the street. We have to let the French know once for all that 'honor,' as we understand it, does not lie in feeding one's vanity by refusing to confess and atone for our errors, but in repentance for wrong done and in the determination to follow quite other courses in future."

The *Spectator*, London, believes that temperament has much to do with the French views of this famous Dreyfus case. It says:

"An ignorant Englishman, when told something outside the range of his experience, as a rule stolidly disbelieves it, and, of

THE FRENCH GOVERNMENT AT THE BAR OF JUSTICE.

MARIANNE (to Justice): "Away with thee, thou troublesome one!"
—*Amsterdamer*

course, refuses to make it a basis of action. The Frenchman believes it, and, believing, imagines a thousand monstrous things which might be true if only the bases on which he builds them were not inventions. The old Englishwoman who was told of

the flying-fish remarked that her son was lying. A Frenchman as ignorant, if told the same thing, would have believed it, and immediately have seen clouds of flying-fish darkening the air of France, and in their fall and putrefaction producing an epidemic. . . . If anybody thinks that illustration too farcical or exaggerated, let him read General Mercier's evidence as to the money raised to defend Dreyfus. That officer has had some kind of regular training, and has risen to high staff employ, yet he believes, and accuses General Jamont, the virtual commander-in-chief, of believing, that Germany and England sent £1,400,000 to Paris to be expended in bribery for Dreyfus, and drew, of course, the deduction that such sacrifices would only be made for a secret agent."

The Westminster Gazette, London, thinks the great majority of English journalists very injudicious in their wholesale condemnation of France. It has pointed out repeatedly that Dreyfus, whether he be guilty of the treason attributed or not, is not the "spotless angel" some papers would have us believe; that the authorship of the *bordereau* was not determined by the Court of Cassation; and that Dreyfus can not satisfactorily explain his secret journeys to Germany. It asks Englishmen to look at the case from the following point of view:

"Suppose that a man had been sentenced by court-martial in this country; suppose that, in answer to an appeal for the reopening of the case, Lord Wolseley, Sir Evelyn Wood, and Sir Redvers Buller declared on their honor that they had sifted all the evidence and found the conviction just; suppose that Mr. W. H. Smith, Sir Henry Campbell-Bannerman, and Lord Lansdowne had from their places in Parliament solemnly affirmed the same thing—would not the English people have accepted their finding, and attributed the attacks on these men to faddists and fanatics? Who can doubt that in this country, as in France, the difficulty of obtaining a retrial would have been enormous, and that the bulk of people in this country would have held tenaciously to the theory of the prisoner's guilt?"

Goldwin Smith, referring to the subject in the *Toronto Week*, remarks that "not only in Paris are sedatives required." "Is it possible," he asks, "that Englishmen can have so far lost their heads as to talk of boycotting France? This Dreyfus affair has made lunatics of all who have dealt with it on either side. If anything like an attempt to boycott France or the Paris Exhibition were made, the very first angry question that presented itself would infallibly lead to war." Some English papers also assert that the Jews, by their want of moderation, have done more harm than good to Dreyfus. Even the Socialist organ *Justice* (London) turns from its defense of Dreyfus to warn "the Jew press" that the Jews themselves are to blame for much of the bitter feeling against them in France. It is certain, also, that the attitude of the Jews in this matter has also influenced people in Germany, where the Liberal press is almost entirely in Jewish hands. The *Tageblatt*, Berlin, one of their most powerful organs, demanded that the German Government should furnish, unasked, a list of the spies in its employ, to show that Dreyfus was not among them. The Conservative papers declared, of course, that that was impossible. The *Correspondent*, Hamburg, expressed itself to the following effect:

It must be remembered that the German Government has already done everything in its power. Officially and unofficially it has been declared that Dreyfus never had anything to do with the German Government. Were the German Government to approach France officially in this matter, the Government of France would certainly resent it. Moreover, the anti-Dreyfusards have repeatedly declared that any statement made in favor of Dreyfus is in itself unworthy of credit, and need not even be examined. When such a statement comes from Germany, it is immediately regarded as an unwarrantable interference with the internal affairs of France.

Much sympathy has been expressed with M. Labori for the attempt upon his life. No other feature of the case, perhaps, contributed so much to the international conviction that Dreyfus is the victim of a conspiracy in the General Staff. Labori's pluck

and energy, which enabled him to continue the defense after a few days' respite, have earned for him much admiration. The *Handelsblad*, Amsterdam, says:

"We read continually in the French papers that France wants a man. Well, that man is found. Since the days of Gambetta (also a lawyer), France has not had such a man. He is respected by friend and foe alike. And let it be understood everywhere that nothing but his love of justice influences him. He has never received a cent for his work on this Dreyfus affair, not even from Zola; he refused payment."

The effect of the trial upon the Government of France and upon the relations of that country to the other nations of the world has also been widely discussed. The opinion that generally prevailed, even before the verdict was rendered, was that "L'Affaire" was certain to injure the prestige of France. *The St. James's Gazette*, London, said on this point:

"Suppose the court-martial, with the best intention in the world, give their verdict against Captain Dreyfus. It follows that no foreigner will be safe a moment in France if it pleases the chiefs of the army to declare that his condemnation is needed for 'the honor of the army.' But suppose that the court-martial does acquit Captain Dreyfus, what follows? Well, what follows is that by his acquittal a large body of the most important officers in the French army, and many of its leading politicians, are covered with infamy. They are shown to have acted with a mixture of cunning and ferocity which one does not expect to meet outside of the seraglio, or of the durbar of Abdur-Rahman. In either case, in what position is France left, and how is it possible that we should continue to treat her as a really civilized nation? It will become necessary to revise our relations to her altogether, and no delicacy of language will alter essential facts."

The *Kölnische Zeitung*, Cologne, does not so much fear for the safety of the individual in France as for the existing form of government. Its overthrow, thinks the paper, must greatly reduce the international prestige of France, as only a state of anarchy can follow. It argues in the main as follows:

The Waldeck-Rousseau cabinet, composed of men whose reputations have not been sullied by scandal, and who are considered the only ones strong enough to maintain order, is in great difficulties. Already the Premier is asked to summon the legislature, under the pretext that the danger of war, caused by the insults heaped upon foreign countries and their representatives, renders the presence of the deputies absolutely necessary. Now everybody knows that no foreign power will go to war because a few French generals hope to save their honor by besmirching the good name of other people. The deputies who clamor for a session wish to overthrow the cabinet. The anti-Dreyfusards have declared most emphatically that they will not respect a verdict of "not guilty." It is quite as certain that the partisans of Dreyfus will not be satisfied if he is resented. They have tried legal means to establish justice. If they fail they will follow M. de Pressensé's example, who has allied himself with the anarchists. But if Zola and his friends unite with the anarchists and other revolutionaries, the overthrow of the republic is certain.

Such fears are expressed in France also, altho the majority of French papers agree with the *Matin*, Paris, which believes that little is to be feared from the Dreyfusards, but that it is the "antis" who must be conciliated.

The *Epoca*, Madrid, regards the attitude of the supposedly strong French cabinet as one of great weakness. There is too much pandering to mob violence, too much liberty for dangerous cranks like Guérin. It continues:

"The mere desire to avoid bloodshed is not sufficient to excuse this weakness. If you want to govern according to Quaker principles, you must first convert your subjects into orderly, law-abiding Quakers. Perhaps France may gain much by having a William Penn at its head; but we doubt it. Past experience and the character of the people show that much firmness is necessary."

The *Pester-Lloyd*, Budapest, is one of those many papers in

Germany and Austria which believe that an army led by men such as Mercier, Boisdeffre, Roget, and their companions need not be feared, as such officers can not possibly compete with the strictly honorable men who lead armies in Central Europe. The *Lloyd* says:

"And yet to men like these the future of France is to be committed! They have excused their base conduct by saying that to tell the truth would cause a war with Germany. To-day they do not scruple to insult all officers outside of France by telling the most unblushing lies and endangering most seriously the republic. Are these men who hire assassins to prevail? The result of the Rennes trial must decide the fate of France."

That the prestige of France has suffered materially in Russia is also evident. The St. Petersburg *Rossiia* declares that the military chauvinism of France must lead to financial ruin. In the *Novosti*, Prince Baryatinski writes that "the lies, the forgeries, the calumnies practised by the French General Staff will ruin the country." The *Grashdanin*, a paper said to be under the Czar's special protection, shows that the result of the Rennes trial must appear anything but satisfactory at the Russian court. It says:

"It is certain that the ultimate solution of this question will give great satisfaction to all honorable men in high circles in Russia. A few Russian papers sympathize with the enemies of the Waldeck-Rousseau cabinet, and hope that Dreyfus will again be sentenced. In serious political circles this idea does not prevail. There the energetic attitude of Waldeck-Rousseau receives applause, and a verdict in favor of Dreyfus will be regarded as a new bond between France and Russia."

Here and there a writer points out that France is not the only country where violations of justice occur. An Irish correspondent of *The Westminster Gazette* (London) writes:

"You English are amusing. Many a Dreyfus case (assuming for the moment the innocence of Dreyfus) has taken place in Ireland, but one word from a Home Secretary, or the *chose jugée*, ended the matter whenever it was broached. Scandals may always be avoided by quietly hushing them up. But the French are fools. They never could have managed the raid inquiry, for instance. I am full of awe when I meditate on English fair play."

The French certainly regard the attitude of the other nations as extremely pharisaical and unjust. The *Journal des Débats*, Paris, in a lengthy article expresses itself to the following effect:

In France, where the light of intellect shines no less brightly than elsewhere, opinions are very much divided on the Dreyfus affair. Some people, honest good people, are convinced of Dreyfus's guilt; others, equally honest and good, believe him innocent. The majority no doubt leave the matter in the hands of the court which has been appointed to judge it. But the foreign journalist acknowledges no such restraint. He has judged the case already. He will not even hear of an appeal against his decision. He knows nothing of the doubts which trouble the French.

The foreign press, we are told, stands in defense of right, of justice, of truth. We would like to point out to them that France is a country where questions of justice and humanity have always been given due importance. There is not a country on earth where a case of this kind would have been permitted to assume such proportions. This evidence of native generosity is an honor to France, but it also makes her in a measure a victim. For the foreigners abuse this generosity by gratuitous championing. We can not but say to our critics: This question does not concern you; we know what is necessary in the interest of right and truth. The best thing you can do is to mind your own business, for the cause which you make your own will not be benefited by your interference. Your attitude is such that we can not believe in the purity of your motives.—*Translations made for THE LITERARY DIGEST.*

LINES OF CLEAVAGE IN SOUTH AFRICA.

AS the news of the South African controversy has come from day to day through the press agencies (which are controlled by the British), it has appeared as tho Mr. Chamberlain has found it necessary to curb his warlike ardor. The interpretation which continental papers are disposed to place upon these reports is that John Bull thinks twice before attacking with shot and shell the enemy who has so long resisted diplomatic assault. The *Journal des Débats*, Paris, expresses itself in the main as follows:

The Boers in the Cape Colony sympathize with their relatives in the Transvaal, that is clear. To what extent, however, they will assist in repelling British pretensions is not certain. Yet the fact that Mr. Schreiner, the Cape Premier, allows ammunition to be supplied to the Orange Free State, and declares that he wishes the Cape Colony to be strictly neutral during the approaching struggle, proves that the great majority of Cape Afrikaners are opposed to British ambitions.

The *Handelsblad*, Amsterdam, says:

"Mr. Schreiner's efforts to preserve peace will not be successful if the English jingo organs have their way. He is now accused of high treason because he wishes to keep the Cape Colony as long as possible out of the difficulty. The jingoes act as if they did not know that the majority of the inhabitants in the Cape Colony sympathize with the Transvaal. As if they did not know how that colony became a British possession! In sober truth, if Mr. Schreiner manages to prevent civil war, he is a very smart man."

The *Times*, London, refers to the refusal of Mr. Schreiner to prevent the Free State—a friendly power—from obtaining ammunition, in the following terms:

"The curiously narrow and technical view of his duties taken by the Cape Premier on this subject might have produced a less unfavorable impression, were it not for the extraordinary statement he is alleged to have made in regard to his attitude in the event of war. Should war break out, he is reported to have said, 'he should do his very best to keep his colony aloof from the struggle.' That phrase, if it be accurate, in its natural sense betrays a startling misconception on the part of Mr. Schreiner of his duty both as a colonial statesman and as a British subject. What would have been thought of the governor of an American State who had declared his intention of keeping his State aloof from the war with Spain? The issues of peace and war do not rest with the colonial authorities, but with the government of the Queen, and when that government has declared war it is the duty of all loyal subjects, whatever their position, not to keep aloof from the struggle, but to do their utmost to bring the struggle to a successful end."

But the *Courant*, Utrecht, points out that the Britons, as a race, mean to establish, by force of arms, a superiority over the Afrikaner race, while the latter once for all refuse to acknowledge that superiority. It is the old story of a people who refuse to be governed without their consent, and the Cape Colony Afrikaner will not permit the Briton to dominate if that makes the Briton domineering. Threats of dire vengeance are already uttered in the jingo press. The *St. James's Gazette* is full of suggestive proposals. One of these runs as follows:

"We are told that in case of war with the Transvaal we shall have to deal with some thousands of farmers from the Cape Colony, who will reinforce the Boers or cut our communications, as well as with similar volunteers from the Free State and Natal. The Dutch inhabitants of our colonies, that is, tho treated as fellow citizens, are some of them disloyal. To encourage the rest it might be as well to make it clear that every duty of a neutral will be strictly enforced in the case of the Free State on pain of the forfeiture of her independence; and that all farms within our boundaries, the owners of or next heirs to which are proved to have served against us, or which are shown to have been transferred simply to avoid the penalties of treason, will be for-

feited. They might very well be balloted for among the British and colonial troops after the war."

What arouses special resentment in Great Britain is that Portugal could not well detain the ammunition intended for the Transvaal, since the Cape Colony refused to detain cartridges "whose distribution could not well be controlled after the consignments had crossed the Free-State border." Yet many British Liberals acknowledge that Britain's attitude toward the Boers is open to criticism. *The Westminster Gazette* says:

"The last thing a prudent man would do, even if he meant war with the Transvaal, would be to furnish the material for civil war at the Cape. Yet in their hurry to anticipate the state of war, some Cape and some British politicians are capable of most foolish proceedings, as we have just seen. A day or two ago, the Cape Progressives were burning to commit a breach of legality against the Orange Free State for the sake of stopping a consignment of cartridges. Now, apparently, we find that our own Government has overreached itself and courted an awkward rebuff in the attempt to stop a little ammunition from passing through Portuguese territory. The moral is—and it extends to the whole of these proceedings—that you can not have the benefits of war and peace at the same time."

Civil war in South Africa would be a very complicated affair. Some of the native tribes would side with the British—the Basutos, for instance, who regard the Orange Free State as their hereditary enemy, and were saved from annexation to that country by British intervention. The Matabele and other northern tribes will undoubtedly side with the Boers. All natives, however, will plunder the whites indiscriminately when they get the chance. There is, even in the old colony, the stronghold of the Afrikaner Party, a section of Boers who affect English ways and speech, and will act as Tories. On the other hand, Rhodesia's loyalty is not at all assured. *The Frankfurter Zeitung*, Frankfurt, says:

"Against the will of the people the Chartered Company has instituted a 'legislative council' of eleven members, seven of whom are appointed by the company itself. That is about as much as if the German Bundesrath had forty Prussian members. This 'fako' representation has given Rhodesia a customs tariff which taxes to the utmost all necessities of life (nearly everything has to be imported). Whisky, however, the curse of South Africa, goes in duty free, to please the great whisky harons of the Cape. Sir Alfred Milner has ratified this tariff, despite the protests of the population. The result was indignation meetings throughout Rhodesia. At one of these the Rhodesian people were described as 'Uitlanders' in the land they inhabit, 'John Company' being the 'Burgher.' But if that tariff is not altered, an early crisis may be expected in Rhodesia."

It is doubtful that the company will reduce the tariff unless it can get hold of the Transvaal gold-fields. Its debts amount to nearly \$30,000,000. — *Translations made for THE LITERARY DIGEST.*

A PARLIAMENTARY CONFLICT IN PRUSSIA.

GERMANY is at present the scene of a struggle of no little interest to America. The Government wishes to extend the already extensive system of canals which intersect the country. This, in addition to facilitating the export of industrial products, would, it is feared by the Agrarians, increase the importation of agricultural produce, and hence the latter, commanding a majority in the Prussian Parliament, have somewhat unceremoniously thrown out the Rhine-Elbe canal bill, which is specially favored by the Emperor. The manufacturers, the plutocracy, and the industrial laborers, all of whom are in a measure opposed to a strong monarchical government because it prevents them from exercising predominant influence, are now forced to support the Emperor; and the great landlords, the farmers, and the farm laborers, by tradition and choice the most loyal supporters of the crown, must

either consent to relinquish their claims to recognition or become the real opposition party. *The Vossische Zeitung*, Berlin, says:

"To the last the Government has failed to be firm in its dealings with the Conservatives, and that is why they have dared to throw out the canal bill. This weakness is only a consequence of the want of backbone shown for years by Ministers of the Miquel and Hammerstein type. Who governs in Prussia anyhow? The Agrarians think that, without their consent, nothing can be done. The German people will watch the end of the struggle with keen interest, for it may break up the rule of the Conservative Party in Prussia."

The Kölnische Zeitung, Cologne, points out that the Minister for Public Works, von Thielen, has declared in the most energetic manner that the Government will not drop the matter, as the Rhine-Elbe canal is an absolute necessity. The paper does not believe that the Conservatives will win in the end and says:

"Not only the Ministers who formerly belonged to their own organization, but the Emperor himself has opposed the Agrarians. They took up the gage and they have won a victory. But tho we are sorry to find that a work of great economic importance has been shelved for a while, we are pleased because the political situation is cleared. The Agrarians have paraded their strength because they do not believe that the Emperor and his Ministers are in earnest, or willing to enter into conflict. It will not be long now before we know whether Germany is ripe to be placed under the yoke of the Farmers' Alliance."

The Conservatives, on the other hand, declare that they could not accept the canal bill because the Government had threatened them. "It would have been undignified," remarks the *Deutsche Tages-Zeitung*, and the *Hamburger Nachrichten* declares that the Conservatives would have lost all prestige if they had meekly accepted the terms of the Government. *The Kreuz-Zeitung*, the organ of the "Junker" Party *par excellence*, hopes the Government will now understand that even the loyal Conservatives must occasionally be considered when important economic interests are at stake, and says:

"It is to be regretted that Chancellor Hohenlohe threatens to leave out of all consideration the wishes and needs of the Agrarians when new commercial treaties are formed. The Conservatives wish nothing better than to work hand in hand with the Government for the welfare of the country. There is no need of a rupture. There is no reason why the Government should fancy that its prestige has suffered, merely because the Conservatives have rejected a government bill. Moreover, even the canal project may revive. If further agitation results in the conversion of present opponents, the canal bill may pass at some future time. But there is no need to hurry."

Of no little moment is this German conflict to Great Britain. On the one hand the hope is expressed that the Agrarians may successfully block the way to further industrial development in Germany. On the other hand, there is a wish that the proud, unbending Prussian squires may be humbled by the Emperor. Here and there it is suggested that an earnest conflict would disturb Germany sufficiently to cripple her industries and yet humble the "Junkers." "If any breed of foreign politicians be 'pizen' to the liberty-loving, free-trading Briton, it is these Prussian Agrarians," remarks the outspoken London *Outlook*, and in another place it says:

"The present Emperor is striving vigorously to develop the means of transit in Germany, by canals and railways to make swift communication between factory and field, and to increase the German commercial fleet; all this in view of the fact that in 1904, when Germany's tariff treaties with Austria-Hungary, Belgium, Italy, Rumania, Russia, Servia, and Switzerland expire, she will be in a position to start a new policy. What that policy may be it would be hard to say absolutely, but things tend to prove that she is meditating the overthrow of our commercial supremacy."

The Journal des Débats, Paris, thinks it possible that the Emperor may ally himself with the Liberals against the Conservatives; but admits that such an alliance could not be lasting. It is doubtful that the estrangement between the King—for it is as King of Prussia only that William II. acts in this matter—and his chief supporters will last. A few government officials who voted against the canal bill in the Landtag have been disciplined, and the bill will again be brought forward. On the other hand, some concession will be made to the class which furnishes nine tenths of the officers and officials in the country. — *Translations made for THE LITERARY DIGEST.*

AN AUTUMN GREETING

Trade Mark.

From "The Linen Store."

Viewed from the standpoint of its provision for strictly household requirements, "The Linen Store" welcomes its patrons to a view of a finer and fairer and fuller stock than ever.

TABLE CLOTHING.

This fall finds us ready with things new, beautiful, and exclusive in fine damask table-cloths and napkins, also a choice selection of Lace Luncheon and Dinner cloths, centre pieces, scarfs and doylies, in Renaissance, Point Arabe, French Crepon, Duchesse and Venetian; Hemstitched Tea Doylies, Tea and Luncheon cloths and Scarfs in great profusion.

BED COVERING.

Blankets of finest wool, in every size. "Patent Satin" quilts of beautiful design, in all sizes, from that of the babies' crib to those for extra large double beds, and some especially long for brass beds. Irish hand-embroidered Bed Spreads, beautiful in design and execution; Lace Bed Se's, of the very latest style and patterns. These with wool and down filled silk and sateen covered comfortables, are suggestive of the stock.

Visitors to the city are cordially invited to walk through our store and look at the beautiful goods above referred to.

JAMES McCUTCHEON & CO.
14 West 23d Street, New York.

BED LINEN.

The sleeping comforts provided by us are in perfect keeping with the requirements of refined people. Sheets, with lace insertion, lace edge and drawn work, with pillow cases to match; Irish hand-embroidery on bed sets; also all sizes and grades of fineness in plain hemmed and hemstitched bed linen; with the one fact common to all—every thread pure linen.

TOWELS AND TOWELING.

For the bedroom, the bathroom, the butler's pantry and the kitchen. Damask and huck, hemmed, hemstitched, and fringed towels; huck toweling, with damask figures of fleur de lis and other attractive designs for the bedroom.

A full supply of bath towels and sheets, rough and smooth.

For pantry use, glass towels and toweling, in all widths and sizes, and an equally full assortment of suitable goods for the kitchen.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Minister Loomis writes from Caracas, in regard to a plan recently presented to the Government which, says the minister, looks to the construction of the greatest system of inland water-ways in the world. It is proposed to connect by means of canals the great river systems of the continent of South America, making a navigable water-way from the valley of the Orinoco to that of La Plata, inclusive. The estimated cost of this work is \$200,000,000, which figure, however, is largely conjectural, as no accurate surveys or detailed statement of the probable cost has ever been made. It is not unlikely, continues Mr. Loomis, that this matter will be taken up seriously by some of the South American governments within a few years.

Minister Finch transmits from Montevideo the following letter published in a local paper, showing the surprising yield of rice in the department of Rivera:

"The first planting of rice by Mr. Juan Lemos was 1½ kilograms (3.3 pounds) which yielded 150 kilograms (331 pounds), a profit of 100 to 1. A sample of the rice has been inspected and is pronounced to be of the best quality. Encouraged by this splendid result, Mr. Lemos will extend his plantations next year. If the enthusiasm for national production spreads, the department of Rivera will, from its soil and climatic conditions, become one of the richest in the country."

Minister Finch writes from Montevideo also that the shipments to Montevideo of coal during the first quarter of the year 1899 amounted to 75,610,672 kilograms (74,416 tons).

As Hongkong has no custom-house, the only official source of information concerning imports and exports is the annual report of the harbor master. His report for the year ending December

31, 1898, has just been published, and it contains many items of interest to American exporters and shipowners who are interested in the commerce of southern China and the Philippines. It will also be interesting to note the increase of American shipping in this port in 1898 over 1897. This has all taken place since August, within a period of four months. The increase of 1899 will be fully double that of 1898, because of the large number of ships plying between Manila and Hongkong that have gone under the American flag, and because of the greater consumption of American goods in Manila. The total tonnage entering and clearing this port for the year 1898 amounted to 17,265,780 tons, an increase compared with 1897 of 1,327,606 tons. There arrived 39,815 vessels, aggregating 8,648,274 tons. Eleven steamers flying the American flag entered during 1898, as against 4 in 1897. Thirty-two sailing-vessels came in under the American flag, as against 30 in 1897. America standing second to Great Britain, with 36 under the British flag. The year 1898 was marked by heavy trade in rice and coal, and the introduction of oil from Langkat, Sumatra. The demand for rice was largely from Japan, and that for coal was a result of the late war with Spain and the centering of so many foreign fleets in this harbor. The American kerosene-oil trade remained practically the same as in 1897. American flour shows a considerable increase in spite of the fact that from April to August the Manila market was practically closed to it. Hongkong imported from the United States 270,204 tons of cargo, as against 278,711 tons from the continent of Europe and 416,377 tons from Great Britain. The imports

from the Philippine Islands amounted to 169,526 tons. The exports from Hongkong to the United States amounted to 148,525 tons and to the Philippine Islands to 152,395 tons, leaving a balance of trade heavily in our favor. Among the imports in which the United States is interested are 103,544 tons of flour, 36,611 tons of cotton and cotton yarn, 55,160 tons of hemp, 67,362 tons of kerosene in bulk, and 59,115 tons of kerosene in case, all of which items except kerosene show an increase over 1897. There arrived during 1898, on vessels of all classes, 3,299,902 passengers. The total revenue of the harbor department, which is made up of light dues, licenses, and internal revenue and court and office fees, amounted to \$183,628.01. These figures in some measure show Hongkong's importance in the shipping world. The peculiarity of the Hongkong trade is that the consumption of imports on the island itself is so small, as compared with the bulk of the trade, that it can be stated that almost all imports are again exported. Hongkong has often been called a vast bonded warehouse and clearing-house for southern China and the surrounding countries.

"During the past fiscal year, certain noteworthy changes for the better have taken place in my consular district," writes our commercial agent at Nouméa.

A Mr. Bernheim, owner of extensive mining property in the northwest of the colony, recently completed a narrow-gauge line of railway, 40 kilometers (24.85 miles) in length. The rails and rolling-stock were imported from France. Two other lines are in course of construction, one of 40 kilometers, on the east side of the island, at Kouaona, and one of 30 kilometers (18.6 miles), close to Bourail, a small town north of Nouméa. A line of 150 kilometers (93 miles), to be built by the local government, will probably be commenced in February next, the contract for which I hope will be secured by a United States firm. A fifth line in the extreme north is in contemplation.

The mining industry is in a flourishing condi-

For General Debility

Use Horsford's Acid Phosphate.

Dr. W. L. SEVERANCE, Greenfield, Mass., says: "For years I have prescribed it in general debility, nervous exhaustion and insomnia, with the happiest results."

ORIGINAL BEEF.

A vegetable beef tasting like flesh-foods, containing twenty-five per cent. more food elements than beef, that can be served in the same manner as beef or chicken, is the new food product called Protose. It is purely vegetable in character, containing no trace of animal substance. It is original beef. Its discovery was as great a surprise to those conducting the investigation from which it resulted as it has been to all who have become acquainted with its marvelous properties. It is more easily digested than any flesh-food. The digestibility of vegetable proteids is always increased by cooking, whereas the reverse is true of animal proteids; hence Protose may be eaten freely without risk of indigestion, biliousness, gastritis, or any other of the grave ills which not infrequently follow the free use of flesh-foods.

Six cents to pay postage, sent to the makers, the Sanitas Nut Food Co., Ltd., 71 Washington Ave., Battle Creek, Mich., will secure a sample can.

tion; nickel, chrome, cobalt, and copper ores are being rapidly extracted. From every quarter of the globe orders for minerals are received by the leading firms, and I am informed by the director of Le Nickel, at Nouméa, and the general manager of the firm of L. Ballande & Co., that they have taken important orders from the United States, and shipments are being prepared for that country.

PERSONALS.

BEECHER and Ingersoll were always great friends. Mr. Beecher had a celestial globe in his study, a present from some manufacturer. On it was an excellent representation of the constellations and stars which compose them. Ingersoll was delighted with the globe. He examined it closely and turned it round and round. "It's just what I wanted," he said; "who made it?" "Who made it?" repeated Beecher; "who made this globe? Oh, nobody, Colonel, it just happened!"

C. S. BATTERMAN, one of the best-known mining men in the Rocky Mountain States, was on the stand as an expert in an important mining case in Nevada, and was under cross-examination by a rather young and "smart" attorney. The question related to the form that the ore was found in, generally described as "kidney lumps." "Now, Mr. Batterman," said the attorney, "how large are these lumps—you say they are oblong—are they as long as my head?" "Yes," replied Mr. Batterman, "but not so thick." The attorney subsided, and even the judge could not help smiling.

JOHANN STRAUSS died only a few months ago, but already a series of regrettable disputes has arisen regarding the wealth that he had accumulated. The great composer was thrice married, and his body had rested in the Friedhof scarcely a week when the second wife, from whom he had secured a legal separation years ago, instituted legal proceedings to contest his will. By this will Strauss had secured to his third wife and step

OATMEAL AND DYSPEPSIA.

We are noted the world over as a nation of dyspeptics. Few people realize, however, that this trouble originates in the food. Nearly every family uses oatmeal or some other form of cereal breakfast foods. It is prepared by placing a little water over the cereal and allowed to cook a few minutes, and then served at the morning meal. The cereal then abounds in starch, and very few healthy stomachs can digest starch in this manner, and the strong stomach soon becomes impaired when forced to digest these foods which contain so much partially cooked starch.

Oatmeal and other cereal foods should never be served when cooked less than five hours. This constant cooking converts the starch into dextrin, and makes the cereal palatable and nutritious.

"Treat the stomach fairly, and it will treat you well," is an old and true adage.

One of the very best foods that one can eat is Granola. It is a scientific combination of wheat and other cereals. The grains are skilfully cooked, converting the starch into dextrin, and rendering the cereals easy of digestion. Chemical analysis shows that one pound of Granola contains as much nutriment, muscle, and brain properties as three pounds of beef. A few teaspoonfuls of this scientifically prepared food, with the addition of milk, make a delicious meal, ready to serve in an instant. Granola can be found on sale at all first-class groceries. The picture of the famous Battle Creek Sanitarium will guard the purchaser against counterfeits.

Christian Cleanliness

Why do you permit a custom at the communion table which you would not tolerate in your own home? Would you like to know where Individual Communion Cups are used? Send for our free book—it tells all about it. A trial outfit sent free.

JOHN KREMER, Druggist, 428 7th Ave., N. Y.

daughter, as well as his sisters, moderate incomes for life, and then made the Society of Friends of Music his heir-at-law. He disinherited his brother, the well-known Edouard Strauss, and made no provision for the destitute widow of his brother Joseph. The Austrian marriage laws are exceptionally severe, and in the case of Strauss and his second wife there were impediments to an absolute divorce such as would have enabled him to marry again legally. So, after the legal separation granted by the court, Strauss emigrated to the duchy of Saxe-Coburg-Gotha, resided there for a period, obtained an absolute divorce from his "legally separated" wife under the laws of the duchy, and then married for the third time. This evasion of the Austrian marriage laws deprives Strauss of the court favor which he had enjoyed, and it seems certain that in the strict legal sense his second wife is his rightful widow, whereas his third wife, for whom he has provided, had no authentic claim on him. The Austrian laws of succession provide that a wife can never be disinherited, but has always a claim on at least one third of the property left by her husband. Under these circumstances the second wife of the great musician has every prospect of securing that much of his wealth. At present she in poor circumstances, earning her living in a photographic studio in Berlin.

At the Metropolitan Club in Washington recently, General Joseph S. Smith, of Maine, gave, among some other interesting reminiscences of his official life at the capital in the "military period" following the War of the Rebellion, the following account of a colloquy between General Sheridan and General Meigs that Smith had himself overheard:

General Sheridan was noted for his facility in epigrammatic speech. General Meigs was the architect of the Pension Office, and was inordinately proud of his achievement. When Sheridan came to make his official inspection of the building Meigs accompanied him. Sheridan went thoroughly over the structure from top to bottom without passing any comment, but when the inspection was completed he turned to his guide with:

"Well, Meigs, I have only one fault to find with it."

"What's that, General?" asked the delighted ex-Quartermaster-General.

"It's fireproof," replied Sheridan.

THOMAS DUNN ENGLISH has just celebrated his eightieth birthday at his home in New Jersey. He is the oldest living graduate of the University of Pennsylvania. Still, his fame continues to rest on the shoulders of immortal "Ben Bolt."

MORE OR LESS PUNGENT.

A Reactionist.—WEARY WILLY: "Dey say action and reaction are always equal."

THE NEW INSULATION CURE FOR Rheumatism and Sleeplessness.

Nearly 10,000 Sold FREE TRIAL.

We wish every sufferer from Rheumatism, Sleeplessness, Neuralgia, Sciatica, Pains in Muscles and Bones, Nervous Weakness and Lessened Vitality to make a free trial of our treatment. Simple as it seems, it is based on science, following the theory of Dr. Brown-Sequard that these ills are due to an excessive flow of electricity from the body to the earth. Our method is to stop this flow by means of SLAYTON'S ELECTRIC SWITCH GLASS BED CASTERS. We do not claim a sure cure for you, but we know their use has brought permanent relief and cure to thousands, and we ask: Is it not worth while to make a free trial?

We have hundreds of testimonials from ministers, doctors, lawyers and persons of highest culture. The following is a fair sample:

FALL RIVER, Mass., June 26, 1899.
THE SLAYTON ELECTRIC CASTER CO.,
Tecomseh, Mich.

Gentlemen:—After trial of the casters you sent me, I have no excuse for returning them, as I am certainly very much improved since putting them on the bed. I have a very peculiar and stubborn case of rheumatism, which has always been worse in summer than in winter. I had already commenced to have the swelling and stiff joints that come on every summer, but after four weeks' use of the casters, the swelling and stiffness is hardly noticeable. Thank you for your liberal treatment in my case. I hope to give you an even better report in the near future.

Very respectfully yours, GRO. E. REEN.

FREE TRIAL FOR ONE WEEK. We gladly send any one a set of Slayton Electric Switch Glass Casters, on receipt of 17c. to pay postage. If you do not want them, return them by mail. If they help you, send us \$3.00 (the regular price) at the end of the week. State whether for brass, iron or wooden bedsteads. Also, be sure to read our adjoining advertisement, headed "Impossible to Catch Cold."

THE SLAYTON ELECTRIC CASTER CO. (Ltd.).
25 High Street, Tecumseh, Mich.

Impossible to Catch Cold.

We want you to make a free trial of Slayton's Spun Glass Insulating Insoles, and subject them to the severest test you can devise. Hundreds testify that their use brings absolute immunity from catching cold (except in case of wet shoes). They are a great aid to the beneficial effect of our Electric Switch Casters (see advertisement), a wonderful aid to sufferers from rheumatism, neuralgia, and all nervous ailments. We will send you a pair for trial on receipt of 5c. to cover postage (2c. if you wish to try the Casters at the same time, on condition that one week after receiving them you either return the insoles or send us \$2.00, the regular price. Leading drug stores can supply them if you insist. SLAYTON ELECTRIC CASTER CO., Tecumseh, Mich.

STAMPED STEEL CEILINGS

Even as You and I

By BOLTON HALL

Author of "Who Pays Your Taxes," "Equitable Taxation," "Stories for Little Citizens," Etc.

FOURTH EDITION NOW READY.

12mo, Cloth, \$1.00.

This is a presentation, by means of popular and simple allegories, of the doctrine of the late Mr. Henry George and the principle which underlies it. The allegories have a considerable amount of humor in them, and not a little biting sarcasm on the follies of government.

The teaching of Mr. George as to the land question is but a practical application to our political affairs of the message of our great religious teachers. The book, taking as a basis the work of Tolstoy, one of George's economic disciples, on "The True Life," shows in its second part what that message is and how it may be applied to the ordinary life of you and me.

No more simple and easy way has been devised of explaining the extent of Land Monopoly and its effects, than by such fables as "A Nineteenth Century Samaritan," "A Divided Inheritance," "The Charitable Man," "The Deserving Horses," "How the Other Half Lives (upon Us)," and others.

Many of these fables have been published in *The Twentieth Century*, *The Voice*, *Outlook*, *Kingdom* and other reform papers.

ONE QUARTER FORMER PRICE

We have had prepared an exceedingly large edition, and by so doing have saved many dollars on the cost of each copy of the new edition of

TISSOT'S LIFE OF CHRIST

ITEMS OF INTEREST

M. Tissot spent ten years, much of this time in Palestine, painting the originals from which the hundreds of illustrations in his work were made.

These 500 pictures tell the entire story of Christ's Life as it has never before been pictured.

The preparation and publishing took four years.

An investment of over \$400,000 was made before the work was ready for delivery.

Each illustration is of distinct value.

The many reproductions of the paintings in color are identical with the originals.

Hundreds of thousands of visitors to the galleries have seen these great paintings, not only in this country but in England and France as well.

INDEED

The present figure for this the most remarkable Religious art work of all times is NOW easily within the reach of every one interested in ART or RELIGION.

NO WORK has ever been so well received by PEOPLE, PULPIT, and PRESS.

IT CERTAINLY is the publishing ACHIEVEMENT of the NINETEENTH CENTURY.

Upon Request

we will forward full particulars of the WORK, the MODEST PRICE, and EASY TERMS of payment which we now offer.

"Napoleon at Chess."

We take this game and comments from the *Times*, Philadelphia:

"It is well known that the great Napoleon played Chess and frequently, too. The table is still shown at the Café de la Regence, where the Sub-Lieutenant Bonaparte had his daily game during the Reign of Terror, and of his latter games as Consul and Emperor three specimens are preserved. The following, the last of the three, was played at St. Helena:

NAPOLEON.

White.

8 P-K R 3 to restrict the scope of the Q B might have been an advisable precaution. Steinitz improves upon his previously-played defense with 10... P x P, White's P-Q 5 generally driving back his Kt-Q Kt sq; and White omitting 19 Q-B 4 gave Black a better position than he ever had with his unfavorable defense. Janowsky, getting impatient, brought the unsound sacrifice of 20, R x P, after which Steinitz, with the exchange ahead, played remarkably well, and won the game in good style.

Little comment is necessary. The game is badly played on both sides. Black, having the decided advantage, gives it up. On his 35th move he had a won game, but he permits White to win his most valuable P. Then he should not have allowed White to get his P beyond Kt 5. The exchange of Queens by Black was unnecessary and greatly weakened his game.

The Literary Digest

VOL. XIX., No. 14

NEW YORK, SEPTEMBER 30, 1899.

WHOLE NUMBER, 493

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION

PRICE.—Per year, in advance, \$3.00; four months, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks** prior to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

DEWEY'S HOME-COMING.

THE one prominent man in America to-day who is not made the object of disparaging cartoon, quip, or editorial is the very one whose monopoly of the public attention would seem most likely to challenge such treatment. Even the host of papers which oppose and ridicule the idea of nominating Admiral Dewey for the Presidency do not hint that the admiral would not make an excellent President, but argue that his very greatness and dignity should be a reason for keeping him out of the turmoil of party politics. The *Chicago Tribune* makes the following analysis of the causes that have led up to our present state of admiration and homage:

"Americans hold Dewey in high esteem because he has given abundant evidence that he is more than a sea commander. During his long stay at Manila he shone as a diplomatist and a manager of men. He maintained his own dignity and that of his country. He got his Government into no disagreeable complications. He curbed the bumptiousness of the German admiral without disturbing the amicable relations of the two nations. He won the respect and confidence of other foreign officers, naval and civil. He did not commit himself with the Filipinos, and he did nothing to estrange them. He displayed during long and trying months those qualities of caution, prudence, and adaptability to men and to circumstances which one does not expect to find, as a rule, in the blunt sailor.

"Dewey endeared himself to his countrymen, again, by insisting on staying in the Philippines long after he had won his fight and Manila had surrendered and was occupied by American soldiers. He could have come home, without impropriety, to wear his laurels while they were green. He was urged to return and enjoy the plaudits of his admiring countrymen. Others would have done so, but he refused.

"He was willing to let his subordinates go home, when he saw their health demanded it. But, tho in ill health, he would not go himself. He endured patiently the intolerable climate of a

Philippine summer. He sweltered in Manila Bay when he could have been enjoying the refreshing breezes of the Green Mountains, or giving advice to the peace negotiators and enjoying the hospitalities of French officials. His tarrying at Manila might have cost him his life. He knew that, and that it is counted less glorious to die of malaria or liver disease than to die like Nelson at Trafalgar; and yet he remained, because duty bid him. That has been his motto, and it is for his devotion to duty, displayed

ADMIRAL DEWEY.

From his latest photograph, taken at Gibraltar.

in days of peace as well as in the clash of battle, that Americans honor him. His victory is nearly a year and a half old. The battle flags have long been furled. A welcome on account of that victory would be a little belated. But he is welcomed rather for what he has done since he sank the Spanish fleet than for sinking it. Peace for him has had its victories no less renowned than those of war."

The suggestion that Admiral Dewey be made President—a proposition advanced last year by the *Louisville Courier-Journal* (Dem.), but dropped when it was learned that the admiral disapproved of it, and now brought forward again by the *New York World* (Dem.)—is not meeting with much favor among the press. Postmaster-General Smith's organ, the *Philadelphia Press*, says:

"Evidently, the gravity of the peril which confronts the party of free trade, free silver, and anti-everything else has deprived some of its most vociferous mouthpieces of a sense of humor, for nothing could be more incongruous, nothing more productive of ridiculous possibilities than Dewey, newly converted to Democracy, trying to stand on some of the shaky platforms which would be built up under him by such artisans as those who constructed

the amazing structure the Ohio Democrats stand on with such trepidation. But it is useless. In the first place, Admiral Dewey is not a Democrat; secondly, he is not a candidate, and, thirdly, he believes in all those things and stands for all those things in American life to-day that the Democrats would repudiate. He is an 'Administration man,' and, as he confessed to another Democratic organ, he does not believe in naval or army men running after political preferment. As he said:

"I am convinced that I have not studied political questions and political methods enough to make a satisfactory President of the United States. The nation has given me an office I am competent to fill, and I am not looking for another job. If I were out of work I might be tempted to look at these things differently, but as it is I can regard the whole question impartially, and I believe that the country should select Presidents who are trained and experienced in the science of civil government rather than to take a man from the army or navy."

"But why say more? The whole issue of the 'only candidate' who can save the Democratic Party belongs to the realm of the ridiculous, save in so far as it is confession—the frank utterance of those who see the game is up and grasp blindly, fatuously at anything."

Leslie's Weekly, however, is inclined to think the admiral a Presidential possibility:

"The most recent declaration of the admiral, and the clearest and most comprehensive, was given in an interview had with him in Manila on February 19 last by Edwin Wildman, the special correspondent of *Leslie's Weekly*. With this gentleman the admiral discussed the possibility of the Presidency with unusual freedom. When asked if he was a Republican or a Democrat he replied: 'A sailor has no politics. I come from Vermont, and you know what that means. To be anything but a Republican in Vermont is to be a man without a party. Our flag-lieutenant comes from Georgia. He tells me that to be anything but a Democrat in the South is to be a nobody. If I lived South I would probably be a Democrat.' The admiral added that he had not voted in many years, and that his vote was usually influenced 'by personal preference or local conditions,' and as to the Presidency he said: 'Don't you think it would be presumptuous to accept a nomination before it is offered? Perhaps it would be equally previous to reject it.' The general drift of the admiral's remarks was complimentary to the existing Administration and against the suggestion that he should be a candidate."

"The unanimous choice ever again of any man for the Presidency seems extremely doubtful. If any one could have it, Dewey under existing circumstances could be thus favored. First, because he is the hero of the nation; secondly, because he is more familiar than any one else with the gravest problem that now confronts us—the Philippine question—(it should be noted that the London *Spectator* advises the appointment of Dewey as the governor-general of the Philippines); and thirdly, because his unanimous election would set at rest the fears of the business world regarding grave financial disturbances that will obviously follow another campaign with Bryan pitted against McKinley on the old platforms."

"It would be unique and extraordinary if both parties were to indorse Dewey, making his nomination unanimous and the Presidential election a mere matter of form. Such an eventuality, if it were possible, would remove the one great menace to a continuance of the country's present extraordinary prosperity—that is, the menace of a Presidential election, with all that that implies of a possible change in our financial and economic policies."

"While *The World's* suggestion, therefore, appears to be fanciful, it is obviously not to be laughed at."

Two timely articles on Admiral Dewey in the October *McClure's*, one by Governor Roosevelt and the other by Joseph L. Stickney, a newspaper correspondent who has known the admiral intimately, are summarized and commented on as follows in the *Boston Journal*:

"It was by no accident that George Dewey was in command of the Asiatic squadron of the United States navy when the war with Spain broke out. He was, it is true, in line for this command and available for sea service in the autumn of 1897. But he was sent to that station, as Gov. Theodore Roosevelt, who was then Assistant Secretary of the Navy, testifies in *McClure's Magazine* for October, 'because, to use the navy language em-

ployed at the time, it was deemed wise to have there "a man who could go into Manila, if necessary."'

"This assurance, of course, is official and authoritative. Admiral—then Commodore—Dewey was deliberately selected for this service out of the officers of 'flag rank,' the real admirals and commodores of the navy. At that time there were six rear admirals and ten commodores. Some of them were already in command afloat; some were on important shore duty; some had just returned from sea. So not all of the sixteen, by any means, could be considered, but we have Governor Roosevelt's word for it that Commodore Dewey was chosen with forethought, and that he 'owed the appointment to the high professional reputation he enjoyed and to the character he had established for willingness to accept responsibility, for sound judgment, and for entire fearlessness.'"

"This choice of the Administration, Governor Roosevelt says, was influenced also by the opinions of certain officers of high

EXCITEMENT OF NEW YORK—LOOKING FOR DEWEY.

—*The Record, Chicago.*

professional merit who happened just then to be in Washington. 'All these men,' it appears, 'were a unit in their faith in the then Commodore Dewey, in their desire to serve under him should the chance arise, and in their unquestioning belief that he was the man to meet an emergency in a way that would do credit to the flag.' This is a significant revelation that, as far back as the autumn of 1897, President McKinley and Secretary Long really regarded war with Spain as very possible, even as probable, if not certain, and that, without saying anything about it to the country, they were preparing their fleets and picking their commanders."

"In another most timely and valuable article in *McClure's*, Mr. Joseph L. Stickney, staff correspondent of the *Chicago Record*, who was once a naval officer, has known Dewey for years, and at his request served on his staff as an aid in the battle of Manila Bay, declares that the appointment of Admiral Dewey to the Asiatic Squadron was, in a special and personal way, the work of President McKinley. If this is so, it is another signal instance of the President's talent for selecting the very best men to do the great work of the nation. It was at one time reported that Dewey did not desire the appointment—that he preferred something else, and that he accepted it rather under protest. 'I have, however, unimpeachable authority for saying,' Mr. Stickney writes, 'that the admiral wanted that command, and had hard work enough to get it.' And he quotes Admiral Dewey directly:

"'Did you expect a war with Spain, Admiral?' I asked him."

"This was the reply:

"'Perhaps it would be too much to say that I expected it at once; but I wanted to have a chance, if it should come, while I was still on the active list. Yes, I felt sure we should have that

war, and I knew that if I ever sailed for Manila on a war errand I should do what I did do and do it in a day. As a matter of fact, it was all done in five hours."

"So it was not a sudden inspiration, after all, but a long-considered plan, a firmly-settled purpose, which brought Admiral Dewey and his ships into Manila Bay and against the Spanish ships and batteries that famous May morning. This is the way in which most of the great deeds of this world of ours are achieved."

THE SEARCH FOR A PHILIPPINE POLICY.

FOR the most part, the discussion over the Philippine problem has been on the broad question, Shall we keep on fighting until Aguinaldo surrenders, or shall we quit fighting and let the Filipinos establish their own form of government? With the approach of another congressional session, suggestions of a better defined policy become of increasing interest; yet, strange to say, almost the only suggestions that have so far appeared have come from abroad. The latest contribution of note appears in the news columns of the *Boston Transcript*, and was taken, so *The Transcript* tells us, from a letter received by a Boston citizen from "a distinguished English author, who has written an exhaustive book on the Philippines and has spent many years there." This author first criticizes our present Philippine policy as expensive and unwise:

"In two seasons, of November to April, with 80,000 men—of which, say, 6,000 sick, 4,000 for administration, 20,000 for garrisons to hold what you conquer, and 50,000 in the field here and here—you could crush the natives into submission. But is it worth while? First, the initial sacrifice. Second, the hatred which the natives would have for the conquering race all this generation. Third, would it pay to hold the islands under military rule for a generation? Then, if I am rightly informed in private letters, the morality of the troops and their conduct as individuals in Manila are by no means conducive to a conquest by moral example. You can force the natives to submit to the power of the sword, but you can only get them to appreciate your rule, to recognize its benefits, and to have a high opinion of your methods of law, order, morality, and justice by moral example. If I am correctly advised hundreds of grog-shops and drinking-saloons have been opened since the United States occupation. Drunkenness is openly seen in the streets of Manila. You know how abstemious the Filipino is; all this drunkenness and other branches of debauchery which I will not mention so horrify the natives that they positively undo all that is achieved by the sword. There are exceptions to every rule, but as a general rule every trooper should be a model of what you expect the native to be molded to. So long as this continues your people will never gain the acquiescence of the natives to your rule."

The writer then sketches the following plan for undermining

Aguinaldo's influence, and, as he describes it, "decently getting out of a fix":

"Ignore Aguinaldo politically. Get each province to send up a deputy favorable to American protection. Form a congress of them. Form, in fact, a Filipino legislative assembly. Call the president of this assembly, president of the Philippine protectorate (not republic). Let them have a right to vote laws—all subject to the veto of the 'protector.' Your head man there will be called the protector. He will have all the power of a president of the republic and something more. Don't have the word republic in it at all. Try in this way to get together all the most influential Filipinos (favorable to your protection). In this way you will undermine all the political influence of Aguinaldo, and you will, little by little, pave the way to a protectorate such as you ought to have established in the beginning. You will, in fact, be retracing your steps without the world at large perceiving it. You will save your dignity, and you will not have Europe deriding you for having 'caved in,' the movement will be so imperceptibly taking place. Thus you will establish that which must come, *i.e.*, a certain measure of native government to satisfy national native ambition. You satisfy native ambition by calling the president of the assembly 'president of the protectorate.' The natives who naturally look to leading positions will be satisfied. The people will feel (as electors) that they are ruling themselves. Then as to the war—you take care to protect the individuals connected with your Filipino congress in carrying out the protectorate laws. Your army will be employed to protect them and to fight whenever Aguinaldo's party attacks you. Aguinaldo's civilian (politician) adherents can enter your Filipino congress if they submit to the conditions of the protectorate. You will find Aguinaldo's political power dwindling away, eventually, with a real Filipino legislation in force. His power will be reduced to nothing. His fighting men will leave him. They will have nothing to fight for. If you are not disposed definitely to retain the islands, you can slacken, little by little, your hold, until your 'protection' becomes more and more nominal, and indeed, if it suits you, you can, one day, slide out of it, retaining in absolute sovereignty one small island as a naval basis for your prestige in the far East. You can do this on the grounds put out by proclamation when the time comes, thus: 'We rescued the Filipinos from the hated oppressive monastic rule. We have fulfilled our mission of humanity. We have done our work. We have shown the Filipinos our power and our generosity. We have seen them fairly established on the path of progress. We continue to extend to them our protection from foreign aggression, for which reason and for the maintenance of our position in the far East we retain in perpetuity and in agreement with the Philippine people the whole of the island of — and the sea surrounding it for five miles from its shores.'

"Your nominal protection would in time suffice for United States and other foreign interests. There would be certain conditions imposed on the Filipinos; for instance, they could not make special laws specially directed against foreigners and obnoxious to the foreigner generally. You would retain such hold, at least, on the islands that, under certain circumstances to be

THE LAST MATCH.
—*The News, Detroit.*

"HANDS ACROSS THE SEA" (NEW VERSION).
—*The Times-Herald, Chicago.*

"OOM PAUL" AND "JOHN BULL" IN CARTOON.

defined previously, you could, by right, have a finger in the pie, in case of need.

"I say retain an island—a small one—but don't retain a port or part of an island. Let your boundary be the sea. It will save you a world of trouble. Don't you see how fond the British are of small islands? 'This is our island and no other cock shall crow here'—that's the policy.

"Now to do all this you would have to make a clean sweep of your highest officials now in power in Manila and send out a new set of men to carry out the above new policy. Moreover, if report be true, there is too much religious influence prevailing at your headquarters in Manila, which mars any attempt at a liberal policy such as I designate."

Both parties in the expansion controversy have found ammunition in the recent statement given out by President Schurman, of Cornell University. As he was considered an anti-expansionist when appointed president of the Philippine Commission, his declarations favoring American rule for the islands are quoted by the expansion press as convincing arguments for our continuing the present policy of subjugation first and control afterward. On the character of the Filipinos, President Schurman said:

"A race should be judged by its best products, and an educated Filipino of whatever tribe (and each city has its educated men) will bear comparison with an educated man of any other race. Among the masses one often finds consciousness of ignorance and strong desire for education. The archipelago will not be revolutionized in a generation, as Japan has been in some respects, but then Japan had thousands of years of national civilization behind her recent transformation. Nevertheless, considering the marked intellectual capacity of the Filipinos and their admirable domestic and personal virtues, imagination can not easily set the limits to their progressive achievements under the inspiration of American civilization, and while American sovereignty means this blessing to the Filipinos it is beyond all doubt the one thing which can save the archipelago from division and appropriation by the great nations of Europe.

"The multiplicity and heterogeneous nature of the tribes is something astounding. Over sixty different languages are spoken in the archipelago, and, though the majority of the tribes are small, there are at least half a dozen each having over a quarter of a million members. The languages of these people are as distinct from one another as French and Spanish, or Italian, so that the speech of any one tribe is unintelligible to its neighbors. These tribes are all civilized and Christianized, but small uncivilized tribes, among whom the Igorrotes seem best known in America, inhabit the mountains in Luzon and form a large part of the population of Mindanao. In this island also there is a large Mohammedan population, which is independent of the Mohammedans in the neighboring Sulu archipelago.

"It is the Tagalogs that inhabit some of the provinces about Manila who are resisting the authority of the United States."

On our duty in the case, President Schurman expressed himself as follows:

"The United States, having assumed, by a treaty of peace with Spain, sovereignty over the archipelago, became responsible for the maintenance of peace and order, the administration of justice, the security of life and property among all the tribes of the archipelago. This is an obligation which intelligent Filipinos, not less than foreign nations, expect us to fulfil. Nor will the national honor permit us to turn back. In taking the Philippine Islands we annexed great responsibility. The fact that the responsibility is heavier than most people supposed it would be is no excuse for failure to discharge it. I repeat that the Philippine question is essentially a question of national honor and obligation."

He thinks that it would be well for Congress to decide as soon as possible upon a form of government for the Philippines and to put it in force in all parts of the archipelago. This form of government should include the largest measure of local self-government, varying with the degree of civilization attained by the different tribes.

The "expansion" papers lay stress upon that portion of the

above which pertains to the diversity of races and the concluding paragraph relating to our national honor. The anti-expansion papers lay stress upon that portion in which the high capabilities of the Filipinos are asserted, and deduce from this their ability to govern themselves. Thus the *Boston Advertiser* (Rep.) says:

"Notwithstanding his evident anxiety to avoid saying anything that might make against the policy which he was sent out to uphold, President Schurman's statement in a number of particulars flatly contradicts some of the choicest arguments of those who consider all Americans 'traitors' who still believe in the teachings of Washington and Lincoln. We all know that one of the most frequently employed assertions of the jingoes is that, anyhow, the Filipinos are savages, who can not be trusted to govern themselves, and can only be kept in order by killing all of them who do not submit to foreign dominion. But of the 'at least half a dozen tribes, each having over 250,000 members,' President Schurman testifies that 'these tribes are all civilized and Christianized.'"

The *Kansas City Times* (Dem.) makes the following remarks:

"If the Filipinos are as intelligent as Commissioner Schurman says they are, and as hostile to the United States as he thinks they are, it would seem that home or any other kind of rule that was not by a government of, for, and by themselves, would require a large permanent army to enforce it, especially as they have been trying for a century to establish an independent nation."

The *St. Louis Republic* (Dem.), however, frankly admits that the points made by President Schurman "are the strongest possible to the imperialist side of this momentous controversy," but thinks that he does not touch the main question:

"The people must not be misled by arguments of the Schurman tenor. The point at issue is not that of what is due from us to the Filipinos. It is of what is due from us to ourselves in the way of the preservation of our national principles. This demands that we shall give the Filipinos self-government because it is forbidden us either to rule other peoples or to engage in foreign wars for colonial aggrandizement."

The *Providence Journal* (Ind.), on the other side of the question, says:

"Dr. Schurman's testimony is of great value, as he comes direct from Manila, where he has had every opportunity the Government could afford him for a close and careful study of the situation. He has been on the firing line, he has spent many weeks in Manila, and he has made a two-thousand mile journey through the islands south of that city. His verdict must have weight, even with 'anti-imperialists.' The national honor, he says, will not permit us to turn back, and intelligent Filipinos are anxious for us to fulfil our obvious obligations. We must enlarge, rather than contract, the sphere of our activity, and give the islanders as generous a system of self-government as possible. This, of course, we shall be only too well pleased to do. Nobody in the United States wants to take from them their real 'liberty.'"

The *Philadelphia Press* (Rep.), under the title "President Schurman's Conversion," says:

"President Schurman, of Cornell, a year ago publicly opposed the acquisition of the Philippines. When he was appointed by President McKinley on the Philippine Peace Commission his selection was accepted as giving a representation on the body to those who were in doubt as to the wisdom or necessity of acquiring this territory, or who opposed any possessions for the United States off of the continent. President Schurman opposed this as unwise for the United States and unjust to the inhabitants of the Philippines. He did not believe we were equal to the task of governing them or that they should be governed by us. If President Schurman had remained in this country he would probably have continued in his original opinion. Other men have who did. He has not. He has been in Manila. He has traversed the islands. He has seen things as they are. He is a candid, reasonable man of sincere convictions, and his opinions have been altered by his acquaintance with the subject. Such a change of opinion must have convincing weight with that large body of men

who are anxious to do right and deal justly by a great national responsibility."

Another side-light on the native character which is being given considerable prominence in the anti-expansion press is General Lawton's alleged statement which appeared in *The Congregationalist* over the signature of a Congregationalist pastor of Somerville, Mass., who is a chaplain in the army. Two days after the appearance of the article, the authorities at Washington gave out a cable message from General Schwan in which he said: "Lawton pronounces as utterly foundationless newspaper reports of interview asserting that he commented on military situation or criticized conduct of operations here." *The New York Evening Post* (anti-expansion) holds, however, that this denial does not cover *The Congregationalist's* article, but evidently refers to a charge made a few days earlier that General Lawton had criticized the conduct of General Otis. *The Congregationalist's* article reports General Lawton as saying:

"Nine tenths of the people of the islands will strongly favor peace, even at the expense of some of their theories, wishes, and hopes. I believe that with a liberal government, such as the United States can and will establish, they will be a peaceable, thrifty, happy people. I believe that it was a great misfortune that we were not able to give them a chance to sample our Government before hostilities opened. . . . What we want is to stop this accursed war. It is time for diplomacy, time for mutual understandings. These men are indomitable. At Bacoar Bridge they waited till the Americans brought their cannon to within thirty-five yards of their trenches. Such men have the right to be heard. All they want is a little justice. I established a civil government at Balinag, with the government entirely in the hands of the natives. It worked to perfection. All these people need for self-government is the protection of our troops till affairs have quieted, and then they will, I have no doubt, advance as rapidly as the Japanese, perhaps more rapidly. I am very well impressed with the Filipinos."

FRUITS OF THE TRUST CONFERENCES.

NEWSPAPER comment on our trust problem, always voluminous, has been given a great impetus by the trust conferences at Chicago and St. Louis. As party feeling ran high during the discussions at the St. Louis conference of governors, and as representatives of only eight States remained until the close, it is generally considered to have been of less importance than the conference at Chicago; but the uniformity of state laws recommended in the St. Louis resolutions is widely indorsed by the press, and if this proves to be the beginning of a general movement for uniform state laws on incorporation, the gathering

THE CONFERENCE ON TRUSTS.--*The Evening News, Detroit.*

of the governors will assume an important place in economic history. The resolutions, which were adopted unanimously by the representatives of the eight States represented, recommended, in substance, the following remedies:

1. National and state laws that shall dissolve monopolies and corporations that restrain trade.
 2. Laws by each State for the proper control of corporations chartered by it; and closer examination of corporations chartered.
 3. Laws by each State to bar out corporations from other States, unless the outside corporations conform to the state laws.
 4. Uniform legislation to prevent a corporation obtaining a charter in one State with the intention of doing business exclusively in other States than the one where it is chartered.
 - 5 and 6. That no corporation shall be formed in whole or in part by another corporation, or hold stock in another corporation doing a similar or competitive business; and that no one shall be an officer or director or hold stock in two or more corporations doing a similar or competitive business.
 7. Laws by each State to bar out corporations that are members of trusts.
- A resolution condemning the practise of "watering" stock was appended to the above list of remedies.

The New York Journal of Commerce, which looks upon trusts with disfavor, doubts the practicality of the St. Louis resolutions,

Chicago needn't get her head swelled because of the "Trust Conference" being held there! There has been a trust conference almost every day in Washington for the past two and a half years!

—*The Post-Dispatch, St. Louis.*

and points out the weak points of the proposed remedies. State laws aimed at outside corporations have usually been so extreme that they have been declared unconstitutional. Laws aimed directly at monopolies usually miss the mark:

"It is proposed to 'adequately and fully define as crimes any attempted monopolization or restraints of trade.' This will be found a difficult thing to do. The common law makes these offenses; the anti-trust law, of 1890 attempted to be more specific than the common law, and proved to be ineffective because it was needful under it to show that a trade had been monopolized; a completed monopoly does not exist even in mineral oil or sugar. Apparently the conference bill seeks to remedy this by making the attempt at monopolization criminal. It is comparatively easy to prove an attempt to commit murder or blackmail, but it will be much more difficult to prove an attempt at monopolization. If a corporation's business grows, and it buys out firms or companies in the same line of business, is it attempting a monopoly? A company is formed which buys three fourths of the paper-mills or the wire-mills or the cotton-mills; is this an attempt to create a monopoly, and, if so, at what particular fraction of the existing plants must the purchasing stop to avoid being an attempt at monopoly? The objection to the common law is that it is indefinite, but to express its purposes in the specific terms of a statute will be found a delicate matter.

"It is also proposed that no corporation be formed in whole or in part by another corporation, which in some respects is a very desirable end to attain. But it is hardly possible to prevent the same persons from being in the directories of two or more corporations.

"On the whole, the conference might have done much worse, but we hope that discussion will continue and the study of the facts will be maintained for some time before the task of legislation is undertaken."

As for the Chicago conference Bourke Cockran's proposed remedy for trust ills—publicity—and Mr. Bryan's proposed remedy—a federal license, considered in these columns last week—have attracted by far the largest amount of attention, altho not the largest amount of approval. Nearly every editor, as well as every political leader and college professor of economics, seems to have his own plan for handling the trusts, and takes this oppor-

tunity to exploit it. The proposals presented before the conference by Prof. John Graham Brooks, of Harvard University, however, seem to be considered practical by many papers. He made three suggestions:

- "1. As absolute a publicity of methods and account as the largest Massachusetts corporation has to submit to.
- "2. Every artificial advantage given by the tariff must be removed.
- "3. Railroad discriminations shall not be allowed to these combinations."

There is becoming more noticeable a tendency in the press to regard combinations as inevitable, and to propose elimination of their evil features rather than complete suppression. This is especially the case in the Republican ranks, the New York *Sun* having now been joined by the New York *Tribune* in defending trade combinations, and Senator Hanna, in a recent interview, having asked what evidence there is to show that industrial combinations are evil in their tendency. The following comments on the Chicago conference show the feeling of the press on the question:

The Real Difficulty.—"A good deal was said at Chicago with reference to the interference by trusts in the elections. This is undoubtedly one of the most serious aspects of the question. But in proposing remedies the orators did not appear to take into account the opposition which the trusts will make to the adoption of such remedies. Granted that the remedies proposed would be efficient, the question how they are to be adopted is one of great difficulty. Mr. Bryan proposes an amendment of the federal Constitution if necessary, and he says that it can be carried through if the people are earnest enough. But that is precisely the question. Even if the people were earnest enough to suppress trusts at all hazards, they might not be so in favor of any particular plan, including that of Mr. Bryan. Experience has shown that it is almost impossible to amend the Constitution of the United States. From early in the century till 1865 no change was made. The last three amendments were the consequence of the Civil War, except for which they could not possibly have been adopted. To put through an amendment now, in opposition to the great political influence of all the trusts, would require a much livelier interest on the part of the masses than they have yet exhibited.

"Mr. Bryan and most of the leaders of the Democratic Party were engaged for a number of years in the attempt to destroy the monopolies created by a vicious system of tariff laws, which included a number of combinations or trusts. It took a long time to bring the people to a proper realization of the evils thus created. When finally the Democratic Party won both Houses of Congress and the Presidency with a distinct mandate from the people to put the tariff on a revenue basis, the influence of trusts on the floor of Congress was strong enough to capture enough of the advocates of tariff reform to render it impossible to pass such a law as the people had demanded. The disgust excited by this failure, along with other circumstances sufficiently well known not to need recital, produced a reaction which made the power of trusts greater than ever, and they dictated the tariff law of 1897 with comparatively little opposition. . . .

"The fight, of course, must go on, but we might as well recognize at the outset the magnitude of the undertaking."—*The Courier-Journal (Dem.)*, Louisville.

Fighters Without Facts.—"Men who propose to make a Presidential campaign on the anti-trust issue stand much in need of facts. It is truly pitiable to see them going about the land, loaded to the muzzle with speeches and interviews, and laboring night and day to persuade the country that they are of all others exactly the men to govern it wisely, tho they can not tell to save their lives what one monopoly exists anywhere in this country, nor what one class of prices has been wrongfully advanced by persons or corporations having an arbitrary control of the markets. To escape shame and to give their efforts the weight which at present is quite lacking, these people should acquire some information about the corporations they assail.

"Not a single one of these corporations has or can get a monopoly. The older have rivals of many years' standing, who are making their opposition known to everybody, through proceedings in the courts, as against the Standard Oil, or in the markets,

as against the sugar company. The one concern supposed to have more complete control than any other of the machinery and operations in its field is the American Tinplate Company, and the claim of that company has been that it could produce 8,000,000 boxes yearly, or 95 per cent. of the tin plates made in this country. But the official directory of the Iron and Steel Association reports works more than a year ago having an annual capacity of 9,490,520 boxes of 108 pounds each, running only single turn. This does not include the stamping or dipping works, nor several new concerns which have been started within the last half year. In no sense is there a monopoly, even in this instance, because nothing prevents the addition of these and many other mills to the producing force besides those now in operation and not controlled by the company. . . .

"In fact, this feature begins to be so far recognized that Mr. Bryan himself admitted at Chicago that the evil effects of the so-called monopolies had not been seen as yet. The legitimate answer is that he is at present creating by his imagination the foes against which he fights, but not even Mr. Bryan will suppose that he can afford to go into a Presidential campaign entirely destitute of evidence respecting any corporation or combination against which he proposes to turn his wind-mills."—*The Tribune (Rep.)*, New York.

Trusts and Organized Labor.—"One of the most significant things in connection with the Chicago trust conference was the conservative tone of speeches by representatives of organized labor. While these speakers complained of certain evils of trusts, they took pains not to advocate a forced return to unrestricted competition. The reason is obvious. These speakers could not condemn the principle of combinations in the form of trusts without condemning the principle of combinations in the form of labor unions. . . . Workingmen are beginning to have a clearer idea of the trust principle, and to realize that these combinations of capital are to be regulated rather than an attempt made to crush them out of existence. Any radical scheme to destroy them completely would be almost certain to carry down all labor organizations with them. This knowledge is destined to have a sobering influence on future discussion of the trust problem, especially in the next Presidential campaign. The interests of the 'money power' and of organized labor are both deeply involved, and the more the 'toiling masses,' as Bryan calls them, perceive this fact the easier and sooner the trust problem is likely to be settled."—*The Commercial Advertiser (Rep.)*, New York.

Up to the Law-Making Powers.—"A strongly predominant sentiment in that Chicago conference was against trusts as now constituted and conducted. Even their most ardent defenders admitted the necessity of close supervision and control.

"Among the potent causes enumerated as tending to the establishment and prosperity of these great industrial combinations in this country were the protective tariff, giving them the possibility of profits obtained by like organizations in no other part of the world; the unchecked ability to crush out competition by local underselling, so vigorous as to ruin those who make a fight for a continuance in business; the favoring discrimination secured from railroads; the power to advance prices at their own discretion, and to secure friendly legislation by means unauthorized in our scheme of government.

"It is certain that a majority, if not all, of these fostering influences are operative, and that they have led to the building up of these huge combinations, more rapidly and more numerous than any previous period or in any other part of the world.

"This would seem to bring the whole question up to the law-making powers. Public discussions and resolutions may make for this result, but they can not compass it. The power of reform, whatever direction it may take, is with the people. When they rise in their might to say that they will no longer suffer extortion for the profit of the trust bonanzas, legislation will respond by their careful regulation or complete extinction."—*The Free Press (Dem.)*, Detroit.

Business Men Not There.—"Some surprise has been expressed at the failure of any business man prominently connected with trusts to take part in the proceedings. The speakers and readers of papers were either college men, politicians, or labor leaders. The college men discussed the subject theoretically, the labor leaders regarded it solely from the standpoint of the labor union, and the politicians divided upon it with a sharp eye to 'votes and

influence' in future campaigns, but the practical business man interested in trusts had nothing to say.

"Why should he? He is too busy just now reaping the financial advantages of his own special trust arrangement while he can. Trusts may be wrong or may be right from an ethical point of view; the important fact with him is that his own trust exists, and he has no time to spend in discussing theories while a personally profitable fact demands his attention."—*The Plaindealer* (Ind. Dem.), *Cleveland*.

"Both Mr. Bryan and Mr. Cockran realize that trusts ought to be deprived of all special privileges. That should be our first step, and it would be a long one. Next the Government should acquire possession of all utilities that are in their nature monopolies, such as railroads and telegraphs. Then we should enact and enforce such laws as might be found necessary and practical to prevent the remaining combinations of capital from using their power oppressively.

"Concentration is the tendency of the age. It is foolish to try to resist it, but we ought to make it work for the good of society instead of for evil."—*The Journal* (Dem.), *New York*.

THE PARDON OF DREYFUS.

ALTHO the President of France has pardoned Dreyfus, the American press does not seem disposed to reciprocate and pardon France. Their verdict, rather, is like that of the court-martial at Rennes—that she is guilty, with extenuating circum-

HARD TO BLOT OUT.—*The Herald*, *Boston*.

stances. The general sentiment seems to be that the French Government has done the best thing practicable, and that if it had attempted to do more it might itself have been overthrown and Captain Dreyfus have been left to the mercies of his bitterest enemies. Justice appeared to be impossible. The incongruity of the affair, however, has not escaped notice. The *Chicago Journal* says:

"It will occur to the American to ask: 'If Dreyfus was innocent, why convict him, and if he was guilty, why pardon him?' There is nothing that can be urged in extenuation of treason. The crime with which Dreyfus was charged was deliberate in character; not a thing done in hot blood, under irresistible provocation. If he was guilty as charged he deserved the penalty prescribed, and more."

The Cincinnati *Enquirer* sees a parting sting for Dreyfus in the very pardon that sets him free:

"This 'pardon' will make a fitting dénoûment. It will reassert the crime of Dreyfus—a crime already disproven ten times over—for pardon implies guilt, and in this case it means brutality as well. It will mean that Dreyfus is, if possible, to be denied the opportunity of vindication. It will mean that this unhappy victim must still bear the cruel burden of his martyrdom. It will mean that Dreyfus's tortures, his wife's surpassing heroism

and sublime devotion, the unconquerable courage of Zola, Picquart, and others of like nobility, the testimony of fact, the evidence of reason, the instincts of humanity, the laws of civilization—it will mean all these are to be set aside on condition that innocence may go unjustified, and that an abominable conspiracy may escape exposure."

The *Buffalo Express* points out the impossibility of complete justice for the unfortunate artillery captain:

"In pardoning Dreyfus the French Government has done all it prudently could to atone for the wrongs inflicted upon him. The royalist conspiracy now being exposed before the Senate shows how near to the brink of a precipice France has been. . . . The power which has enabled the military party twice to condemn Dreyfus would have been sufficient, is still sufficient, to overturn the republic in a day and put Orleans on the throne of France. It was not monarchy, but their own protection, that the army chiefs wanted. Revolution was held back as a last resort, but if it had been undertaken, the Government had no force with which to oppose it.

"It would have been a fine bit of sentiment if the Government had denounced the court-martial and undertaken fresh proceedings to give Dreyfus the kind of vindication he deserves and his friends ask. But it would probably have been a poor service to France or even to Dreyfus. For had the military chiefs thrown the weight of their enormous influence on the side of Orleans, there could have been no pardon or release for the wretched victim of all their plots."

The *St. Louis Republic* reviews the good record of President Loubet's first year:

"President Loubet is not by any means disappointing those who counted upon his courage and forcefulness for the salvation and regeneration of France. He has compelled a revision of the Dreyfus case. He has rescued Dreyfus from the living death of the Isle du Diable. He has set him free against the will of the French army. He is moving the machinery of government for the punishment of royalist plotters against the safety of the republic. Through De Gallifet it is now easy to believe that he will yet bring about the reformation of the army.

"This is a manful record for the first year of Loubet's administration. It speaks well for what is to follow. The friends of France may well rejoice over this peasant President. He is doing his duty to France and her people."

LETTERS AND ART.

MRS. FISKE AS "BECKY SHARP."

THE dramatic event of the past fortnight was the appearance, on September 12, of Mrs. Minnie Maddern Fiske in the title rôle of "Becky Sharp," a dramatization of Thackeray's "Vanity Fair." The best dramatic critics of the metropolitan press almost unanimously agree in saying that Mrs. Fiske more than reached her usual heights of fineness, subtlety, and force, and that the play presents an intellectual treat for the artistic and literary theater-goer.

MRS. FISKE.

The acting of Maurice Barrymore as *Rawdon Crawley* is spoken of as deserving no less a word than perfect, and the *Steyne* of Tyrone Power is pronounced uncommonly good. Says *The Commercial Advertiser*:

"Mrs. Fiske is going to leave a name high in the history of dramatic art. That point is settled. If she were to die to-morrow it would be true; every year of her life will make it truer. Hers is one of those natures that suffer,

and, in spite of genius, are comparatively slow in making their way, because of certain oddities in temperament and of certain incompleteness in their collection of artistic weapons. Henry Irving's history is of this kind. So with Mrs. Fiske. As she has talent and character that nothing can subdue, not only does she improve yearly, but the public yields more and more, as it usually will to sustained power in however unfamiliar a guise it comes.

"Mrs. Fiske's portrayal of *Becky Sharp* is surely one of the ablest feats of acting in our time. It has its physical limitations. The face of the actress is not so built that its manifold changes can be seen in the rear seats. The voice is not a perfect tho it is a powerful instrument. But the mind which uses these bodily tools has seized one of the two or three greatest characters in English fiction and proved big enough to hold it. . . .

"Mrs. Fiske handles *Becky* with a perfect mastery. *Becky's* fascination is the serpentine charm of mind and daring, relentless audacity, and quick, complex knowledge, and wit. Her gaiety and snap, her enthusiasm and lightness, are the zest of pure intellectual power, unguided by virtue and unsoftened by kindness. The Prince of Darkness is a gentleman. The queen of malice and intrigue is majestic in many of the attributes of a woman. She can weep, she can pity herself, she can have the nerves, even while her mocking intelligence plays over all human emotion, her own included; and this isolation of the able spirit gives a kind of evil nobility—'by merit raised to that bad eminence.' Mrs. Fiske's *Becky* sees her falsehoods confronting her, in the comfortable days of *Miss Crawley*, and she turns away the consequences with the easy heart of power. She smiles and rules. In the next act her wit and mental authority rule the men (tho the examples of this are needlessly multiplied), and when the cannon begins to boom and the men rush to arms she enjoys this great spectacle, she enjoys a moment later cheating poor *Joe Sedley*, and she enjoys the passionate departure of her husband. The wine of life is in her, and undaunted by surrounding peril she is happy in the teeth of fate. In this latter half of the ball scene there is what is probably the most remarkable exhibition of stage

management we have ever seen. . . . Not the pen of Thackeray itself could make you feel the palpitating changes of this scene more than the picture before your eyes; and the hand of the stage manager that guided this thing in its complex and perfect harmony was the hand of Mrs. Fiske."

William Winter, in the course of a very lengthy notice of the play in the New York *Tribune*, says:

"Mrs. Fiske's impersonation of *Becky Sharp* revealed a distinct ideal, and it was remarkable for its physical as well as mental brilliancy, its clear and pure verbal utterance, and its splendid energy of sustained, yet thoroughly concealed, artistic effort. The element in *Becky's* character which is chiefly fascinating is her sprightly and refreshing intolerance of stupid conventionality. This shows itself in scornful satire of pumps and prigs, of arrogant conceit, of empty ostentation, and of pretentious folly. This attribute of the character was made delightfully clear by Mrs. Fiske, and the actress also consistently maintained a certain feverish buoyancy and glittering excitement. It would be useless to make *Becky Sharp* as callous and as flippantly frivolous on the stage as she often is in the book, for that would defeat dramatic purpose. Mrs. Fiske furnished what the dramatist omitted—*Becky's* idea of her self-justification; for, very artfully, she laid a strong emphasis on the memory of *Becky's* ill-treated and misguided childhood, and also on her inherent inability to escape from the blight of evil ways. The performance, moreover, had wonderful variety—its demeanor fluctuating from demure gravity and sweet candor to mordant bitterness, and its moods of feeling ranging from icy sarcasm and merry banter to passionate excitement and frenzied despair. The personality commonly denoted as the woman of the world has not, in our day, been better portrayed; and, as a general judgment on this play and this performance, it may with truth be said that Mr. Mitchell has got more out of the book of 'Vanity Fair,' for dramatic purposes, than anybody else that ever touched the subject, and that Mrs. Fiske has given to one of the most truthful, brilliant, and wonderful creations of fiction a visible, beautiful, and lasting form and pressure."

The critic of the New York *Evening Post*, however, takes a very different view. He speaks of the play as "the theatrical monstrosity exhibited in the Fifth Avenue Theater," and terms it "a rather poor joke . . . a feeble travesty" perpetrated on the "dead and defenseless Thackeray." There is "no attempt at sequence," he says, and the effect is "altogether chaotic and amazing." The characters are "mere shadows of caricatures," embalming "occasional fragments of the original Thackerayan dialog in the clouded amber" of the playwright's own invention. To proclaim that a "hodge-podge of this sort is founded upon Thackeray" is, says the writer, "something closely akin to an imposition." He continues:

"The failure of Mrs. Fiske to realize anything like the common ideal of this fascinating little blackleg was the crowning disappointment of the performance. It was generally supposed that the part would have suited her better than most which she has attempted recently, but her impersonation was notably and curiously deficient in some of its most essential attributes. It lacked charm, variety, brilliancy, snap, versatility, eloquence, sparkling deviltry, and style, being, indeed, chiefly remarkable for splendor of clothing and a certain placid assurance. It did not possess fascination, or subtlety, or formidable passion, while in speech it was monotonous and often indistinct, being marked, indeed, by all those inflexible mannerisms which have marred her recent performances. Nevertheless, her achievement appeared to give satisfaction to her many friends in the audience, and she was the recipient of constant and vigorous applause, and was called before the curtain again and again."

Walt Whitman, Admiral Dewey, and Expansion.

—Some discussion has recently taken place concerning Walt Whitman's attitude toward expansion. As a growing number of people look upon him as a great representative American as well as a great poet, his views naturally possess some weight and importance at the present moment. In the course of an editorial in

the Brooklyn *Eagle* (September 13), the writer refers to Whitman's well-known poem entitled "A Broadway Pageant," which, in spite of the supposedly terrible things Whitman may have written in other places, is "full of a broader and wider Americanism than any poem written in this generation." The writer continues:

"It was written at the time of a visit of some Japanese envoys to the United States and concerning the demonstration in their honor in this city. He says that he does 'not know whether others behold what' he beholds 'in the procession along with the nobles of Nippon, the errand-bearers, bringing up the rear, hovering above, around, or in the ranks marching.' Then he tells how the Orient comes, how the Originatress comes, how the race of Brama comes, and how geography, the world, the great sea, the brood of islands, the countries there, Confucius himself, the great poets and priests, the people, and all the rest are in the procession:

These and whatever belongs to them palpable show forth to me, and are seiz'd by me,
And I am seized by them, and friendly held by them,
Till as here them all I chant, Libertad; for themselves and for you,
For I, too, raising my voice, join the ranks of this pageant,
I am the chanter, I chant aloud over the pageant,
I chant the world on my Western sea,
I chant copious the islands beyond, thick as stars in the sky,
I chant the new empire, grander than any before, as in a vision it comes to me,
I chant America the mistress, I chant a greater supremacy,
I chant projected a thousand blooming cities yet in time on those groups of sea-islands,
My sail-ships and steam-ships threading archipelagoes,
My stars and stripes fluttering in the wind,
Commerce opening, the sleep of ages having done its work, races reborn, refreshed,
Lives, works resumed—the object I know not—but the old, the Asiatic renewed as it must be,
Commencing from this day surrounded by the world.

"This reads very much like prophecy. Now that we are soon to have another Broadway pageant, when the center of it will be an American returning from planting the American flag on the islands of the Orient, this chant of the spread of liberty with the expansion of Americanism is thrilling."

MORE ABOUT THE AUTHOR OF "RICHARD CARVEL."

"RICHARD CARVEL" continues to have a surprising success. Since its publication on the 1st of June, 150,000 copies are reported to have been sold, and its popularity, instead of showing any signs of diminishing, increases from month to month. This remarkable, even unprecedented achievement, naturally turns attention to the promising young author who is apparently to take a place among the leading American writers of the day. We have already (see THE LITERARY DIGEST, August 19) given a brief account of Mr. Winston Churchill, together with his portrait. The following additional details are given by Mr. J. Francis in the New York Times (September 16). The writer says:

"Winston Churchill, author of this story of life in the American colonies and in London during the time of the Revolution against the mother country, is only twenty-seven years old, having been born in St. Louis, Mo., November 10, 1871. He is of New England ancestry, his grandfather having been a prominent merchant in the West Indian trade, with headquarters in Portland, Me., while on the maternal side he is descended from John Dwight, founder of Dedham, Mass., and that intellectual giant, Jonathan Edwards.

"Mr. Churchill's boyhood was spent in St. Louis, and he was graduated from Smith Academy in that city when sixteen years of age. One year later he became a cadet at the United States Naval Academy at Annapolis, receiving his appointment through a Congressman from his native city. He entered upon his new career with all the ardor and natural ambition of a happy, healthy, and well-endowed youth, and before long the whole tenor of his life was changed. In his early years he had been studious, almost bookish in his tastes, but now he became greatly interested in athletics and outdoor life, particularly horseback-riding and rowing. He organized the first eight-oared crew at Annapolis, and was himself its captain for two years. Fencing was also one

of his favorite amusements, and the knowledge of the use of the foils which he acquired while a cadet he put to excellent use in 'Richard Carvel.' In fact, the strong outdoor atmosphere which pervades the pages of that book is a representation of Mr. Churchill's own love of life in the open air, and all the pastimes and sports to which such a life gives an impetus.

"This marked change in Winston Churchill's personal taste and habits was not the only or the most important one which occurred while he was taking the course at the Naval Academy, for long before the day of his graduation from that institution he began to suspect that literature would claim him for her own and that the pen would prove to him a far more agreeable means of subsistence than the sword. This suspicion became a conviction three months after he assumed the duties of his first commission—to the cruiser *San Francisco*, then at New York—and he resigned from the navy. After a brief connection with *The Army and Navy Journal*, during which time his first story, 'Mr. Keegan's Elopement,' was submitted for publication and accepted by *The Century Magazine*, Mr. Churchill went to Irvington-on-the-Hudson to live and became managing editor of *The Cosmopolitan Magazine*. The arduous duties devolving upon him in his new position, however, left him no leisure for original composition, and at the end of a few months he bade good-by to the editorial sanctum and resolved that henceforth his pen should be free and unshackled and he himself at liberty to develop his own ideas along original lines."

"The Celebrity," Mr. Churchill's first book, was begun during the next winter (1895-96) at Irvington. Owing to some delays, the novel was not published until he had already begun work on "Richard Carvel." It attained, however, almost immediate success. In the mean time, he continued his work upon the second story. The following account of his methods is from his own pen. He tells us that he first proceeded to inform himself—

"by visiting all the places concerned in the story, and by reading biographies, histories, memoirs, letters, old newspapers—in fact, everything which could give me an insight into the life of those days, or into the character of people like John Paul Jones and Charles Fox, whom I desired to introduce. Of course I read a great deal too much, a great many books gave me no direct help, and added nothing to what I had already learned; but I have no doubt that all this reading counted in the way of letting me into the spirit and the atmosphere of the age and the ideas and the business methods and the modes of life and thought of those days. Of course I took voluminous notes, and had no end of trouble to keep them arranged so that I could use them, in spite of the effort I made to keep notes on costumes in one volume, manners and customs in another, unusual words and turns of expression in another, incidents in another, character in another, history in another, and so on."

Mr. Churchill, we are told, is a most painstaking writer and spares no effort or drudgery to make the historical setting of his story conform to facts. "Richard Carvel" was written five times before it was placed in the printers' hands, and the thrilling fight between the *Serapis* and the *Bonhomme Richard* was wholly rewritten after the novel had been set up in type. A writer in the Boston *Herald* gives the following account of the author's personal appearance:

"He is a tall, athletic-looking young man of twenty-seven, singularly handsome, with very broad shoulders, black hair, and brown eyes; alive to the finger-tips and manly through and through, with neither false pride nor false modesty, but with a certain grace and a delicacy of perception of which one gradually becomes aware. He is frank, genuine, companionable, and straightforward, more so than most college men; he has much natural dignity, but not a trace of self-consciousness, and he is one of the brightest talkers the writer ever met. He does not go in for epigrams, paradoxes, or striking contrasts, but he is delightfully natural in all ways, frankly interested in his work, and full of original ideas that are thoughtful and sensible without being startling or revolutionary. In short, he is a capital fellow and a thoroughbred. The more you talk to Mr. Churchill the more convinced you become that he is going to count."

It is pleasing to know that Mr. Churchill, with admirable good

sense, will not surrender to the many tempting offers which have been made to him from publishers for work that would necessarily be hasty and ill-considered. He will take at least a year, and give to the new novel upon which he has already begun work the same care and attention to details which he bestowed upon "Richard Carvel."

RECENT POETRY OF "THE SOUTHWEST AND NORTHWEST."

IN two recent articles, Mr. W. D. Howells treats of two local poets—Madison Cawein, representing the Ohio valley (which Mr. Howells terms the Southwest); and Hamlin Garland, representing the Northwest. Of the first of these he says (in *Literature*, August 25):

"Above all the other younger poets of the Southern West Mr. Cawein seems to me expressive of such poetic over-life as haunts the air of the Ohio valley, and if it were not for the allegiance I bear to certain very lovely moods of Mr. J. J. Piatt's, I should not make any sort of exception. His verse incarnates (there is no doubt of the flesh and blood) the soul of a warm, rich, lazy land, drowsed in a summer air under a sky of Asian vastness and a summer sun of tropical fervor. In all that is sylvan, all that is pastoral, the region is of a soft beauty, which his sensuous rime imparts again and which takes my homesick fancy with a tenderness which I hope does not disable my judgment. I do not think I can be wholly disqualified to bear witness to the local truth of his poetry because I am native to the same region; but if the reader distrusts my testimony, I do not believe he can question that universal truth to nature in Mr. Cawein's work, which, after all, is the best witness to the poet's veracity in local and lesser things.

"There was something from the first in the region of which he sings that recalled storied places to the earliest white men who knew it. The open woods of oak and ash and poplar suggested the parks and groves of older lands; the broad savannahs made the pioneers think of smooth meadows; and there was an inland gentleness in all, different from the rugged picturesqueness of the Atlantic coasts and the intervening mountains, as well as from the dismaying vastness of the far Western plains and peaks."

Mr. Howells quotes as an illustration of this peculiar felicity of descriptive power, the following lines from "The Rain Crow":

Can freckled August,—drowsing warm and blonde
Beside a wheat shock in the white-topped mead,
In her hot hair the ox-eyed daisies wound,—
O bird of rain, lend aught but sleepy heed
To thee? when no plumed weed, no feathered seed
Blows by her, and no ripple breaks the pond,
That gleams like flint between its rim of grasses,
Through which the dragon-fly forever passes
Like splintered diamond

Still another passage shows Mr. Cawein as a painter of the older domestic scenes of New England which dwelt in the memory of the early Ohio settlers:

Old homes among the hills! I love their gardens,
Their old rock-fences that our day inherits.
Their doors round which the great trees stand like wardens;
Their paths down which the shadows march like spirits;
Broad doors and paths that reach bird-haunted gardens.

I see them gray among their ancient acres,
Severe of front, their gables lichen-sprinkled,
Like gentle-hearted solitary Quakers,
Grave and religious, with kind faces wrinkled,—
Serene among their memory-hallowed acres.

Cawein is, therefore, the poet of a new land already touched with reminiscence of the older counties to the east:

"This poet wins his airiest, his most substantial, success when he finds the fabled past amidst the blue-grass meadows and woods-pastures of the Ohio valley, and plays hide-and-seek with the graceful shapes of Greek myth and romance in twilight that has no past except the mute immemorial antiquity of the Mound Builders. He belongs, as his home belongs, to that mood of the race's westward advance, when it still looked longingly eastward over its shoulder; and when it could no longer see its old home,

sat down in its new place and fondly strove to dream out an image of it there."

Hamlin Garland, on the other hand, rejects all esthetic allegiance to the past, and absolutely cuts such bonds in twain:

"No more pastorals, no more demi-divinities, no more idyllic moods for him, or the like of him. New forms of nature, huge, savagely mystical, savagely beautiful, too hopelessly far from Arcady and Tempe for any emotion of kinship, have stirred his bold passion. It is not a mere pagan land, that trans-Mississippian region which the train-men of the Pacific railroads enter when they leave 'God's country' to the eastward, but something older yet, something nearer the prime and the nameless Titans who were before the conquering deities; and a quality of prehistoric loneliness

breathes from it into such verse as has been truest to it. One is aware of this in Mr. Joaquin Miller's frequently uncandid, yet mainly veracious, rime (now more forgotten than it should be), but he is of the far Southwest, which has its memories of vanished civilizations or semi-civilizations, and Mr. Garland is of the far Northwest, which has no sense of any past, but is the past itself."

Garland's voice, says Mr. Howells, "seems the true voice of the treeless wildernesses which stretch unbroken

MADISON CAWEIN.

from sunrise to sunset in a desolation deeper than that of impenetrable woods." His lines entitled "Noon on the Plain" illustrate this quality.

The horned toad creeping along the sand,
The rattlesnake asleep beneath the sage,
Have now a subtle fatal charm,
In their sultry calm, their love of heat,
I read once more the burning page
Of nature under cloudless skies.
O pitiless and splendid land!
Mine eyelids close, my lips are dry
By force of thy hot floods of light,
Soundless as oil the wind flows by,
Mine aching brain cries out for night!

Still another poem of this nature is "A Child of the Sun":

Give me the sun and the sky,
The wide sky. Let it blaze with light,
Let it burn with heat—I care not.
The sun is the blood of my heart,
The wind of the plain my breath.
No woodsman am I. My eyes are set
For the wide low lines. The level rim
Of the prairie land is mine.
The semi-gloom of the pointed pines,
The seeping darks of the mountain spruce,
Are prison and poison to such as I.
In the forest I long for the rose of the plain,
In the dark of the firs I die.

Mr. Howells remarks that Garland reminds one neither of other literary men nor of literature:

"Here is nothing out of his reading, tho you feel that he is a well-read man, and loves letters as much as he loves plains and skies. But he suggests that perhaps the newest men of our American branch of an old and deeply lettered race have worn off an imprint that seemed indelible. In this fresh coinage there

is no longer the image and the superscription of Cæsar, nor any effigy of yet elder Attic authority. You might as well look for either in so many Japanese poems. Have we then something absolutely American at last?"

SWEDISH-AMERICAN LITERATURE.

THE recent festival of the Swedes in Chicago in honor of their great national dramatist, Karl Michael Bellman, brought into notice the fact that the Swedes in this country possess a literature of their own of no mean value. Upon this occasion the Swedish Glee Club and the Svithiod presented for the first time in this country a new musical play entitled "En Afton paa Tre Byttor" ("An Evening at the Inn of the Three Tubs"), by Gustave Wicklund, city editor of the *Chicago Swedish Tribune*. The play was written by him in Chicago in 1895 for the Bellman centennial in Sweden, and had the unprecedented honor of being placed on the boards of the Folkteatern Theater in Stockholm as the chief official piece of the celebration. It was played for a month to crowded houses, and was received enthusiastically by the critical public of the Swedish capital and by King Oscar, the poet-musician, who gave it the highest praise. A writer in the *Springfield Republican* thus describes the play:

"An Evening at the Inn of the Three Tubs" is quite simple in construction, is a one-act play, and depicts, in a thoroughly natural manner, an evening at one of the popular inns of Bellman's time. The *dramatis personæ* are well-known characters in the life and works of Bellman. Father Bergstrom, a musician and noted personage in the Bellman songs, is introduced in the opening scene, celebrating his birthday at the inn. Among those present with him are Father Berg, a paper-stainer and performer on several instruments; Father Movitz, a constable and musician; Corporal Mollberg, a horse soldier without horse or caparison, officiating on occasions as a dancing master; Ullo Winblad, priestess of the temple of Bacchus, and Dame Lona, hostess of the 'Three Tubs.' Suddenly Bellman himself appears, seeking refuge from two process servers who are in search of him to arrest him for debt, his chronic condition. He explains the situation in an improvised song. While the mirth that follows this is at its height the bailiffs arrive, and just as they are about to lead away their victim two gentlemen enter. Bellman at once recognizes his patron, King Gustaf III., who was much given to visiting the popular resorts of the capital incognito, and the King's favorite companion, Elio Schroderheim. The King has heard of the poet's plight, and promptly settles the debt, altho Schroderheim declares that if every worthy subject was made happy at the same cost as Bellman the Bank of Sweden would soon be compelled to stop payment. The final scene ends in great jubilation. About a dozen popular Bellman melodies are interwoven with the play."

Mr. Wicklund, the same journal informs us, was born in Gefle, Sweden, December 8, 1832. He had a good school education and wielded his pen somewhat, in both poetry and prose, before emigrating to America in 1878. After some time spent in farming, he devoted himself exclusively to journalistic and literary work. Bellman, in whose honor the play was composed, occupies a place in the Swedish heart very similar to that of Burns as the people's poet of Scotland.

The "Perfect Honesty and Praiseworthiness" of Plagiarism.—Mr. Howells has lately stirred up an old subject by his article on "The Psychology of Plagiarism" in *Literature*. Referring to Mr. Hall Caine (see THE LITERARY DIGEST, July 22, 29, August 12), he instances the case of a "very widely known English novelist" who was accused of appropriating the words of another. It will be remembered that Mr. Caine, through a friend, eventually explained that he had designedly used the words of Dean Swift which his critics and enemies had fallen foul of, and that he had previously in a newspaper inter-

view announced his purpose to do this. As no disgrace has befallen him, Mr. Howells wonders if, after all, "the crime of literary theft" is not a legitimate one. A writer in a later number of *Literature*, Mr. C. Fred Kenyon, agrees with him, and even goes further. He thinks it is not only not a crime, but is to be highly commended—perhaps partly on the same ground that caused Sir Roger to commend the good sense of his vicar for reading the sermons of Tillotson and Burnet each Sunday instead of his own necessarily feeble products. The writer says:

"It seems to me that, within limits, plagiarism is quite permissible. Where, by its means, an author can strengthen the fragments of his plot, make a particular scene more dramatic, or a description more real, he has the right to take from any writer the particular ideas and expressions he may require. There are many works by famous and obscure writers which, while being in no sense great or even notable, yet contain ideas or passages of writing which are new and forcible. These books are buried in obscurity, and are rarely opened by anyone save the student. Is it to be supposed that we can allow these gems, which are hidden by so much that is weak and paltry, to be lost altogether? A thousand times, no! If, by their use, a writer can make a more complete artistic unit of the particular work upon which he is engaged, then he is, in my opinion, quite entitled to use or reject whatever he likes. If, by chance, he fail to improve the value of his own work by annexing that of another writer, well, it matters not, for he himself is the only one who suffers. I do not in the least uphold those who take a complete novel, essay, sermon, etc., alter its appearance by the change of a few words, and then pass off the result as their own work; but within the limits which I have already pointed out I think plagiarism is perfectly honest and even praiseworthy. Plagiarism in music, painting, architecture, and many other arts is regarded without complaint; why not, then, in literature?"

CENSORSHIP OF THE STAGE IN ENGLAND.

AS there has been some talk of establishing a censorship of the stage in this country, it may be advantageous for us to learn what the English think of their censor. In *The North American Review* (August), the distinguished realistic playwright, Mr. G. Bernard Shaw, tells of some of the doings and misdoings of that bewigged and (he says) often befogged functionary. This potent individual is the representative of the Queen's lord chamberlain:

"The lord chamberlain does not condescend to read plays himself; and the examiner of plays, who does it for him, is perhaps the obscurest unit in the imposing procession of pages of the back stairs, pages of the chambers, pages of the presence, masters of the music, keepers of the jewels, keepers of the swans, gentleman usher daily waiters, gentlemen usher quarterly waiters, barge-masters, grooms of the privy chamber, gentlemen ushers of privy chamber, and all the other breath-bereaving retainers of whom only one, the poet laureate, has succeeded in imposing the fact of his existence on the consciousness of the British public. The lord chamberlain himself, with all this pageantry to superintend, has no time to keep any check on his subordinate, even if he could pretend to know anything more than he about dramatic criticism and the foundations of morality. The result is that the examiner of plays, humble, untitled, 'middle-class' tho he be, is yet the most powerful man in England or America. Other people may make England's laws; he makes and unmakes its drama, and therefore also the drama of America; for no American dramatic author can afford to defy a despot who can, by a nod, cut him off from an English stage-right worth possibly \$20,000 in London alone. The monarchy is limited; the cabinet, with tears of rage, can not assert itself even against anti-vaccinators; the House of Lords, nominally omnipotent, puts down its foot only to emphasize the humiliation of having to take it up again; but the examiner of plays, greater than all these, does what he likes, caring not a dump for nations or constitutions, English or American. The President of the United States himself practically can not see a new play with first getting the examiner's leave."

One would suppose that the man chosen to fill the place of this

astonishing autocrat would be a highly qualified and distinguished representative of the literary and dramatic professions. But no, says Mr. Shaw. While the stamp-pounder in a British post-office must have passed the civil-service examination, no examination in dramatic art, literature, faith, or morals is required of the wielder of this vast and intercontinental power. The present dramatic czar is "one George Alexander Redford, said to have been a bank clerk, but not ascertained to have been anything" except a lucky individual who has obtained a soft berth, with power to exact tribute in pounds and pence of every dramatic author, English or American, who desires to put a play on the boards in the British Isles. That he does exact tribute to the extent of all the traffic will bear is fully shown by Mr. Shaw; and Americans who once boasted that they would give millions for defense, but not one cent for tribute to a foreign pirate, contribute their full quota to his dramatic majesty of the Queen's household; for the English stage-right in any play is at once forfeited if the play is first brought out in America, and therefore the American dramatic author who looks forward to English triumphs must first of all put himself, his play, and his fee in the tender hands of the examiner of plays.

Mr. Shaw narrates many telling facts relative to the petty tyrannies practised on dramatic authors; but perhaps the most interesting fact is an incident showing the important power which a censor may have even over the production of pieces of classic literature. It appears that on the centenary of Shelley's birth, the Shelley Society of London proposed to celebrate the occasion by a public performance of "The Cenci." The following is the amusing little tale told by Mr. Shaw of how the poet's followers at first evaded and defeated the tyrant, but were at last brought under his heel:

"The examiner would not hear of it; but the performance was given for all that in the Grand Theater, Islington (a northern suburb of London), before an audience of poets, headed by Browning, and a crowd of their disciples. Technically, this performance was not a public representation of the play; it was only a meeting of the Shelley Society. The spectators did not pay at the doors; they had all joined the Shelley Society for the season, and were attending this particular 'private' meeting of it in the exercise of their ordinary right as members. For the moment the defeat of the censor was complete. But the performance had taken place in a London theater; and London theaters are subject to the lord chamberlain, who licenses them from year to year. The unfortunate lessee, having let his house to the Shelley Society (without any knowledge of the plot in hand), found himself at the mercy of the outraged chamberlain when the time came for renewing his license. What passed between them is not known; but there is now a clause in the lease of that theater stipulating that no performances of unlicensed plays shall be given in it. When the Shelley Society proposed to repeat 'The Cenci' some years later, the lord chamberlain was master of the situation. With a single revolutionary exception, no manager dared lend or let his theater for the purpose. The terror was so complete that a manager who, not realizing his risk, had discussed quite favorably the possibility of placing his house at the disposal of the society, was compelled to write to the press vehemently denying that he had ever contemplated such an enormity, altho his letters were in the hands of the very persons he was publicly contradicting.

"Since then, the blockade has been run only by the Independent Theater, which succeeded in producing Ibsen's 'Ghosts' on three occasions without a license. In this case no license was applied for, its refusal being practically certain; and the first performance, which was technically 'private,' like that of the Shelley Society, was over before the lessee of the theater knew that anything exceptional was happening. After this, the theaters were thoroughly on their guard."

The following is the set of rules (according to Mr. Shaw) promulgated by this British Philistine who sits in judgment in affairs of the stage:

"There is one rule that never varies, and never can vary; and that rule is that a play must not be made the vehicle of new opinions on important subjects, because new opinions are always questionable opinions, and I can not make Her Majesty the Queen responsible for questionable opinions by licensing them. The other rules are simple enough. You mustn't dramatize any of the stories in the Bible. You mustn't make fun of ambassadors, cabinet ministers, or any living persons who have influence in fashionable society, tho no notice will be taken of a gag at the expense of General Booth, or a Socialist or Labor member of the county council, or people of that sort. You mustn't have any love affairs within the tables of consanguinity in the prayer-book. If you introduce a male libertine in a serious play, you had better 'redeem' him in the end by marrying him to an innocent young lady. If a female libertine, it will not matter if she dies at the end, and takes some opportunity to burst into tears on touching the hand of a respectable girl."

Mr. Shaw closes with this admission of the indifference of English public opinion to the censorship abuse and this appeal to his friends in America:

"The public is either satisfied or indifferent, because the class in England which feels social matters deeply does not go to the theater, and the class which does go wants to be amused there, and not edified or conscience-stricken. There is no money in the question, no vote-catching power, no popular interest in or knowledge or comprehension of it, and consequently no political capital to be made out of it. The censorship will probably outlive the House of Lords and the supremacy of the Established Church, as quietly as it has outlived the Metropolitan Board of Works and the Irish Church. In England this article will be entirely wasted; no English editor has ever dreamed of asking me to deal with the subject. In America, it may be useful, in view of the likelihood of attempts to set up State censorships in that country. In which case, O my friends across the sea! remember how the censorship works in England, and DON'T."

English and American Novels on the Stage.—The dramatic season just opening is notable for the exceptional number of plays which are based upon well-known novels. Never, it is said, were there so many dramatized works of fiction offered to the public at one time, and never has there been a time when such dramas have found a more eager and appreciative public. Mrs. Fiske in "Becky Sharp"—of whom we speak elsewhere in detail—of course heads the list. Then there is "The Only Way," founded on Dickens' "Tale of Two Cities," which has met a very warm welcome. "The Gadfly," founded on the recent English story of that name, has furnished Mr. Stuart Robson the opportunity to experiment for the first time in tragedy, tho, as it appears, with only limited success. Mr. Zangwill has brought out his "Children of the Ghetto" in Washington with great *éclat*, and will shortly introduce it to the New York public. Julia Marlowe is to appear as *Mary Tudor* in a dramatization of Caskoden's "When Knighthood was in Flower." J. H. Stoddard is to take the part of *Lachlan Campbell* and Reuben Fox the part of *Posty* in "Beside the Bonnie Brier Bush." William Gillette has adapted "Sherlock Holmes," and will himself interpret the part of the great detective. Clyde Fitch has adapted Daudet's "Sapho" for Olga Nethersole. And, finally, William Young is to make out of "Ben Hur" one of the great spectacular events of the season.

NOTES.

It is rumored in England, says *The Music Trade Review*, that Patti may again make one of her farewell tours in America.

PADEREWSKI has had an unprecedented success in his recent European tour. In London the receipts of his last concert were over \$6,000. In Paris he broke all records with receipts of 14,800 francs. He will sail for America in October.

JEAN DE RESZKÉ, who with his brother is a Polish nobleman by birth, has been decorated by Queen Victoria with the Royal Victorian order of the fourth class. Sir Arthur Sullivan is the only other musician who has been honored with this especial decoration.

SCIENCE AND INVENTION.

THE ARMY SIGNAL CORPS.

AMONG all the aids that science gives to the military service, none is more important than that rendered by perfected methods of signaling from the simple "wig-wag" to the electric telegraph; yet we seldom hear of the doings of the signal corps, essential as they are to the success of any military movement.

THE HELIOGRAPH.

a, Brass bar; b, mirror; c, sighting rod; d, tripod; e, hole in the mirror through which the instrument is set by bringing hole and end of sighting rod in line with distant station. The tripod to the right with shutters is used to produce the intermittent flashes of which the signals are composed.

An illustrated article in *The Mechanic Arts Magazine* (Scranton, Pa., September), by Louis Allen Osborne, gives in brief space some of the most interesting facts regarding this branch of the service. Says the author:

"When you read in your morning paper the account of some important battle in the heart of the Philippine Islands, does it ever strike you that this information has come to you from the interior of a country where railroads are few, telegraph lines fewer, and the only means of communication between some sections is on horseback? When General Shafter was in Cuba it was not unusual for the evening papers to publish details of events that had taken place the same morning in the interior of the island, and the officers of any army in active service must be in constant communication with the commander, no matter how widely the sub-organizations may be separated. The duty of providing and maintaining this communication devolves upon the signal corps; and the signalmen detailed to accompany a battalion or regiment, as it marches out of headquarters camp, are of as much importance to that organization as is the lookout on board ship. The signal corps is the eyes and ears of an army. It must frequently advance beyond the main column, reconnoiter the country, and report back in detail anything that may be discovered. It must also keep the moving detachment in communication with general headquarters, and report each day all the details of its service to the commanding officer.

"The instruments used in signaling may be divided into two general classes—namely, those designed to produce on the receiver an impression of motion, and those designed to produce an impression of time. The former include the flag, torch, etc., and the latter comprise the lantern, heliograph, telegraph, etc.

"When signaling with the flag, the signalman faces the station with which he desires to communicate, and waves the flag slowly but steadily from right to left to attract attention; or, if the station has a particular 'call letter,' he attracts attention by repeatedly signaling that letter until he is answered."

After describing the usual combinations of motions employed to form the letters of the alphabet, and noting that at night the torch or lantern is used instead of a flag, the author goes on to describe the heliograph, one of the most interesting instruments for military signaling. The usual form is shown in the illustration. The intermittent flashes of reflected sunlight sent by this

device have been made to carry a message eighty-two miles in the clear air of the Rocky Mountains and forty-seven miles in the East (from the Capitol roof at Albany to the Catskills). The uncertainties of the weather, of course, make this method of signaling somewhat unreliable. Says Mr. Osborne:

"The telegraph and the telephone are, then, the only absolute and unfailing means of communication. A telegraph line several miles long may be erected in a day, and it can be guarded by a comparatively small number of men.

"In laying a telegraph line, two or more of the signalmen carry knapsacks, on the top of which are reels containing one quarter of a mile of double cable. These reels unwind as they march along, and the other members of the corps in the rear attach the wires to trees at intervals, raise it on short thin poles, or hide it in the bushes and brush along the ground, according to the character of the country and degree of permanency required in the line. The erecting party are constantly in communication with every station along the line, as within the knapsacks under the reels the wires are connected up through an electric bell and telephone-receiver. This bell can be rung at any moment and instructions telephoned to the advancing party. Should the instructions be in the character of a cipher despatch and require the telegraph in preference to the telephone (as is often the case), the officer in charge of the squad is so informed, and the operator . . . steps up, throws out the telephone connection, and inserts the terminals of the key and sounder, which he carries in his hand. Telegraphic communication is thus opened with headquarters, while the local telephone service is suspended.

"Where an army is marching through an unknown country, it is frequently advisable to send a signal party to the top of some hill or promontory to reconnoiter the country, and telephone or telegraph back the results of its observations. When the party returns over the route on which they advanced, the wire is reeled up again, ready for future use. Should the main body of troops in the rear advance somewhat before the signal party returns, the rear end of the line is reeled up accordingly."

PRINTING OF THE FUTURE.

THIS is the somewhat ambitious name bestowed by M. T. L. Motquin on the method of rapid printing, by means of Roentgen rays, invented by M. Izambard. In the *Revue Scientifique* (Paris, August 26) he gives us the latest word regarding this method, about which we have already published some information. M. Motquin first hastens to assure us that the method is one of the few things that we Americans did not originate. He says: •

"There has been mentioned, as antedating the invention of M. Izambard, an experiment of the American Prof. Elihu Thomson, of March 11, 1896, in what he calls 'multiple skiagraphy.' It consisted in attempts at photographic reproduction on thirty superposed sheets of sensitive paper of different kinds. Its object was to study the penetration of the X-rays through the sensitive films. This experiment, however, had been preceded by a communication to the [Paris] Academy of Sciences by the Messrs. Lumière, on January 17, 1896.

"The earliest idea of the application of the X-rays to printing was that of M. Izambard, first in his French patent of October 19, 1897, and then in his American patent of March 18 following.

"As early as 1895 M. Izambard had thought of applying electricity to the impression of a pile of sheets of specially prepared paper.

"In his apparatus each letter was represented by a key acting on two hammers corresponding to each other, one above and one below the pile, one positive and the other negative. The current passed between the two hammers and marked the letter on each one of the intervening sheets by decomposing the film on the paper.

"About this time Roentgen's discovery made this double system of hammers, with its complicated mechanism, unnecessary. We know that the X-rays need no opposite pole to traverse the pile of paper, and this fact does away with all the difficulties of the previous plan.

"The X-rays traverse opaque bodies, but they are stopped by

metallic substances. If, then, we use, to mark the characters on the paper, a special ink of metallic composition, these characters will be impermeable to the X-rays. A pile of gelatinobromid sheets will be instantly impressed, and the text can thus be reproduced on thousands of leaves at once.

"The text can be written with a pen or set up in type, but the simplest method is to use a typewriter. . . . We can see that this does away with the longest and most complicated operations of typography, namely, the composition and the distribution of the type. . . .

"If we wish to print on the two sides of a sheet at once, we can do so by sensitizing the two sides in parallel bands, the bands on one side corresponding exactly to the spaces between the lines on the other."

M. Motquin notes that the pagination of a printed book is very easy by this method, since the pages of the copy are simply to be distributed in order over the various piles of sensitized leaves, and several piles can be impressed at once by a suitable arrangement of sources of rays. He goes on to say:

"One of the most curious applications of the X-rays to printing is the impression, in sealed envelopes, of state papers, diplomatic correspondence, military plans, confidential circulars, and in general of all secret documents, which can not be kept strictly secret if printed by the present methods."

To keep a secret from the printer, it would be necessary only to enclose the copy flat in an envelope and to enclose likewise each of the sensitized sheets. M. Motquin also considers this method of printing excellently adapted for artistic designs, and for many other purposes. To quote further:

"X-ray printing is certainly the printing of the future, but even at present, without awaiting the improvements that must be made in it, the use of this very rapid process can be of service in numerous and varied cases.

"Newspapers can now have done in one hour at vastly less expense the same work that has previously required six or seven hours. A supplement containing the very latest news can be added to each edition in fifteen or twenty minutes' work. . . . Publishers of music, etc., will not have to keep on hand for possible new editions enormous stocks of plates. Doubtless they will gladly exchange this mass of metal for simple radiographic cards, which will take up little space and be always ready to use."

M. Motquin thinks that the only points in the system that need improvement are the cost of gelatinobromid paper, the composition of the radiographic inks, and the methods of washing and drying large numbers of sheets at a time. In conclusion he says:

"We do not believe that the system is destined to replace the splendid results of the present methods, but rather to supplement them in the interest of greater speed by judicious combination of the two systems."—*Translation made for THE LITERARY DIGEST.*

THE AUTOMOBILE GUN CARRIAGE.

IT is announced by the press that Major R. P. Davidson, United States army, will leave Chicago for Washington in a few days, on his newly invented automobile gun carriage, carrying a Colt rapid-fire gun and 2,000 rounds of ammunition. According to *The Electrical Review*, "it is Major Davidson's intention to make this trip a demonstration of the military capacities of the automobile, and it is expected that he will show that light artillery of this character can cover more ground in two days than the ordinary horse-drawn battery can traverse in a week."

Major Davidson, it will be remembered, is the officer who, at the head of a bicycle squad from the Northwestern Military Academy, made the trip from Chicago to Washington a few years ago, and delivered to the Secretary of War a message from General Brooke. Major Davidson's invention is described and illustrated in *The Automobile* (New York, September). Says that paper:

"Seats are provided for four persons, who constitute a gun crew.

There is provision for carrying twenty-five hundred rounds of ammunition, a few accessories, and fuel. The large fuel tank for gasoline is placed under the forward floor, so as to be well protected from possible danger, and fuel for two hundred miles can be carried. This tank is of heavy seamless sheet iron, and is practically bullet-proof.

"The carriage employs the Duryea system of propulsion, which has been in use several years on carriages. It will mount a Colt automatic rapid-fire gun firing about five hundred shots per min-

AUTOMOBILE GUN CARRIAGE.

ute. The cartridges are 7-millimeter U. M. C., with smokeless powder and nickel-jacketed bullets, and will have a velocity of two thousand feet per second. The range of the gun is about two thousand yards. The gun points forward, and is ready for use at any time; it is mounted on a swivel and can be swung around, up or down, to cover any object, its sweep being that of a full half circle.

"The carriage will weigh about nine hundred pounds, of which quantity the gun accounts for eighty. The running gear is made very strong, to withstand the rough usage to which the carriage may be subjected. Its designer admits that its use in regular warfare is as yet an open question, but for street riots and similar uses believes it to be practical."

HAVE FISHES TWO EXTRA SENSES?

WE are not apt to think of fishes as creatures endowed with acute sensibility, yet their senses must of course differ in degree from ours, and perhaps also differ in kind; for certainly a human being, even if he could live and breathe submerged in water, could never accomplish what the fish does. Matthias Dunn, who contributes an article entitled "The Seven Senses of Fishes" to *The Contemporary Review* (August) is of the opinion that fish are aided by at least two extra senses, which he believes to be located in the so-called lateral lines or dermal tubes, which run down the sides from the brain, meeting at the tail. Says Mr. Dunn:

"To live in the sea must be very different from living in the atmosphere. The softness, clearness, and lightness of the latter make life more secure and the pleasures of existence more safe than is possible in a medium which is nearly a thousand times heavier, and which is often so violently disturbed as to lash into fragments everything fragile existing near the shore. At times, when the war of the elements means death to all coming within range of its fury, the five senses seem very weak and inefficient defenses for meeting all the exigencies of life under these violent conditions. Since all the senses are tactile, the five organs in use in the heavier element must be toned and modified to receive impressions in keeping with the weight of their surroundings; and this must entail a dull record of life, without some other additions, except possibly in the case of the sense of smell. But in the sixth and seventh senses the balance is fully made up to most of the fishes through their calling in the use of magnetism and electricity."

The sea, our author tells us, is not a crystal-clear medium by any means. It is often foul with dirt over great areas, and even when it is free from spores, spawn, weeds, and refuse the light

penetrates into it but a relatively short distance. To quote again:

"Such combinations of dirt, dregs, and darkness must surely make the sea anything but a pleasant transmitting vehicle for the use of the senses as we know them. Yet, notwithstanding the improbability of any beings endowed with only human intelligence finding their way through such unexplored, obscure, and undefined regions, these denizens of the deep master this difficulty with ease; nothing strikes one more than the quiet method these creatures have of knowing their true position, and the certainty with which they find the neighborhoods wherein are found the pleasures and necessities of life. The facts seem to point to finer and higher perceptive faculties in fishes than in man, and this can only be accounted for by the former possessing two extra senses."

The sixth sense, which Mr. Dunn names the "electric dermal sense," has for its object, he believes, the foreknowledge of coming storms. He writes:

"In going roughly through the English fishes I found two lateral lines in all the sharks I have been able to get hold of—viz., the blue, porbeagle, spinous, toper, thresher, smooth hound, rough hound, nurse hound, and picked dog. And among the herring family it is seen in the chad, herring, pilchard, sprat, and anchovy, some kinds having several such lines. But I failed to find these lines in fishes with suckers on their breasts, from which fact we may conclude that they have no need of these organs, seeing these fishes are generally located near the shore, and have the power of clinging fast to the rocks when in difficulties; having this convenience, they may be able to dispense with that knowledge of the coming storms which is evidently given to other fishes which possess one of these lines."

"Science seems to have had no knowledge of this sense; and we have only discovered it by observing the fishes using it as one of the necessities of life. Mr. J. T. Cunningham, late of the Plymouth Biological Laboratory, in his valuable work on the sole, recently published, devotes several interesting pages to the lateral lines, proving that the cells in them are sensory in their action; but concludes with the statement that the functions of these sense organs are entirely unknown, and that it is difficult to imagine what stimulus affects them. While the late Dr. Day declared these lines to be essentially organs of sensation, he did not give us the slightest information as to their object, except by suggesting that they may be tactile; but all sense organs must be of this order; it is impossible for them to be otherwise. And Dr. Gunther, of the British Museum, says these lines are abundantly provided with nerves."

"But the fishes themselves tell us the story of their use, when we observe their actions and habits of life under certain critical conditions; and their many premonitions of coming calamity distinctly point out that they must be under the influence of this far-reaching and expressive sense. This view induced me to look more carefully for the organs which represented it, and I was more than a little surprised to find the beautiful adaptability of this tube to its work."

After describing numerous instances where fish have seemed to possess knowledge that a storm was approaching, Mr. Dunn goes on:

"This excitement among the fishes before the coming storm clearly points to the circumstance that they are fully aware of what is approaching them, and prepare for the occasion; the feeding fish, well knowing that the storm will break up and destroy the connecting medium between their olfactories and their food, are anxious to take in a reserve to sustain them until communication can be again established."

Of the tubes that Mr. Dunn believes to be the seat of this premonitory sense, he says:

"Looking closely at these organs, we find the line consists in some instances of two tubes close together, and in others of two far apart; and in more than one of the *Clupea* family there are several such lines along the sides. In their construction they are divided into cells, consisting of jelly or mucus, having patches of sensitive hairs in them here and there. These are the organs I

so anxiously looked for, and I find them to be of the same character as those in the electrical ray; they are electrical instruments pure and simple, enclosing the whole fish, whereby the electrical knowledge collected is thrown into the brain."

"It may be urged that an electric sense in fishes is little other than an hypothesis or a suggestion, and that the foregoing statement is no proof that the tube is actually electric in its action; and this to some extent is true. Here, however, we are certainly in the same boat with all the scientists, who say that certain jelly cells in the back of the torpedo are an electrical apparatus, since no individual has yet been able to make an electric battery out of this mucus or jelly. Nor has any person, to our knowledge, been able to set this jelly machine in this fish's back in action to prove its electric character. In fact, it is only considered to be such from the actions of the animal possessing it. This is precisely our case respecting the electric force in one of the lateral lines of fishes. It may be asked, 'How can the simple possession of a few electric cells without accessories be of any use to the fishes?' But having electric cells in the sea is very different from having them on the land. The torpedo ray has no wires to his instrument, but he has only to see the fish he desires as food in the distance, and by an effort of the will he can make them dead. This almost perfect expression of electric power has been in existence throughout the ages among these fishes, and man is only now discovering its first outlines. When the storms send their earth-currents along the deep, far ahead of their course, the fishes in the track with their electric cells catch the inspiration and instantly know whether it is a gale, storm, or tempest which is coming; and they act accordingly."

The seventh sense, which Mr. Dunn calls the "magnetic dermal sense," he locates in the same lateral lines, aided perhaps by the brain itself. Its purpose is, he thinks, to act as a compass in the fish's journeyings, keeping him in his course, and warning him of the proximity of the coast. After telling many wonderful stories of the unerring accuracy that fish display in these respects, he says:

"With these facts before us I think it is clear that besides electricity, magnetism, to a high degree, is a fixed principle, and plays an important part in the life history of most of our fishes. But whether the magnetism reaches them on primary or secondary lines at this moment it is difficult to say; I lean rather to the secondary expression, or that shown to be stretching from the shores only."

"Mr. Thomas Clark, of Truro, our Cornish magnetist, states that all basic rocks are highly magnetic. They are found at the Manacles, Cape Cornwall, Padstow, and many other places in and out of the county; and further, that the magnetic power of such rocks is intensified by friction. Thus the basic beaches brought into motion by storms increase their magnetic power to an almost incalculable degree, of which he gives ample proof. Hence, he infers, it often affects the compasses of passing ships, and in fogs leads them on to destruction."

"It is interesting to think that these magnetiferous headlands have another and brighter side, and may be the means by which the inhabitants of the sea find their way from winter and tempest to shelter and rest; and when the spring advances direct them back to sunshine and their summer homes."

"No doubt the intricacies of the compass are too much for the comprehension of these fishes; but they may have a magnetic indication suitable to their apprehension, on the lines of sight or smell, which may impress them as to the whereabouts of the headlands, and consequently of the vicinity of the seashore. I can understand the possibility of the idea being objected to because the creatures have no metals from which such a talisman could be built up; but the same kind of objection can be raised respecting the formation of an electric battery in the back of the electric ray."

"And in this instance may not the brain itself, assisted by the dermal magnetic tube, be a substitute for the lodestone? For this organ is to a great extent constructed on the same lines as Lord Kelvin's latest compass invention—viz., a magnet floating in liquid. I have opened the skulls of several fishes at death, and have found the brain in the cranium floating in a fine, clear, tasteless fluid, of about the consistence of water, which, with the brain, in many instances completely fills the brain-pan."

PHOTOGRAPHS OF LIGHTNING.

IN a recent issue (August 12) we reproduced a photograph of lightning, together with remarks made by Professor Hazen in *Popular Science*, to the effect that a multiple flash of lightning had never, so far as known, been photographed except by a mov-

FIG. 1.

ing camera. This remark has called forth contributions from two of our readers. One of them, Dr. J. D. Justice, of Quincy,

Ill., sends us two photographs made by Dr. J. K. Reticker, of that city, about 11 P.M. in May last. Dr. Justice writes:

"The next morning while in the operating-room of St. Mary's Hospital, Doctors W. H. Baker, Otis Johnston, Henry Hart, and the writer were talking about the beautiful lightning flashes. One in particular, a multiple flash seen by Dr.

Baker, was mentioned, when Dr. Reticker, also present, introduced his photograph of that particular flash, and Dr. Baker at once recognized it as the one he thought he had seen. The direction and time appeared to tally so well that the discussion ceased, but all admired the photograph. I herewith hand you a print made for me by Dr. Reticker since I read your article (Fig. 1). The tall stack shown gives the precise direction of the flash. The doctor tells me he made many trials before success crowned his efforts. A second photograph (Fig. 2) taken another evening is worthy of note because of the clouds shown. The camera rested upon the roof of his residence open each time."

FIG. 2.

FIG. 3.

Mr. F. B. Beardsley, of Hartford, Conn., also contributes a photograph (Fig. 3) that was made from a camera that was not in motion. He writes to us:

"It was a very dark night, and the camera was kept on the cloud, and as fast as a flash appeared a change was made. Nearly a hundred slides or pictures were taken, but this was the wonderful one, and there was no thought of a multiple picture when it was taken, and it was not known that we had such a picture till it was developed. This can be proved if there are any doubts of it."

Why do Birds Migrate?—Some correspondence on this subject in *Popular Science News* (September) reveals the fact that there is considerable difference of opinion on the subject among naturalists. Says one contributor: "The migration of birds has been, and still is, quite a mystery. It is undoubtedly a matter of instinct, and also of example from older to younger birds. That these birds have any idea of the exact time of an advancing season is not to be accepted. In fact, in many cases, the setting in of an early or late winter may be foretold by the early or late migration of birds from North to South. It is so easy for a bird to change its habitat that it is no wonder it takes this method of keeping itself in a comfortable locality and where the food it needs can be obtained most readily. The stories told of the feats performed by birds in carrying out this migratory instinct are marvelous. The Virginia plover, it has been calculated, flies at the rate of 225 miles an hour, and at a height of nearly two miles. It is said that a Wilson's blackcap warbler arrived at a certain bush in the North, in three successive years, at 1.30 P.M. of the same day." Another correspondent writes: "It is commonly thought that birds migrate because of the changes in the weather; that they seek in winter a warmer and in summer a cooler climate, so as to avoid being subjected to great vicissitudes of temperature. But naturalists tell us the migrations are largely a matter of the search after food. They leave a given region because a specific food is exhausted, and they fly to another specific region because the experiences of the tribe as a whole have shown that desirable food can be found there. They are driven by hunger out of one place and are led by experience to another. It is not the winds that drive them, nor is it the temperature that tempts them." Regarding this, a prominent ornithologist writes to the same paper: "I suppose this may be true in part, for proper food and rearing of young are chief reasons; but they often seem to go without any apparent reason, when food conditions are seemingly perfect. It is certain they go, but I have yet to find the ornithologist who can tell exactly why."

SCIENCE BREVITIES.

SILKWORMS are very sensitive to the action of light of different colors, according to experiments recently described by Flammarion before the French Academy of Sciences. "The author," says *La Nature*, "kept silkworms in boxes covered with glass of different shades. The creatures all received the same food, and nevertheless they gave very different results as to the quantity of silk and eggs, and also in the proportionality of the sexes."—*Translation made for THE LITERARY DIGEST.*

THE survey of the island of Puerto Rico now being made by the United States authorities has been productive of so much new information that it is called by *The National Geographic Magazine* "the rediscovery of Puerto Rico." The latest Spanish surveys were old and unreliable. Says the magazine just mentioned: "A curious circumstance developed by this survey is the fact that the island seems to be considerably smaller than has been supposed, at least if one can safely generalize from the experience of one season. According to previous information, Point Viento is about fifty miles east of Ponce, but the actual distance was found to be about seven miles less. If this 'shrinkage' should be found to extend to other portions of the island, it would make a considerable decrease in the area of the island from the figures usually stated."

IN discussing some recent lunar photographs, M. Loewy, director of the Paris observatory, remarks, as reported in *La Nature*, that "the comparative history of the earth and the moon shows that their development has been on parallel lines. The moon carried away from the earth a fraction of the terrestrial atmosphere, amounting to about 1-1000 when separation took place, but this atmosphere has been diminished rapidly. It has been thought that the disappearance of the air was total and final. The photographs show huge deposits of white ashes formed at a great distance from the craters after solidification. There must have been an atmosphere at this time to transport the ashes, and, as this was subsequent to solidification, it is at least probable that the atmosphere still exists."—*Translation made for THE LITERARY DIGEST.*

THE RELIGIOUS WORLD.

THE RELIGIOUS PRESS ON THE DREYFUS VERDICT.

THE religious press of America—Protestant, Catholic, Jewish, and Free Thought—has attained to a unity of belief and sentiment upon one point at least, namely, that an egregious moral outrage was perpetrated by the Rennes court-martial. The very captions of the editorial articles upon the verdict show this. One paper heads its comment, "The Rape upon Justice"; another, "France's Infamy"; another, "The Moral Sedan of France"; still another, "The Condemnation of France," etc. We can find space for only a few of the many scores of denunciatory judgments. *The Outlook* (undenom.) says:

"Recondemned! We rub our eyes to see clearer, but we are still living in modern, not in medieval, times, as such monstrous injustice might indicate. It seems incredible that this defiance of conscience, reason, and justice could take place in the last part of the last year of that century which we are fond of regarding as the most civilized of all epochs.

"The five men who voted 'Guilty' are either imbeciles or perjurers. Instead of convicting Dreyfus, they have convicted themselves. Expediency, not evidence, conquered them. To please the majority of Frenchmen, and to please the army, the judges yielded more even than did Pilate himself; they crucified afresh an innocent victim."

The Independent (undenom.):

"This trial has been a campaign of education for the French people, teaching them the inseparable alliance of honesty and honor. France has had a weak sense of justice; this trial has cultivated that sense. It has, perhaps for the first time, set over against each other the two ideals, one of justice, the other of reputation, of glory, called honor. France has been told by her noblest men that honor must rest on justice, that honor must follow justice, not justice honor; and if the lesson is not yet learned it has been well preached. All the nations of the world have been looking on, and they unite in condemning the nation that has condemned an innocent man to save the fame of a few generals. The nations of the world are this day preaching the lesson of justice before honor to France. France declares that there is no other nation that makes so much of honor as she; but she does not know what honor is. She is hugging a bastard in its place. It is the duelist's honor, the swaggerer's honor that she glories in, not that of Christian or of Jewish truth."

The Watchman (Baptist):

"Never before in human history has the moral judgment of the civilized world been so unanimous in the condemnation of an act of national injustice as it is in its verdict upon the Dreyfus case. . . . A century ago such a travesty of justice might have passed without notice; but to-day, with the modern methods of conveying intelligence and with the modern quickened sense of justice, the world is aflame with indignation. The fact that the world should be swift to visit its condemnation upon a great nation for a moral delinquency indicates and registers the modern ethical advance. The moral consciousness of the world has been aroused to see that no defeat that it is possible for a nation to sustain in arms is for a moment comparable with the disgrace of consenting to injustice. That is the shame that rests upon France to-day, and it can not be atoned for by any brilliance of foreign alliances, any advance in wealth, numbers, or intelligence, or any victories by land or sea."

The Evangelist (Presby.):

"The general censure of France, the general expression of hopelessness that any good can henceforth come of a nation so blind to justice, so hostile to the right, so given over to prejudice, are all the more severe and sweeping in proportion to the firmness with which that conviction has been held in the face of every evidence that acquittal was not to be expected from the court-martial at Rennes. In every other civilized country, condemnation of the verdict has not only been unanimous, it has called forth the

severest and most scathing judgment of France as a nation, the most pessimistic forecast of her future, the most confident prophecies of her downfall. Humanity washes her hands of France as of a nation past redemption."

The Interior (Presby.):

"The verdict against Dreyfus should be accepted by every honest man and woman as a personal insult, and resented as such. The women of America alone can bring the sycophantic scoundrels who have outraged the moral sense of Christendom to their knees. The women made the Parisian press right-about-face with the agility of monkeys in the beginning of the Spanish war. Will American women look upon that broken-hearted wife, and those children with names blackened in their helpless infancy, and then soil their white hands with anything that comes from the befouled hands of France? Will they crowd French cafés and hotels for the Exposition next year? Those who do will be in, but not of, American womanhood."

The Churchman (Prot. Episc.):

"Twenty-nine years ago a fabric of political corruption based on military terror and veneered with military pomp collapsed at the virile touch of the psalm-singing soldiers of Germany. That was a political Sedan. To-day France is her own executioner. Others can inflict material defeat and ruin on a nation, but only the nation itself can forfeit its own honor."

"And that is what France has done.

"Our hope is in the intellect and the independent religious life of France, in the saving remnant that have battled so loyally for truth and righteousness in these past years and will not now withdraw before the triumphant joy of the forces of clericalism and monarchical reaction. They will fight on, for that is a law of their being. We have faith that they will prevail, and that her ten righteous men may yet save Sodom."

The Christian Advocate (Meth. Episc. South):

"In every civilized nation there is indignation at the unrighteous and cruel weakness of the court-martial. If such a thing as the public opinion of the whole world can effect anything, it will put a stop to the further humiliation and persecution of the poor creature who has been forced to suffer so much in the place of a nest of base-hearted criminals and conspirators, one of whom at least forged the document upon which the pretended verdict was based."

The Catholic Mirror, Baltimore:

"The church makes no campaign against the Jews nor do the religious orders attack them."

"In this country, the Catholic press is almost one in belief in the innocence of the Jew. The few papers who proclaim otherwise are inspired by the personal beliefs of their editors, just as those who affirm the prisoner's innocence speak only the sentiment of the individual on the tripod, not a prejudged verdict of the church."

The American Hebrew:

"O France, how art thou fallen low! A hissing and a reproach hast thou become before the bar of history—a thing of scorn and loathing in the eyes of mankind. From age to age thy shame shall not cease and men, not to be born for decades yet, shall grow up to speak of thee with words of contempt, to avert their honest eyes from looking on thy dishonored face, to shrink from contact with thee. For thou, who claimest to be wedded to honor and to have selected all verity for thy bridal bed, hast proved to be a thing wilfully loathsome and bideous because of the deformity of thy choice, when thy real bride was seen and thy degraded nuptial couch was disclosed. This is thy shame—that not the meanest things on earth can be told that thou art even a little better than they!"

"When thy traitorous sons drew up their plans and arranged their schemes, when they reckoned the danger and counted the cost, they forgot one factor. They omitted to count in God, and He will assuredly remind them of His existence!"

The Hebrew Standard:

"No country can outlive the shame of France. Spain stands out as a mournful example of its crime against a part of its popu-

lation. All its power and the work of some of its most enlightened statesmen could not avoid its inevitable downfall."

Rabbi Emil G. Hirsch writes in *The Reform Advocate*:

"As for France—the God of Israel still liveth. Righteousness exalteth a nation. Let us pray that for the country and the people that on the European continent were the first to proclaim the rights of man, soon the better day of moral regeneration may dawn. We are confident the hour will strike when France will accept the verdict of the world's jury and make amends for the inconsistent, unjust sentence pronounced at Rennes."

THE CREED OF THOMAS HARDY.

FEW readers of Thomas Hardy would be disposed to admit that he has a creed; and, using the word creed in the ordinary religious sense of the term, doubtless he has none. A critic, Miss Anna McClure Sholl, has said of him:

"Acknowledging no creed, this most modern of modern novelists is eminently Calvinistic in his portrayal of men and women as predestined to misfortune or failure; as pulled about at the impish pleasure of the god Circumstance. The keynote of his work indeed is the effect of circumstance—of luck—upon man's war with the lower elements in his nature. Some foreordained event for which he is in no wise responsible turns the tide of battle against him; yet he is held accountable for his defeat. He reaps where he has not sown. He is overwhelmed with punishments for sins committed by others. He is literally badgered through life by the modern devil of ill luck."

Yet here we have a very definitely outlined belief, even if it be a belief in evil; and using the word in this primary sense, a writer in *The American Illustrated Methodist Magazine*—Mr. James Main Dixon—has attempted to point out the religious significance of this twilight creed, which has been a progressive intellectual and spiritual process, an almost complete reversal of his earlier and more optimistic outlook upon life. The writer says:

"The tone of each of his books has been somewhat gloomier than the last. It is true he is in sympathy with nature; but the nature he interprets is a nature wholly limited to the senses. As his outlook on life becomes less enthusiastic and more critical with advancing years, nature appears more and more 'red in tooth and claw with ravine'; the graveyards are more in evidence than the happy homesteads. The appalling thought which, on one occasion, struck a chill at Alfred Tennyson's heart as he approached the great city of London—that all this million and more of people would, in a definite time, be corpses in their graves—is a thought we naturally drift to after a continuous reading of Hardy. His characters become one with nature in the subtle web of sympathy he weaves between mind and matter. But the process leaves man more of an animal, instead of raising the brute creation nearer the level of man. It is not the magnificent conception of St. Paul, which makes the whole creation sympathize with man's aspirations; it is the leveling down of man to the infinitely recurring cycle of birth, growth, and the inevitable dissolution. . . . To Tennyson the ideal is the real, the other world the world of life. The gleams from the other world that come to us through friendship and otherwise are sparks of holy fire that must be kept alive with as sacred care as ever priest preserved of old the altar fire."

"But Thomas Hardy, looking upon life with the cynical eye of the realist, crushes out these illusions. He contemplates life in what appears to him to be its practical aspect; and he advises his readers to accept calmly the inevitable."

Mr. Dixon mentions one of Hardy's tales—"The Fellow-Townsmen"—as one of the most terribly significant examples of his dark philosophy of life. It is the simple story of two men's lives:

"One is happily wedded; the other, having married a fashionable wife, who cares nothing for him, is miserable. A boating

accident occurs, and the dearly loved wife is drowned, while the woman whose only destiny in life seems to be that of making her husband miserable is rescued from death. . . . To the very end of the tale a tricky fate pursues the man who was unhappily married. He is relieved of an unsuitable partner only just too late to marry his first love. The fates conspire against him, as against poor Tess, so as to crush out happiness for him.

"This, then, is Mr. Hardy's dreary philosophy of life. He contemplates a stage where men and women come and go, and are quickly forgotten. Happy are those whom a malign fate does not thwart with a strange persistency. The lesson of life is the old pagan one of cheerless resignation. To obtain the wished-for prize is to suffer disillusion; to continue in the steadfast pursuit of the ideal is impossible for poor human flesh and blood; to trust to fate or Providence is to lean on a broken reed."

Yet, says Mr. Dixon, Hardy is not without "longings after the mystical, the eternal, the satisfying." In a stanza in the recently published "*Wessex Poems*" he says:

"That from the bright believing band
An outcast I should be;
That faiths for which my comrades stand
Seem fantasies to me
And mirage-mist their shining land
Is a drear destiny."

But he can not join in belief with those who have faith in the "returning of heart to heart" after dust has returned to dust:

"Such scope is granted not my powers indign...
I have lain in dead men's beds, have walked
The tombs of those with whom I'd talked,
Called many a gone and goodly one to shape a sign,
And panted for response. But none replies;
No warnings loom, nor whisperings
To open out my limitations,
And Nescience mutely muses: Where a man falls he lies."

Mr. Dixon terms this the essence of that "sad pessimism of the worldling who wrote 'The Preacher' and who, gazing on life, detected nothing but emptiness everywhere." He adds:

"It is evident that this condition here described is not a condition of spiritual health. This agnostic life, with its gray skies and leaden horizon, is malarious. No wonder that into it intrudes the unhealthy notion of a tricky, thwarting fate, which seems to take pleasure in wrecking happy destinies. As perfect physical health engenders an instinctive indifference to dangers, and thus best insures itself against harm, so perfect spiritual health, trusting in God, is untouched by sickly morbidity. Perfect love casteth out fear. The man who, looking out upon God's world, can question nature in the following fashion, will surely be at the mercy of an evil destiny:

"Has some vast Imbecility,
Mighty to build and bend
But impotent to tend,
Framed us in jest, and left us now to hazardry?"

The writer, however, gives Hardy credit for being wholly sincere, not only in his philosophy of life, but in his ethical standards:

"That Mr. Hardy is an honest, straightforward man, preaching no veiled licentiousness, but merely what he considers to be the literal truth, will be granted by most people. So plain-spoken and consistent is he, so well does he comprehend the chief points at issue, that his writings have a distinctly tonic value. The believers in a great unseen world of reality are better able, after reading his works, to realize the value of their position. They come to see that their own theory is by far the best working hypothesis in the department of the higher ethics—of all ethics, indeed. Mr. Hardy's world is a world infected with a creeping paralysis; it has lost the first essential condition of health. . . .

"The fatal destiny that broods over Hardy's universe is only potent with souls that are receiving no true spiritual nourishment; with souls which, through some defect or misfortune, are blind to the great yet simple realities of existence. Such as have 'felt' know that their contentment is not 'smugness,' but the happiness that endureth. The highest happiness has ever in it something of the mystical, which the ordinary eye refuses to see, and, failing to see, disbelieves in and distrusts. But this invisibility only makes it the more real and inviolable; a fountain of life and love to themselves and all around them."

"THE FAILURE OF CHRISTIANITY."

MR. CHARLES WATTS, an Anglo-Indian who under the pen-name of "The Free-thinker" is a frequent contributor to *The Buddhist*, Colombo, says in a recent article in that paper that Christianity is a failure in every particular in which it has promised to benefit the world. He speaks not of the truth or error of its professed creed, but of the practical non-obedience to its teachings throughout the Christian world, from which he draws the conclusion that it is a religion which in its commandments is unsuited to the nature and needs of mankind. Indeed, he believes that the great mass of Christians are not sincere believers in the ethical maxims of the Sermon on the Mount, however much they may have a certain attachment to Christian mythology such as we see in all formal religions. They find it useful and profitable in trade and social intercourse and governmental affairs to prate about their high principles of religion, says Mr. Watts, but this is pure dissimulation and smug Philistinism. He says:

"It has been frequently pointed out that the avowed object of Christianity is twofold. First, to convert mankind to a belief in the efficacy of Christ's death as an atonement for sin; and, in the second place, to furnish a gospel that would prove an efficient guide in the secular duties of life. Nothing appears more clear to our mind than that in both cases the Christian religion has proved a decided failure. It has existed in various forms for about eighteen hundred years, and yet the great majority of the human race have either not heard of it, or have entirely rejected it. The population of the globe at the present time amounts to about 1,275,000,000, of which, according to the most liberal calculation, only 350,000,000 profess to believe in Christianity; that is, less than one third. But, if we make an allowance for the large number who are merely nominal Christians, more than three fourths of the world's inhabitants to-day are not Christians. This looks like a decided failure so far as the 'conversion of the world is concerned.'

"Careful readers of the New Testament, having retentive memories, need only to be reminded of what the theory of Christianity is to enable them to see at once its inadequacy as a guide in daily life. In fact, not only are Christian teachings thoroughly impracticable, but some of them are entirely delusive. Take, for instance, the subject of prayer. Nothing is more clearly set forth in the New Testament than the promise that God will answer the supplications of those who believe in Him. Christ Himself distinctly told His disciples that whatever they asked of His Father He would grant their request. 'All things, whatever ye shall ask in prayer, believing, ye shall receive' (Matt. xviii. 19; xxi. 22; John xvi. 23).

"Now, to those who firmly believe in this Christian teaching we submit the following facts. Jesus Himself prayed for the unity of Christendom, that His followers might be one (John xvii. 21); but that prayer has never been answered—in fact, the disunion among Christians to-day is greater than it ever was, and plans more sensible than reliance on prayers are now being adopted to achieve what the prayers of Jesus failed to accomplish."

The prevalent militarism, in which the armed Christian nations of the earth, with their vast millions of hosts ready to fly at each other's throats, their horrid engines of destruction, and their gospel of force, immensely outdo in display of brutal might all that paganism, ancient or modern, ever accomplished or dreamed of, is, says Mr. Watts, the shortest and most effective arraignment of Christianity that the despised pagan of to-day can desire. The following indictment of Christianity might, he thinks, be put alongside of St. Paul's indictment of paganism in his Epistle to the Corinthians, remembering, too, that every one of the crimes mentioned by the apostle is rampant in the Christian cities of to-day after nineteen hundred years of Christian preaching by the successors of the Apostles:

"The world has been devastated with sanguinary encounters, and the followers of Jesus have neither prevented those horrors

nor done much to mitigate their evil effects upon mankind. Indeed, Christians on both sides of the contending forces have implored God to aid them in killing each other. This was the case in the Crimean War, the Franco-German War, and the Civil War in America. In all these conflicts each side prayed to God that it might win all the battles. One would think that the disastrous consequences of those dreadful struggles between Christian nations would have been sufficient to destroy all belief in the efficacy of the prayer of supplication, for every Sunday during all these events the clergy repeated the request: 'Give us peace in our time, O Lord.' Still, the tragic slaughters went on, and God ignored all such appeals. Surely, if anything could show the impotency of the Christian faith as a promoter of peace, it would be the present expenditure of millions of the people's money, and the loss of millions of human lives in reckless warfare. Even to-day the prayers of the churches are offered up for the Peace Conference, which does not even propose to adopt Christianity as a cure for the evils of war. What a satire on Christian prayer for peace are the busy state of the warship building trade and the extra military preparations now going on, absorbing as they do a vast proportion of the earnings of the laborers of all the great nations of the world!"

ALLEGED CHURCH DESECRATION IN THE PHILIPPINES.

VIGOROUS protests from Roman Catholics continue to be made concerning the reported desecration of churches in Luzon by American soldiers. In spite of the denials of Dr. Schurman, the late chairman of the Philippine Commission, that such desecration has taken place, a protest has been filed with President McKinley by the Metropolitan Truth Society, asking him to give his attention to the matter and punish the guilty. The Catholic Young Men's National Union, at its twenty-fifth annual convention at Newark on September 20, also passed resolutions to the same effect, and forwarded them to Washington. Cardinal Gibbons is said to have appealed personally to the President, although the reports of this interview are contradictory; and on Sunday, September 17, it is said that almost every archbishop and bishop in the United States made the question a subject of especial comment in his sermon. A high ecclesiastic in Washington, quoted in the *New York World* (September 20), says:

"The protest filed by the Metropolitan Truth Society with the President has the indorsement of every Catholic in the United States. These outrages are steadily reported on what seems unimpeachable authority. They are indignities not only to Catholicism but to Christianity.

"The archbishops are now considering the preparation of a circular letter dealing with the various aspects of the case.

"There is in this country abundant testimony of a direct character to these outrages. If those who make the allegations have borne false witness they should be punished.

"It is said that the President has ordered a complete investigation and a prompt report from the Philippines."

In a recent number of *THE LITERARY DIGEST* (September 9), we quoted a statement from the *Chicago Inter Ocean* that after making thorough investigations in St. Paul and Minneapolis it could find no stolen ecclesiastical vestments on exhibition in any shop in those two cities. The *St. Paul Dispatch* (August 29), in an editorial headed "A Specter Witness," also denied that there ever was any "Michael Prendergast" (the soldier alleged to have stolen the articles in question), or that there were any vestments to be seen on exhibition in St. Paul, and added that "the whole story was conceived in the mind of a coward, a traitor and a base calumniator, who had not even the wit to prepare a plausible story." Mr. William F. Markoe, the subscriber of the *St. Paul Dispatch* who was thus given the lie direct, returned to the charge in a letter over his own name. He says:

"No names were mentioned because, knowing from experience the sensitiveness of a certain class of Catholics in such matters, I

feared to arouse hostility which might resent the implied insult in a way that might cost the offenders thousands of dollars. Now, however, I enclose names and addresses for the information of *The Dispatch*, so that it may verify the facts if it cares to. Moreover, I make the further assertion that I had the soldier's word for it that before leaving said religious trophies with the store in question he submitted them to the inspection of *The Dispatch*, which made a news item thereof, which several persons claimed to have read in your own columns at the time. I also assert that said sacred books were on exhibition from about May 12 until a few days ago; that the missal or mass-book was open at the most solemn portion of the mass, namely, the consecration of the elements; that the sacred words of consecration were printed in large display type; that a most touching picture of our crucified Savior with bowed head and disheveled hair, as if in silent protest, was conspicuously displayed; that the well-thumbed pages proclaimed that the book had been actually used in the offering of the most holy sacrifice of the mass times without number; that thousands of passers gazed upon these sacred objects with feelings of curiosity or deep chagrin, while not a few sincere Catholics consoled themselves with the thought that at least the identity of the words and music of these books with those used in every Catholic church in St. Paul afforded proof conclusive of the identity of Catholic doctrine and worship in all ages and countries.

"Does *The Dispatch* also deny the exhibition of the sacred vestments of a Catholic bishop of the Philippines in a store in Minneapolis so minutely described in such respectable journals as *The Northwestern Chronicle*, *The Irish Standard*, the *Minneapolis Times*, and the *Minneapolis Journal*?"

In reply to this letter *The Dispatch* says editorially (August 31):

"*The Dispatch*, upon reflection, recalls that there was on exhibition in this city a Catholic prayer-book, said to have come from the island of Luzon, but it did not understand, nor does it now believe, that the book in question was the result of spoliation of Catholic churches by the American soldiers, hundreds of whom are probably as devout Catholics as those who have communicated to *The Dispatch* their thoughts on this subject. That seems about all that is necessary to be said."

In *Collier's Weekly* (New York, September 9) appears a full-page illustration which is "respectfully submitted to the Secretary of War" by the editor. Under it are printed the following words:

"The above picture is from a photograph taken by a correspondent in the Philippines, and not altered in any particular. It represents a field telegraph station set up on the altar of Caloocan church with wires attached to the tabernacle. The officer standing back of the operator is a lieutenant; and the one in front of the operator, with a cigarette, holds the rank of captain in the United States army."

The Independent (September 21) says, however:

"We do not know that a Catholic church is any more sacred than a Protestant church, and in our Civil War a multitude of Protestant churches were quite as much desecrated. In the Philippines the church is the chief building, a sort of fort, and is always occupied by the insurgents and often fired by them on their retreat. That is the way of war. In this case the picture shows that no unnecessary damage has been done. The cross and the image of the Virgin and Child are untouched, as also the filigree wreaths and other ornaments and carvings. We agree with the sensible editor of *The Western Watchman*, who says:

"Some papers, to prove that our American troops in the Philippines desecrate Catholic churches there, print photographs of the interior of those churches, showing them filled with soldiers. Now, if the only desecration those churches receive is sheltering our poor soldiers from the killing Philippine sun, a very few drops of holy water will reconcile them."

On September 22, the following despatch from General Otis was received by the War Department:

"Referring to your cablegram of September 18, sixteen churches, different localities, occupied by United States troops. Four only partially occupied, and religious services not interfered with. Also three convents occupied. These three and ten of the

sixteen churches formerly occupied by insurgents. Church property respected and protected by our troops."

According to the Washington correspondent of the *New York Herald* (September 23), who quotes the foregoing despatch, President McKinley "promptly directed that a cablegram be sent to General Otis asking for a more explicit report upon the matter." Some surprise has been expressed, says the same authority, that General Otis seems to think the protest was directed against the occupation of churches and convents. On this point he quotes the following comment from the apostolic delegate, Monseigneur Martinelli:

"There can be no legitimate complaint over the occupation of churches by troops in time of war. According to the canons of the church we do not hold that such quartering forms what we call desecration. It is customary, however, for the military commandant to give due notice of his purpose to the bishop or priest in charge, so that the blessed sacrament, the sacred relics, and the regular altar furniture can be removed. The bishop or priest, in giving his permission, presupposes that the military authorities will preserve good order and discipline."

A New High-Church Magazine.—The first number of the new monthly magazine called *Church Defense*, devoted to the interests of the "Catholic party" in the Episcopal Church, was issued in New York on September 21. One bishop and several well-known New York clergymen are reported to have lent their personal support to the paper, and are to be contributors to it. The motto of the journal is "First Pure, Then Peaceable," and the opening article is, in part, as follows:

"The Gospel is first pure, then peaceable. Its message of peace is to men of good will, not to those who teach what the American bishops, in their Pastoral Letter of 1894, describe as 'certain novelties of opinion and expression, which have seemed to us to be subversive of the fundamental verities of Christ's religion.' There can be no peace between faith and unbelief, and when the arch-enemy of souls comes stalking in surplice and stole, the call to battle against error becomes more imperative. . . . Now unbelief boldly demands admission to the priesthood, and a bishop has been found to lay hands upon an avowed disciple of error, an impugner of God's Holy Word. This sacrilege was not committed thoughtlessly or unadvisedly, but in the face of serious and earnest protests. It was not an erratic incident, but it was a concerted assault upon the Citadel of Faith."

In still another article Bishop Potter is exhorted to declare publicly that he committed a great error in admitting the Rev. Dr. Charles A. Briggs into holy orders in the church. "Will he"—Bishop Potter—"be strong enough and great enough to break away from the evil forces closing about his name and work?" is the pointed question that is asked. Further respects are paid to Dr. Briggs as follows:

"Dr. Briggs, whose ordination so scandalized the church, occupies a position which, to say the least, must be trying. As professor in the Union Theological Seminary, he is supposed to be under obligations to teach the Westminster Confession; as a priest of the church, he is bound to teach the Catholic faith, as this church hath received the same. As a professor, he teaches men who are to go forth, not as priests, but as Presbyterian ministers, while he himself has taken vows to be a priest in the Anglican church, which believes in a three fold ministry. As a clergyman of the church, which believes the Bible to be the Word of God, he is going forth to teach at the pro-cathedral parish a people, a large part of whom are Jews, not to believe the Old Testament."

A VOTE of thanks passed at a camp-meeting in Georgia lately has the merit of originality if not of reverence, altho the originality was probably unconscious, and the apparent irreverence not designed. At the last meeting of the series, eight resolutions were passed, in the form of a tender of thanks to those who had shown favor to the religious gathering. The last two resolutions of thanks read: "Seventh. To the railroad for the reduced rate of one and a third fare for round trip to persons attending the meeting. Eighth. To Almighty God, the Father, Son, and Holy Ghost, for calling so many of His people together, and meeting with them in power and demonstration."

FOREIGN TOPICS.

DISCUSSING THE DREYFUS VERDICT.

CAPTAIN DREYFUS'S pardon, issued last week by President Loubet after Dreyfus had withdrawn his appeal for a revision of the Rennes sentence, will not, according to the Paris correspondent of the London *Times*, annul the civil and military consequences of the verdict, and he will, therefore, no longer be

"LES DERNIÈRES CARTOUCES!" (RENNES, 1899.)

(With profound apologies to the memory of Alphonse de Neuville.)
—Punch, London.

long to the army. There is nothing, however, to prevent him from applying to the Court of Cassation to quash the Rennes trial whenever the new fact required by law is produced. When liberated, he proceeded to Carpentras, a city of 10,000 inhabitants, in the southeastern part of France (province of Vaucluse) where he is now living in the house of a sister. The members of his family do not wish to expose him to such demonstrations of sympathy abroad as might be used against him by his adversaries at home.

The civilized world is pretty unanimous in saying that the verdict of the Rennes court is a violation of justice, and that France must suffer in consequence. *The Globe*, Toronto, says:

"A new force that has stolen upon the world unconsciously is a world-wide public opinion, and its first striking manifestation is in the Dreyfus case. . . . Every nation feels the new force of the world's opinion. Whether in overrunning new territory, snubbing weaker races, or in the treatment of its own subjects, every member of the family of nations is restrained by thoughts of what the outside world will say. The sentiment in the case of Captain Dreyfus has been healthy and humane. It was the thought of a man enduring the tortures of solitary confinement on Devil's Island for a crime of which he was innocent that moved the world and turned all eyes on France."

The Globe is one of the few papers which, while unable to justify the Dreyfus affair, finds some explanations for it, which we summarize as follows:

We must remember that French court proceedings, however satisfactory to Frenchmen, are different from those in vogue among English-speaking nations, and not easy for us to understand. The witnesses do not give their testimony under such strict rules and limitations. Besides this peculiarity of the case,

we must remember that we did not get an unbiased representation of the trial at Rennes. The reports were full of argument and prejudice, and were obviously biased in favor of Dreyfus. The witnesses against him always presented a wretched appearance in the box, and nearly every day there was a "triumph" for the prisoner. That Dreyfus did not write the *bordereau* seems proven. That he confessed his treason, that he sold documents to Germany in order to get more valuable documents from Germany, is not proven, as Captain Lebrun-Renault can not bring another witness to back him. If the judges were to give the reasons for their decision, some light might be thrown upon the mystery; but at present it seems to be involved in a mist which only time and the researches of some future historian can dissipate.

The *Hamburger Nachrichten* claims to have found a solution. Dreyfus was a spy in the pay of Russia, says that paper. But it has not yet offered any evidence in support of this assertion. Many papers express astonishment at the sort of testimony admitted before the court, and the summing up of the counsel for the prosecution, Major Carrière, is regarded as extremely weak. "We are told that Dreyfus may have done this, and might have done that; but not a word of what Dreyfus has done," says the Amsterdam *Handelsblad*. It must be taken into consideration that there is still secret evidence, or what passes as evidence, and that the trial was not altogether public. *The St. James's Gazette*, London, points out that an appeal would do little good to Dreyfus, and says:

"The generals who were called as witnesses, and who are acting as prosecutors, have sprung a new dossier on the court. Observe the government commissary, Major Carrière, had two months to prepare the evidence and all the documents before him. The secret dossier has been examined. The generals have been allowed to talk at large, and their evidence so-called has been torn to shreds. Now when their backs are to the wall they produce a more secret dossier; and it is absolutely going to be examined. When it also is abolished—a still more secret dossier will of course make its timely appearance."

One witness claimed to have seen a French paper with the words "Dreyfus is arrested" in the German Emperor's bedroom at Potsdam. But strangers are not admitted to the Prussian

THE SIEGE OF "FORT CHABROL."—Jugend, Munich.

palaces while the royal family occupy them. Moreover, when Labori, Dreyfus's counsel, who is an accomplished German scholar, tested the witness, it was found that the latter could not read the German of even so short a sentence as "Dreyfus is arrested." Another witness claimed to have overheard two German officers speak of Dreyfus as a traitor and a spy. Independently of the fact that this would hardly be called evidence in most

countries, it was found that the hotel at which the witness said he heard the conversation had ceased to exist at the date he gave. On the other hand, the declarations of the German and Italian military *attachés* that Dreyfus never had anything to do with them were completely ignored, altho backed by statements in the official *Reichs-Anzeiger*, Berlin. Still France will probably feel relieved provided the Dreyfusards let the matter rest where it is. *The Speaker*, London, remarks:

"An appeal would be most grave, because it would invite the supreme court to declare whether the liberty and honor of a French citizen in a citizen army are to be protected by law, or left to the mercy of savage prejudices and organized conspiracy, claiming the divine right of military discipline. This is a question which far transcends in vital importance the personal wrongs of Captain Dreyfus. It goes to the very root of civilized government. Is France to be governed by law, or by the sword of Brennus thrown into the scale to make justice kick the beam? That issue makes a far greater demand upon the civic courage of enlightened Frenchmen than any issue which has arisen since the Revolution. We believe that courage will be equal to the emergency, and will meet the enemies of civilization without flinching."

The London *Times* wellnigh exhausts its vocabulary in condemnation of the verdict:

"We have no hesitation in affirming that the sentence of the Rennes court-martial constitutes in itself the grossest and, viewed in the light of the surrounding circumstances, the most appalling prostitution of justice which the world has witnessed in modern times. Judicial crimes have been committed in the past under the overpowering influence of popular passion, in moments of intense panic and national excitement, in the throes of revolutionary movements, when the whole machinery of justice has fallen temporarily into the hands of a bloodthirsty mob or of fanatical sectaries; but never before, in a great country which claims to march at the head of civilization, which possesses all the outward guaranties of social order, of constitutional liberties, and of regular government, which in a period of profound international peace can rely upon the consciousness of its own strength not less than upon powerful alliances for the undisturbed enjoyment of its legitimate position among the foremost powers of the world, has a properly constituted tribunal, invested with all the power and majesty of the law, so flagrantly, so deliberately, so mercilessly trampled justice, honor, and truth under foot."

Zola, in an article in *L'Aurore*, draws a contemptuous picture of the court-martial and its proceedings, and adds (we quote from a translation in the London *Times*):

"When the complete report of the Rennes trial has been published there will exist no more execrable monument of human infamy. This exceeds everything. Never will a more rascally document have been furnished to history. Ignorance, folly, madness, cruelty, lies, crime are strewn there broadcast with such effrontery that future generations will shudder with shame. It contains confessions of our baseness which will make humanity blush. That such a trial could have taken place, that a nation should offer the civilized world such symptoms of its moral and intellectual state, it must be that it is passing through a horrible crisis. Is then death near at hand? What bath of kindness, purity, and equity will save us from the poisoned mud in which we are struggling?"

It is certainly not without interest to note that so reliable a publication as the *Journal des Débats*, Paris, which has maintained a fairly independent attitude during the trial, describes the audience to have been thoroughly satisfied of the fairness of the court, while the foreign journalists who reported the case claim that the court was very unfair to Dreyfus. The *Matin* and other French papers complain that the foreigners did not appreciate the courtesy extended to them, and that they endeavored to turn the Dreyfus affair into an excuse for boycotting the next Paris exhibition. According to reliable reports, this boycott will come to nothing; but there is no reason to doubt that French prestige has suffered very materially in countries which were ac-

customed to regard France as their leader. Cesare Lombroso, the well-known Italian criminologist, writes in the main as follows, in the *Gazzeta del Popolo*, Turin:

The French people do not bate injustice as much as most peoples. Papers which are not influenced by the church or by the jingoes are not read by the masses. The Socialists do not exercise the same influence as in Germany, and can not impress the people. The people do not object to injustice when it hurts a victim like Dreyfus. This sentence at Rennes will lead France back to its militarist, monarchical, and Jesuitical instincts. True, France has as progressive and liberal a ministry as a people could have to-day. But the moral strength of that ministry is regarded as weakness by the French people. Because that ministry is too high-minded to shed blood in the Guérin comedy, it will fail. The people want a brutal show of power.

I can not tell what triumphant militarism will do. It may conquer a few additional square miles in China or Africa. It may pick a quarrel with England. It may establish a prohibitive tariff for the protection of French agriculture and industry, and deliver the schools into the hands of the priesthood. One thing only is certain: all who yet believe in the intellectual hegemony of France must lose their faith. Among the Latins France used to be admired. We magnified her merits and minimized her faults. The sentence of Dreyfus changes this. France may send her soldiers to march around in whatever part of the world she chooses, but French influence will in future go no further than French bayonets.—*Translations made for THE LITERARY DIGEST.*

LESSONS DRAWN FROM BRITAIN'S COLONIAL EMPIRE.

THE *Deutsche Revue*, Stuttgart, publishes an interesting paper on modern colonial expansion, in which the writer, Lord Farrer, warns the great colonizing nations against mistakes which are likely to cost them much blood and treasure. We summarize this somewhat lengthy article as follows:

Germany wishes to rival England as a colonial power, France sends small bands of soldiers to hoist her flag in all the deserts and swamps of Central Africa, Russia is about to annex northern Asia, the United States has burst the bands of the Monroe doctrine and prepares to play the rôle of a conquering nation in both the Old World and the New. John Bull, who has annexed more and better places than any one else, seems to think that he is robbed of everything the others manage to get. England's colonial empire has often been the cause of jealousy abroad, and still oftener of rude boasting at home; it is, therefore, a difficult thing for an Englishman to criticize, even if he is eighty years old and full of patriotism. Yet I would point to some of the lessons learned by England through bitter experience.

First, then, it is dangerous practise to treat the colony as if it existed solely for the benefit of the mother country. In the seventeenth century Ireland was to all intents and purposes an English colony. The country is chiefly agricultural, and England was the nearest and most natural market. But the jealousy of the English farmer successfully prevented the importation of Irish produce. Ireland was on the commercial road to America, but the British shipping laws excluded Ireland from the American trade. During the seventeenth century, a promising industry arose in Ireland—the manufacture of woollens. The jealousy of the British producer was aroused, and Ireland was prohibited from selling her woollens, either in England or anywhere else. History knows of no legislation more cruel and foolish. Even the prohibition of the Catholic religion was not so far-reaching in its results. Misery and strife were the necessary consequences. England has done better in India. She has agreed to the payment of import duties on Lancashire cottons, altho the cotton manufacturers objected, and she is about to give India the gold standard. England has learned that tariff legislation, intended to benefit the mother country alone, is fraught with danger.

Another lesson which England has learned is that it is impossible to enforce in the colonies laws and customs at variance with the habits of the population. Only by the exercise of the greatest toleration can a European race hope to rule Asiatics without

serious conflicts. Customs which shock our sense of humanity, such as slavery, the burning of widows, and human sacrifice, must be attacked and removed with the utmost caution. Nothing illustrates this better than England's struggle with her North American colonies. The colonists had much reason to complain of England's tariff policy, yet the ostensible reason for the rebellion was the stamp tax, altho there was nothing unjust in the principle that the colonies, whom England had defended against France at great expense, should pay something toward the maintenance of the army.

A third lesson to be learned from England's experience is that trade does not follow the flag. It is the fallacy that colonies become good customers which leads Englishmen to agitate for the annexation of new territory.

The writer here adds tables showing that the colonial trade has for fifty years ranged between 25 and 30 per cent. only of the entire trade of Great Britain, and that it has comparatively declined, if the increase of the colonial empire is taken into consideration. He then comes to his fourth argument against excessive colonial enthusiasm:

"There is nowadays little or no room for such colonies as Holland, France, and England once founded, colonies in climates where Europeans may plant their own stock. What is to be had is in the tropical zone of Africa, where Europeans can not settle for good, and what Lord Salisbury calls 'abandoned territory,' i.e., pieces of breaking empires. India was such territory when Great Britain possessed herself of it. Something of the same sort are the colonial empire of Spain, most of the Turkish provinces, and perhaps the great Chinese empire. But the possession of such territory is no sinecure. All civilized peoples wish such territory to be well administered, for the sake of their own trade; but the nation which attempts to exploit such colonies for its own trade alone must sooner or later expect to be attacked.

"The conclusions which we may draw from the foregoing may therefore be briefly summarized as follows: If a colony is to be of service to the mother country, the interest of the colony itself must be consulted, especially in matters of trade. The mother country must not interfere with the customs of the inhabitants of the colonies, and may not tax them directly. Moreover, the mother country must not be disappointed if trade does not really follow the flag. Still, there is an advantage to the civilized world in general in the fact that abandoned territory is held by one of the great powers. As all are eager to extend their influence in this direction, there is danger of a general conflict. If Russia, Germany, France, England, and the United States would agree that the 'policy of the open door' is to be followed in whatever territory they annex, that is to say, that they will not discriminate against the goods of other nations, much danger of war would be removed, as there would be much less jealousy in the struggle for the possession of territory."—*Translation made for THE LITERARY DIGEST.*

PANSLAVISM AND THE PEACE CONFERENCE.

THE Czar's proposals for the curtailment of national armaments were, as our readers are aware, received with extreme skepticism. Even Mr. Stead and other Western supporters of the Czar explained Russia's move on ethical rather than practical grounds. A very different view is taken by a writer in the *Nation* (Berlin), a Bulgarian named Boris Minzès. He believes that the jingoism which until a quarter of a century ago possessed all Russia has given way to a sense of inferiority. We condense his article as follows:

The Slavophiles, vulgarly called Pan Slavists, are the supporters of two distinct ideas: the union of all Slavic races, and the preservation of absolutism in Russia. But the Balkan Slavs have done much to bring the Russian Pan Slavists to their senses, politically speaking. The position of the Czar, as Anatole Leroy Beaulieu points out, is, from the Slavophile point of view, that of the Jewish theocracy in the days of David and Solomon; and the aim of the Slavophiles is to keep this Cesaropapism alive. But the military and political successes of the Russian expansionists

have not been such as to warrant the belief in the divine mission of the Emperor-Pope. There is the Crimean War, the Berlin congress, the failure of Russia's policy in the Balkan peninsula! Russia has, with tremendous exertions, created an immense army. Whether that army is equal to the task for which the Pan Slavists intend it, remains to be seen. For the rest, Russia is suffering from the infirmities of old age and of childhood at one and the same time. The rural population are subjected to chronic famine. Despite the protective tariff, the industries can be kept going only with government assistance. Russia's position as a great power forces her to adopt progressive measures, such as the building of railroads and the introduction of the gold standard. The preservation of Cesarism, on the other hand, forces Russia to abstain from the most important means to national progress—education and liberty. The Pan Slavists see all this. The time is past when Russia was regarded by them as a match for all Europe. Comparison shows them how poor a country Russia is in more senses than one. This has rendered even the most warlike elements peaceable. The only thing they can not see is that absolutism is the real source of all this weakness.

The peace proposals of the Czar were, therefore, taken in earnest by the Russians. The archaic system of Cesaropapism is in danger of destruction if Russia is unlucky in war. Russia must have peace to preserve her absolutism, and she is willing to preserve that peace even at the risk of revealing to the outside world her own sense of helplessness.—*Translation made for THE LITERARY DIGEST.*

FOREIGN VIEWS OF THE FILIPINO WAR.

DESPITE our increased armaments, the press of other countries begin to express doubts that we shall be able to impose our will upon the Filipinos, and our efforts this winter will be closely watched.

According to all reports published in Europe the Filipinos are more willing than ever to fight for their freedom. The correspondent of the *Kölnische Zeitung* declares that the American troops are never safe from attack, altho the Filipino forces are not yet in such a condition that it would be wise for them to risk a pitched battle. In Cebu and Negros the independence party has the upper band, altho, according to the same paper, the Americans, to pacify the latter island, summarily shot forty-three natives supposed to sympathize with the independence movement. Another correspondent writes that no decent Filipino will accept office under the Americans. Everywhere throughout the group there are state assemblies which side with Aguinaldo, and regents appointed by the Americans must be protected with American bayonets. One British colonial paper of undoubted loyalty to the English-speaking nations, *The Friend of India*, Calcutta, expresses the opinion that the world does not benefit by being subjected to the rule of these nations. It says:

"Englishmen and Americans are probably, in the main, neither better nor worse than Frenchmen or Germans, but they have a greater desire to appear better, and therefore they defend their conduct with arguments which in the eyes of foreigners seem pure hypocrisy. . . . As Englishmen who know what empire means, we earnestly hope that the American people will abandon the attempt to reduce the Filipinos to direct submission to American rule. It is a short-sighted view which fosters the belief that all the world would be better for the adoption of the particular form of civilization which commends itself to the Anglo-Saxon race. In many obvious respects that civilization is most unlovely."

The same writer describes the life of the masses here and in Great Britain, and adds:

"To reduce the whole of the world to their domination would be to strike a blow at real progress from which humanity would never recover. It is in the variety of types that the possibility of progress lies, and those of us who realize that, in spite of protests and in spite of opposition, the Anglo-Saxon race will continue to enlarge its dominion, are only anxious that this dominion, which the pride of race compels, shall be reduced, wherever possible, to the merest shadow of sovereignty. The true burden

of the Anglo-Saxon race is to keep the peace of the world. And that burden is one that can be lightly borne, if only we determine to reject all idea of imposing upon other peoples our customs, our creeds, our ideals."

The presence of a considerable number of people in the United States who oppose the attempt to subjugate the Philippines is duly noticed abroad. An article in the New York *Nation* has been translated into several languages, and the following sentence, with which the article closes, has been much quoted: "Even if the last town of the Filipinos has been given to the flames and the last native been shot in his mountain fastness or swamp, it is *we*, not the Filipinos, who will be the losers." The Berlin *Tageblatt* thinks the assertion that only one tribe, the Tagals, opposes the Americans "very complimentary to the Tagals." The general tone of the papers commenting upon the matter is to the effect that the American people should at least come out openly with the assertion that their aim is conquest pure and simple. *The Week*, Toronto, says:

"What is especially irritating in President McKinley in his oiliness. . . . He has given a good many of the Filipinos peace, at all events, if not charity, the peace of the grave; and he is preparing to give it to as many more of them as decline to participate in well-being under the Stars and Stripes; in other words, to become the serfs of his Government, preferring freedom and the possession of the land which is their own. . . . There is even relief in turning from the sanctimony of the President to the frankness of *The Globe-Democrat*, which hopes that 'the bloody little wretch and despot, Aguinaldo, the insolent assailant of the American flag, will be driven into the sea, or given the sovereignty of six feet of soil in Luzon.' . . . *The Globe-Democrat* always denounces Aguinaldo as a rebel. Washington was really a rebel. He was in arms against a government the legitimacy of which he had never denied, and could not possibly deny. . . . Suppose that at the end of the Revolutionary War France had bought the colonies of Great Britain, and, on their declining to be handed over, had proceeded to shoot down as rebels those with whom she had been acting as allies. That case would not have differed from the present, saving in the relative strength of the parties concerned, which, except in the eyes of buccaneers, does not affect justice."

Dr. Barth, the editor of the Berlin *Nation*, believes that ignorance is largely responsible for jingoism. He says:

"Narrow views with regard to nationality, caused by the ignorance of the people and fostered by the sensational press, is at the bottom of it all. . . . Our political life would be much improved were it not that the sorriest phrase-maker can always obtain influence by appealing to national prejudice. That morality should cause us to be just to other nationalities is hardly admitted in theory. In practise, the barbarous rule is followed that injustice to another people is a virtue."

In answering the question, Who was responsible for the beginning of hostilities between the American and Filipino troops at Manila? foreign writers are nearly as unanimous against the United States as they are in condemning France for the Dreyfus case. Every correspondent, every traveler, who has endeavored to probe the matter is convinced that the Americans wantonly provoked a fight. At any rate, they declare, the Americans were ready and waiting for it, their officers and men were at their post within a few minutes, while the Filipinos were taken by surprise and many of their officers and men were taken prisoners on that account. From a long letter by Jean Hess, the correspondent of the Paris *Figaro*, we condense as follows:

These Filipinos are not the brutes or savages which they are made out to be by the Americans, and their courage knows no bounds. They know that, for their independence, blood must be spilled, and they are ready to sacrifice theirs. They reckon on the time when, after their present resistance has been overcome, the Tagal mothers will raise a new generation of fighters. Only by destroying the race can the idea of independence be eradicated. Some Americans tell me that it is really their intention to wipe out the Filipinos altogether. Can they do it? There are some ten millions of them.

The *Vossische Zeitung*, Berlin, is informed that in Manila "taxes are higher, security of life and property less, business worse than under Spanish rule." Its correspondent describes the situation, in the main, as follows:

The Americans have tried to form an Americanist party, but their endeavors are not crowned with much success. They get a few rich men who have always sided with the foreign masters, even during Spanish times. To these must be added their retainers, and the Spanish clergy, who hope to recover their estates under American rule. The only place friendly to the Americans is the little town Makabebe, whose inhabitants sided with the Spaniards, and which was burned on this account by Aguinaldo's forces. The saloon-keepers in Manila are also for the Americans, who, if they have not imported any other evidence of their civilization, are hard at it making drunkenness popular among the natives. The great bulk of the Filipinos want their independence, and the fact that General Otis is allied with the Archbishop of Manila, whose oppression was one of the main causes of the rebellion against Spain, is not likely to make the Americans more popular.—*Translations made for THE LITERARY DIGEST.*

POLITICS AND BUSINESS.

FOREIGN papers lately have had many favorable comments on our consular service. While it is noticed that the frequent changes which our political system causes in all branches of the administration prevent an able consul from making full use of the information he has obtained during his short term, the inherent business ability of the American seems to neutralize this evil to a great extent. In the *Revue Diplomatique*, Paris, the theory is advanced that the employment of former journalists as consuls and consular agents has much to do with the success of this branch of our public service. The paper says, in effect:

Journalists are accustomed to gather information, and know how to present it in an agreeable manner, easily understood by all. The connection of such consuls with the press enables them to secure the publication of the information received, which is another matter of importance. The manufacturer and merchant are enabled to enter into early competition in new markets.

But no consular service, however ably conducted, could procure the sale of inferior goods or neutralize a want of energy on the part of our industrials. That no such want exists with us is acknowledged nowhere more openly than in Germany. The *Hamburger Nachrichten*, says:

"The conservatism of England, and her inability to appreciate the necessity of suiting the taste of the customer must eventually cause her to be vanquished by America's bold, inventive genius, and by the willingness of the Americans to sacrifice an old plant, at whatever cost, to substitute new machinery. Moreover, the Americans know the value of time, they appreciate their consular reports and study them, and thus keep themselves informed of the needs of foreign customers. America now follows Blaine's advice to export manufactured goods rather than raw material. This must later have much political influence. England's friendship for the United States will be changed to hatred as soon as the competition of the American becomes more serious. Meanwhile it is the business of the Germans to prepare for that competition and to meet it."

Most German papers believe that the interests of their country will be badly served if politics is allowed to interfere with business. The *Kölnische Zeitung*, Cologne, writes in the main as follows:

It was not so long ago that political instigation seriously estranged the people of the United States and Germany. If this feeling had been allowed to influence business circles, it would have been much more lasting. Hence it would not be wise to abstain from visiting the Philadelphia trade congress. Whether our representatives can convince the Americans that it is to the interest of the United States to be just and fair to Germany in matters of tariff and trade, we do not know. Self-interest alone counts in business matters. But altho our economical relations with the United States are far from satisfactory, they are not yet so bad that we can not calmly discuss the situation with the Americans.

The *National Zeitung*, Berlin, says there is no objection to sending samples of goods to Philadelphia. Germany, thinks the same paper, need not fear healthy competition; but the Germans can not meet it unless they know what the competitor is doing, and they can not discover this unless they permit their own progress to be investigated. Patriotic sentiment must not be allowed to blind them against the progress of others.—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

William F. Grinnell, consul at Manchester, gives below a table of the exports of cotton yarn, cotton velvets, cords, and fustians from Manchester to the United States for the first half of the years 1898 and 1899, shipments recorded monthly, which will be of interest to a large class of our manufacturers and merchants.

Month.	Cotton Yarn.		Cotton Velvets, Cords, and Fustians.	
	1898.	1899.	1898.	1899.
	Pounds.	Pounds.	Yards.	Yards.
January.....	123,702	152,225	512,617½	834,796½
February.....	172,721½	160,899½	550,289½	575,910½
March.....	230,461½	202,893	574,088½	1,053,861½
April.....	183,536½	129,914½	739,576½	1,107,923
May.....	154,089	186,893½	551,508	1,570,520½
June.....	81,675½	206,477	491,419	1,535,170½
Total.....	946,186	1,039,304½	13,419,499	16,678,181½

The egg trade in Germany and Russia has grown astonishingly within the past few years. The following tables will show the extent of this growth:

GERMAN IMPORT FROM ADJOINING COUNTRIES.

Year.	Quantity. Tons*	Value.
1880.....	15,493	\$3,498,600
1889.....	48,516	9,805,600
1898.....	105,836	16,993,200

* Space measure, 40 cubic feet.

Nine tenths of this import came from Russia and Austria, smaller quantities coming from Italy, the Netherlands, and Rumania. Russia's increased export in eggs, however, is something enormous.

RUSSIAN EXPORT TO FOREIGN COUNTRIES.

Year.	Quantity. Tons.	Value.
1881.....	4,580	\$257,000
1894.....	62,596	9,452,000
First 11 months of 1898.....	118,608	17,720,000

The raising of poultry for the production of eggs has become an important factor in Russian husbandry. Not only is this the case in districts which border on the frontier, but in the interior

of the country as well. In 1894 freight on the Russian railroads was reduced. This gave the infant industry a new impulse. The completion of the Kaiser Wilhelm Canal enables the dealers to ship eggs direct to Hamburg without change of bottom. From this port transshipments are immediately made for England, Belgium, and the Netherlands.

Consul-General Holloway, of St. Petersburg, writes:

"In consequence of complaints concerning the preparation of flax for the market, the Emperor has approved new rules prepared by a special commission, which will be in force from and after September 1, 1899, viz.:

"The flax must not contain any garbage or other admixture, or be wet, in order to increase its weight. Each bundle of flax must not weigh more than 20 pounds and consist of fiber of one and the same quality. The bundles must be prepared according to the length of the fiber, without the heads, and tied at one third of their length with twisted flax in such a manner as to permit the fiber to hang loose on both ends, in order that the same may be examined without untying the bundles.

"The penalties for violating these regulations are: For selling, preparing, or keeping for sale flax containing garbage or other admixtures, or wetted to increase its weight, imprisonment for not more than a month, or a fine not exceeding \$50. For violating the other rules the sellers will pay a fine not exceeding \$50."

In compliance with a Department instruction Consul Brodowski, under date of July 7, 1899, transmits the following explanation regarding the continued use of the pound as a weight measure in Germany and the relative values of the German and American pound:

"The metric system of weights and measures was introduced into Germany shortly after the Franco-German war, but the Germans in general in their every-day dealings continue the use of the pound almost exclusively, especially, older people, who in their younger days were accustomed to this expression. All my bills here for meat, groceries, etc., are made out in pounds; and a scale of the newest construction, which I purchased to verify the weights of goods delivered, indicates both kilograms and pounds. One kilogram is exactly two former German pounds, and such German pounds therefore equals 1.1023 American pounds. If a German firm, especially a smaller one, which can not afford to employ an English-speaking clerk, writes its letter to the United States in German and orders its goods in pounds, meaning German pounds, and the American firm makes its estimate in American pounds, the result will be trouble and misunderstanding. It is well, therefore, for our people in their correspondence with German firms to make a note of the difference between the German and American pound."

The Department has received from Mr. Mertens, in charge of the consular agency at Valencia, a report to the effect that the wheat crop throughout Spain has been very poor this year. During the month of May, 8,000 tons were imported from Russia, 5,000 tons from the United States, 4,000 tons from France, and 18,000 tons from other countries—i.e., British India, South America, and Australia (a trial shipment of 1,000 tons from the last-named country). During the first five months of the year 1900 tons have been imported. Mr. Mertens continues:

"The sugar question is still unsolved. The demand is great, and the home factories can not supply the market, in spite of the strongly protective tariff. The following figures show the import for the first five months of 1899, as compared with the same period of last year:

From—	1899.	1898.
	Tons.	Tons.
Cuba.....	6,000	300
Puerto Rico.....	71	4,000
Philippines.....	2	243
Canary Islands.....	500	96
Other countries.....	9	5

"In all about 6,600 tons were imported during the period of 1899 under consideration, against some 4,600 tons last year. Foreign refined sugar, notwithstanding the high duty, can almost compete with the Spanish home product."

This cake of soap sent free for a 2-cent stamp

We have prepared 50,000 good-sized sample cakes for readers of THE LITERARY DIGEST—all we ask of them is a stamp to pay the postage. We can only afford to make this offer because we know that if you value health and cleanliness you also consider how you get it. Read our statement below—no one else dares to expose the source of soap supplies.

HYOMEI Antiseptic Skin Soap

is a revelation to soap-users, and is made from the FRESH GREEN LEAVES OF THE TASMANIAN BLUE GUM TREE.

Perhaps you have not given it a thought, but there has never been but one way of making soap: the base of all, from the commonest washing to the finest toilet, has always been the same—fats, grease, or oil combined with an alkali. To be sure, different grades of these materials are used, delicate perfumes and medicament of some kind often added, but nine-tenths of every cake of soap made is composed of the above ingredients. In fact, it has always been thought that soap could not be made in any other way, and for this reason no physicians have ever recommended the use of any soap for the skin. As a general thing, they are made from cheap fats and grease collected by street scavengers, and thrown out from houses in which all kinds of disease are prevalent; however, of late most of the oils used come from incinerating plants now erected near all large cities where is burned the refuse collected from private houses, hotels, and restaurants. Thousands of gallons are produced in this way every year, and being too cheap for other uses is purchased almost exclusively by soap-makers. It is claimed that the heat used destroys all the germs of disease; but the medical profession asserts the contrary, and state that the use of cheap soap accounts for most of the blotched and pinpiled faces we see daily. One thing, at least, has been proven conclusively—that the dry and scaly skin with which so many persons are troubled is due to the use of alkali in soap. However true this may be, the thought of using such products daily is not a pleasant one, and the discovery of a method by which soap can be made without the dangerous ingredients will be hailed with delight by all.

Hyomei Antiseptic Skin Soap

It is the most perfect Toilet and Medicinal Soap ever known, and the first one to be manufactured by the new process. Made from the fresh green leaves of the Tasmanian Blue Gum Tree, and containing all its fragrant, well-known healing and antiseptic qualities, this soap will be a revelation to users. As a skin food it has no equal. It acts not only as a cleanser and preventive of disease, but cures all cutaneous affections in a short time. It gives a rich, creamy lather, an invigorating and refreshing odor, and leaves the skin soft, white and velvety.

HYOMEI ANTISEPTIC SKIN SOAP is sold by all druggists. Price, 25c. If your druggist does not keep it, we will send by mail on receipt of price. Don't forget our offer—send 2c. stamp for postage and we will mail FREE a sample cake.

R. T. Booth Co., Ave. 1, Ithaca, New York

Tailor-Made Suits

\$5.00

OUR new Fall and Winter Catalogue of tailor-made costumes and cloaks is now ready. We illustrate in it all of the newest Paris styles, and will mail it free, together with samples of materials to select from, to the lady who wishes to dress well at moderate cost. We keep no ready-made garments, but make everything to order, thus giving that touch of individuality and exclusiveness so much to be desired.

Our new Fall and Winter Catalogue illustrates a splendid assortment of suits and cloaks, made according to fashion's latest dictates.

Charming Costumes and Tailor-Made Suits, Faultless in Cut and Finish. \$5 up.

Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up. Jaunty Capes, \$4 up. New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, Etc.

We also make finer garments and send samples of all grades. We pay express charges everywhere. Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. Be sure to say whether you wish samples for cloaks or for suits, and we will then be able to send you a full line of exactly what you desire. Write to-day for Catalogue and Samples; we will send them to you, free, by return mail.

PERSONALS.

MAITRE LABORI, who almost lost his life at the hands of an assassin at Rennes, was until recently editor of the professional newspaper *La Gazette du Palais*. He is compiling and editing a comprehensive treatise on French jurisprudence entitled "The Encyclopedia of French Law," of which nine solid quarto volumes have already appeared. He made his reputation as a remarkably clever criminal lawyer in the case of the anarchist Duval, and in the defense of the Niort brothers, accused of parricide. Among the best-known cases with which he has been connected may be cited that of M. Prieu against the minister of foreign affairs; the eccentric case of the comic actor, Chirac; several lawsuits against *Gil Blas*; and the Vaillant anarchist trial in 1894. His pleadings in the Zola trial have since greatly enhanced his professional reputation, not only for forensic eloquence, but for adroit and skilful handling of his case.

REV. DR. LYMAN ABBOTT spends much of his spare time, when in New York, in one of the deep alcoves in the old Astor Library, where the table in front of him is littered with books and strewn with papers. The attendants all know him, and his wants are never neglected. When the Doctor is at work he hurries himself in his books, his gray hairs almost hidden by the volume, and as long as he reads he is dead to the rest of the world. Not long ago another industrious book-worm visited the library and called for a certain book.

WOULD you rather buy lamp-chimneys, one a week the year round, or one that lasts till some accident breaks it?

Tough glass, Macbeth's "pearl top" or "pearl glass," almost never break from heat, not one in a hundred.

Where can you get it? and what does it cost?

Your dealer knows where and how much. It costs more than common glass; and may be, he thinks tough glass isn't good for his business.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

SINGER SEWING-MACHINES ARE MADE AND SOLD ONLY BY

THE SINGER MANUFACTURING CO.

OFFICES IN EVERY CITY IN THE WORLD.

A recent canvass of the United States found 216,000 family sewing-machines of all kinds that had been in use from 15 to 48 years; more than one-half of them were Singers, and 2,000 of these Singers had done good service during 40 years and more.

**A SINGER WILL
OUTWEAR ANY OTHER KIND.**

"I think Doctor Abbott has it," replied the clerk. It was so, and the student was forced to take up another line of investigation, very much against his will.

Soon afterward still another man came in and went over to the alcove in which the Doctor and his rival sat, says the Philadelphia Post. He called for no book, but was merely looking around aimlessly. "Looking for a book?" asked the rival. "Oh, nothing in particular." "Well," he added, slowly and sternly, "if you are looking for any book, that man over there (pointing to the Doctor) has it, and he will keep it, sir, for a whole year."

ADMIRAL DEWEY is perhaps the best small-swordsman among the senior officers of the navy, indeed, the best in the service, excepting possibly Lieutenant Commander Lucien Young, whose skill is a matter of note all through the service.

MADAME ANTOINETTE STERLING, the contralto singer and evangelist, says the Pittsburgh Dispatch, had an experience in the Bombay Presidency, India, which is as quaint as any of Kipling's tales of the hills. She was campaigning with Pundita Ramabai, and through her magnificent voice was drawing thousands of natives to her meetings. They had never seen that kind of a missionary before, and had never heard a voice like hers. They were so pleased with her work that they said to themselves:

"This is a foreign woman guru, and for fear of giving offense to us she has omitted to put her begging-bowl outside of her door for us to put in the customary contributions."

In India every guru or holy person carries a brass, wood, or clay begging-bowl, into which the devout put some small sum of money. Madame Sterling walked out upon the veranda of her hungalow one morning, and there, to her amazement, found two begging-bowls. One, a little one with two annas in it intended for the Pundita, and one, an enormous affair, containing a handsome sum of annas and rupees for herself.

The only explanation she could ever extract from the servant was this: "Little howl—little money for the little Pundita with little voice. Big bowl—big money for big Missahih with big voice."

Madame Sterling was one of the principal speakers among the American women at the international council recently held in London.

GENERAL P. J. JOUBERT is the most celebrated fighter in South Africa. He is vice-president and the commander-in-chief of the Boer army, and is looked on as the country's savior in the event of war with England. The general is sixty-eight years old now and scarred by many a wound from English bullet and native assegai, yet he is sturdy of frame and keen of eye. He led the Boers at Majuba Hill, where two hundred and eighty English gave up their lives, General Joubert losing but five men. He beat the English at Laing's Neck, commanded the forces at Bronkhorst and Spruit, and finally caught Jameson like a rat in a trap through quick mobilization of troops.

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerous inflammable substances and is not affected by heat, cold or climate. Made in standard colors, plain or figured.

Enough to cover a dining chair, seat or foot-stool sent for 25 cents in stamps.

Sample Free! 15x6 inches, enough to make a Sewing Companion sent for act. stamp with your upholsterer's name.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

MORE OR LESS PUNGENT.

They Liked Him.—JAGGLES: "I see there's a new keeper in the menagerie. Didn't the animals like the old one?"

WAGGLES: "I guess so. They ate him up."—*Judge*.

The Hippopotamus.—"Describe the hippopotamus," said the teacher. "The hippopotamus," answered the little girl, "is a very heantiful animal, but is not useful. It is raised only in circonses."—*The Tribune, Chicago*.

A War of Words.—"Dunphy is pretty well battered up." "Yes. He and McCracken had a passage of words." "Only words?" "That's all. McCracken threw a dictionary at him."—*The North American, Philadelphia*.

A Dose of Poison.—LULU: "The wretch! He said if I refused him he would take a dose of poison then and there. I refused him."

MABEL: "Ah! And what did he do?"

LULU: "Lit a cigarette."—*Judge*.

His Time Occupied.—HOUSEKEEPER: "I should think a big, strong man like you would be at work somewhere."

HOBBO: "It's dis way, lady: I'm kep' so husy lookin' fer work dat I can't take a job anywheres."—*The Record, Philadelphia*.

He Killed Him.—MAUD: "Major, is it true that once during the war one of the enemy died to save your life?"

MAJOR BLUNTLY: "Yes."

MAUD: "How noble! How did it happen?"

MAJOR BLUNTLY: "I killed him."—*Tit-Bits*.

Feasts of the Jews.—"Now, boys," said the Sunday-school teacher, "can any of you name the three great feasts of the Jews?" "Yes'm, I can," replied one little fellow. "Very, well, Johnny; what are they?" "Breakfaat, dinner, and sup-

per," was the unconsciously logical reply.—*The News, Buffalo*.

Woman's Health.—MR. BILKINS (looking up from the paper): "The eminent physician, Dr. Greathead, says there is no exercise so conducive to health in woman as ordinary housework."

MRS. BILKINS: "Huh! I'll bet he's married."—*New York Weekly*.

She Wasn't There.—YOUNG BRIDE: "I didn't accept Tom the first time he proposed."

MISS RYVAL (slightly envious): "I know you didn't."

YOUNG BRIDE: "How do you know?"

MISS RYVAL: "You weren't there."—*The Boston Traveler*.

The Baby Swallowed It.—"Briggs seems quite lively this morning." "Yes." "He usually comes down to the office exhausted and peevish. What's the cause of this change?" "This is the first morning he hasn't had to hunt for his collar button." "How did that happen?" "The baby swallowed it."—*Exchange*.

Whisky as Medicine.—MRS. NABOR: "And so the doctor ordered you to give your husband whisky for his rheumatism. Does it seem to do him any good?"

MRS. NEXDOOR: "John says it does him lots of good, but I notice the pains come upon him more frequently than ever."—*Ohio State Journal*.

The Reason Why.—HOUSEKEEPER: "What's the reason that all the men who come around begging now are such big, strong-looking fellows?"

POLITE PILGRIM: "De reason, lady, is dat it's on'y strong-looking fellows w'at kin beg now."

If You Feel Depressed

Use Horsford's Acid Phosphate.

Dr. W. E. PITMAN, Lynchburg, Va., says: "I have used it in nervous depression and dyspeptic troubles, with good result."

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent post-paid for \$1.25 including the best work ever published on the great value of lung gymnastics, by Dr. Fatchen. Send 2-cent stamp for testimonials to C. HYGIENIC SUPPLY CO., BOSTON, MASS.

adays widout gettin' hurt."—*The Record, Philadelphia.*

The Big 'Uns.—**CURATE:** "Cruel Boy! Are you trying to catch those poor little minnows?"
BOY: "No, sir; the big 'uns!"—*Judy.*

Green Apple.—"Do you make much out of your apples?" asked the visitor. "Oh, pretty considerable," answered the farmer, "but I've got a son up in the town who makes more out of the apples in a month than I make the whole season." "A farmer, is he?" "No; he's a doctor. I'm talking about green apples now."—*The Statesman, Yonkers.*

Gathering Material.—**FIRST PROFESSOR:** "Isn't it strange about that old Dr. Hardbee? He has taken to going to all the dances and afternoon teas in town. Do you suppose his mind can be affected?"

SECOND PROFESSOR: "Oh, no; he is gathering material for his new work, 'Do Women Really Reason?'"—*Bazar.*

A Consistent Misanthrope.—"Can you tell why it is so much colder in winter than it is in summer?" inquired Mr. Blykins's little boy, who is studying astronomy. "Of course I can," answered Mr. Blykins, irritably. "There's no use of expecting things to be otherwise. The coal trust has got to have some excuse for raising prices, hasn't it?"—*The Post, Washington.*

The Five Black Children.—At a recent church dedication the invited preacher followed his sermon by taking subscriptions for the balance needed to pay for the building. As the subscriptions proceeded one of the collectors announced, "The five Black children, \$1!" This the courteous money-raiser amended by saying, "Five little colored people, \$1!" Amid an outburst of laughter the pastor hastily explained that the donors were white children by the name of Black.—*Epworth Herald.*

IN your experience with White Lead have you ever been troubled with cracked, pulled or alligatored surfaces, or have you ever heard of such trouble in the use of White Lead?

Never; and these conditions were never known until the introduction of zinc white, "combination lead," and ready-mixed paints, the two last composed largely of zinc, barytes, whiting, etc., very little lead, if any.

—Mr. E. P. Edwards, in "Painters' Magazine."
Mr. Edwards is the senior member of the firm of Messrs. Edwards & King, Painters and Decorators, Elizabeth, N. J.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles, or combinations of colors forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

Current Events.

Monday, September 18.

—The French Senate sitting as a High Court of Justice meets and listens to the indictment of M. Déroutelle and others for conspiracy.

—The Chinese Government files at the State Department a vigorous protest against General Otis's order excluding Chinese from the Philippines, declaring his action to be a violation of international laws and treaty obligations.

—Governor Lowndes and others of Bear-Admiral Schley's friends call on the President and protest against that officer's assignment to the South Atlantic station on the ground that the command is not important enough for him.

—The executive committee of the Democratic national committee decides to meet every two months at headquarters in Chicago to arrange for the coming campaign.

Tuesday, September 19.

—The French Cabinet issues a pardon to Captain Dreyfus. The news is calmly received in France.

—M. Scheurer-Kestner, formerly vice-president of the French Senate and a zealous supporter of Dreyfus, dies.

—Three hundred delegates are present at the convention of the League of American Municipalities in Syracuse.

—The triumph of John C. Sheehan's followers at the Tammany primaries in New York is thought to mark the beginning of Croker's downfall.

—William Rockefeller is elected a director of the New York Central Railroad to succeed the late Cornelius Vanderbilt.

Wednesday, September 20.

—Active preparations for war with the Transvaal are made in England, altho a peaceful settlement of the dispute is hoped for.

ONE CENT A WEEK

For Ten Weeks' Subscription

PUBLIC OPINION is now a magnificent weekly magazine, comprising in its 52 issues, a grand total of over 1700 pages of reading matter and illustrations. Its field is as wide as the range of human interests. Its readers, independent of other periodicals, are fully abreast of the times, sufficiently well informed to appear in any company, and to discuss with intelligence both sides of every question of the hour, whether political, social, religious, educational, scientific, literary or artistic.

In a recent letter one subscriber says: "In its present form it is worth at least \$100.00 per year to any progressive, intelligent reader who wants to keep posted."

Those who are leaders in Public Affairs—political, educational, religious, social, and financial—are and have been for years readers of **PUBLIC OPINION**.

This special introductory offer gives you ten numbers (regular price, \$1.00) for the price of one (ten cents)—the cost of postage. It will not be made again. Send at once your name, address, and 10 cents (coin or stamps) to

\$3000
worth for
\$2.50.

PUBLIC OPINION,
19 Astor Place, N. Y.

3000
Papers
in one

—Captain Dreyfus is released from prison in Rennes and goes to Bordeaux.

—The Spanish Cabinet decides that interest on the Cuban bonds shall be paid not by Spain, but by the Government of Cuba.

—An anti-trust conference opens at St. Louis with a large attendance of governors and attorney-generals.

Thursday, September 21.

—Captain Dreyfus arrives at his brother-in-law's home at Carpentras, where he is expected to remain for several months.

—The Republicans of Nebraska hold their State convention in Omaha. President McKinley's Philippine policy is indorsed, and candidates for supreme judge and regents of the university are nominated.

—The Massachusetts Democratic convention is held in Boston, and after a stormy meeting upholds the Chicago platform.

—Henry V. Johnson, mayor of Denver, is elected president of the League of American Municipalities. The league votes to meet next year at Charleston, S. C.

Friday, September 22.

—A Cabinet meeting is held in London; it is decided to make no further diplomatic representations to the Transvaal until the forces at the Cape have been increased.

—General Otis cables from Manila, in reply to an inquiry, that sixteen churches have been occupied by United States troops, but that the property is respected and protected.

—Insurgents wreck a train near Angeles, Luzon, two Americans being killed and five wounded.

—Senator Foraker speaks at Hamilton, O., in favor of expansion, and gives his views on trusts.

Saturday, September 23.

—The Austrian Cabinet resigns, owing to inability to settle parliamentary difficulties.

The Nebraska Chess Association.

Mr. C. Q. De France, Secretary of the Association, informs us that the Second Annual Correspondence Tournament began on January 21, 1899, with twenty-four entrants, playing in three sections of eight each. Up to July 22, forty-five games have been completed, nine of which were resigned without play. There is, also, in progress a correspondence match between Kansas and Nebraska. The score stands: Kansas, 4½; Nebraska, 2½; unfinished, 9. We give a game in the Nebraska Tournament between Mr. C. Q. De France, of Lincoln, and R. E. Brega, of Callaway. Mr. De France writes: "Up to the 14th move White had the best of the game according to the 'Handbuch,' which authority entirely ignores Black's 11th (K Kt -K 2). Black's play throughout is good." Our criticism is that White is not sufficiently aggressive. When playing the Evans it will not do to temporize and allow Black to develop his pieces. White has weakened his Q's wing, and unless he forces Black to defend, he is bound to get the worst of it. His 9th move was very conservative, while Black's 9th was useless. In a celebrated game, which we will publish soon, between Morphy and Mariani, the moves at this juncture were: 9, P-Q 5, Kt-R 4; 10, P-K 5! Kt x B; 11, Q-R 4 ch, Q-Q 2; 12, Q x Kt. This is playing the Evans.

| 18 B-Kt 3 | P-K Kt 4 | 37 Resigns. | |
| 19 P-K B 3 | P-K R 4 | | |

Black played a very dangerous game, beginning with his 5th move, but he was helped very materially by his opponent. Notice, especially, White's 8th and 16th moves. Mr. Brent displays considerable cuteness in his play. See how he won the P on his 28th.

NINETEENTH GAME OF THE FINALS.

Ruy Lopez.

- | | | | |

The only comment we make is that it is difficult to understand how a player could make such a blunder as Black's 22 in a correspondence game.

Chess-Nuts.

Mr. Atkins, of Northampton, England, the only representative of Great Britain at the recent Chess Congress in Amsterdam, achieved the extraordinary feat of winning every game, or, in Chess nomenclature, making a clean score.

One of the curiosities of the London Tournament is the following: Mason beat Janowski both games, Janowski beat Lee both games, Lee beat Mason both games.

The Literary Digest

VOL. XIX., No. 15

NEW YORK, OCTOBER 7, 1899.

WHOLE NUMBER, 494

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given**.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE WELCOME TO ADMIRAL DEWEY.

NEW YORK'S naval and land pageants in honor of Admiral Dewey are considered by other cities as an expression of the feeling, not of New York City and State alone, but of the whole country; and as fifteen States were represented by troops in the land parade, and all the States were no doubt represented in the six miles of audience, the sentiment can be understood, as expressed by the *Philadelphia Ledger*, that New York City "on this occasion at least" was "a worthy representative of a great nation." *The Ledger* in its editorial columns reviews the chief features of the celebration as follows:

"New York worthily represented the nation in the reception tendered to Admiral Dewey, and the admiral more than met the expectations of his countrymen by his modest demeanor, his strict performance of social duties, and his thoughtful consideration for others. The affair had been well planned, and was carried out as nearly according to program as was possible in the presence of a throng of people reaching into the millions. Even the naval parade was viewed by hundreds of thousands. Scores of the finest private yachts in the world escorted the war-ships to their anchorage or passed in review; hundreds of steamboats, tugs, and barges, loaded down with sightseers, joined in the procession, and the banks of the Hudson made a magnificent amphitheater, which was crowded with spectators, especially in the neighborhood of General Grant's tomb. In the evening a fairy-like scene was presented by the illuminated war-ships, and fireworks blazed in every quarter of Greater New York.

"This, however, was but the prelude to the land demonstration, in which the masses of people could take a more active part. Following the presentation of the loving-cup by the city of New York, a formal affair, came the great military parade. The procession did not differ greatly in character and numbers from that which was given in Philadelphia during the Peace Jubilee, but the distinctive feature of the celebration was the great throng of people gathered to witness it. The entire line of the parade was

lined from curb to roof with enthusiastic people, and the overflow was so great that, while the procession was passing, the parallel side streets were also crowded. Not more than half of the people who had gone to see the parade could get even a glimpse of the marching column. Those who did get a viewpoint witnessed a scene never to be forgotten. The patriotic enthusiasm of the crowd was infectious. Admiral Dewey was, of course, the center of interest, and, while preserving a modest demeanor, did all that was in his power to show his gratitude for the honors conferred upon him. He did not spare himself during the parade, nor on the reviewing stand. Once he stopped the procession for a few minutes in front of thousands of school-children that he might listen to their song, and that they might be gratified by a clear view of his figure. He showed equal consideration for others when he stood on the reviewing stand for four hours acknowledging every salute. He did not leave it until the last man had passed. His conduct throughout will help to endear him to the American people. Always unassuming, he was also most considerate and kindly, thinking more about gratifying his hosts—the people—than of his own comfort or convenience.

"The demonstration can not be compared with any other; in the number of people engaged it stands in a class by itself. That it was well managed by the municipal authorities is proved by the few minor casualties reported.

"A singular feature of the land parade, which could not fail to be noted by every one, was the expression of public sentiment in favor of the fighting element. Next to Admiral Dewey, Admiral Schley received the greatest ovation along the line of the parade. Governor Roosevelt also proved immensely popular. The veterans of the Civil War, altho they came along near the end of the procession, met with a storm of applause. Many of the state military organizations were in fancy-dress suits, and presented a fine spectacular appearance, but they did not arouse such enthusiasm as the Tenth Pennsylvania in their service uniforms, that had been worn in the Philippines.

"The Seventh New York presented perhaps the finest appearance of any regiment, and was greeted with applause, to be followed quickly by hisses as soon as it was recognized that this regiment had failed to enlist for the war with Spain. The scene was really painful, but the crowd wanted fighters, and consoled itself, after the Seventh had passed, with a great reception to the Seventy-first New York. There was no mistaking the attitude of the great throng; it had come to honor Dewey, because he had smashed the Spanish navy, and its mood was to honor only the fighting men, or those who had seen some kind of service in the field.

"For two days New York City gave up business and organized magnificent pageants to represent the nation's welcome to Admiral Dewey, and on this occasion at least it was a worthy representative of a great nation."

The surprise expressed in England at our enthusiasm finds no echo in the American press. The *New York Times* says in reply:

"Was it a small thing to free American commerce, at a single blow, throughout the whole length and breadth of the Pacific Ocean? Was it a small thing to annihilate at a single blow the sea power of Spain, so that after Dewey's victory the only question in any American naval officer's mind was, as used to be said of the British buccaneers of the Spanish main, not how many or how big the Spaniards were, but only where they were. Was not the erasure of Spanish sea power in a three hours' fight as brilliant and impressive a feat of arms as that for which Lord Kitchener earned and deserved the thanks of his countrymen, and received in London a greeting not less general and not less enthusiastic than that which has welcomed Admiral Dewey to New York? If the American fire at Manila, as afterward at Santiago, was so deadly and direct that the enemy was dazed and blinded

into an absolute inability to reply to it, and that each victory was bloodless, did that fact make the victory less valuable or less worthy of celebration?"

The Boston *Herald* points out that we are paying homage, not alone to the victor of a brilliant sea-fight, but to a man of remarkable qualities of statesmanship. The Philadelphia *Press* and the New York *Sun* see in the celebration the American people's acceptance of the policy of expansion. The perpetuation of the Dewey arch is, urged by several New York papers, and the effort of a number of wealthy New Yorkers to raise the necessary amount, of which one man has already subscribed \$150,000, is

IS DEWEY TO BE HOBSONIZED?

AUNTY DEMOCRACY: "Oh, isn't he too sweet for anything!"

ADMIRAL DEWEY: "I'll bet my boots Hobson didn't face anything like this."

—*The Journal, Minneapolis.*

open plain, and yet the Moscow police and soldiery were powerless to handle the crowd. When the distribution of souvenirs was over, 2,500 persons had been crushed to death. On Saturday the Brooklyn Bridge alone handled 800,000 people. The Pennsylvania ferries handled a quarter of a million, and the elevated roads considerably over a million, and among them all there was not a mishap."

Admiral Dewey's salute at the tomb of General Grant was one of the most impressive events of the celebration. The New York *Press* says of it:

"Not only spectacularly, but historically and morally, must the salute at the tomb be ever the most important part of such commemorations. On the height at Riverside the standard of accomplishment is set. There rests the supreme military figure of our history. Yet he in his time had to be measured by the military standards of the past and to stand the test triumphantly. . .

"What of the future? Have we a young Dewey somewhere now, who in another generation will be a fit candidate for the salute to the tomb? Shining small examples of subaltern pluck and skill, as young Bagley furnished in death or young Hobson in life, or (in the army) that brave, clear-headed young Miley, just dead at Manila, gave in fifteen months of wearing tropical service seem to show we have. And every day such as these, when as now there is a worthy object for their veneration and their praise, makes us surer of keeping that sacred light aflame. There is many a boy's heart stirring now on Vermont hills or Ohio valleys as there echoes across and up and down the continent the sound of the guns of the admiral saluting the general's tomb. They will be ready to do and dare for their country. It is ours, and the duty needs a closer attention than we generally give it to keep a country worth doing and daring for."

PARADOXICAL as it may seem, if Sampson and Schley had fewer friends they would have more admirers.—*The News, Detroit.*

ADMIRAL DEWEY'S VIEWS.

ADMIRAL DEWEY'S opinion of the capability of the Filipinos for self-government carries with it just now so much weight that journals which find his reported utterances contrary to their liking cast doubt, not upon the soundness of his judgment, but upon the accuracy of the reporters in reproducing his views. The reports are substantially the same, however, in papers of such dissimilar views as the New York *Sun* and New York *Evening Post*. The admiral said of the Filipinos (as quoted in *The Evening Post's* interview):

"Do I think the Filipinos are fit for self-government? Well, no; not just now. They probably will be in a little time. They are a very queer people—a very queer mixture. Many of them are quite civilized and good people, but I do not think they are fit for self-government just yet. But when I say that, I must add that it is my candid opinion that they are more fitted for it than the Cubans, that they are a better people than the Cubans in every way. I do wish, however, that the whole business was settled, and I think that after a little the Filipinos will take kindly to us."

Of Aguinaldo and General Otis he said:

"But these fellows [Filipinos] all are a queer lot. They were simply servants and stablemen, and Aguinaldo was a junior clerk in the navy-yard. He is a pretty smart fellow. I knew him pretty well. In fact, we were great friends, and are, for the matter of that; but he has not the brains. There are people behind him, some of them lawyers, and able fellows, who make a tool of Aguinaldo. . . .

"I thought that this thing in the Philippines would be over long before this, as it should have been. I can't imagine how they have stood out till now. Of course, there was the rainy season, and I suppose little was done. One great trouble out there has been that General Otis has tried to do too much. I told him so. He wants to be general, governor, judge, and everything else, to have hold of all the irons. No man can do this. This is the great trouble. It is enough for a man to do one thing, to be one thing, and when a man tries to do everything and to be everything it is easy to imagine the result. The fight in the Philippines should be easily ended."

The interviewer then touched upon the proposal that the admiral should be nominated for the Presidency, and remarked that the ticket "Dewey and Wheeler" had been suggested. Said the admiral:

"We should make a pretty mess of it. General Wheeler, of course, has had some training in the political schools; but then he is a West Pointer. I had forgotten that. He would want to run everything as he would a regiment, and, of course, would make a splendid mess of it. You can not run a government as you would a regiment. . . . I am not a politician, I am a sailor; my training has been all that way. I am at home on board my ship. I know my business, or at least should know it; and I do not want to mix up in the affairs of government. I am perfectly satisfied to live and die a simple sailor, who tried to do his duty. I am not a politician. I can not make a speech even. I wish I could, but I have to be content with my lot."

Some of the comments are as follows:

A Program Suggested.—"Admiral Dewey now comes home and, so far as the capacity and fitness of the Filipinos are concerned, he completely justifies the position which Senator Hoar took in the Senate, which ex-Senator Edmunds took in various letters to the press, and which *The Republican* strenuously urged upon the Administration. He again declares that the Filipinos are more fitted for self-government than the Cubans, and 'that they are a better people than the Cubans in every way.' Admiral Dewey, it is true, says in this interview that the Filipinos are not fitted for self-government 'just now,' but please notice that he hastens to add: 'They probably will be in a little time.' How long a time? According to his own statement, in less time than the Cubans can fit themselves to run their Government. . . .

"If the Filipinos, as Admiral Dewey now declares, will be fit

for self-government 'in a little time,' the United States can not make them fitter by sweeping over their towns and fields with fire and sword during the coming year. Fitness for government among a people is not developed by riddling their ranks from millimeter [sic] guns. If the sincere purpose of the American people is to have the Filipinos govern themselves at the earliest possible day, if they honestly desire that the islands shall have peace and prosperity without delay, then the American people will conquer not the Filipinos, but the false pride in their own hearts. They will demand the assembling of Congress, and from Congress they will demand a formal declaration of the policy of the United States toward the Filipino people, and that declaration, they will insist, shall consist of a pledge like that given to Cuba.

"What would the situation be then? The cause of war would be removed and diplomacy would do the rest. Fighting would end. Wherever the native government showed capacity and fitness it would be recognized. When its fitness to govern the whole territory were manifest, withdraw in its favor. This is practicable, for Dewey has said that the Filipinos are a better people than the Cubans in every way, and that they will be fit, actually fit, for self-government in 'a little time.' And it is not only practicable; it is justice."—*The Republican (Ind.)*, *Springfield*.

The Battle of Sandy Hook.—"One of the most smashing blows ever dealt by George Dewey at the foes of the flag was administered by that sailor in the neighborhood of Sandy Hook. . . .

"Dewey sails into our lower hay one memorable September morning and before he has been six hours in port lets fly his broadside at the gang which has been maligning him. With perfect propriety and yet with his customary candor he expresses himself upon nearly all the above-mentioned branches of the general subject. Aguinaldo, instead of being in the admiral's opinion another Washington, is 'nothing but a figurehead,' a person of 'only average intelligence and ability,' the creature and tool of the 'brains back of him,' that is to say, as Admiral Dewey intimates, of a syndicate of crafty Oriental lawyers. The Filipinos in general, instead of being eminently qualified for independence of American protection, are 'not yet capable of self-government.' In time they will be, but they are not now. 'The great majority of them,' says Dewey, 'have the crudest ideas of an honest and efficient government.'

"General Otis, instead of being a foolish and headstrong incompetent, a person deserving of exposure and denunciation by the admiral immediately upon his arrival, turns out to be in Dewey's estimation a pretty fine sort of commander. He is working, according to Dewey, 'with might and soul at everything but comes under his notice in the way of putting down the rebel-

lion and bringing order out of chaos in the islands.' The only fault Dewey has to find with Otis, it appears, is for working too hard and continuously for the Government and the flag, and thus endangering his own health and even his life. It will be observed that Admiral Dewey, contrary to Copperhead expectations, speaks of Aguinaldo's enterprise as a 'rebellion,' and not as 'an heroic resistance of foreign oppression.' He speaks of Aguinaldo's followers as 'insurgents,' and not as 'patriots struggling for freedom.' And finally, instead of predicting a glorious triumph for Aguinaldo and his hand, illuminating the pages of history with another example of successful resistance to tyranny, the admiral simply remarks: 'They can't hold out against the army and navy. At the time I left I said the insurgents were on their last legs. It's got to come; they can't stop it.'—*The Sun (Rep.)*, *New York*.

JUDGES AND CAMPAIGN CONTRIBUTIONS.

THE testimony of a large number of judges before the Mazet Committee in New York, that they had paid from \$1,500 to \$15,000 to their party managers in connection with their nomination and election to their seats on the bench, has made considerable stir; and altho most of the judges defended the practise for various reasons, the press do not. The arguments put forward in favor of campaign contributions from the judiciary are: That a prohibition of the practise would be evaded by dishonest men, who would thus crowd the honest men from the bench; and that by paying his contribution the judge is released from his obligation to the party manager, and is left free to discharge his duty with impartiality. A few of the judges, however, declared that they considered the system wrong and thought that it should be discontinued. That, too, seems to be the opinion of the press. The *New York Times* says: "With all deduction and qualification made, the practise remains a most indefensible one. It is hopelessly inconsistent with the theory of an independent and unbiased judiciary." The *New York Tribune* says:

"Cloak it as you will, weave fictions about it and make it so much a matter of convention that the most high-minded bow to the tyranny of the rule, yet the fact remains that these large contributions are in essence the price of nomination. . . . The whole system is bad, and the only remedy is the total abolition of judicial campaign contributions and the removal of the judiciary absolutely from politics. As Justice Barrett says, 'The man who goes into the judiciary should be consecrated—set apart from

IT LOOKS AS IF OOM PAUL HAD ABOUT USED UP ALL THE SLACK.

—*The Record, Chicago*.

TWO CARTOONS ON THE EVE OF WAR IN SOUTH AFRICA.

other men.' But how far is his ideal from the judges who fix political slates in the judge's chamber and deal out patronage in accordance with party lists from the judge's bench!"

The Philadelphia *North American* says that the confessions of the judges "necessarily tend to bring the bench into disrepute," and the Washington *Star* says of the fact that most of the judges defended the system: "A jurist who can wink at a barefaced custom of extortion and office-selling, and pretend to be conscientiously satisfied that it is honorable, is not the man to deliberate and decide upon the individual rights of the people." The New York *Journal* thinks we are following China's example: "It has been the experience of all countries that men who paid high prices for their offices were likely to get the money back in one way or another. That is what is done in China. We want no mandarins on our bench." The New York *Evening Post* recommends that the judges view themselves as they appear in cartoon:

"Let them look at the pictures presented of them to-day in the press, each justice's portrait having under it the price he paid for his seat. Does that add to the dignity of the bench? Does that tend to increase respect and reverence for the bench? How would each justice appear seated upon the bench with the price he paid for the seat displayed on the desk in front? It may be that this connection of the price with his name in the public press is grossly unjust, even outrageous, but it is done and will be done so long as the practise continues. If the judges themselves class their office with other political offices, how can they blame others for doing the same?"

THE CONVICTION OF CAPTAIN CARTER.

ON the last day of September, as the plaudits of millions were ascending in honor of Admiral Dewey, President McKinley issued an order approving the verdict of the court-martial which on May 12, 1898, had found Captain Oberlin M. Carter, of the corps of engineers, guilty of conspiracy to defraud the Government. And as the Dewey procession was on its march to the triumphal arch, Assistant Adjutant-General Simpson, with Captain Carter as his prisoner, was on the march for Governor's Island. The verdict of the court-martial, which is now approved, was as follows:

"And the court does therefore sentence the accused, Capt. Oberlin M. Carter, corps of engineers, United States army, to be dismissed from the service of the United States, to suffer a fine of \$5,000, to be confined at hard labor at such place as the proper authority may direct for five years, and the crime, punishment, name and place of abode of the accused to be published in the newspapers in and about the station and the State from which the accused came, or where he usually resides."

Captain Carter's place of confinement will be Fort Leavenworth, Kans. There is no appeal from a verdict after the President has given his approval, and the only hope for Carter's release now lies in executive clemency some time in the future.

The facts of the case have been pretty fully exploited in the period of delay of more than a year on the part of the President. Captain Carter, a native of Ohio, graduated from West Point at the head of his class in 1880; in 1884 he was assigned to duty in Savannah, under General Gillmore; and three years later, on the death of the latter, assumed general supervision of the engineering work in Savannah River and in adjacent waters in Georgia and Florida.

In 1897, Carter was appointed an *attaché* of the American embassy to the Court of St. James. His successor in Savannah, Captain Cassius E. Gillette, soon discovered evidences of irregularity on the part of Captain Carter, in collusion with the managers of the Atlantic Contracting Company. Charges were made, a court-martial was appointed, and a verdict found as stated. The sum of which the Government was defrauded is estimated at from \$1,700,000 to \$2,000,000.

The delay of the President in approving the verdict has elicited, of late, considerable criticism. His approval has, so far as we

have seen, elicited nothing but praise, except from Captain Carter's attorney, Frank P. Blair, who asserts that Carter was convicted on perjured testimony, and likens his fate to that of Dreyfus. During the President's delay, he had had ex-Senator Edmunds investigate the trial as a special commissioner, and the approval of the verdict is supposed to be in conformity to the (never published) report of the commissioner.

The New York *Herald* thinks there has been too much mystery in the case, and asks why Commissioner Edmunds's report has never been published. The New York *Sun* asserts that "never was greater care taken to guard against injustice to the accused man." The New York *Press* sees in the contrast between Dewey and Carter "a salutory presentation of the various rewards which

the nation has for various sorts of service"—a reflection which occurs to many other journals. The New York *World* finds in the surprise and incredulity at first awakened by Carter's conviction "witness to the high character of our military service." The Washington *Times* thinks the President's action "a much greater recognition of justice in connection with a rich and influential criminal than any one had a right or reason to expect."

CAPT. OBERLIN M. CARTER.

The Philadelphia *Times* commends the President both for his delay and his final action; but wishes he had shown the same regard for the honor of the army in the case of General Eagan. Other comments are as follows:

No Similarity to the Dreyfus Case.—"Dreyfus, the victim of a conspiracy, was convicted by the use of forged papers, in a tribunal subject to the control of the conspirators and not open to the observation of the public, and the defendant had little or no opportunity, certainly not even ordinarily adequate opportunity before a court-martial, to defend himself. Carter was tried in the open by a court accepted by the defendant, who had the chance, before the trial began, to challenge any member of the court objected to by him, and he had the support of half a dozen or more of the best lawyers. . . . The French captain was not favored, as the American captain was, in the War Department. Mr. Blair is ungrateful to Colonel Davis, who recommended that Carter be not tried for conspiracy because of the difficulty of convicting an engineer officer. Dreyfus had no such friend as this; nor did he, by the consent of the war minister of France, have access, in the War Office, at all times and always before the prosecution, to papers and proceedings touching his case."—*The Times, New York.*

No Extenuating Circumstances.—"The offense of Captain Carter was absolutely without extenuating circumstances. He occupied a station in life that should have gratified the most exacting ambition. So high is the credit of the engineer corps, to which he belonged, that the officers thereof are habitually entrusted with the disbursement of millions of dollars in the execution of public works without being required to give bonds. Being a man of unusual intelligence and attainments, of attractive person and manners, and possessed of influential friends, his position in his corps was distinguished beyond that of other officers of his age. His lines had fallen in pleasant places, and a bright future

CANDIDATES FOR GOVERNOR OF OHIO.

was assured to him. He not only sacrificed this in order to satisfy base passions, but in disgracing himself he inflicted an injury on a highly esteemed and implicitly trusted corps for which even the imprisonment he will endure can not be deemed adequate expiation."—*The Record, Philadelphia*.

Punish the Contractors.—"With Captain Carter's own fate decided, interest now centers in the prosecution and punishment of his accomplices, the contractors who were the chief beneficiaries of his fraud. They must not be permitted to escape. They too are influential, and they have the advantage of not being compelled to face the direct justice of a military court. The process of enforcing restitution from them is likely to be a long and bitterly contested one. But when complaints were made about the delay in Captain Carter's case the Attorney-General gave assurance that it could in no way open to the contractors the path of immunity. He had several methods of reaching them at command if the captain should be found guilty. He has been, and the country now looks confidently for the punishment of those who defrauded the Government with his aid."—*The Tribune, New York*.

THE OHIO CAMPAIGN.

THE widespread interest in the Ohio political campaign arises mainly from the expectation that a Republican defeat in the President's own State may imperil his chances of renomination. That the Administration is, at any rate, unusually interested in the contest is shown, so the newspapers think, by Secretary Hay's letter to the chairman of the Ohio Republican State Committee, defending the tariff and denying the Democratic charge of a secret alliance with England. While the Republican and some of the Democratic papers think a Republican defeat improbable, enough complications have arisen to place the result in doubt. The candidacy of Mayor Jones, of Toledo, altho not considered likely to succeed, may draw away enough votes from either of the two more prominent candidates to elect the other. The break in the Republican ranks, too, caused by the opposition to Senator Hanna, which nearly defeated him when he ran for the Senate, is still wide enough to induce the Republican Governor Bushnell and many other Republicans to oppose Judge Nash, the Republican candidate for the governorship; but this is paralleled in the Democratic camp by the opposition to John R. McLean, the Democratic candidate. The Bryan Democrats fear that McLean, if he carries McKinley's State (especially if at the same time the Republicans carry Nebraska, Bryan's State), will urge his own nomination for the Presidency in place of Bryan;

the anti-trust Democrats allege that McLean is himself connected with several industrial combinations, and some look askance at McLean's alleged contribution of half a million dollars to the campaign fund. So that, with two Presidential nominations depending more or less on the outcome, the result is far from certain. The Republican cause, it is calculated, will be greatly helped by the speeches of Governor Roosevelt, President McKinley, and Senator Hanna; while the Democratic will be advanced by the party's unprecedented financial condition.

Both Parties Corrupt.—"It is a battle of bosses and boodle, and the luster of victory to either side will be dimmed by the means employed to win it. A battle fought for principle on each side would bring honor to the winner and no disgrace to the loser, but that is not the real character of the struggle this year in Ohio, no matter what the opposing banners may be claimed to represent. Bossism backed by money governed the convention which made the Republican nominations at Columbus. Bossism backed by money compelled the placing of an alien at the head of the

A SURE SIGN OF BAD LUCK.

Mr. Bryan sees a new moon over his left shoulder.

—*The Tribune, Minneapolis*.

ticket nominated at Zanesville. The men in both parties who believe honestly in the principles on which their respective parties were founded have good reason for being dissatisfied with the control into which both parties in Ohio appear to have fallen. They are not unlikely to have their dissatisfaction deepened into disgust, as the campaign progresses, by the methods employed.

"It is deplorable that the State of Ohio should this year be made the chosen ground for a disgraceful display of venal politics; that the Republican Party in Ohio, with its professions of political purity, should furnish to the whole country, as it is now doing, an object-lesson in the corrupting use of money in politics and in the demoralizing effect of bossism; and that the Democratic Party, with an exceptional opportunity for success if true to its principles of honesty, economy, and popular rule, should have lost that opportunity by permitting the usurpation of leadership by one whose candidacy represents bossism, and whose chance of success lies in the corrupting influence of money. Is it any wonder that decent and conscientious men of both parties are disgusted and undecided what course to pursue?"—*The Plaindealer (Ind. Dem.)*, Cleveland.

Two Views of Judge Nash.—"The Republican management seemt to be of the opinion that now is the time to break out in double-leaded praise of the Republican nominee for governor of Ohio. Not much has been written about him since the holding of the Republican state convention, Hanna and Hannaism having absorbed attention almost exclusively on the Republican side. *The Enquirer* takes pleasure in giving general circulation to that which will reach only a limited number of people through the Republican press bureau agencies. Here is a specimen:

"Standing upon a platform that is the living embodiment of patriotism, the eloquent exemplification of principle, Judge Nash is presented to the voters of Ohio for their suffrage. Of his personality, it is not needed that aught be said to the people of the State, who know him well. As citizen, jurist, and man, he is thoroughly representative of all that is best in Americanism. He is a leader worthy of his cause—a cause that appeals to all that goes to make up the greatness and purity of the grandest Republic on earth. He and his cause are typical of the people, representative of popular and independent suffrage, of popular and independent government—concrete Americanism."

"What unutterable nonsense! Judge Nash is undoubtedly what the world calls a 'very nice man.' He is a well-behaved gentleman, and has a good standing personally in the community where he lives. Indeed, we might go so far as to admit that he is an 'awfully nice man'; but it is ridiculous to say that he is 'thoroughly representative of all that is best in Americanism.' He is representative of Marcus Alonzo Hanna and George Barnsdale Cox in this campaign, and of nothing else. He is indebted to the two leading Ohio bosses for his nomination, and it required both of them to pull him through, tho he had the prestige of being the 'administrative candidate.' If nothing else were available

OHIO JUNGLE TALK.
JOHN R. MCLEAN: "Lend me your legs, Aggie. I am also running."—One of the cartoons being sent out by the Ohio Republican State Committee.

in the line of proof, his insulting letter to Governor Bushnell, written to aid Mr. Hanna's boodle candidacy for the Senate, would be sufficient to show where he stands. Judge Nash is not 'thoroughly representative of all that is best in Americanism,' tho he may be a 'leader worthy of his cause.' His cause is that of Hanna and Cox.

McLean and Bryan.—"The Bryanites of Ohio are beginning to realize the truth of what *The Leader* said months ago about Boss McLean's hostility to the Nebraskan, and his purpose to capture the machinery of the Democratic Party in Ohio this year so that he would be able to swing the delegation from this State

against Bryan in the national convention of next year. . . . But the Ohio Bryanites permitted themselves to be deluded. They were dazzled by Boss McLean's offer to put a half-million dollars into the campaign this year, and they fell over themselves in their effort to attach themselves to the procession that was following the plutocratic controller of big corporations in Washington. They nominated him for governor of Ohio, and he, in turn, permitted them to adopt a platform indorsing Bryan and reaffirming the Chicago platform.

"Every vote cast for Boss McLean this fall by a Bryanite will be a vote against Bryan, and the sooner the followers of the Nebraskan get that into their heads the better it will be for them and their cause."—*The Leader (Rep.)*, Cleveland.

Silver Sacrificed.—"For a day or two, the Ohio silverites felt safe because they had secured a free-silver plank and an indorsement of their idol. They did not dream how little McLean cares for platforms. Within ten days after his nomination he repudiated the Zanesville declaration and declared that the campaign must be fought on State issues. This was an eye-opener. It was followed by McLean selecting his lieutenants from the gold Democrats of the State. The old-line silverites were ignored. Then, to cap the climax, McLean went to Chicago and became involved in his now famous tilt with George Fred Williams, of Massachusetts, in which he referred to Bryan as an 'uncertain political asset.' On top of all this comes the information that A. J. Warner, the silver-haired silver apostle of Ohio, and Allan W. Thurman, known to be a thorough friend of silver, have been, on demand of McLean, taken from the list of speakers at the Democratic campaign opening. A revolt of silver men is an absolute certainty."—*The Blade (Rep.)*, Toledo.

"Should the extremely unlikely happen and Ohio go Democratic, it would undeniably be a blow to the Republican Party and a tremendous inspiration to the Bryanites. But it would neither eliminate the President as a candidate for renomination nor slate him for defeat. The effect would be to sober the Republicans of the nation and to fire them with renewed resolution and zeal. They know that behind Mr. McKinley are not only the masses of the party but its organization everywhere, and that he has no rival in sight for the nomination. Let Ohio be lost to the Republicans, and, notwithstanding the disaster, nothing short of a political miracle, such as the willingness of Admiral Dewey to become the President's competitor for the nomination, could separate Mr. McKinley's fortunes from those of his party."—*The North American (Rep.)*, Philadelphia.

THE LEAGUE OF AMERICAN MUNICIPALITIES.

MUNICIPAL ownership was the main theme discussed in the recent meeting of the League of American Municipalities in Syracuse, and in spite of considerable opposition it seems to have carried the day. Mayor Henry V. Johnson, of Denver, the new president, is a pronounced advocate of the municipal ownership of water-works, telephones, electric-light works, gas-works, and street-railway systems. The representative of the New York *Tribune* at the convention says:

"This was significant, since a good many representatives of corporations have been in Syracuse, some of them as members of the convention, who have been making earnestly expressed arguments in favor of cities abstaining from engaging in such enterprises as the manufacture of gas or electricity, or the running of telephone exchanges or street-railway lines. So determined have been the representatives of corporations to bring forward their views on these matters, that it is natural to infer that the owners of present city franchises are apprehensive that the cities may enter into competition with the companies, and thus depreciate the value of the latter's franchises."

The Boston *Transcript* notes and comments upon this victory for municipal ownership as follows:

"The election of a new president by the League of American Municipalities, at Syracuse, was by a test vote, and therefore significant. The choice fell upon Mayor Johnson, of Denver, but

it was not a question of individuals so much as the policies represented by them, and the victory was really on the side of those who had advocated the municipal ownership of public franchises. That proposition dominated in interest all others, and it was discussed with more complete thoroughness than had ever been given to it before by those actually invested with executive authority in their various municipalities. The chief efforts of the advocates of municipal ownership were directed against the position that city governments were not competent to be entrusted with the administration of public utilities. The mayor of Des Moines used the unique argument that 'nothing could do more to bring out the latent virtue of the indifferent citizen than freighting the ship of state, already, as he fears, overloaded, with still dearer interests. Every citizen would be interested in securing the greatest efficiency in the public service, and in a very short time demands would be made by a quickened and enlightened popular sentiment for the enactment of a strict civil-service law.' The mayor of Colorado Springs took similar ground, and Prof. Edward W. Bemis of the Bureau of Economic Research, in New York city, declared that 'monopoly in private hands is essentially undemocratic.' It is safe to assume that the test of sentiment with respect to this new policy has never been so squarely applied before in such a distinctly representative municipal organization, and the result will doubtless be something of a surprise. There is nothing in the movement however to cause apprehension. Possibly its friends have more faith in its efficacy as a purifier of municipal government than results will justify, but it looks as tho the experiment would be tried on a constantly enlarging scale until it triumphed or ended in discredit and collapse. As a general thing, however, the movement finds its support among those who are honestly striving to elevate the standards of municipal government."

MAYOR HENRY V. JOHNSON, OF DENVER,
The New President of the League of American
Municipalities.

NO WOMEN NEED APPLY.

THE encroachment by women upon employments formerly monopolized by men has been interrupted recently by two notable "reversions." A report which bears evidence of authenticity and has not been contradicted is being widely circulated to the effect that the national Government will no longer employ women in its departments. There will be no summary removals.

The reasons assigned for the change are reported to be: First, that women are less efficient than men and expect special consideration because of their sex; second, that they "can not adapt themselves to as great a variety of work as men"; third, that when extraordinary exertion is required, such as working overtime or exhibiting unwonted energy under pressure of departmental necessity, women are not to be relied upon as men are under similar conditions.

The Chicago *Evening Post* defends the change, and says:

"While there are women who accept positions upon the same terms as men and make it a point to ask no favors, it is unquestionably true that the majority of them are open to the criticism passed upon them by the Washington department chiefs. Every

employer of labor has discovered that. If an employee is wanted who can be occasionally used outside of the particular line of work for which he or she is engaged, the employer will select a man every time. He can get more work out of him, and he requires no special consideration."

In the opinion of *The Public Ledger*, Philadelphia, this charge is "but part and parcel of, a supplement to, the recent letting down of the civil-service bars, of that step backward which made thousands of offices that had been held under the civil-service rules as public trusts the mere loot of the political spoilsmen."

The Ledger continues:

"There is one cause for dispensing with the labor of women in the departments of the federal Government and substituting that of men for it which has not been given by the authors of the scheme; it is that women have no votes—that men have. That is the obvious reason and the only consistent one. Corrupt politics seems to have alone inspired the new policy, and an indignant public sentiment should prevent its consummation by the corrupt politicians, influenced to do this great wrong by corrupt politics."

The second "reversion" to which we have referred is indicated by a report from Chicago and some other large cities in the West to the effect that there is a great lack of women for domestic service, and that men are taking their places as "hired girls." The situation is described thus by the Chicago *Times-Herald*:

"American girls were prone to indulge a strong repugnance against housework for hire because they considered that it lowered them socially. A person could fold circulars or direct envelopes and still insist on claims to social eminence, but cook and housemaid immediately lost caste by their menial labors. It was a matter of principle, not of pay, with the girls, but it soon began to count tremendously as a matter of pay with employers. They not only invited women into new fields which were opened by new inventions like the typewriter, but discharged male clerks and bookkeepers and gave their positions to aspiring womanhood at half rates. Man was now on his uppers and in the streets.

"He might turn tramp, might starve, or might himself become housemaid or cook. For a time he chose to tramp or starve, but finally he has decided that the uncertainties of the one alternative and the certainties of the other are alike objectionable, and he has resolved to don cap and apron as a last resort. Whether he will ultimately clothe himself in petticoat and dress remains to be seen.

"Probably his repugnance for his new occupation is equal to that of his merciless rival in the business from which he has been driven, but necessity knows no law, and he should make the best of a bad lot. When he is being 'ordered about' by a woman he must remember that bread and butter is a salve for every indignity, and recall the yearning days of an empty stomach. He should take some pride, too, in the fact that his superiority is still acknowledged in the item of pay, since it is said that he enjoys a premium of 20 per cent. in kitchen and dining-room. That, indeed, is a comforting reflection for the sex in general. It may be down at the heel, but greater natural endowments will tell."

TOPICS IN BRIEF.

THE man who is worth a million may be a man for a' that; and, if the stories are true, he may be a United States Senator for less than half that. —*The Journal, Detroit.*

MR. JOHN BULL may find solace in the fact that he is not the only one who is suffering from cramps in his benevolent assimilation department. —*The World-Herald, Omaha.*

THE MISSIONARY: "My erring brother, have you been Christianized?" The Native: "Not completely. They have gobbled all my land, but I still have my few clothes." —*The Journal, Indianapolis.*

ELECTION INSPECTOR (severely): "Sir, have you ever read the Constitution of the United States?" Naturalized Citizen: "No. Have you?" Election Inspector: "No." —*New York Weekly.*

NOW that the War Department is supplied with a lawyer at its head, it would be a bright idea to fire Griggs and put a fighter in charge of the law department in these days of trusts. —*The Record, Chicago.*

FIRST CORPORATION DIRECTOR.—"Our legal department is getting to be very expensive." Second Corporation Director: "It is indeed! Very! Sometimes I am almost tempted to think it might be cheaper to obey the law!" —*Puck, New York.*

LETTERS AND ART.

A NEW ITALIAN GENIUS.

LITERARY Paris is just now paying attention to another "ultramontane" genius. In spite of the long-standing Franco-Italian feud, these two Latin countries have been discovering in late years that they have much in common, and Duse and D'Annunzio have in turn been welcomed in the French capital with warm appreciation. Now Mlle. Serao is having a literary triumph. The Paris correspondent of the *New York Times*, Mr. Rowland Strong, thus writes of her:

"I doubt whether in any country in the world a more remarkable authoress is living than Mlle. Serao. She may be ranked with George Sand and George Eliot; for she possesses precisely those masculine qualities as an artist which distinguished her two great predecessors of the same sex. Just before meeting Mlle. Serao I had finished reading in Mme. Charles Laurent's translation, 'Adieu, Amour' (Good-By, Love), and I was principally struck by the vigor of the writer's manner. The plot is drawn in with bold and masterly draftsmanship. The characters live and breathe. The tragedy moves forward with the stateliness and inevitableness of true tragedy. One really finds these qualities but seldom in woman's work, be it said with all due respect to a sex so infinitely superior in many things outside of the artistic sphere.

"Mlle. Serao lacks something of the ironic humor of George Eliot, but I fancy her grasp of life and its verities is truer, and she reminds one more particularly of George Sand, to whom she is not, I think, intellectually inferior."

Mr. Strong gives the following personal details of the Italian novelist:

"In person Mlle. Serao is short and plump; the mother of a family, as she informed me with pride, and vivacious as only Neapolitans can be. Her head is the head of Balzac—with a big, towering forehead, prominent beetling brows, and black Latin ox-eyes. She has no neck to speak of, but wonderful black hair, which must have been her chief beauty when she was younger. Her conversation is fluent and agreeable, her French almost perfect.

"Quite early in life she plunged into journalism, and her talk has that practical, somewhat cynical nuance which reveals the experienced journalist."

She is now the wife of Scarfoglio, "the most eminent journalist in Italy."

Mlle. Serao's masterpiece is the story called "*Il Paese di Coccagna*" ("The Country of Coccagne"), which Mme. Paul Bourget has translated into French. Says Mr. Strong:

"It describes the dreadful lottery mania which prevails in Naples, and its tragic consequences. It supplies the most intense description of modern Neapolitan peasant life which Italian literature can show. And yet it was not a success, a fact which supplied one of the chief topics of the conversation which I had with its gifted authoress.

"'*Il Paese di Coccagna*,'" said Mlle. Mathilde Serao to me, 'was not a pecuniary triumph, as most of my other books have been, but it was a good novel. I can say that without being accused of self-conceit. I know what it cost to write it, and I can tell a good book from a bad one. It failed—relatively, at any rate—and forgive me if I seem paradoxical, because it had a motive, a moral. People, my dear sir, do not want morality in art; they want passion and beauty—not exclusively one or the other, but both. They want something which reflects their own life to them, their own ambitions and dreams, in an agreeable way, and they want the artistic beauty of form."

Mlle. Serao expresses herself frankly with regard to modern French literature, which she thinks chiefly marked by sterility. She has, however, hopes of a revival of the ancient literary primacy held by Italy during the Middle Ages and at the time of the Renaissance. She says:

"France has lost her three greatest writers of modern days—

Taine, Renan, and Littré—and I do not observe that their mantles have fallen on any one in particular; their thrones are still unoccupied. The French seem to me to be forgetting that they are Latins, and that their literary mission is the cultivation of style. Zola has high qualities, humanely speaking. His '*Assommoir*' is his *chef-d'œuvre*, but its motive failed; it no more put a stop to drunkenness than my 'Country of Coccagne' abolished lotteries, and its style is not sufficiently good to give it artistic immortality.

"What I fail to see in modern French literature is the great humane and intellectual impulse wedded to immortal style, as was the case with Renan, Taine, and Littré."

DEWEY AND THE POETS.

IT were a pity if, after the sculptors and the mural painters and the musicians had levied upon their art for the welcoming of Admiral Dewey, the poets were to remain quiet. Some of them at least have already broken silence, and most notable among the poetical contributions to the occasion is the following from the *Baltimore Sun*, written by Dr. John Williamson Palmer:

Ship Ahoy!

A GREETING TO ADMIRAL DEWEY.

The Isles are angry, and the tribes, defiant,
Sulk in their jungled dens;
The swart Tagalo, sinister and pliant,
Slinks through the seething fens.
The fiery Malay, the fell Moro crouching,
With sinuous kris agrip,
Mocks—tho his doom, his helpless gods avouching,
Comes thundering from a Ship.
From Ind to Cathay all the groping races,
Bewildered, stand at gaze,
Awd by a mirage, where the gazer traces
Freedom, on God's high ways.
Lo! a young nation, eager, frank, and lusty,
Bold in her cause and claim,
Bursts the frail bars of codes outworn and rusty,
And enters in His name.
Eh! her Herald! in no blazon flaunting,
Prankt in no clarion'd pride,
No pomp of baubles, no vain titles vaunting—
King, where his cruisers ride!
Starboard and port his ordinance to utter,
An argument of wrecks!
Careless alike tho tribes or empires mutter,—
Dominion walks his decks.
Bravely aloft his starry charter floating,
Saluting tropic skies,
He steered, commissioned for great deeds denoting
Good will and high emprise.
Proudly we hail him, in his large endeavor,
Where'er our guns are heard,
There, too, our plaudits and our pæans ever
Rise to his work and word.

The following sonnet by Walter Allen Rice appears in the *New York Times*:

Thrice Hail, the Hero!

As when the ancient Greeks did celebrate
Olympic games and with each other vie
In tests of strength, or in the races fly,
The victor, laurel-crowned, returned in state;
So sailed away to meet the guns of Spain
A tiny squadron 'neath the Stripes and Stars;
And on the bridge the hero of the main.
How rudely Spain was awakened from her sleep
Has oft been told since that bright morn in May;
That daring deed, the wonder of the deep,
To Peace will lead the nations of our day.
And lasting fame his name will ever keep—
Thrice hail the hero of Manila Bay!

Moved by the dearth of poetry for the occasion, the *Brooklyn Eagle* raised its voice last week in reproach:

"Where are the few poets whose names are rated high in American literature? Why are Stedman and Stoddard and Markham and Gilder and Richard Hovey silent? Is it possible that these writers are poets rather than men, and that they are all 'anti-imperialists'? That the voice of their nation does not stir any answering thrill in their veins? Hovey, probably the least known and also the strongest poet in the list, wrote last year

about the Spanish war in a way that showed him to be a good American. He appreciated the outpouring of power in a noble cause more fully than did any of the poets of the best rank which we have, but even he has found no welcome for the victor of the war that he celebrated in its beginning. The fact is our poets of the present day have divorced literature from life, and the separation is disastrous to literature. Life can get along without poetry, but poetry without life is a fearsome thing. Nature our poets will sing, but human nature must be refined down to its purely intellectual and spiritual aspects before it moves them. Not thus have sung the great poets of any time or people. Not so have sung the men who made American poetry strong."

THE COMING CHANGE IN SEX IDEALS.

MUCH comment has been occasioned by an article in the current number of *The Sewanee Review* (New York) on the Sapphic verses of a young American poetess, Miss Ann Reeve Aldrich, published shortly before her premature death. The New York *Sun* has said some biting things about the writer, and has rather broadly hinted that the church is in danger and that the canons of ecclesiastical propriety have been violated by the appearance, in a "High-Church review," of an article in defense of what it terms the erotic verses of a young poetess of passion. The publishers of *The Review* have said, however, that the purpose and spirit of the paper have been much misconceived, and that the daily press has read the article in a light that never was on land or sea, or in any one's mind but the newspaper critics'.

The writer, Mr. G. B. Rose, calls attention in the beginning to the fact that the later nineteenth-century poetry, as represented in Tennyson, Arnold, and most of the American verse-writers, has become less vital in its treatment of life. In the days of Byron and Shelley, poetry and life were one, and poetry was "the most popular, because the most vital, form of literature." Especially in dealing with the central fact of life—love and the sex relations—current verse ignores everything except "the delicately fanciful and religiously sentimental." Altho in prose the rights and relations of the sexes have finally attained to a position where they can demand some attention from thinking minds, the reviewer still turns in scorn, says Mr. Rose, from every poem that shows a sign of the "erotic taint," especially if it be from a woman. Yet, he says:

"Of all the passions, love is the one to which woman is most susceptible, and the one about which, at least in modern times, she displays the greatest reticence. This is due in some measure to the modesty of the sex, still more to the restraint of public opinion. It has been the rule from time immemorial that woman should not court, but be courted; that her love should not be uttered, but confessed. Her heart must be a hidden garden into which one alone can gaze. Pale lilies of fancy, passionate blood-red roses of desire, may blossom there, but they must hide and bloom and wither all unseen, or seen by but a single eye. The woman who tears down the barrier that the ages have built around her, and exposes the garden of her soul to the public gaze, is despised of men and execrated by her sex. A few of the Bohemian race, like George Sand, may do so, but the vast majority shrink from the exposure of their hearts as they would from an exposure of their persons. Many of them write, but instead of uttering their own thoughts and sentiments, they write as the world expects they should feel and think. There is no more seething volcano than a woman's breast, but its fires must smolder concealed beneath the snow. Consequently female authors are generally tame and insipid to the last degree. Forbidden by public opinion to utter plainly and intensely what they feel, and restrained by innate modesty from revealing the secrets of their hearts, they generally devote their writings to photographic reproductions of the commonplace, to ethical disquisitions that are a weariness to the flesh, to works of sentimental unreality, or something of the kind."

One reason of this insipidity observed in most feminine writing is, says Mr. Rose, that "her heart and senses have been so

cramped by the training that she and her ancestors have received that she has little to express." Some of the most important and vitalizing elements of her nature have been atrophied and rendered as non-existent and useless as the foot of the high-caste Chinese woman which has been tightly bandaged since earliest childhood. As Mr. Rose poetically expresses it, "in the pale Gothic gardens the blood-red roses of Lesbos have turned to a pallid pink, and their intoxicating odor has become a delicate perfume." Yet Mr. Rose thinks that it is apparent to all observers that a change is coming in the ideals of women. In the wholesomer out-of-door life of the modern day the medieval conception of womanhood is passing away, and the naturalness, purity, and sane beauty of the Greek statue is returning. This amelioration and emancipation from the one-sided and moribund spiritual ideals of medievalism is shown in the great change in woman's reading in recent years. It is shown still more by the two recent volumes of Miss Aldrich. Says the writer:

"They are volumes of extraordinary promise, uttering the cries and moanings of passion with an intensity and directness worthy of Sappho, tho of course without that marvelous imprint of supreme genius that makes the slightest fragment of the Lesbian a scintillating gem. Still, they are fine poems, the true sobbings and exultations of a woman's love, such an outpouring of a woman's heart as we rarely find in our modern literature. There are none of the fine phrases, the recondite interweavings, which make the 'Sonnets from the Portuguese' so charming and so unreal to the average reader. There is no veil, no concealment, no artifice. Except that the words are in rhythm and in rime, they are such as any passionate woman might utter in the rapture and despair of love.

"In the blithe days when she sported with her fifty maidens, Sappho would not have understood all that Miss Aldrich meant; but when the mad love for Phaon came and she stood upon the Leucadian Rock, ready to quench in the purple waters of the Ægean the flames that consumed her soul, she would have recognized in Miss Aldrich a frailer, paler, sadder sister, and would have clasped her to her bosom. Yet even then she could not wholly have understood her; she could not have comprehended that shame of love that the Middle Ages had bequeathed to the youthful American. Sappho could never have understood why she should be more ashamed of her love than of hunger or thirst—why she should ever refrain from the utterance of any emotion. Her love, even its Lesbian forms, was as natural as that of a bird, and as devoid of shame. When Miss Aldrich sang the song with which she begins her singing Sappho would have wondered vainly what she meant. It marks the gulf between the woman of to-day and the woman of Lesbos."

Mr. Rose then gives the following verses in illustration of this contrast between the joyous spirit of appropriation shown by Sappho and the pained and timid self-consciousness of the daughter of the Puritans:

"In that first Eden Love gave birth to Shame,
And died of horror at its loathsome child.
Let us slay Shame and bury it to-day—
Yea, hide it in this second Eden's wild,
This dim, strange place where, for aught we two know,
No man hath stepped since God first made it so.
Now dream we are alone in all the earth.
Say, wouldst thou weep if all save we were dead?
I would not weep, but closer to my breast
Would press the golden glories of thy head,
Rejoicing that none other of my race
Should feed his eyes upon thy wondrous face.
Look at this tangled snare of undergrowth.
These low-branched trees that darken all below;
Drink in the hot scent of this noontide air,
And hear, far off, some distant river flow,
Lamenting ever till it find the sea.
New life, new world, what's Shame to thee and me?
Let us slay Shame: we shall forget his grave
Locked in the rapture of our lone embrace.
Yet, what if there should rise, as once of old,
New wonder of this new yet ancient place:
An angel with a whirling sword of flame,
To drive us forth forever in God's name?"

"The whole spirit of the piece," says Mr. Rose, "would have

been incomprehensible" to Sappho and all her maidens, and they would have wondered what their "sad little sister was singing about" in such mournful strains.

AN APOLOGY FOR GEORGE SAND.

A REMARKABLE apology for George Sand has appeared in Paris, in two volumes, by a Russian lady who conceals herself under the pseudonym of Wladimir Karenine. These volumes treat that period of the celebrated novelist's life lying between her birth (1804) and her relations with Alfred de Musset in 1838; and throughout an effort is made to cover with the mantle of charity the career of this wayward woman of genius.

In the early part of the century, when George Sand was at the zenith of her powers, her name appeared to Anglo-Saxons to represent all that was fiendish, brutal, and lustful in the feminine mind and heart. She stood for the destruction of all virtuous beliefs, a sort of "devil's advocate" against the sanctity of the marriage bond. Our grandmothers thought of her with a shudder. But the modern self-assertion of woman has had the effect of putting George Sand in a milder light before the world, and the author of this new work thinks the time has come when she can be understood and appreciated. Her wearing of pantaloons can no longer be an offense, since modern man has condoned the abbreviated costumes in many other women.

George Sand had a half-brother, Hippolyte, by her father, and a half-sister, Rosalie, by her mother, and these two facts explain many disagreeable things in her life and the attitude which she assumed toward the marriage question. She herself was born one month after the marriage of her father and mother. Maurice Dupin, who at the age of sixteen enlisted in the republican army under Massena, met a pretty little adventuress, Sophie Antoinette Victoria Delaborde, in the Italian campaign. Sophie was not long in showing her preference for the young soldier, and soon accompanied him to France. Mme. Dupin, the mother, irreproachable herself, had set up no standard of morals for her son, and did not mind the liaison; but she was shocked when the marriage occurred and would have no more to do with young Maurice.

But this aristocratic woman was not without a soft place in her heart, and Maurice knew it. One day in her walk she passed the apartment in which Maurice and his family then lived. The janitress came strolling along, as if by accident, bearing in her arms a fine girl child—Marie Aurore. Mme. Dupin stopped her, took the infant (George Sand) in her arms, and covered it with caresses. Maurice, secretly watching, at a sign from the janitress stepped forward, threw himself on his knees before his mother, and received her pardon. Soon the family was taken into her house.

During all George Sand's early life these two women constantly fought for her affections. The contrast between mother and grandmother was very great. The latter was elegant and dignified in manner, a great lover of literature and art, and a philosopher free from all superstition. She was in all respects the best type of the eighteenth-century lady. The biographer relates, as told to her by an eye-witness, that George Sand, despite her well-known democracy, often exhibited signs of her aristocratic training. In the presence of a stranger or a bore, she showed her reserve or impatience after the manner of a real grand dame, and she inspired respect and awe in the most self-sufficient. To her grandmother and the great ladies who surrounded her, George Sand was wholly indebted for the cultivation of the instinct that gave her an insight into the moods and manners of the higher classes, whom she has painted with such fidelity in many of her novels. On the other hand, it was through her mother that she gained such an intimate knowledge of the bourgeoisie and the peasant class. It was therefore from these two opposite points of view that she saw life, and she was unable to reconcile the two views.

Her religious education was formed by the same diverse influences. Her mother, with all her immorality, was a superstitious believer. Her grandmother, with all her austerity, was a Voltairean atheist, yet, for the sake of form, insisted that the young girl should attend church. With the Restoration, religion had again become popular and the atheist was now the vulgar parvenu. In 1817 little Marie Aurore was initiated into the Catholic church and was placed in a convent. With her grandmother, she had seen life through the eyes of an aristocrat; with her mother,

she had seen it as a peasant; now she was to taste life from the cloister and imagine it with the aid of the poetical images of Catholicism.

About this time she met Stephane de Grandsaige, a medical student, of a serious, ponderous mind. Aurore under his instruction developed a passion for the study of physiology and anatomy. He would dissect heads and arms and legs in company with her. The gossips of La Chatre Convent busied themselves with stories of the conduct of this strange girl. They declared that she robbed graveyards, shot ghosts, and did all sorts of gruesome work, and, to crown it all, that she was in love with Stephane. The well-meaning honest dullard of a curé heard these stories and allowed himself to question the young woman at confessional in a tactless manner. Aurore sprang up, resented his coarse insinuations, and left the convent never to return.

But she was still devout enough to feel some anxiety for the future welfare of her grandmother, who in 1821 was stretched on her death-bed. Aurore sent for the archbishop of Arles, an illegitimate stepson of Mme. Dupin by her second husband, a worldly-minded, good-natured *bon-vivant*. The archbishop insisted that his mother must receive the sacraments. She smiled scornfully, but consented for the sake of appearance. When Mme. Dupin died she left to her granddaughter half a million francs and requested that her relatives, Rene de Villeneuve and his wife, become the guardians of the girl. But Aurore's mother objected to the will and created a vulgar scene.

Now for the first time the daughter began to understand the abyss separating her from her mother and what she had lost in the death of her gracious tho anstere grandmother. Yet she obeyed her mother and went to live with her. The gulf between the two became, however, wider and wider during the years they spent in Paris and Nohant. The mother treated the daughter with all the coarseness and vulgarity of her coarse and vulgar nature. She heard the stories of her life at the convent and made the innocent daughter a target of the most immoral insinuations. She rallied her on her "originality" and fine education, and cast her books into the fire before her eyes. One moment she would vent her frenzy of rage in beating her, the next she would express her sudden revulsion of feeling in smothering affection. But there was now no mood in which the girl liked her mother.

Casimir Dudevant was Aurore's chosen suitor. There was no genuine love between them—nothing but a mild affection and respect. He was a commonplace man who did not understand the woman's genius. The mother had to be consulted concerning the match. One day she gave her consent and the next day she withdrew it, and attempted to reproach the suitor with once having been a waiter in a café. But the couple were married and lived happily enough together for a few years, Aurore having centered her affection upon her two children. Finally, Casimir took to drink, became brutal, and struck his wife. George Sand tells us that this blow knocked out of her every feeling of respect she had for him. She now felt only contempt, and to widen the breach she fell in love with another man.

Her new lover was Aurelian de Sege, a serious, reticent, and somewhat pedantic country magistrate, full of high ideals and with a passion for literature. This passion it was that drew these two souls together, who were unlike in all other respects. He was too high-minded and prudent to contract a dangerous liaison, and she still felt the training of her grandmother. So they separated with tears over the thought that they could never realize their love.

This incident awakened Aurore to the higher meaning of life, and she now felt that reconciliation with her husband was impossible. She told him all, and surrendered to him all her property with the exception of 1,500 francs a year for herself. Then, taking her daughter Solange with her, she went to Paris to begin life anew. The world was now nothing to her nor the world's law. She had learned to despise all convention and tradition. Hereafter she would follow the bent of her own inclinations and find the happiness of which she had dreamed.

After many trials and rebuffs in Paris, she fell in with a young journalist who afterward became famous as Jules Sandeau. The result was a literary and domestic copartnership. Here George Sand later determined to drink life to the full and to give it expression in her novels. It was the age of romanticism—romanticism for man, but not for woman. She made up her mind to include women. But to do so, she must set the example, and that meant unsexing herself. She wore man's clothes, she

smoked a pipe, she learned the language of the ateliers, she led a Bohemian life and swore like a trooper as occasion demanded. To all intents and appearances she was a man. She would earn her own livelihood like a man. She claimed all the rights and enjoyments of a man.

She and Sandeau wrote "Rose et Blanche," and she afterward wrote "Indiana," to which she appended the famous pseudonym George Sand. Soon she broke off with Sandeau, and her amours with other men followed thick and fast. Her preference was for men of intellect and brilliant qualities; but in most of her adventures she was as inconstant and unfaithful as any male Don Juan.

For Alfred de Musset she felt the strongest passion of her life. Musset was twenty-three and she twenty-nine when they first met, but the attraction was mutual and immediate. Musset's mother consented to the liaison, but made her son promise not to leave Paris without her permission. But Paris was too narrow for George Sand and Alfred de Musset. They decided to go to Italy. George Sand, with tears in her eyes, begged Mme. Musset to give her consent, and she did, foreseeing the misfortune for her son, who returned broken in mind and body. This attachment served also to completely disillusionize George Sand, who lost all faith in great men, and, in fact, in all men.

DIME NOVELS AND CRIME.

TWO young men named Heneck and Hundhausen recently followed a former friend and schoolmate from a little Missouri town to Chicago, and butchered him in a brutal manner. After their capture they confessed that, in a spirit of bravado taught them by dime-novel heroes, they had taken up a vendetta against their victim, and had slain him for some supposed crime committed by his father against the brother of one of the murderers thirteen years before. Their satchels were filled with specimens of this class of literature, and they had also with them a large store of pistols, knives, and belts. An editorial written in the *Tacoma Ledger* (September 10) draws the lesson that it is one of the chief duties of parents and of schools to impart early a love of real literature such as will give saner notions of life, and, while satisfying the child's love for excitement and adventure, will hold up truer ethical models. He says:

"It is found that a large majority of the criminal class who read are deeply interested in the dime-novel class of literature. They have not sufficient moral sense to discriminate between a hero and a bravo, and emulation of these false gods oftentimes is the cause of the reader's downfall. It may be that most of these, if they were influenced in the right instead of the wrong direction, would become honest working-men, instead of vagabonds and finally criminals.

"It is impossible to prohibit this sort of literature by law, altho no doubt it does as much harm as much that is prohibited, and the only way to counteract, or rather prevent, its evil influence, is to turn the attention of youthful readers to something better. They naturally like stories of adventure, with thrilling escapes and excitement and go. There are plenty of good books that will furnish this kind of reading, without bad effects. No youth was ever harmed by reading 'Ivanhoe' or the 'White Company,' which are calculated to prove interesting and exciting to any well-balanced youth. The child may take to dime novels for want of better reading. After the age of twelve years, with the opportunities for obtaining interesting books, if he persists in a preference for Old Sleuth stories and the adventures of Jessie James or Billy the Kid, it is high time that his preferences be interfered with and an attempt made to turn them in another direction, by banishing the bad matter and supplying its place with wholesome mental pabulum."

An English View of "David Harum."—Comparatively little popular interest has been as yet shown in England for either "David Harum" or "Richard Carvel"; but the English critics are not blind to their merits. The *London Academy* gives the leading place in its issue of September 16 to a review of the former book (with portrait of the author), and says of it:

"If 'David Harum' contains any surprise, it is, not that the public should be so easily pleased, but that an amateur of letters should have been able to produce such good work, and that such good work should be so widely appreciated. Noyes Westcott may have been an everyday person, which is to say, a non-spiritual person, seeing what he saw with everyday eyes; he may have been heedless of the subtler manifestations of beauty; he may not have discovered with De Manpassant that words have souls, or with Flaubert that sentiment is the devil. 'David Harum' remains—'David Harum' will probably remain for some years—a convincing and delightful creation, and, in the sense that it sticks in the memory, a memorable one."

After a lengthy description of the story, the reviewer adds:

"Novels which excite America seldom or never meet with anything but indifference here. The reason usually is, either that they are imitations (a little weak, but wholly unashamed) of styles distinctively English (this applies especially to historical novels), or that they are quite beneath our standard, American taste being as yet behind our own. But neither of these charges can be enforced against 'David Harum.' It owes nothing to English models; and it is at once capable and modest, certainly superior to several conspicuous English successes of recent months. Why, then, should it not have succeeded here as in America? The answer is not forthcoming. . . . Of one thing I am convinced, that David Harum himself would have enchanted these isles if he had been properly introduced to them. Had Noyes Westcott been fortunately 'discovered' in the right quarters, had his book been nicely heralded, had it been backed by a sufficient moral force, had fifty little things happened—then the fame of 'David Harum' might have filled the country."

EVE: A YIDDISH FANTASY.

ALTHO Yiddish, the Judeo-German language of the Ghetto, is said by Prof. Leo Wiener to be gradually dying out among the Jews of to-day, it still possesses a school of writers who, says so high an authority as the *London Spectator*, "yield neither in style nor invention to the best men of letters in France and England." Leon Perez—"the Yiddish Heine"—and Abramowitz are among the greatest of these writers. Another Yiddish writer of ability is Wirth. A very curious specimen of his work is given in *The American Hebrew* (September 8). It is entitled "Eve," and narrates with some modern and piquant touches the Semitic legend of our first parents in the Garden of Bliss. It reads thus:

"'Sh! sh! Don't wake him,' said God to the surrounding angels. And the angels moved on tiptoe, with wings folded, and fingers on lips. 'Gabriel,' asked Uriel, 'why operate on the sleeping Adam? Would it not be better to do the thing while he's awake?'"

"'You jest,' answered Gabriel. 'Were he awake he would not consent.' Still a-tiptoe, they drew near to Adam. The first man lay on his back, sleeping soundly.

"'My sons,' said God, softly, 'help me to place him on his side.' And Adam was put on his left flank.

"'Gabriel, hold him by the feet that he may not move; and you, Raphael, give me your knife.'

"Raphael took his knife, whetted it on a stone, and handed it to the Master of Worlds, who cut into the flesh of Adam.

"Adam awoke, stretched himself, and yawned lengthily. All the creatures in Paradise, whom he himself had named, were familiar to him, but now he saw a new creature, such as he had not previously set eyes upon. The new being resembled himself in many ways, yet there were remarkable differences. She stood silent before Adam, and smiled in a strangely attractive way.

"'Who art thou?' asked Adam.

"'I am thy wife,' answered Eve, in a voice of bewitching tone. At the words, a soft thrill passed through the limbs of the first man. Eve's voice seemed to him sweeter and purer than that of the nightingale to which he had so much loved to listen.

"'Come, come with me,' said the woman to him. And she led him toward a tree in the midst of the garden. Adam paled, for

he recognized the Tree of Knowledge. Eve looked at him with a sweet smile and her pink fingers pointed to the Tree.

"At that moment, the Serpent, lying at the feet of the woman, murmured the words: '*Taste it*'; and all the birds in Paradise seemed to chant and warble more sweetly and gaily than ever before.

"But Adam did not move, for he remembered the threat of God: 'If thou eatest of this tree, thou diest!'

"Still, Eve kept her bright gaze fixed on Adam, who felt a soft heat envelop his limbs and an unknown longing pierce his heart. Eve plucked an apple and offered it to Adam. Once more the Serpent murmured: '*Taste it!*' and all the birds in Paradise made the air resound with their most exquisite songs. Every bird, every tree, every blade of grass seemed to murmur in Adam's ear: '*Taste it!*'

"Eve stood, apple in hand, smiling deliciously and bewitchingly. Adam's will grew feebler, and he felt himself yielding to hesitating softnesses. 'It is forbidden,' he muttered, plaintively. 'Nonsense!' answered Eve, 'Everything good is permitted.' And ere he could prevent her, Eve had taken a bite of the apple. 'God,' she said, with a pretty shake of her head, 'how good it is! Taste it.'

"It is forbidden,' repeated Adam.

"What nonsense! I've eaten and nothing has happened. Why don't you do as I do?"

"If thou eatest of the Tree of Knowledge, thou diest,' was God's command."

"At the words, Eve ceased smiling; she became red as fire and her eyes sparkled with anger. 'And thou tellest me this now, after I've eaten!' she cried. 'Ah, I understand now why thou wouldst not taste! I guess thy secret hope. Thou wouldst have me die so that thou mayst wed another wife!'

"In the fury of her jealousy, she made as if to attack him with her little fingers armed with sharp nails—but even in her worst anger she was beautiful—her locks floating in the wind, her fine eyes widely open, her cheeks red with rage, her tiny lips bleeding! So beautiful was she that Adam could resist no longer, and he also bit into the apple."

THE YOUNGER RUSSIAN STORY-TELLERS.

ALTHOUGH Russian critics lament the literary sterility of the Russia of to-day, the great empire of the East is the home of a strong and virile body of young writers, comprising several of exceptional power, worthy to rank high among modern men of letters. In *The Forum* (September), M. A. Cahan gives an account of some of the members of this rising school. The novel is, he says, really in eclipse just now. Aside from Tolstoy, who with the exception of his forthcoming novel has done nothing in fiction of late years, Turgenyev and Dostoyevsky have left no successor. It is in the short story that the younger men are pre-eminent. M. Cahan names among the chief of these Korolenko and Chekhov. Both these, like all Russian writers, are realists. The story of plot and adventure, says M. Cahan, is looked upon in Russia as fit food for infants. "Lifelikeness clothed in the simplest forms of expression, and artistic sincerity reflecting the self-criticisms and the melancholy moods of the Russian people—which the critics have taught the public to exact from its story-writers since Pushkin—are still the *sine qua non* of literature."

Moreover, art for art's sake does not exist in Russia. The censor rules out all formal political or social treatises, but permits great license in works of fiction. Therefore the story with a purpose is the only avenue of expression for the nation's thinkers. Yet even here the moral must be implicit in the picture. "The novelist," says M. Cahan, "must try to make his pictures talk, to let life expose its own wounds. . . . The censor, as a rule, does not prevent a subject of the Czar from painting a spade, but he will not let him call it by its name." The writer continues:

"To make a story such a vehicle of expression two things are necessary. It must be a faithful transcript of life, and it must be a work of art; that is, not a dead 'protocol' of events, nor yet a

series of retouched photographs, but a picture vivified by the breath of genius and carrying the illusion of pulsating reality. A 'purpose novel,' where the sails of the narrative are trimmed to suit the wind which blows in the direction of the author's preconceived moral, is in Russia in far worse odor than it is here. Indeed, this sort of fiction usually defeats its own 'purpose'; for it is prevented, by its artificiality and made-to-order effect, from directing attention to the phase of life in question, so that, instead of exclaiming, 'How true!' the reader exclaims, 'Oh, it's only a story!'"

Of Russia's leading writer of the new school M. Cahan says:

"Korolenko's natural bent seems to be in the direction of the mysterious and the weird. He is indisputably the greatest master of Russian composition since Turgenyev and Goncharoff. His style is rich in color and exquisitely finished; but instead of the soft, enravishing splendor of Turgenyev's diction, it has a lethargic, uncanny glow which pleases but does not move. Were he an Englishman his art would, perhaps, have developed some of the qualities of Stevenson and Du Maurier. As it is, he often seeks for the quaint and the bizarre in real life; now penetrating the depths of a 'Rustling Forest' for a story of old serfdom days; now descending into the subterranean refuge of beggars to study the feelings of a boy 'In Bad Company'; now ascending to the bell-tower of a village church where a superannuated, life-long 'Bell-ringer' gasps his last amid the reverberations of his own chimes.

"Korolenko is best known to English readers as the author of 'The Blind Musician,' which it is customary to call his masterpiece. This is scarcely fair to the gifted writer; for, with all its high merits, this story is not altogether free from a certain premeditated effect which is absent from his other works, notably, 'In Bad Company.' This tale treats of life among the drink-crazed outcasts of a southern town, and of the touching friendship between the young son of the local judge and the sickly little daughter of one of the social waifs. Abandoned to his gnawing grief over the loss of his wife, the judge neglects his motherless boy; letting him roam around the streets, make excursions to the vaults of the abandoned castle, and visit the church where the tramps of the town find shelter. The lonely little nobleman thirsts for the caressing hand of a parent; and in his yearnings he finds consolation in his secret devotion to the beggar girl. The story is thoroughly convincing, and offers a striking example of a disagreeable subject made beautiful through artistic truth inspired by human sympathy. The several outcasts in the story are among the strongest creations in modern literature."

Verisimilitude is possessed in a striking degree also by the other great story-teller Chekhov. Unlike Korolenko, he has no political opinions; he is neither Socialist nor autocrat, conservative nor radical, but a man without convictions.

NOTES.

SIEGFRIED WAGNER is reported to be at work on a new opera, "The Lady Judge."

AMONG the musicians to be in America this autumn, says *The Music Trade Journal*, are Paderewski, Mark Hambourg, Sioti, De Pachmann, Georg Liebling, Rosenthal, Jonas, Carredo, Josef Hofmann, and Dohnanyi.

SOUSA disagrees with Paderewski on the subject of whistling. The latter says that a man should have a right to shoot on the spot any one who whistles. On the other hand Sousa, in a recent issue of *The Pacific Monthly*, expresses a very different view. In no other nation is the love of music so universal as in America, he asserts, and in proof of this statement he says: "The newsboy whistles as he goes upon his errands, hubbubbing over with strains from the popular airs of the day. The infectious melodies are taken up, passed on and on until even sedate and dignified business and professional men permit themselves to become young again, and whistle the pent-up melodies."

THE readers of *London Truth* were lately asked to name what they thought the twenty best books in the world. The following is the result of the vote, following the order of popularity: The Bible; Shakespeare; Homer; "Paradise Lost"; "Vanity Fair"; Dante; "The Pilgrim's Progress"; Gibbon's "Decline and Fall"; "Ivanhoe"; "Robinson Crusoe"; Carlyle's "French Revolution"; "The Imitation of Christ"; Boswell's "Life of Johnson"; "Pickwick"; Tennyson; "The Arabian Nights." Virgil; Molière; "David Copperfield"; "The Vicar of Wakefield." It is noticeable that there are on this list two ancient classics, one French, and one Italian, but not one German book nor, it may be added, one representative of American literature.

SCIENCE AND INVENTION.

AUTOMOBILES UP TO DATE.

THERE are at present three practicable systems of automobiles or horseless carriages—the electric, the gasoline or naphtha, and the steam. These are compared and described in their latest developments by Hiram Percy Maxim in *Cassier's Magazine* (September). The author bids us distrust the oft-

A REPRESENTATIVE FRENCH LONG-DISTANCE GASOLINE RACING AUTOMOBILE. BUILT BY MM. PERIN, PANHARD & CO.

Courtesy of *Cassier's Magazine*.

repeated claim that any one of these systems is better than the others. Which is the best depends, he says, on the kind of use it is to receive. He continues:

"In New York city to-day there are about a hundred motor hansom and coupé cabs in public service; about twenty motor wagons are engaged in the delivery of light merchandise; and there are between thirty and fifty private motor carriages, usually carrying two passengers. In London there are to-day about forty motor coupé cabs in public service, and fully three times as many private motor carriages as in New York, and about as many motor delivery wagons. In Paris there are twelve public motor coupé cabs in regular service, a large number of motor delivery wagons, and three or four thousands of all types of private motor vehicles. Other cities also have motor vehicles in use within their areas, but the three cities mentioned are all that it is necessary to study to indicate the present condition of affairs. In London, Paris, and New York every one of the public motor hansom or motor coupé cabs is propelled by the electric system, using electric storage batteries. In New York about 95 per cent. of the private motor carriages are similarly propelled, and every one of the delivery wagons as well. The remaining 5 per cent. of practical private motor vehicles which are seen upon the streets and in regular use are propelled by gasoline engines. In Boston, where local causes have affected development, steam takes about an even place with gasoline. In London not more than 20 per cent. of the private motor vehicles used regularly are propelled by storage batteries. The remaining ones use gasoline engines, or 'petrol motors,' as they have been called. The motor delivery service, both heavy and light, is almost entirely accomplished by steam. In Paris about 95 per cent. of the private motor vehicles are propelled by gasoline engines or '*moteurs à pétrole*.' The same is probably the case with the motor light delivery wagons. The other 5 per cent. of all vehicles in use may be safely said to be equally divided between electricity and steam, the latter being almost exclusively used for heavy traction. . . . There is every reason for us to recognize that for short distances, for relatively light loads, and courses within a limited area, the electric system has succeeded in forcing out all other systems; for heavy weights and long distances steam has succeeded in displacing all competitors; while for high speeds, for indefinite distances, and light weights, the gasoline engine has proven best suited."

Mr. Maxim first takes up the electric system, whose advantages he sets forth as follows:

"In public city service, it is obviously necessary that a cab, in order to be successful, must be absolutely controllable in heavy traffic even in comparatively unskilled hands, free from unpleasant odors and the general mechanical disadvantages usually inseparable from an engine, and this, added to the limited requirements of cab service as to mileage, makes it easy to understand why the electrical system has been the most successful. How long this state of affairs will exist depends entirely upon what is accomplished with the other systems. As improvement in the capacity per pound of storage battery is, to all appearances, advancing more rapidly than improvement in gasoline, steam, or other systems, it does not seem likely that electricity for cab service will very soon be supplanted. In the case of the private motor vehicle, the requirements are not as uniform as with the public cab, but nevertheless there has been enough experience to permit classification of the different requirements and to understand their limits. It does not seem to be generally understood that the intentions of the owner regarding his motor carriage invariably determine the best system for his purpose. Other things being equal, the electric carriage is generally preferred on account of its extreme simplicity of operation, its ability to meet almost ideal esthetic demands, and its instantaneous availability. The limitations of the best electrical carriage on the market to-day are, therefore, an index of the status of the electric carriage."

"It is possible to buy to-day in America an electric carriage which will carry either two or four passengers a distance of thirty miles over ordinary grades at an average speed of eleven miles an hour on one charge of its storage battery."

"The operation of the carriage is the simplest of all. The maintenance consists in keeping the motor commutator and brushes clean, bearings oiled, nuts tight, charging batteries, and, from time to time, adding to the electrolyte in the batteries enough water to make up for evaporation and decomposition losses. In practise it is found that this is all that is really required, and that but little difficulty is experienced if the carriage is turned over to an ordinary stable-man after taking a little pains in his instruction."

Next comes the gasoline or naphtha system, in which, it appears, our American makers have recently stepped to the front. Says Mr. Maxim:

"Last year the best gasoline equipments were made in Europe. To-day it is more than probable that the best gasoline equipments can be obtained in America, altho it must be understood that there are also inferior ones offered for sale there. The best

American gasoline carriage is to-day an entirely practical and serviceable vehicle. It can be depended upon every day in the year if it be given reasonable opportunities. It requires more skill to operate than is necessary with an electric carriage, and considerably more skill to maintain it. . . .

"The gasoline used in the best machines is what is generally known in the trade as 72 degree. Any gasoline or naphtha is suitable, altho that between 68 and 74 degrees gives the best results."

This can be purchased throughout the United States at a price which averages fifteen cents per gallon. In the best gasoline carriages in which two passengers are carried and which, without passengers, weigh about seven hundred pounds, the consumption of gasoline is, on ordinary country roads, about 0.06 gallon per mile."

It is necessary, Mr. Maxim tells us, that a gasoline automobile should be cared for by a mechanic. In the hands of any one else it is "practically useless." An ordinary stable man can not manage one. Where the owner has no mechanical bent and can not keep an expert mechanic, his machine is often cared for by one of the companies that make a specialty of looking out for them. Gasoline motors are not usually successful when the load is more than fifteen hundred pounds. Of steam carriages, the third and last type, the writer speaks as follows:

"These have been produced especially in the vicinity of Boston, in the United States, and, in a few instances, apparently perform the regular service in which light gasoline vehicles elsewhere

THE STANLEY STEAM AUTOMOBILE. BUILT BY THE MOBILE COMPANY OF AMERICA, NEW YORK.

Courtesy of Cassier's Magazine.

excel. They are operated by a small steam-boiler placed under the seat, and a very small high-speed steam-engine, geared to the driving-axle. The weights are very much less than in the case of the gasoline carriage, sometimes as much as 50 per cent., and the speeds are very high. . . . The fire is made to take care of itself automatically in the best vehicles. A cloud of visible steam at the exhaust is difficult to avoid, and there is always a slight roar from the fire, which is usually one of gasoline, burning in a large Bunsen burner. . . .

"The steam carriage is able to fill the unlimited distance requirements as well as the gasoline vehicle. Its peculiarities, however, are decidedly different, and there are very few successful light steam vehicles in daily use, as compared with the number of successful gasoline vehicles in daily service. For weights exceeding fifteen hundred pounds and distances exceeding even ten miles, however, steam has proven more successful than anything else. In Great Britain there are several vehicles in regular use for carrying heavy loads of general merchandise. In France the same condition of affairs exists in the transportation of large numbers of passengers and heavy merchandise. From a knowledge, however, of experiments that are being made on both sides of the Atlantic, it seems very probable that, at least for the transportation of heavy loads of passengers over fairly long distances, other systems will be developed in the near future which will seriously compete with steam."

In conclusion, the situation as regards the mechanical traction of carriages and wagons is thus summarized by Mr. Maxim:

"The motor-vehicle situation, then, as we have to face it to-day, offers three different practicable systems for the propulsion of road vehicles. All three are eminently successful and satisfactory in their field, but none of them completely fills all fields.

Instead of the broad statements which we see continually that this or that system is the best for all services, we find that it depends entirely upon the requirements and limitations of the particular case in question."

IS THE UNIVERSE INFINITE?

INFINITY is a word that has always bothered theologians, philosophers, astronomers, and mathematicians alike. Once they all gloried in speculating about it, but recently the immensity of the idea seems to have fatigued a good many of them, and they are trying to see whether we can not get along without it. Hence the suggestion that the universe may have boundaries beyond which there is but empty space, and even the hint that our three-dimensional space itself may possess curvature in a higher dimension, so that it may be of limited extent. M. A. Muller, who contributes to the *Revue Scientifique* (August 26) an article on "The Infinity of the Stellar World," does not go into these speculations, which belong to the shadowy domain between mathematics and metaphysics; but he presents some interesting considerations relating to the stellar universe. He lays stress on the fact that the matter concentrated in suns and planets may be only a fraction of that which we are accustomed to regard as "empty" interstellar space. The sun, if expanded so as to fill the limits within the farthest star whose distance we can accurately measure, would become infinitely less dense than the vacuum in a Crookes tube. Hence space, which seems from our observations to be "empty," may possibly contain matter having more gravitational power than the whole solar system. There is no reason why this tenuous matter, which may be matter in its primordial form, and may also be identical with the luminiferous ether, should be supposed limited in extent simply because matter in its concentrated form, as planets and suns, is so limited. A still more vast conception of infinity arises from the analogy between worlds and atoms—between a system of planets and a system of atoms forming a compound molecule. How do we know that our solar system is not a single molecule of some higher world? How do we know, on the other hand, that the chemist's molecule is not a world by itself, of an infinitely smaller order? This speculation, made earlier by the English mathematician W. K. Clifford, is thus presented by M. Muller:

"Portions of matter, however small they may be, may perhaps be capable of as much division as is the immensity of astronomic space, and the isolated atom of free ether may be . . . as complex for its own dimensions as is the field of stellar space in relation to a single star. There is an analogy of constitution between the isolated atom of free ether and the stellar molecule that represents to us the atom of astronomic space, both being plunged into an indefinitely great medium. We are thus in the presence of what is commonly called the infinitely great and the infinitely little.

"Consequently, altho we can not reach or even conceive the simple atom of the material world, we find these same atoms in movement in the material representation of which celestial space constitutes the type. On the other hand, mechanical energy is revealed to us by the action of these atoms across a medium, which renders untenable the hypothesis of action at a distance, as well for the molecule of free ether as for the stellar molecule.

"This analogy leads us to think that the celestial universe is itself only the infinitely small portion of a world that it will never be given us to know. We are thus led to conceive of the infinity of the stellar world, since the importance of the etheric medium adds much to it and because the materiality of the stars represents only a fraction of that of the field of space.

"We may be permitted, in closing, to quote those few lines of Pascal where he says that 'whenever a proposition is inconceivable we must suspend judgment and not deny it simply for this reason, but examine its contrary; and if this is found to be manifestly false, we may boldly affirm the former, incomprehensible tho it may be.'—*Translation made for THE LITERARY DIGEST.*

THE NORTH STAR TRIPLE.

THE discovery is announced from Lick Observatory that Polaris, usually called "the North Star," has two invisible companions. In other words, at least two planets belong to the system of which it is the sun. Strictly speaking, only one of these is a planet proper, while the other is its satellite, revolving about the larger body, while both bodies make a circuit about the Pole Star itself. This discovery, which rests entirely on the evidence of the spectroscope, as the system is too far distant to be seen with the telescope, was made thus, according to an interview with Prof. W. W. Campbell, of the observatory, quoted in *The Journal* (New York). Said Professor Campbell:

"The observations of Polaris were made with the Mills spectroscope attached to the 36-inch telescope. From the well-known principle of the shifting of the line in the spectrum of a star we can determine whether the star is approaching or receding from the observer, and how rapidly. For most stars the velocity is constant. For some stars the velocity is variable, due to the attractions of companion stars.

"The recent observations of Polaris at Lick Observatory show that its velocity is variable. It is approaching the solar system now with a velocity of 8 kilometers [5 miles] per second. This will increase in two days to 14 kilometers [8½ miles], and in the next two days will decrease again to 8 kilometers. This cycle of change is repeated every four days. The bright Polaris, therefore, revolves about the center of gravity of itself and its invisible companions once in four days. The orbit is nearly circular and is comparable in size with the moon's orbit around the earth.

"This center of gravity, and therefore the binary system, is approaching the solar system at present with a velocity of 11½ kilometers per second. A few measures of the velocity of Polaris made here in 1896 gave its approach at the rate of 20 kilometers per second. Part of this change since 1896 could be due to a change in position of the orbit of the binary system, but most of it must have been produced by the attraction of a third body on the two bodies comprising the four-day system.

"Both companions of Polaris are invisible, but their presence is proved by disturbances which their attractions produce in the motion of the bright Polaris."

Insanity in Kansas.—Newspaper reports have it that insanity is increasing in Kansas faster than in neighboring States. Dr. Albert S. Ashmead, in a letter to *The Tribune* (New York, September 17), says that he regards this as largely an apparent effect due to the fact that lunatics formerly at large are now confined in asylums, and hence appear in collected statistics. Still Dr. Ashmead believes that there certainly is an abnormal increase in the number of mentally unsound people in the State, and *The Tribune* sets to work editorially to account for it. It says: "The American, when he left the settled region, started out with a restless, active brain. He was inventive, speculative, full of nervous energy, which at one point was enterprise and a little further on lack of balance. He took his family into regions where he and they slaved to build a new civilization. This work bore particularly hard on the women. The combined burden of loneliness, motherhood, and the killing labor of pioneering was enough to drive thousands of them insane, and, perhaps, leave a tendency to insanity in their children. Even the men, with their superior chance for companionship away from the farmhouse, were solitary and overburdened in comparison with the most remote tenant of the old Eastern farms. Under such circumstances it would be remarkable, indeed, if the peopling of the plains did not develop every eccentricity latent in the settlers." To account for the fact that no such result is seen in the similarly settled States of Nebraska and Iowa, the writer reminds us that Kansas was settled by enthusiasts in a time of political excitement. He says: "The moderate, well-balanced farmer either from the North or the South was not the one who rushed to Kansas to determine its political complexion. We do not mean to say that the early Kansans were insane, but the line between sanity and insanity is often a narrow one, and it might easily be possible that a large sprinkling of fanatics in the foundation of a

community subject to the hardships and loneliness common to all the surrounding country, would leave traces in the character of the population half a century later."

WRECKING A BRIDGE BY ELECTRICITY.

AN ingenious method of destroying an old wooden bridge quickly, without injuring its stone abutments, was recently employed in Clinton, Ind. The old toll bridge over the Wabash at that place had been purchased by the county authorities, who wished to replace the wooden superstructure with one of steel, to be erected on the old piers and abutments. The former owner

BRIDGE DESTROYED BY ELECTRICITY.

agreed to remove the frame structure in thirty days, but found this to be a harder task than he had bargained for. His troubles are thus described in *The Western Electrician* (Chicago, September 9):

"He traveled about, consulted bridge- and house-wreckers, wrote letters, and sent telegrams, but all to no purpose; no company or individual was found that would agree to take down the timbers, leaving the masonry intact, in the time available. The thirty days passed, and the old bridge still stood. The owner succeeded in getting an extension of a week, but he was at his wits' end. The structure could be blown up with dynamite, but the explosion would destroy the piers also. It could be set on fire, but that would crack or injure the masonry. Several other plans were suggested, but the only sure way seemed to be the erection of false work, and that method was out of the question, owing to the shortness of the time allotted for the work."

At this juncture an electrician of Clinton, a Mr. Mills, came forward with a proposal to use electricity in a novel manner, not to blow up the bridge, but to burn it apart. This method, although entirely unheard of, proved effective. It was put into execution thus:

"Each span of the bridge was composed of nine chords, each consisting of three timbers. Therefore, if these twenty-seven sills were cut simultaneously the span would drop between the piers to the river beneath. This was what was actually done, the cutting being accomplished by burning through the wood by loops of iron resistance wire made red-hot by the passage of an electric current. The timbers were of yellow poplar and nine inches square. Each one was burned simultaneously in two places, about ten feet from the pier at each end. Thus the mass of timbers dropped well inside the piers without injuring them.

"By this method it was required that fifty-four resistance loops be heated to wreck each span. No. 12 iron wire was used for these loops, and over one hundred feet of it was required. At the bottom of each loop a five-pound sash weight was fastened to an insulator. This weight pulled the loop down as it burned its way through the timber. Sufficient current was used to heat the

iron wire cherry-red. Alternating current at 50 volts pressure was employed, and the distance of the farthest point of the temporary wiring to the shore connection was 650 feet. One span was wrecked at a time, and the time that elapsed from the moment of turning on the current until the fall of the span was one hour and forty minutes in each case.

"Examination after the fall of the bridge showed that all the sills were burned by the wire loops in exactly the same manner—five inches deep from the top and three inches deep on the sides. When this depth was reached the weight of the span fractured the remaining wood. The cut made by the hot wire was quite sharp and clean, and the wood was not charred more than an inch from the place of fracture.

"The current was first turned on about five o'clock in the morning on the day of the wrecking, and at two o'clock in the afternoon the last span crashed to the river bed, and a great shout of admiration went up from the throats of about two thousand spectators who witnessed the feat."

The picture is a snapshot taken just as the first span was falling.

SIGNOR MARCONI HERE.

WILLIAM MARCONI, whose name is so closely associated in the public mind with his successful system of wireless telegraphy, is now in this country. While here he will report the international yacht race by his new method of communication, and later make some tests for the United States Government. The statement, recently quoted in these columns, that experiments in wireless telegraphy have never yet really succeeded in this country, makes his presence specially interesting, for Marconi's success abroad in telegraphing through space is unquestioned. Says *The Western Electrician*:

"By means of the Marconi system and submarine cable and land wires, messages will be transmitted to *The Herald* office and bulletined almost simultaneously with the movements of yachts described in despatches. . . . The transmitting-instrument will be upon the large ocean-going Plant Line steamer *Grande Duchesse*. Upon the upper deck of the vessel will be placed a tall pole, sixty feet in air above the water-line. Signor Marconi and two assistants will be on this vessel, and a running account will be telegraphed by them. On the cable ship, anchored near Scotland Light, a similar pole will be erected, and here two expert operators will be stationed to receive messages from the swift-moving *Grande Duchesse*. From the cable ship the messages will go by submarine and land wires direct to *The Herald* office."

We are told by *The Scientific American* that the Italian is to have a rival at the yacht races, as the steamer *Ponce* will also report the event in like manner, using the instruments devised by Mr. W. J. Clarke. These, however, work on what is generally called the "Marconi" system, that is, they use electromagnetic or "Hertzian" waves in space.

New Tests of the Holland Boat.—This submarine torpedo-boat is now undergoing an elaborate series of tests at the hands of a government board at Little Peconic Bay, L. I. Says *Electricity*: "Since the *Holland* was tested over a year ago in Staten Island Sound it has undergone a complete overhauling, and several important changes have been made in the operating machinery as well as elsewhere. Little Peconic Bay was selected as the place of trial on account of its level bottom and the comparatively small number of moving craft. The principal test will be held over a two-mile course, and will consist of diving, running under water, running awash, and the discharge of torpedoes. Special attention, it is said, will be paid to the time in which the boat dives, the steadiness of her course, and the accuracy with which her torpedoes are discharged. From trials which have so far taken place it has been ascertained that the boat can be made to disappear below the surface in from five to ten seconds. . . . As now equipped, the vessel can carry sufficient gasoline to give

it a cruising radius of about 1,500 miles at a speed of six miles an hour. It is rather curious to note that from the tests that have already been made it is claimed that when the boat is speeding under water propelled by electricity drawn from the storage-batteries it makes better time than when running on the surface under gasoline engine power."

Smokeless Coal.—A "smokeless coal" of recent invention has just been tested in England. In the course of the experiments, which are described in *La Nature* (July 22), the new combustible "was burned in ordinary grates and also in braziers placed in the middle of the room, and it was found that it gave off only traces of smoke, which were hardly perceptible even when fresh coal was added to the fire. The fire resembled an extraordinarily brilliant coke fire and had long white and blue flames. The heat given off is intense, and as to the production of steam, one pound of coal evaporates fourteen pounds of water. The residues (ashes, etc.) do not exceed three per cent. For industrial use, the combustible is molded into perforated bricks weighing about ten pounds apiece, but for domestic use it takes the form of cakes or lumps of lenticular form, of which 140 weigh 100 pounds. At present the bricks can be bought in London at retail for 21s. [\$5.25] a ton. We are told that the new combustible is composed of 93 per cent. of coal-dust and of 7 per cent. of a mixture of pine and caustic lime. These three substances are mixed and run into molds, where they harden to such a degree that they do not separate in burning."—*Translation made for THE LITERARY DIGEST.*

Cause of Death from Burning.—An Italian physician, Dr. Azzarello, tells us that burns cause death by poisons formed in the tissues by the action of the heat. According to *Modern Medicine*, he "divides the theories of the causes of death from burns into the following classes: (1) Death from shock or extreme pain; (2) embolism, thrombosis, and destruction of blood elements; (3) pyemic infection through the burned surface; (4) poisons formed by the action of heat on the tissues, or auto-intoxication from deficient excretion by the skin. The author has shown by experimenting upon dogs and rabbits that the intoxication theory is the correct one. A chloroformed animal died in the same time, and with the same symptoms, as one not anesthetized. Section of the nerves supplying the burned part causes no alteration in the effect of the burns. Bodies of animals burned to death failed to show any embolism, thrombosis, or great destruction of blood-corpuscles. The rapidity of death was too great for the action of bacteria to be the cause. On the other hand, blood from burned animals and extracts of burned tissues were toxic to other animals, and caused death with symptoms similar to those of the burned animal."

SCIENCE BREVITIES.

PROFESSOR CROCKER of Columbia says that the Japanese have not been very successful as electrical engineers. Labor is eight times as cheap as it is here, but the product is proportionately poor. Electrical studies, however, are up to date.

THE DENSITY AND DIMENSIONS OF ATOMS.—Some highly interesting experiments upon the absorption of X-rays and cathode rays by various kinds of matter have recently been described by Signor Guglielmo. They were undertaken, says *The Electrical Review*, "with a view to deducing the dimensions, absolute weights, and densities of atoms. The discussion is too long to be abstracted here, but the result reached is that the density of atoms is . . . 80,000,000 times that of water, or that atoms weigh about 28,000,000 pounds per cubic inch."

ALCOHOL AND LIFE INSURANCE.—"The excessive mortality in the assured who are engaged in the liquor trade has for a long time exercised the minds of the directors of life insurance companies," says *The Lancet*, London. "The figures put forth by the Abstainers and General Insurance Company present the drink question from another point of view. From a report made by Mr. James Meikle upon the mortality experience of the Abstainers' ordinary department during the first fourteen years of the company, it appeared that but forty-eight deaths had occurred out of each hundred anticipated under the table. If this experience continues to prevail in the future, abstainers will have justice on their side if they claim that they should pay a lower premium than those persons who habitually take alcohol, even tho' in small quantities. It will, however, be necessary to ascertain how long the applicant has been a total abstainer, as reformed drunkards who have become abstainers are not good lives."

THE RELIGIOUS WORLD.

"THE MOST REMARKABLE WOMAN IN THE WORLD'S HISTORY."

SUCH is the startling phrase applied by Dr. Richard Hodgson, president of the American section of the Society for Psychical Research, to Mrs. Leonora E. Piper, of Arlington Heights, Mass., who has been under the scientific observation of that society for thirteen years. It will be remembered (see LITERARY DIGEST, June 24) that Professor Hyslop, of Columbia University, expressed a short time ago the sure conviction that

MRS. LEONORA E. PIPER.

within two or three years the society would be able to present scientific proof of existence after death, obtained by the aid of Mrs. Piper. Dr. Hodgson also promises us within the same period "a new revelation, a new faith." *Light* (London) quotes from an article by him in *Le Journal d'Études Psychologiques* (August) as follows:

"During a period of twelve years," said Professor Hodgson, "I have had, through the mediumship of Mrs. Piper, communications with the spirits of those who have been for some time dead. During the first few years I absolutely disbelieved in her power. I had but one object, to discover fraud and trickery, and I had had plenty of experience with Mme. Blavatsky and with the crowds that gathered round her when she was alive. Frankly, I went to Mrs. Piper, with Professor James, about twelve years ago, with the object of unmasking her. To-day I am prepared to say that I believe in the possibility of receiving messages from what is called the world of spirits. I entered the house profoundly materialist, not believing in the continuance of life after death, and to-day I simply say, 'I believe.' The proof has been given to me in such a way as to remove from me the possibility of a doubt.

"The influence which guides Mrs. Piper now announced that in the future its action would be exercised in such a way as to diminish the distance which separates the two states, the state before death and the state subsequent to death. The change took place in June, 1897. The earlier guides, 'Phinuit,' 'Pelham,' and others, quitted in effect the circle of Mrs. Piper's influence, and their places were taken by two individuals in particular who actually direct the communications which she receives. We recognize the first, who communicates by the voice, under the name of 'Imperator,' and the second, who writes, is known as 'Rector.' I have received from the first innumerable communications, especially on the relations which exist between man and the Infinite. . . .

"The world is on the eve of great developments. In two years' time, or perhaps sooner, by means of the most remarkable woman who has appeared in the world's history, I will publish to the world a new interpretation of the laws of humanity, of that great primitive universal religion which no dogma and no sect of to-day can contradict. It will be a new revelation, a new faith. To suffering humanity, tortured for centuries with doubts, wavering first this way and then that, it will need no explanation. The new and yet ever old truths need only the restating—they compel belief."

Light also quotes Professor James's account of some of his experiences with Mrs. Piper:

"We have repeatedly heard from Mrs. Piper in trance things of which we were not at the moment aware. On my mother-in-law's second visit to the medium, she was told that one of her daughters was suffering from a severe pain in the back that day. This altogether unusual occurrence, unknown to the sitter, proved to be true.

"My wife and brother received from Mrs. Piper the announcement of my aunt's death in New York before we had received the telegram breaking the news to us.

"The most convincing things said about my own immediate household were either very intimate or very trivial. Unfortunately, the former things are private and personal. She told of my killing a gray and white cat with ether, and described how it had spun around and around before dying. She told how my New York aunt had written a letter to my wife, warning her against all mediums, and then went off on a most amusing criticism full of traits of the excellent woman's character.

"She was strong on the events in our nursery, and gave striking advice during our first visit to her about the way to deal with certain 'tantrums' of our second child, 'little Billy boy,' as she called him, reproducing his nursery name. She told how the crib creaked at night, how a certain rocking-chair creaked mysteriously, how my wife had heard footsteps on the staircase, etc. Insignificant as these things sound when read, the accumulation of a large number of them has an irresistible effect."

The Rev. Minot J. Savage, in a passage in the *New York Journal* quoted by *Light*, says:

"My first sitting with Mrs. Piper was a surprising one. She was then living on Pinckney Street, in Boston.

"Immediately on becoming entranced her control, Dr. Phinuit, said there were many spirit friends present. Among them, he said, was an old man, whom he described, but only in a general way. Then he said: 'He is your father, and he calls you Judson.'

"Attention was also called to the fact that he had a peculiar bare spot on his head, and Mrs. Piper put her hand on the corresponding place on her own head.

"Now for the facts that give these two apparently simple points whatever significance they possess. My father had died during the preceding summer, aged ninety years and six months. He had never lived in Boston, and Mrs. Piper, I am quite sure, had never seen him nor been in any way interested in him. He wasn't at all bald, but when quite young had been burned so that there was a bare spot on the right side of the top of his head, perhaps an inch wide and three inches long, running from the forehead back toward the crown. This he covered by combing his hair over it. This was the spot that Mrs. Piper indicated.

"Now as to the name by which he addressed me: I was given the middle name Judson at the request of a half-sister, my father's daughter, who died soon after I was born. Out of tenderness for her memory father always used, when I was a boy, to call me Judson, tho all the rest of the family called me by my first name, Minot. In his later life father also got to calling me by my first name.

"No one, therefore, had called me by my second name for many years. I was, therefore, naturally struck and surprised by suddenly hearing one who claimed to be my father giving me once more my old boyhood name. During this same sitting Mrs. Piper's control also said:

"Here is somebody who says his name is John. He was your brother. No, not your brother, your half-brother.' Then, pressing her hand on the base of her brain, she moaned as she swayed to and fro. Then she continued:

"He said it was so hard to die away off there all alone. How he did want to see mother!"

"She then went on to explain that he died from a fall, striking the back of his head. Her whole account of this was realistic in the extreme. My half-brother, John, the son of my mother—for both father and mother had been twice married—died several years previous to this sitting. While building a mill in Michigan he fell, striking the back of his head on a piece of timber. He was far from friends, and was a most tender lover of his mother."

THE CHRISTIAN VIEW OF DISEASE.

WITH Christian Science, divine healing, mental healing, and faith cure all insisting upon claims to recognition, each presenting numerous testimonies to cures effected and each upholding its own peculiar philosophy and distinct methods of procedure, the wayfaring man is subject these days to something like distraction. What is the true view, at once Christian and scientific, of disease and death? James T. Bixby undertakes to answer in *The New World* (September).

In the Old Testament, we are told, the prophets represented Yahweh as the author alike of sickness and of health, of death as of life, in striking contrast to the demonology of nations surrounding the Jews. The demoniac theory persisted, however, even down to the days of Jesus, but He gave it no sanction. "If any word of Jesus lends color to it, it is only as a popular figure of speech, or as humoring the lunatic's delusion, that he uses it." Yet to-day, in Chicago, thousands listen sympathetically to Dr. Doxie, whose theory of divine healing rests upon the idea that disease is the work of Satan, and who brackets doctors and drugs with devils as foes of Christ.

Mr. Bixby proceeds briefly to controvert this view of disease, and also, at greater length, the views held by the Christian Scientists, who dismiss disease as an unreal image engendered by aberrant imagination and hereditary dread. He does not deny that cures have been wrought:

"It is not to be denied that, under the influence of belief in this new theory, wonderful cures have been wrought. But in all ages and lands, under all sorts of theories, faiths, superstitions, and imaginations, marvelous healings and restorations of sight to the blind, speech to the dumb, and power of motion to the paralyzed have been effected. Twenty years back, marvelous cures of all kinds were wrought by faith in blue glass. A few years ago a man in Denver named Schlatter wrought great numbers of cures by his blessed handkerchiefs. Mesmer at Paris, in the last century, effected them by animal magnetism and his famous tub. In the Middle Ages kings cured scrofula by the royal touch. At Lourdes, the holy spring and faith in the Virgin effect these miracles. At Naples, the blood of St. Januarius produces them; in Ceylon, the tooth of Buddha; in Africa, the rattle of the sorcerer and the mummeries of the medicine-man; in Persia, fifty years ago, the touch of the Bab; at Mecca, the kissing of the black stone work these same marvelous cures. In Nancy the French doctors cure many severe maladies and even perform surgical operations painlessly by hypnotism. All over the United States, innumerable quacks and patent medicines have their sworn witnesses and affidavits of magical healings of the most helpless cases which they have wrought."

These cures, wrought under dozens of different theories, have some force in common. This force is found, as the psychologists have shown, "in the power of mental suggestion and expectant attention over the body, especially the nervous organism, when anything strange has more than ordinarily excited the mental powers." Mr. Bixby proceeds to tell of cases of similar cure wrought entirely by sudden excitement, whether of joy or dread. Anything that rouses the lethargic mind and sets the psychic forces thrilling with new energy will frequently accomplish the same result.

"What, then, is the rational and Christian view of sickness?" Mr. Bixby proceeds to answer as follows:

"It is that sickness is a natural incident to those general laws of life, growth, and health which the Creator of all has ordained. It is perhaps conceivable that God might have given to every living creature a perfect inward mechanism and a perfect environment, and thus avoided all possibility of imperfect life. But that would have required special and constant interposition, and allowed no independence and interaction of living things, and no very great abundance of life; none of that play of effort, liberty, spontaneity, and heredity that we now have. Instead of this, as observation of nature shows, God chose these latter advantages. He filled the earth to overflowing with life; He left each

species its due freedom to seek its food and pleasure where it chose. He linked the generations together by the penalties and blessings of heredity. He encouraged each to strive and push upward. He established everywhere, as the very conditions of knowledge and improvement, universal laws of cause and effect."

In this complex world, what is sickness to one form of life is health to another. Each tree or plant must have its proper environment; so must each human being:

"God's system is not that of compulsory health to man—to the filthy just as much as to the clean, to the ignorant and the coward as much as to the enlightened and brave; but He gives this great blessing on conditions. As long as men and women observe nature's laws of health, all will go well with them. But if they do not strive to learn those laws; or, if knowing them, they willfully disobey them, they must suffer the consequences. If farmers will carelessly poison their wells with the worst kind of filth, if men will besot their brains with alcohol, if women will lead sedentary lives in close, unwholesome atmosphere, their lungs deprived of half their natural capacity by fashionable constriction of the waist, can they expect either nature or a just God to overlook such abuse of the laws of health?"

When these laws have been violated, the best remedy is a return to normal hygienic habits and conditions, and patience to let the healing power of nature do its work. Drugs are but auxiliaries. And mind cure, faith cure, and Christian Science may be good as stimulants and aids; as panaceas or substitutes for medical skill they are foolish.

It may seem to some incredible that God should ordain disease; but He has surely ordained what is worse to our human thought—death; and resignation to what is inevitable is the Christian's duty. Such resignation brings its own reward, if not in bodily recovery, then in spiritual good:

"Where else is there such a school for tender helpfulness and touching disinterestedness as in the sick-room? And in its chastening shadows, what new worth and nobler dignity does family life take on! How, as the strength fades, do the pomps of the world and the fascinations of the senses sink into their true insignificance! How conscience, on the contrary, is quickened; how the immortal standards of truth and righteousness rise up in their regal majesty; how avarice and vice shrivel, and the blessedness of the meek and the pure in heart beam forth in heavenly beauty! Wisely did noble Thomas Arnold, that grand Christian teacher of Rugby, exclaim a few hours before his death, as if a great light had come to him: 'Thank God for pain!'

"What else, indeed, can so enable a man to know himself as sickness can? What else can strip the heart of all illusions and purge it of the chaff of vanity and ambition? What else can bring the soul into such trustful dependence on God, lifting the heart above the commotions of this turbulent world into that inner tranquillity which comes through devout communion with the unchangeable divine Love?"

RELIGIOUS TEACHING OF COUNT TOLSTOY.

IN his interpretation of Christianity Tolstoy has traveled a long distance from the traditional views held by both Catholics and Protestants, so that he now finds himself almost the exponent of another system of religion, too advanced for traditional Christians and yet too much bound up with Christian nomenclature and mythology to suit the tastes of free-thinkers. Mr. Samuel E. Keeble, while acknowledging that in some respects the great Russian's indictment of modern Christianity is a true one, yet thinks that his system of teaching has vital defects on the religious side which are misleading many of his followers. Mr. Keeble says (in *The American Illustrated Methodist Magazine*):

"Count Tolstoy charges the church with misleading men by substituting theology for ethics. He declares that the process began with the preaching of St. Paul, who knew but imperfectly the ethical doctrine set forth in the Gospel of Matthew, and who

preached a metaphysico-cabalistic theory entirely foreign to the doctrine of Jesus; this theory was perfected under Constantine, when the existing pagan social organization was proclaimed Christian simply by covering it with the mantle of Christianity. After Constantine, that arch-pagan, whom the church, in spite of all his vices and crimes, admits to the category of the saints—after Constantine, began the domination of the councils, and the center of gravity of Christianity was permanently displaced till only the metaphysical portion was left in view. And this metaphysical theory, with its accompanying ceremonial, deviated more and more from its true primitive meaning, until it has reached its present stage of development as a doctrine which explains the mysteries of a celestial life beyond the comprehension of human reason, and, with all its complicated formulas, gives no religious guidance whatever with regard to the regulations of this earthly life' ('My Religion,' p. 219)."

When Tolstoy sets out to prove the essential paganism of modern Christendom, says the writer, he has an easy task:

"The Machiavellian politics, the rivalries, jealousies, ambitions, the despotisms, and tyrannies, the class legislation, the wars and vast armaments, and the economic system which divides society everywhere into two hostile camps of wealthy capitalists and poor workmen—all these do not savor much of the noble name of Christ, which modern civilization takes upon itself. Very few true Christians will differ from Tolstoy here. Nor when he attacks the world of fashionable society, with its balls and theaters, its receptions and parties, its calls and gossip, its erotic poetry and neurotic fiction, its lust and jealousy, its rivalry and hate, its pride and vanity, with all of which he is so well acquainted at first hand."

After pointing out what he deems the indefensible literalness of view with which Tolstoy interprets Christ's words—his doctrines of non-resistance of evil, the abolition of property, the banishing of amusements, his condemnation of oaths and courts of law—Mr. Keeble continues:

"Suffice it to say that Tolstoy approaches the sayings of Jesus with an entire lack of common sense and without the historical spirit. He makes none of those necessary qualifications which Christ expected would be made, falling into the same error as Ricardo's disciples in economics, applying, in all literality, doctrines meant to be accepted with common-sense qualifications. Tolstoy never takes into consideration the nature of the audience Christ addressed, or the moral evils our Lord was aiming at. He does not appreciate our Lord's intellectual method—that of paradox and absolute statement, made to startle and awaken a morally dead society. He quite closes his eyes also to the fact that Christ qualifies His own teaching by both word and deed, thereby making it rational, practicable, and compatible with human progress. It is only too sadly true that Christians are prone to explain away the ethics of the Sermon on the Mount, or to ignore it as a mere counsel of perfection, an unattainable ethical ideal; but this does not justify an irrational, woodenly literal way of regarding and practising that teaching.

"It is not sufficiently pointed out that Tolstoy, in addition to these mistakes, really severs Christ's ethics from their root in religion. Casual readers of his writings are misled into thinking him religiously orthodox by his constant use of the terms, 'God,' 'Father,' 'the soul,' etc. The deception is the more thorough because he declares that Christ's Christianity is 'the strictest, purest, and fullest system of metaphysical ethics, above the most ambitious ascent of human reason, and in the wide circle of which moves to its achievement all highest human effort' ('My Confes-

sion,' p. 170); and again in 'My Religion,' that 'the metaphysical and ethical portions [of Christ's doctrine] are so closely united that one can not be separated from the other without destroying the vitality of the whole.'"

But, says Mr. Keeble, Tolstoy invents a system of "metaphysics" of his own as far removed from that of Jesus as he claims the system of St. Paul is. Its basis is a poetical positivism or a vague pantheism—it is hard to tell which. The "God" of Tolstoy has almost nothing in common with the God of Jesus Christ—the loving heavenly Father. Tolstoy further denies the doctrines of the incarnation, the divinity and atonement of Christ, miracle and prayer, the resurrection, and even the immortality of the soul. The latter statement, which has been denied, Mr. Keeble shows to be true by numerous quotations from Tolstoy's works. After paying high tribute to Count Tolstoy, terming him a great modern Francis of Assisi or Savonarola in his exposure of the evils of our civilization, Mr. Keeble says in conclusion:

"He is rapidly becoming an object of so much reverence that this, combined with his literary skill and genius in setting forth his views, predisposes men to regard both his criticism of the church and his exposition of essential Christianity as infallible. This predisposition needs to be counteracted. If Count Tolstoy's program were universally accepted, we should undoubtedly be delivered from a multitude of social, political, industrial, and moral evils; but the state of society ensnaring would be the antipodes of the highly developed, many-hued civilization, sweet, sane,

TOLSTOY'S HOME AT YASNAIA POLIANA.

and full-orbed, which Christ's true doctrine of redeeming love and ethical holiness is destined yet to establish upon the earth. We love Count Tolstoy, and owe him much, both of heart-searching and of stimulus; but we love Jesus Christ more, and can not, without protest, see His teaching deleted of its most precious religious truths, even by one so noble and so good as Count Tolstoy."

FANATICISM AS A SOURCE OF CRIME.

FANATICISM has been defined as "belief, on its emotional side, rising to such a height as to interfere with the normal evolution of the psychic life." In this sense, says Dr. August Loewenstein in *The American Journal of Sociology*, we observe the development of an abnormal one-sidedness which shows itself in an intense intolerance for other opinions, and a desire to save one's own soul which is to be deterred by nothing, not even by crime. He continues:

"The results of an analysis of a series of legal actions involving prosecution for crime supposedly committed under the spell of fanatical religious beliefs serve to illustrate this point. Thus the Convulsionists, a sect existing in Paris about 1760, were wont to crucify members of their order, in emulation of the crucifixion of Jesus, in the belief that the souls of the surviving members would be saved by the sacrifice of their fellows. In 1817 the 'Päschelians,' an Austrian sect, murdered a man, his wife, and their daughter, under the delusion that the trio, who refused to go with the fanatics, were possessed of the devil. On the following day they crucified one of their own number, a girl of eighteen years, who had offered herself for the death, in imitation of the death of Jesus, in order to save the souls of her fellow believers. In 1823 the leader of a Pietistic circle in Switzerland, after having despatched her sister, who gave her life as a means of saving the

souls of her relatives, was crucified by her followers at her own command, in order that she might die, rise again after three days, and restore to life the sister whom she had slain. In 1865 two mothers, adherents of the 'Holy Men,' slew their sick children, believing them to be victims of demoniacal possession. In 1875 a Hungarian miller, belonging to the 'Nazarenes,' killed his son as an offering for his own sins, after the fashion of Abraham. In 1870, in Irkutsch, Russia, one of the 'Schismatics' convinced himself by prayer and fasting and much Scripture-reading that to save his soul he must be crucified. Accordingly he attempted self-crucifixion, and succeeded so far as the circumstances of the case would permit. In 1830, in the government of Perm, Russia, a peasant killed his child as an offering for sin, and buried the body in an ant-hill. Likewise, in the government of Vladimir, another peasant killed both his children in due Abrahamic form, and while the babies bled under the father's knife the devout mother celebrated the service by reading aloud selected portions of the twenty-second chapter of Genesis. In 1854, in the government of Tamboff, Russia, a peasant, convinced that to save his soul a man must have a sin to repent of, killed a neighbor with an ax in order to satisfy this highly imperative condition. It is a part of the creed of the 'Wanderers,' a Russian sect, that Anti-christ rules in high places there, and that, accordingly, good men must have naught to do with governmental affairs of any sort. In conformity with this belief, a man murdered, in various ingenious ways, twenty-five men, women, and children, including his own wife and babes, in order to free them from the danger of losing their souls by suffering the contaminating contact of the government census-taker. This occurred in 1897. The 'Deniers,' another quite interesting Russian sect, believe that evil taints all earthly good, and that the only escape is death. In 1825 sixty of these men, strong in the faith, after having murdered their wives and children, permitted themselves to be put to death, one by one, by their leader. The 'Scourgers,' who also form a widespread and influential sect in Russia, in obedience to the behests of their 'saviors' are in the habit of indulging in human sacrifice, cannibalistic feasts, erotic dances, and other lewd procedures as an extremely efficacious method of keeping the hand of evil from off their immortal souls. So the 'Muckers' of Königsberg and the celebrants of the Black Mass in Paris afford further examples of the use of a ritual of erotism, coupled with a practise of the most abandoned and obscene behavior, to promote the eternal welfare of the soul. A fitting conclusion to this series of instances cited in proof of the thesis that fanaticism may become a source of crime is afforded by the account of the notorious 'Skopzi.' A belief in the practise of castration as a necessary means of saving the soul is a cardinal tenet of their faith. The diabolical cunning and ingenuity displayed by them in accomplishing, with or without the victim's consent, this maiming operation upon young and old alike make them at once the most dangerous and the most despicable of criminals."

HAS THE BIBLICAL OPHIR BEEN FOUND?

THE search for Ophir, the gold land of Solomon's period, has been as persistent on the part of Biblical scholars as has been the attempt to locate the Biblical Paradise, and the results have been as widely divergent. Some have sought for it in Africa, others in India, and others in Arabia. Probably the most substantial contribution to this discussion that has been published for decades is the work of the German traveler, Dr. Carl Peters, entitled "Das goldene Ophir Solomos," and largely on the basis of this volume the *Neue Lutherische Kirchenzeitung* (Cottbus, No. 8) gives a goodly number of facts that seem to speak for South Africa as the proper locality:

The oldest astronomy is that of China; according to which blue signifies the East, red the South, yellow the West, and black the North. The Chinese system of astronomy found favor among most of the cultured peoples of antiquity; and accordingly we find the Black Sea in the North and the Red Sea in the South. The Turks still call the Mediterranean the "White" Sea, probably a change from "yellow." In Arabic red is *ahr*, and Africa is called *Afir*, or the Land of the South. In Latin *Afer* is used to design-

nate an African, hence *African*. Accordingly the terms *Ophir* and *Africa* are identical.

The Berlin Mission Superintendent Merensky describes what is now called Mashonaland in South Africa. He quotes from Portuguese accounts of the wonders of the land of Monomotape. In this country, in Simbabwe, the Portuguese found magnificent ruins, described in the works of De Barros in the sixteenth century. Immense walls are found there, built of huge stones placed upon each other without mortar. Over the gates of these walls Arabian travelers found inscriptions they could not read. A tower seventy feet high crowns the walls. The Arabian travelers report that this is regarded as the Ophir of Solomon, and it is known that in 1500 A.D. the Arabs brought gold from these districts. Portuguese admirals in 1506 found near Sofala two Arabian ships laden with gold. Merensky reports that the Boers of the Transvaal, who every year rode over large territories hunting elephants, found there old orange orchards and grape plantations. When the Portuguese discovered this country they found here the remains of an older civilization such as ore mines, and at that time arms were regularly exported from Sofala to India. Even in Northern Transvaal are yet to be found the remains of old iron-smelting ovens. The inhabitants of Monomotape are described as being dressed in silks and cotton goods, and they are said to have possessed ships that sailed to India. Evidences of these things were seen by Merensky himself, who states that these people are still skilful in the manufacture of various articles. Owing to illness, Merensky could not reach the ruins themselves, but the natives speak of them with religious awe and regard them as sacred to the gods.

The first modern traveler to reach these ruins was the German Mauch, who reports that the present inhabitants, who came there in the present century, claim that before them these districts were peopled by whites, and the ruins of their houses and manufactures are still to be seen. The ruins of Simbabwe consist of two groups, one on a granite heap 400 feet in height, and the other on an elevation of 300 feet. The valley between the two hills is sandy and also contains ruins. The ornaments found on the buildings point to a Phœnician source, which is in harmony with the statement of the Bible that Solomon sent Phœnician sailors to the gold land of Ophir. On one of these elevations is found a tower sacred to Ashera or Astarte, the Phœnician goddess of the moon. According to 1 Kings xi. 5, Solomon was a worshiper of Astarte.

Since the days of Mauch two Englishmen named Pavan and Dunt succeeded in visiting the ruins, and the latter has described them in detail. In recent years this new Biblical Ophir has become the object of Christian mission enterprise. No doubt these mines went to decay when the Phœnician commonwealth fell into ruins. A great deal of gold is said to be still in these districts awaiting the diggers.—*Translation made for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

THE cartoon in our issue of September 16, accompanying the article on "The Coming Theology," was accredited to *The Christian Cynosure*, from which we took it. We have since learned that it was originally taken from *Leaves of Healing*, and should have been credited thereto.

THE conversion of a large body of Nestorians in Persia to the Russian (Greek Catholic) Church is, according to Rev. Samuel G. Wilson, M.A., of Tabriz, Persia, a movement for better protection, not a spiritual change. He tells in this connection the following story (*Missionary Review*, October): "A Nestorian was irrigating his fields. A fellow peasant came up and turned off the water to his own field. When asked why he did so, he replied: 'I am able to, for I am a Russian.' The first man thought it useless to resist, and walked away to the village. Presently he returned and began turning the water back to his own field. When No. 2 began to quarrel with him, he said: 'Go away, or I will knock you down with my spade. I have just enrolled as a Russian, too.'"

IT has been reported for some time that a movement is afoot for a union of the Unitarian and Universalist churches. The chief doctrine of the former is historically a belief in the unity of the Godhead as opposed to a trinitarian conception, while the Universalists have emphasized the doctrine of the ultimate salvation of all created beings. As both churches of late years have advanced to a ground in which merely distinctive doctrines are less dwelt upon, and a general spirit of what is termed liberal theology is emphasized, they have found themselves to be in increasing harmony. However, there is much opposition in each church to the idea of an amalgamation. *The Leader* (Universalist) says that "the genuine Unitarian preacher can never feed the thoroughbred Universalist, and the consistent Universalist can not satisfy the genuine Unitarian." *The Christian Register*, the weekly organ of the Unitarians, has thus far been silent on the subject.

FOREIGN TOPICS.

THE UNITED STATES AND SOUTH AMERICA.

IT is asserted by *The Morning Post*, London, that the South American republics fear the United States, that the dread of an attack will cause them to sink their differences in the future and to form a defensive alliance, and that the annexation of San Domingo, which has been so earnestly advocated in some of our papers, would cause this alliance to become an accomplished fact.

So far as we can discover, all this is as yet mere rumor. There is some resentment in South America for our alleged assumption of racial superiority, and the motley crews of American war-vessels, escaped from the discipline of shipboard, have not always represented our country to advantage; but the obvious advantage of having this nation as a friend in any quarrel nearer home has prevented South American governments more than once from serious attempts at federation. Similar influences appear to be at work now. The *Provincia do Para* claims to have discovered the text of a secret treaty between Bolivia and the United States, which runs about as follows:

The United States will exercise diplomatic pressure on Brazil to secure to Bolivia her rights in the territory on the Acre, Purús, and Jacú rivers, according to the convention of 1867. In case of war the United States will assist Bolivia to obtain money and arms.

The United States will force Brazil to regulate the frontier definitely between the Jurú and Jacary rivers.

The United States will cause Brazil to give freedom to all Bolivian vessels on the rivers of the Amazon valley. At Belem and Manaos Bolivian goods must pass duty free.

Bolivia will reduce the duty on American goods 50 per cent., and the export duty on rubber will be reduced 25 per cent. for a period of ten years.

In case of war with Brazil, Bolivia will cede the disputed territory to the United States.

In case of war the United States will bear the cost, for which the Bolivian customs will be mortgaged to her.

Despite this evidence of the want of unanimity among the South Americans, an alliance is thought possible in many quarters. *The Week*, Toronto, says:

"Since the American raid on the Spanish possessions there has been a change. The feeling of Spanish South Americans toward their ancient mother, in spite of the violence with which the bond was broken, is filial; and one of the delegates, when an appeal was made to revolutionary sentiment, nobly answered that he was not wanting in love of the new, but he was wanting in hatred of the old. But, besides this, there have been ominous symptoms of American tendency to expand by filibustering in a southern direction. Above all, there has been manifested a spirit of unscrupulous aggrandizement which could not fail to alarm the neighborhood."

In England the possibility of United States supremacy in South America, politically as well as economically, is not viewed favorably. *The Saturday Review*, London, says:

"No political maxim has suffered such perversion as the Monroe doctrine, tho the perversion of maxims is profitable study for the student of politics. Monroe and Canning both spoke together and both meant 'South America for the South Americans.' The dream of the far-seeing American to-day is 'South America for the North Americans.' The dragon of Monroe serves to protect the golden crop against the incursions of the Old World until what time the fruit is wanted for a nearer neighbor. There are signs that that time is within measurable distance. . . . If such a doctrine is to be pushed to its extreme limits, American enterprise alone will be entitled to the active protection of American fleets or armies, and any hope of developing the richest lands of the globe must vanish for us. . . . It would be the most criminal folly to shut our eyes to the possibilities of the future. Enemies

possibly, rivals certainly, we must be with the United States in the years to come. An irritating jobbing opposition on small points is to be deprecated, but we must evince a clear determination that the broad basis of our statecraft is to vindicate our full share in the future development of South America."

Nor could we escape serious complications with Germany. Germany has emphatically disclaimed all intention to annex territory in South America, and the Germans there aim at the establishment of independent German states rather than political unity with the mother country; but German trade interests are too great in South America to permit their unconditional surrender to the United States. The *Deutsche Tages Zeitung*, Berlin, says:

"The victory so easily obtained over Spain has puffed up the Americans to such an extent that they begin earnestly to think of the political and economical annexation of South America. This interests us not only on account of trade, but also on account of the continually growing and prosperous German colonies in Brazil. Yet Brazil is the first to be attacked. . . . Luckily trees do not grow into heaven. An alliance between Chile, Brazil, and Argentina seems to be assured, despite the chink of American dollars in Brazilian government circles."

It may not be generally known that the German colonies in Brazil contain a strong leaven of Germans who did not like the United States and reemigrated to South America. Certain it is that the German element there have no wish for American rule. The *Koseritz Deutsche Zeitung* says:

"Some time ago it was reported that Bremen papers advocated the hoisting of the German flag in the German colonies of Brazil. It seems now that this lie was published to turn attention from the real enemy. While jingo hot-heads exploit this report against the Germans, they fail to notice the suspicious doings of the Americans, doings which should be watched all the more carefully as the Brazilian Government protests only mildly. . . . As if to assist American lust for territory, the Brazilian congress refused an interpellation on the subject."—*Translations made for THE LITERARY DIGEST.*

GREAT BRITAIN AND THE TRANSVAAL.

IT is not a question now of juggling with franchise or jury laws. The issue is simply whether the English or the Dutch are to be the paramount power in Africa." This is the case as stated by the *Montreal Herald*, echoing closely the utterance made by Sir Joseph Chamberlain in a recent speech. There are other indications that, in the British mind at least, the issue has thus broadened out. The situation is thus put by a writer in *The St. James's Gazette*, who says:

"England has the right of one independent nation against another to make the treatment of the Uitlanders—whether her own subjects or not—a *casus belli*; but, of course, such treatment must be of very grave nature. The question arises, Is the treatment of the Uitlanders of such a nature that it would be regarded by the civilized world as a good cause for England to go to war with the Transvaal; for it must be remembered that that state does not refuse to remove grievances, but to do so other than in its own way? It is, I think, not of such a nature; and therefore England would not be justified in making war upon the Transvaal as one independent nation against another."

"But when one nation admits that another has suzerain rights, it is the duty of the subject to comply with the demands of the paramount power, if they are not contrary to all principles of right and justice."

"Now, unfortunately, Mr. Krüger will not admit that England has such rights over the Transvaal; it is then England's duty to show him the error of his ways, and, if arguments won't do, then by blows—blows not directly in favor of the oppressed, but on behalf of suzerainty."

The St. James's Gazette asserts further that, as Great Britain claims to be the suzerain of the Transvaal, no warning need be

given the latter when Great Britain decides to strike. The editor says:

"In the mean while there are certain mistakes made in some quarters at home as to the forms to be observed in such a crisis, when dealing with a subordinate government like that of the Transvaal republic, which—whatever its own views may be—is not considered by Great Britain to be a sovereign state. As we have pointed out before, the relations subsisting between us do not require us to act toward the Transvaal as a rupture with a great power would necessitate. That is why there is no occasion for a declaration of war, or for resenting in a practical manner—as would be done in the case of a sovereign state—the impertinent message of President Krüger asking for explanations of our military preparations. . . . If hostilities are begun against us, through the insensate folly of the Boer Government, they will be met, and the issue accepted and carried through to the inevitable end. But if Mr. Krüger simply refuses our demands, they will be enforced; that is all."

Englishmen are not lacking, however, who continue to insist that this attack upon the Transvaal is criminal aggression. Even from Johannesburg a correspondent of *The Westminster Gazette* writes:

"It comes to this, that the Boer is asked to legislate his country into our hands in the course of a few years—which is more than has ever been asked of any nation under the sun, unless the writer be badly out in his knowledge of political history. In conclusion, let all fair-minded Englishmen say whether it is right, or even decent, for a nation like Great Britain to blackguard the burghers of the Transvaal in the way that is being done by a large portion of the British press. It is not without the bounds of possibility that the Boers will be goaded into a war to the death—even against odds such as would almost preclude the possibility of anything but their extinction!"

Goldwin Smith, too, declares in so many words that the Transvaal gold, not sympathy with the Uitlander, is the cause of Britain's conduct, and the attitude of the non-British foreigners in the Transvaal shows that there is no cause for interference. The Germans, for instance, speak in terms of gratitude of the liberality of the Boer Government, and an organized force composed of Germans, as well as detachments of other nationalities, will be in the field when hostilities break out. A correspondent of the London *Chronicle* asserts, even, that a number of Englishmen are taking up arms for the Transvaal against their own country.

In *The Fortnightly Review*, London, Edward Dicey writes in true-blue jingo style as follows:

"In Egypt, in South Africa, in every part of the world where British interests are at stake, I am in favor of advancing and upholding those interests even at the cost of annexation and at the risk of war. The only qualification I admit is that the country we desire to annex or take under our protection, the claims we choose to assert, and the cause we decide to espouse, should be calculated to confer a tangible, manifest advantage to the British empire. At the time of the Venezuela difficulty, I was one of the first publicists to deprecate any controversy with the United States, tho I believed, and still believe, the claims of Venezuela to be utterly unjust, and tho I hold the intervention of the Western republic on her behalf to have been legally and morally unjustifiable. My reason for taking this line on the Venezuela question was simple enough. The territory we claimed as belonging to British Guiana was of little or no material value to the British empire, and if, as seemed probable, the enforcement of our claim was certain to involve us in a war with the United States, we should have been entering on a contest in which we had everything to lose and nothing to gain."

But Mr. Dicey believes that the Boers are not strong enough to win. It is also thought that the evident desire for peace on the part of the Continental nations encourages Great Britain. The *Kreuz-Zeitung*, Berlin, says:

"The attitude of the powers during the Peace Conference at The Hague has convinced the British that the Continental gov-

ernments deeply feel their responsibility, and will not go to war for the sake of the Boers, even if such a war were popular. Europe needs peace; if England wants war, she will not be interfered with outside of South Africa. Germany certainly will not interfere unless specifically German interests are endangered."

Some British papers profess to be sorry for the Boers, but declare that to oppose the English-speaking people is foolish, useless, and wicked. *Events*, Ottawa, says:

"The subjugation of the Transvaal by England and of the Philippines by the United States is only a matter of time; but will the vaulting ambition of both countries end there? The United States is young at the game; but a day will come when Great Britain will have to reckon with a formidable and equal foe. 'Then,' as one writer puts it, 'Great Britain, at the zenith of her power and glory and prosperity, will continue to shoot in the skies of international politics, a fiery and uncontrollable orb, until she meets the star that is rising from the East, borne on the wings of Autocracy and Orthodoxy, and which is slowly but steadily moving on the same path. Then the heavens will ring and shake with the tremendous clash, and we shall witness the truth or falsehood of the proud English creed that there is no end to the dominion of Great Britain, that she can only grow and spread her empire, and that, superior to Rome, she will achieve durability in the midst of supreme power.'"

The advice of many Continental papers to the Boers is to strike the first blow, which they probably will do as soon as the rainy season sets in. That England will win is not considered certain, especially since the Free State openly sides with the Transvaal. "Moreover," says the *Deutsche Tages Zeitung*, Berlin, "the British soldier is very inferior material to send against white men. The young Boers are confident and anxious to be led against the enemy. The artillery of the Boers is in good order, and military authorities who know both parties agree that Great Britain must, in order to be successful, strike a crushing blow in the beginning. If that blow is struck by the Boers, British rule in South Africa will end."—*Translations made for THE LITERARY DIGEST.*

ENGLISH LIBERALS IN SEARCH OF A PLATFORM.

THERE is at present practically no parliamentary opposition to the Government in Great Britain. The Liberal Party is all at sea, looking in vain for a suitable platform. Its supporters agree only in one point: that the old issues are worn out. A writer in *The Fortnightly Review*, London, says:

"What is the cause of this disastrous revulsion from Liberalism? . . . There is no doubt of the answer. The cause was the foreign policy of Mr. Gladstone's government. It was Majuba and the loss of Gordon. It was the retreat from the Transvaal and from the Sudan. It was the cool contumacy with which Germany helped herself to territory in South Africa and New Guinea, in cynical indifference to the abstract virtue of Mr. Morley's school of foreign policy. . . . Imperialist feeling and a continuous foreign policy must be the common virtue and necessity of both political parties under democracy. To recognize this is the first condition of the return of Liberalism to something like the old genuinely vital and representative composition of the party."

At present, so thinks the same writer, England is fairly prosperous and willing to let things go as they are. But, as Lord Salisbury points out, lean years must follow at some time or other, and then the party lines will be drawn between the Haves and the Have-nots. It must be the business of the Liberals, as a true People's Party, to look to the interests of the Have-nots. This is also expressed by another writer in the same magazine, who proposes a program which we summarize as follows:

First among practical suggestions is the taxation of land values in towns. It has become a crying evil that the "unearned increment" should find its way into the pockets of a few individuals

without any diminution in the shape of taxes. It will be difficult to discover a remedy; at present, the landlord always manages to shift the burden upon the shoulders of the tenant. But taxation of urban land values is plank one. Plank two is old-age pensions. Mr. Chamberlain, when pressed on this point, declared that he had made only a proposal, no promise. The Liberal Party must draw no such distinction. Then there is the problem of the drink traffic. The Liberal wire-pullers are rather nervous about it. The reform of the licensing system is not popular, they say. But that assertion is preposterous. The drink traffic is the most monstrous monopoly that rears its head in our midst, and the most

could. It appears to be on the latter ground, discrimination against Canada, that the treaty is to be disallowed."

The Montreal *Herald* thinks that new capital is what West India chiefly needs. Other papers point out that the West Indians are in a state of chronic discontent, whether they are under Spanish, English, French, or Dutch régime, and Jamaica is credited with being especially prone to such a state, always wanting money from the old country but never making any sacrifices. *The Witness*, Montreal, says:

"The Jamaicans have never hesitated to make their sorrows known to the world, and periodically make it understood that they regard it as an inherent duty of the imperial Government to help them out of their troubles. . . . But the British taxpayer, who thus becomes responsible for the amount of these loans, is surely entitled to have reasonable conditions made to secure the proper expenditure and future repayment of the sums in question. Here, however, the imperial Government meets a chronic resistance to its demand for any such safeguards. . . . Incidentally, it may be stated that on the abolition of slavery by the British Parliament, of the \$100,000,000 voted as compensation to colonial slave-owners the Jamaican planters received nearly \$31,000,000, or about ninety-five dollars per head for every man, woman, and child held in bondage. This may be regarded as a fair illustration of the 'inimical and despotic imperial policy.'"

The fact that filibusters from this country could encourage trouble in West Indian colonies at any time that the mother country happened to be in trouble elsewhere, has made many Englishmen ask themselves whether it is worth while for Great Britain to keep her West Indian possessions. A writer in *The Outlook*, London, declares that Great Britain is in honor bound to keep the West Indies, especially as the colored population is thoroughly loyal. He adds:

"It is no use concealing the fact that any disposal of any part of the British West Indies will have to regard the rights and feelings of the colored population. Their rights are the rights of loyal British subjects. Their feeling is that their patriotism, their loyalty, their devotion to Britain, their capacity to learn what they are taught, and their ability to progress *as far as they are permitted*, should make Britain stand by them. There was a time when their rights could be hartered without their knowledge or consent; but they now possess among them an amount of intelligence which intensifies the difficulties of this task."

But according to *The Speaker*, London, the Jamaicans will be little pleased if their treaty with the United States is not ratified. That paper says:

"It is futile to deny that there is a large body of Americans and American sympathizers in the island—added to the half-million colored malcontents—and this is by no means the first attempt to secure a preferential market in the United States by sacrifices which would entail a future repentance. . . . Once more the best of the bargain is with the shrewd republic, altho an attractive veil of temporary advantage hides this from the insular eye. Happily Ottawa is again on the alert. Canada's trade with Jamaica has been built up slowly and under difficulties; the Jamaica-American treaty would kill it almost at a blow. It was to promote this trade and strengthen the intercolonial tie that the Halifax and Bermudas cable was extended to Kingstown last year. Canada feels, and feels justly, that she is on the high road to prosperity; each year her population, her exports and imports, the earnings of her railways, the output of her mines and mills advance by leaps and bounds; it would, in her opinion, be the sheerest folly to permit without protest the destruction (dictated by a policy so short-sighted as that of the Jamaicans) of an inter-imperial trade which could never be won back. . . . As a matter of fact, Jamaica has no tangible grievance, inasmuch as Canada's mills and soil are capable of producing everything, with the exception of sugar, that the United States produces; and it has been pointed out that while the Americans are prepared to make some initial rebates for the purpose of getting a hold upon the island, prices of Canadian and American merchandise do not materially differ."

IN "RETIREMENT."

SIR WERDANT NARK-CURT (reading Prosebery's speech): "The fellow's impudence is simply appalling. Liberal party must chuck over Home Rule? I'll see him 'Parked' first. Besides, what's he got to do with it—he's no member of *our* party."

PROSEBERY (after perusing Nark-Curt's speech): "Confound his cheek. The idea of this fellow advising the Liberal party what to do. *He* don't belong to it."

—Clarion, London.

fertile cause of crime and misery. Popular control of the licensing system is a principle of the merest elementary justice.

The reform of the House of Lords may be deferred, for the House of Lords is more popular to-day than ever it was. The disestablishment of the church also is not of immediate importance. And Home Rule must be abandoned altogether. The main thing necessary is that the Liberal Party establish half a dozen points in which the young men of the party believe. Wire-pulling and vote-catching tactics will not pay.

Similar views are expressed in *The Westminster Review* and in stanch Liberal weeklies like *The Spectator*. Some would like to make Disestablishment and the reform of the House of Lords included in the immediate issues. Others fight shy of local veto. All, except the extreme Radicals, are agreed that "Little Englandism" is so unpopular that it can not be upheld by any political party desirous of getting into power.

THE BRITISH WEST INDIES.

THE United States has concluded a commercial treaty with the island of Jamaica; but, as it is expressed in diplomatic parlance, Mr. Chamberlain "will advise her Majesty to disallow the treaty." That is Canada's doing. *The Monetary Times*, Toronto, says:

"It is at the request of Canada again, as in the case of the Newfoundland treaty, that the Jamaica treaty is to be disallowed. We shall doubtless hear once more from across the border that Canada is controlling the imperial policy. But the case is one in which we had some right to speak; we have given Jamaica a preference in our markets, and we have gone to the expense of setting up steam communication with the island, for the purpose of fostering the trade between us. On general principles, too, we can fairly object when Jamaica discriminates against a sister colony which has gone out of its way to assist her as best she

MISCELLANEOUS.

SEXUAL KNOWLEDGE FOR THE YOUNG.

THERE is one department of the Women's Christian Temperance Union which publishes a little paper—*The New Crusade*—edited by Mary Wood Allen, whose chief purpose is to persuade parents to impart to their children correct knowledge regarding the more secret functions of life. A publishing house has lately been started in Philadelphia to publish a series of books, written by Sylvanus Stall and Mrs. Allen, with the same general purpose in mind. The subject seems to be gaining more and more of a hearing, and in *The International Journal of Ethics* this subject is considered by E. Lyttleton, who reaches the same conclusions concerning the importance that the child's first knowledge should be correct and dissociated from vulgar accompaniments.

Mr. Lyttleton takes account of the misgiving which deters the teacher or parent from imparting information on the subject—a sort of instinct that such information is too liable to be turned into poison. This false reserve is responsible for the fact that boys, in particular, are left to get their knowledge through the conversation, frequently vulgar and positively immoral, of their companions. Another injurious result is thus described:

"Moreover, and this is perhaps the most serious fact of all, the point of view taken by boys if left to themselves must inevitably be selfish. This will be seen at once if the second of the two conditions incident to boyhood be taken into account: the normal growth of animal desires, far stronger in the male than in the female, anyhow in England. At varying ages these desires make themselves felt, in a very large number of cases most imperiously, in some few quite irresistibly. Ordinarily at fifteen and sixteen years of age, the will power being still weak, the bodily desires are almost at their height; if they increase later on, so does the power of will and the sense of prudence, so that, normally, the dangers of misuse are less from seventeen years onward. Now, this fact of growth, by itself, would make it difficult for a boy to contemplate what he has heard of sexual relations, paternity, sexual indulgence, and so forth, from anything but a selfish point of view. At the time of puberty, mysteriously and silently the great fact of personality, the sense of egoism, asserts itself, and often produces a puzzling shyness and a reserve which sometimes struggles for utterance but can not find it. This causes the view of life to be colored and interpreted by the claims of self, and to this is to be attributed the not very uncommon lapse into temporary insanity at this period, which manifests itself in very various and often, of course, innocuous forms—rowdiness, moodiness, silence, etc.—but occasionally in deceptiveness, dishonesty, arson, homicide, or suicide. But how much more inevitably is this selfish coloring given to the facts of sex, etc., when no wholesome counterbalancing knowledge of any kind whatever is given, but when every single suggestion and hint on the subject has come from those who are under the same dominating influences of ignorance, curiosity, and the claims of self! It is significant to note that of no other subject whatever can this be said. . . . It will hardly be disputed that of all the awful evils which attend the violation of sexual morality—used in its broadest sense—by far the larger portion are due to the initiative and motive power of the male sex. If, then, the reasoning is correct which points to the license of men as due to the falseness of their conceptions of all sexual matters from childhood onward, it will be seen how tremendous is the indictment to be brought against the still common practise of leaving boys to gather in a fitful and uncertain fashion for themselves stray fragments of vitiated information on the most vital and most intimate of all truths of the natural world."

The writer hesitates to speak with the same confidence in regard to the results of parental reticence upon girls, but thinks that it must entail a serious intellectual loss, tho the moral loss may be less.

Mr. Lyttleton in conclusion urges strongly two points:

"The first is that matter is not evil. The time-honored doctrine which affirms the contrary is, it is true, less confidently

stated than formerly, and the influence of Christian teaching on the destiny of the human body and the marvels of physical science have combined to save us from any formulated theory in these days. Yet it remains a fact that in the popular view of this subject there is much that tends to depreciate one of the greatest of all divine or natural laws: the law of the propagation of life. To a lover of nature no less than to a convinced Christian the subject ought to wear an aspect not only negatively innocent but positively beautiful. It is a recurrent miracle and yet the very type and embodiment of law; and it may be confidently affirmed that in spite of the blundering of many generations there is nothing in a normally constituted child's mind which refuses to take in the subject from this point of view, *provided that the right presentation of it is the first*. Nothing can be more important than this, since there is in every child a native curiosity concerning every revelation of life, which leads to the first teaching about maternity and generation being eagerly absorbed and firmly stamped upon the mind at its most receptive age. It is nothing short of appalling to realize this simple psychological fact, and then to reflect on the tone in which the chance instructors of our children handle these sacred themes—dirty-minded school-boys, grooms, garden-boys, any one, in short, who at an early age may be sufficiently defiled and sufficiently reckless to talk of them. No matter what palliatives may be applied later on, the poison thus imbibed never quite leaves the system. The only exceptions to this rule are the very rare cases in which the mind seems quite unable to take any interest in the matter; so innocent, in fact, as to be impenetrably dull, and children so safeguarded purchase moral immunity at the cost of a certain intellectual loss.

"This, then, is the first principle to be grasped, that there is nothing in natural law which may not be spiritualized in its presentation to a child. The second is that the first presentation of this particular subject is the one which prevails over all others."

The Great Wall of Babylon.—Recent archeological discoveries made under the auspices of the German Oriental Society show that the assertions of ancient writers about the enormous width of the walls of Babylon were not exaggerated. Says *Biblia*, September: "In No. 2 of the *Mittheilungen* of the German Orientgesellschaft, the leader of the Babylonian expedition sent out by the society, Dr. R. Koldewey, describes the first fruits of that enterprise, and presents data which make it possible, for the first time in more than two thousand years, to test the correctness of the claims put forth by Herodotus and Diodorus to the effect that the wall of the city of Babylon was so wide that several chariots could drive upon it side by side. The German expedition has begun its work by digging a wide trench directly into the heart of the great Kasr mound from the east, and has made it possible to measure the famous wall. This 'gigantic bulwark' consists of an outer wall 7.25 meters [24 feet] in thickness, built of burnt brick bearing the stamp or impress of Nebuchadnezzar, and an immense wall 13.10 meters [43 feet] thick, while the filling between the two is 21.5 meters [71 feet], making the enormous total of 41.85 meters [138 feet]. As yet, the diggers have penetrated only 17 meters [56 feet] into this mountain of ruins, but it is thought that now the palace walls themselves have been reached. The society proposes to expend as much as a hundred thousand marks per annum for the next five years at least in this undertaking. A little brochure descriptive of the work, entitled 'Babylon,' to be issued at once, will contain an address by Prof. Friederich Delitzsch, delivered in March, in the presence of the Emperor and Empress of Germany, who last year gave 20,000 marks to the association."

EPILEPSY FROM COFFEE.—A case is reported from Germany, according to *The New York Medical Journal*, that is of especial interest to coffee-drinkers. It is that of "a previously healthy married woman, aged forty-four years, with a good family history, who acquired the habit in 1893 of eating daily from five to ten drams of roasted coffee-beans, while continuing to drink coffee in the ordinary way. Tremors of the hands and spasms followed, and finally in 1897 genuine epileptic convulsions. These recurred regularly every fortnight or oftener. In 1898 she was unable to obtain the coffee, and tho at first the fits continued, since the end of November, 1898, there has been only one, and that after an indiscretion in diet. . . . Since alcohol, mercury, lead, ergotin, chloroform, ether, and other poisons can produce epilepsy, it seems very probable that the writer's view that the coffee was the cause of the attacks is correct, especially since the number of fits decreased when the coffee was relinquished."

Tailor-Made Suits

\$5.00

OUR new Fall and Winter Catalogue of tailor-made costumes and cloaks is now ready. We illustrate in it all of the newest Paris styles, and will mail it *free*, together with samples of materials to select from, to the lady who wishes to dress well at moderate cost. We keep no ready-made garments but make everything to order, thus giving that touch of individuality and exclusiveness so much to be desired.

Our new Fall and Winter Catalogue illustrates a splendid assortment of suits and cloaks made according to fashion's latest dictates.

Charming Costumes and Tailor-Made Suits, faultless in cut and finish, \$5 up.

Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up.

Jaunty Capes, \$4 up.

New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, etc.

We also make finer garments and send samples of all grades. We pay express charges everywhere. Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. Be sure to say whether you wish samples for cloaks or for suits, and we will then be able to send you a full line of exactly what you desire. FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The Department has received a note from Ambassador Tower, dated St. Petersburg, May 25, 1899, in which he calls attention to the fact that newspapers in the United States have recently published articles describing Mr. Markavitch as the chief constructor of the Siberian Railway. The Russian Minister of Ways of Communication, Prince Hilkoff, has informed Mr. Tower that no one by that name was ever entrusted with the construction of the Siberian line, and Mr. Tower thinks that the error should be corrected, as it may lead to misunderstandings.

Consul Plumacher, of Maracaibo, on April 18, 1899, writes that according to a recent decision from the Venezuelan Government, licorice has been placed in the third class of the import tariff (25 centimes, or 4.8 cents).

Consul Skinner writes from Marseilles: "I am advised that the Paris, Lyons, and Mediterranean Railway Company, headquarters at 88 Rue St. Lazare, Paris, has undertaken the construction and operation of an electric railway between Fayet and Chamonnix, at the foot of Mont Blanc. The line is to be in operation within twenty months, and it is to be presumed that the company will be interested in propositions for machinery and equipment. Power is to be furnished by the River Arve. The cars are to be automobiles, each supplied with its own dynamo. The contract for building the road proper and providing the water-power has been divided into two parts and awarded to Gagner & Frères, of Annency, and Richard & Meynard, of Avignon."

The failure of the crops in many of the provinces of European Russia is a much more serious affair than is generally admitted. Nowhere has it been more complete than in the province of Cherson, which has within its borders the two largest exporting ports in the Russian empire—Odessa and Nicolaiev. During the famine year of 1891-92 this province suffered severely, tho not as much as at present. The famine year found the peasant farmers without any reserve stock of grain and consequently without seed for future sowing or the means of subsistence until the next harvest. Their distress, however, had been provided for by the erection of storehouses in the peasant villages, in which every house owner had been obliged to place a certain quantity of grain for eventual public alimentation. Later on, the system was found to be inconvenient, and the grain was sold and the proceeds invested in interest-bearing bonds. Thus was formed the so-called "fund for the public alimentation." During the critical condition of affairs in 1891, the administration of the districts purchased grain and distributed it to the peasants at cost price for food and sowing purposes, and a time was stipulated for the repayment of this relief. This year a conference has been called in this province (Cherson) to take measures to deal with the situation. The questions to be considered are the degree of failure in each district separately, the seed necessary for sowing the fields, the amount of government assistance which will be required during the year, and the amount of cash in public alimentation and other funds at the disposal of the administrations for relief purposes.

The Monterey Foundry and Manufacturing Company is owned almost wholly by Mr. James Meehan, of Kentucky. Previous to the purchase of the Monterey foundry in 1896, it was not a success financially. Immediately thereafter, however, it was remodeled, renovated, and enlarged. It now has a complete modern plant of American manufacture and represents an investment of \$125,000. The plant comprises a foundry, machine shop, brass foundry, hammer shop, pattern shop, and a wood-working shop. About 235 men are constantly employed in this enterprise. Most of the skilled mechanics are Americans, who receive on an average from \$5 to \$8 per day. The laborers are all Mexicans and receive from 75

cents to \$1 per day. A general specialty and jobbing business is carried on. The specialties consist of sugar-mills of all sizes, mining and smelting machinery, engines up to 25 horse-power, brass cock and fittings of all descriptions, school furniture, architectural iron work, etc. Locomotives are repaired and rebuilt in this foundry. The pig iron used therein is imported from the United States, the scrap iron is procured in Mexico, the steel used in the manufacture of tools and machinery is imported from the United States, and wrought iron is purchased in the latter country and in Mexico.

PERSONALS.

THE PRINCE OF WALES, it is said, is the heaviest individual risk of all the patrons of the life insurance business in the world. His death would cost English, German, French, and American companies not less than \$10,000,000. But it is alleged by persons well informed on insurance matters that not more than \$1,000,000 of this amount is for the benefit of the Prince's family. The other policies were taken out years ago for the protection of his creditors. It is a curious fact that at least \$3,000,000 of insurance has been placed on the life of the prospective King of England as a speculation by persons who do not know him and have never had any relations with him whatever. The *Chicago Record* says of the circumstance:

"This would not be possible under the insurance laws of the United States, but it is allowed by some of the English companies. Over there any man can secure a policy on the life of a neighbor, provided he can persuade the neighbor to submit to a medical examination or find a company which has recently had him examined. Thus, when the Prince of Wales undergoes an examination for insurance, lots of speculators apply to the same company for policies on his life, or get certified copies of the report of the medical examiner and use them with other companies. It is pure speculation. They pay a high premium, a margin, so to speak, or, to put it in another way, they book a wager with the insurance companies that the Prince will die before the total of their premiums exceeds the amount of the policy. Therefore many persons would be financially benefited if Albert Edward should drop off suddenly one of these fine days. The Prince is perfectly aware of this fact. He knows very well what advantages have been taken of his situation, but I do not suppose it makes any difference with his habits."

WHEN the late Daniel W. Voorhees, of Indiana, was in the prime of his manhood and reputation he appeared for the defense in a famous murder trial at Louisville. The day was intensely hot, and the court-room was packed almost to suffocation. As Voorhees arose to begin his argument, he cast his eye critically over the jury and discovered that one of its members had fallen asleep. Frowning with indignation the lawyer motioned to one of the court officers, who at once shook the slumberer rudely into consciousness. He was a fat, timid-looking man, and was so mortified and aghast at the enormity of his offense that he could hardly find words in which to reply to the sharp questions of the judge. He managed finally to blurt out that he could not help dozing off whenever it was warm and the room was crowded. "If the gentleman always sleeps where it is warm and crowded," said Voorhees, majestically but sneeringly, "the gentleman will no doubt enjoy himself hugely in Hades." There was a roar of laughter in the court-room, but the fat man had

Yacht Race Souvenir Free.

The Prudential Insurance Company of America has just issued a handsome souvenir pamphlet on the international yacht races, which are to take place in October off Sandy Hook, for the America's cup. The souvenir contains handsome half-tone engravings of both the *Shamrock* and the *Columbia* and also gives a short history of the attempts made by English yachtsmen to regain possession of the cup since it was captured by the *America* off the Isle of Wight in 1851. A copy of this pamphlet will be sent free to any one who will write to the Home Office of The Prudential at Newark, N. J., mentioning this publication.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Simply Do This

The Ostermoor Patent Elastic Felt Mattress \$15.

is well worthy of your consideration. Are you open to conviction? or are you one of the few people who will have an unsanitary hair mattress—no matter what it costs? We make it simple for you to learn about (see above picture) and easy for you to buy, for our mattress is always

"SENT ON SUSPICION."

SLEEP ON IT 30 NIGHTS and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can get your money back by return mail—"no questions asked." There will be no unpleasantness about it at all.

GRAND RAPIDS, Mich., 155 Washington Street, March 15th, 1897.
DEAR SIR: In 1881 (16 years ago), I ordered a Patent Elastic Felt Mattress, as an experiment, and the results have been in every way satisfactory. It retains its shape and elasticity in a manner that makes devotees of hair mattresses incredulous. I know of no material that can begin to compare with the Felt. My experience with it has made me recommend it to my friends, and they soon join in the chorus of praise. All the claims you make for the material and workmanship seem to me well within the bounds of modesty.
Yours truly,
(Rev.) THOS. W. ILLMAN.

Curtis, is "done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Coan." Send for circular L, or forward your book or MS. to the N.Y. Bureau of Revision, 70 Fifth Avenue.

his revenge two hours later when he hung the jury against Voorhees's client.

SEÑOR PI Y MARGAL, who surprised the Spanish Cortes by holding up the United States as an example to be followed by Spain, is, strangely enough, one of the leading authorities on United States history. He is now seventy years old, a quiet little man, who has devoted his life to the study and advocacy of republican institutions. He was the president of the short-lived Spanish republic, and, even now, predicts that the monarchy in Spain cannot last long. He has written a history of the United States in two large volumes.

CAPTAINS Hogarth and Wringe, the men who will sail the *Shamrock*, are but little over thirty years of age, but have been sailing in yacht races for several years.

GEN. JACOB S. COXEY, who has had various adventures since he headed "Coxey's army," has evidently prospered on the whole, as he has just purchased an old steel plant at Millvale, near Pittsburgh, and intends to erect a large open-hearth steel plant at a cost of something like \$150,000. The new works will give employment to 300 men.

THE German Emperor has never been a slug-gard, and is usually hard at work in his study at five o'clock and at six on horseback, while the Empress shares her husband's love of the morning hours, and may be seen cantering on her favorite mare two hours before the world breaks its fast.

PRINCE HERBERT BISMARCK does not endear himself to his countrymen. The object of his life seems to be to keep the public away from Friedrichshagen, and to snub every German who wishes to pay any kind of homage to the home of the great chancellor. The latest order of the Prince is that no beer is to be sold to visitors on his estate.

MORE OR LESS PUNGENT.

Got the Bees.—JOGGING JIM: "Ello, Slumppy! Wot's de matter wid yer face an' hands—got de hives?"

SLUMPPY: "No; I got de hees."—*Judge*.

War Expenses.—JAGGS: "War is more expensive than it was two hundred years ago."

BAGGS: "Oh yes, they didn't have to investigate everything then."—*The Journal, Detroit*.

Tactfulness.—The late Duc de Sagan used to relate this story: King Frederick William III. was very sparing of words, as is well known, but one day he was told there was at Toplitz, where he was then drinking the waters, a Hungarian magnate still less talkative than the king. An opportunity for a meeting was soon managed, and the following conversation took place, the King beginning: "Bathing?" "Drinking." "Soldier?" "Millionaire." "Good." "Policeman?" "King." "Compliments."—*Boston Beacon*.

An Opinion.—One of the bravest, as well as one of the wittiest things that has been done lately, was the reply of the Rev. Doctor Newman Smyth, of New Haven, when the representative of one of the worst of modern newspapers asked him for "a bright, terse interview about hell" for its Sunday edition. Doctor Smyth very kindly complied with the request; his article was as follows: "Hell, in my opinion, is the place where the Sunday edition of your paper should be published and circulated."—*News-Letter*.

Adding Insult to Injury.—"Yes, sir, it is adding insult to injury," said young Mr. Homewood, warmly. "That's just what it is!" "What is

adding insult to injury?" demanded young Mr. Point Breeze. "Or rather, who is doing this thing?" "Miss Murray Hill. Only a month ago she refused my offer of marriage, and to-day she sends me an invitation to see her wed another. I shall be compelled to spend good hard cash for a wedding present too. If that isn't adding insult to injury, I don't know what it is."—*Pittsburg Chronicle-Telegraph*.

An Heroic Liar.—"That Slims is the most resourceful fellow you ever saw. His girl has a pretty cousin stopping with her, and he told his particular that he had hired an orchestra to serenade them Thursday night. As he had done nothing of the kind and forgot all about it, and as she had made arrangements to treat the serenaders, Slims caught it hot and heavy when he next called. How do you suppose the rascal squared himself?" "Haven't the slightest idea." "Told the girl that the orchestra struck on him because she sang in church and didn't belong to the union."—*Detroit Free Press*.

The Baby's Profession.—A Parisian flaneur relates that the following conversation took place in an emigration office. The father of the family presents himself and asks for tickets. "How many are you?" asked the agent. "Three—I, my wife, and my child." "Good; your age, your profession?" "Thirty years, carpenter; my wife, twenty-four, needle-woman." "The boy," asks

A PECULIAR REMEDY

Something About the New Discovery For Curing Dyspepsia.

(From Mich. Christian Advocate.)

The Rev. F. I. Bell, a highly esteemed minister residing in Weedsport, Cayuga Co., N. Y., in a recent letter writes as follows: "There has never been anything that I have taken that has relieved the Dyspepsia from which I have suffered for ten years except the new remedy called Stuart's Dyspepsia Tablets. Since taking them I have had no distress at all after eating and again after long years can sleep well. Rev. F. I. Bell, Weedsport, N. Y., formerly Idalia, Colo."

Stuart's Dyspepsia Tablets is a remarkable remedy, not only because it is a certain cure for all forms of indigestion but because it seems to act as thoroughly in old chronic cases of Dyspepsia as well as in mild attacks of indigestion or biliousness. A person has dyspepsia simply because the stomach is overworked, all it wants is a harmless vegetable remedy to digest the food and thus give it the much needed rest.

This is the secret of the success of this peculiar remedy. No matter how weak or how much disordered the digestion may be, Stuart's Dyspepsia Tablets will digest the food whether the stomach works or not. New life and energy is given not only to the stomach but to every organ and nerve in the body.

A trial of this splendid medicine will convince the most skeptical that Dyspepsia and all stomach troubles can be cured. Send for little book on Stomach troubles mailed free by addressing F. A. Stuart Co., Marshall, Mich. So popular has the remedy become that Stuart's Dyspepsia Tablets can now be obtained at any drug store at 50c. per package.

the agent. "Seven months." "His profession?" The father's eyes formed Gothic arches on his forehead. "His profession, I say," repeated the agent, angrily. "We have no time to lose." The father reflects, and at last replies, "Milkman."—*Exchange*.

He was Busy.—"Phalim," wearily said Mrs. McGorry, with some difficulty making herself heard above the lusty howls of her leather-lunged offspring, "Yez will hov to howld dhe baby for a while. Try to git him quieted av ye can. Sure Oi'm ahl worn out wid his yells." "Oi'll not howld him!" indifferently replied her husband, who was luxuriating with his pipe and newspaper; "nt's your duty, not moine. Av yez can't keep dhe little monkey still, lave him yell, for ahl Oicare." "Ut's yure duty as much as ut is moine! Half av him belongs to ye, anyhow." "Wull, thin, do phot yez place wid yure half, an lave my half boller ahl ut wants to. Oi'm busy!"—*Basar*.

Current Events.

Monday, September 25.

—Despatches received from General Otis announce that the insurgents on the island of Negros are about to surrender, and that the American flag is to be raised on Snin Island.

—General Shryack is chosen to succeed Senator Wellington as chairman of the Maryland Republican state committee; Senator Wellington makes a bitter attack on Governor Lowndes.

—The official trial of the new battle-ship *Kearsarge* takes place near Boston.

—A number of judges, examined by the Mazet committee in New York, admit paying heavy assessments to political parties.

—John Sleeper Clarke, the comedian, dies at Sribiton-on-Thames, England.

Tuesday, September 26.

—Admiral Dewey arrives at New York early in the morning, with the *Olympia*, two days ahead of the time expected. He is visited in the lower bay by Sir Thomas Lipton, Rear-Admirals Samp-

A VEGETABLE MEAT.

This truly wonderful food product is, without question, the most remarkable discovery in dietetics which has been made within the last half century. A vegetable food substance corresponding in composition to lean flesh, such as beef or mutton, has long been sought for, not only as a most desirable addition to the vegetarian bill of fare, but as a dietetic necessity in that very large class of cases in which flesh-foods are necessarily prohibited, or in which their use is in the highest degree undesirable, as in chronic rheumatism, Bright's Disease, diabetes, and various nervous affections, and in affections of the liver, such as infectious jaundice and sclerosis. This vegetable meat is called Protose.

It is purely vegetable in character, containing no trace of animal substance. It is original beef. Its discovery was as great a surprise to those conducting the investigation from which it resulted as it has been to all who have become acquainted with its marvelous properties. It is a delicious food product, containing twenty-five per cent. more food elements than beef, and has a taste that can hardly be distinguished from flesh-foods. Protose can be served in any manner that flesh-food can be prepared.

The Sanitas Nut Food Co., Ltd., at 71 Washington Ave., Battle Creek, Mich., will send a sample can for six cents to cover postage.

To Troublous Stomachs.

To prove that Kremer's Dyspepsia Powder is the most meritorious remedy for all forms of dyspepsia, I will send a large box for 5c. postage, the price (50c.) to be sent only in case you are benefited after a week's trial. Otherwise return powder by mail.

J. A. Hirst, Newburgh, N. Y., writes: "It did me more good than anything else I have ever taken." So say hundreds. Mention this paper.

son and Philip, Captain Chadwick, etc. He talks on the Philippines and other public questions.

—General Otis cables that General Snyder attacked the insurgents five miles west of Cebu, and destroyed seven forts and a number of smooth-bore cannon. The War Department decides to create four military departments in the Philippines.

—Delegates from all over the world arrive in Washington to attend the sessions of the Pan-Presbyterian Council.

Wednesday, September 27.

—Preparations for war continue actively in both England and South Africa.

—The *Olympia* moves from Sandy Hook to the naval anchorage at Tompkinsville; Admiral Dewey pays an official visit to the Brooklyn navy-yard.

—Attorney-General Griggs gives a hearing to Wayne MacVeagh, counsel for the defense in the court-martial of Capt. O. M. Carter.

—Capt. A. H. McCormick, commandant of the Washington navy-yard, is promoted to the grade of rear-admiral.

Thursday, September 28.

—Generals MacArthur and Wheeler capture Porac, a town eight miles from Bacolor, in Luzon.

—Amos L. Allen is nominated by the Republicans for the vacancy caused by Speaker Reed's resignation and Luther F. McKinney by the Democrats.

—President Schurman, of Cornell, addresses the students on the problems in the Philippines.

—Governor Roosevelt calls on Admiral Dewey on the *Olympia*, and formally tenders the State's greeting. Among the official callers are Generals Miles and Merritt, and the captains of the fleet at Manila.

Friday, September 29.

—The naval parade in honor of Admiral Dewey takes place. The *Olympia*, the *Chicago*, the ships of Rear-Admiral Sampson's North Atlantic squadron, and a multitude of yachts, excursion boats and tugs, sail up the Hudson to Grant's Tomb.

—Despatches from London say that all signs

"A LITTLE LIGHT"
ON A
DARK SUBJECT.

There are sixteen different kinds of Carter's Ink suited to as many different uses. If you choose the kind suited to your use you can find none better. Uncle Sam uses more of Carter's Ink than of all others put together. All the great railway systems use Carter's Ink exclusively, as do the greatest school systems. They don't have to use it but they do just the same. Ink is so cheap that every one can afford to have the best. Carter's Ink is easily the best.

Of Interest to Every Clergyman and Bible Student.

THE EXPOSITOR'S GREEK TESTAMENT

Rev. W. Robertson Nicoll,
M.A., LL.D.
Editor.

"What Dean Alford's book was to Bible Students twenty years ago, this work is to the clergymen of to-day." Practical, Exhaustive, Comprehensive.

To be complete in four vols. Vol. I., now ready, contains the Synoptic Gospels, by PROF. ALEXANDER BALMAIN BRUCE, D.D., and the Gospel of St. John, by PROF. MARCUS DODS, D.D.

Special Introductory Price on Vol. I. | Volume sent on approval if desired to Clergymen and Bible Students. | Write for Easy Terms of Payment.

point to war with the Transvaal, and a squadron of British cruisers is gathering at Cape Colony.

—A panic is created in the cotton-markets of the South by false quotations from Liverpool. In the New Orleans Exchange future business is suspended, and all contracts declared void.

Saturday, September 30.

—The land parade in honor of Admiral Dewey is held, about thirty thousand men being in line and marching from Grant's Tomb to the Triumphant arch at Washington Square. The pageant is declared the most magnificent in the history of this country.

—Fourteen Americans, taken prisoners by Agninaldo, are released.

—President McKinley approves the sentence of the court-martial in the case of Captain Oberlin M. Carter, corps of engineers.

—The Democrats of Ohio open their campaign with a meeting at Hamilton, addressed by John R. McLean and others.

Sunday, October 1.

—All despatches from the Transvaal point to war, and the Boers' forces are massed around the region of Lsing's Nek.

—The German Government pays Spain \$5,000,000 pesetas as the price of the Caroline Islands.

—Elaborate preparations are made for Dewey's reception in Washington. The admiral receives at the Waldorf-Astoria delegates from Chicago and Philadelphia.

STAMMERING

It catches me here

permanently cured by a physician—a speech specialist for over eighteen years. Pupils may live in the institution and receive the doctor's personal treatment and care. Our new location, adjoining Central Park and Hudson river, is unsurpassed. Refer by permission to Rev. DR. CHARLES H. PARKHURST, Capt. BROWSON, Com. Gunboat *Yankee*, Prof. WOODSON WILSON, Princeton College, Dr. W. A. HAMMOND, Ex-Surgeon Gen. U.S.A. Applicants may rely upon having the best treatment known. The celebrated German and French methods are utilized. Improved by the suggestions of a progressive American physician. Send for circular. "How We Treat Stammering To-day."

Fine Chess.

In a game between V. Tietz (White) and A. Kamish (Black), played recently in Carlsbad, this position was brought about:

WHITE (13 pieces): K on Q Kt sq; Q on Q 3; Bs on Q sq and Q Kt 6; Kts on K 2, K B sq; Rs on K Kt 6 and Q B sq; Ps on K Kt 2, K R 5, Q 4, Q Kt 2, Q R 3.

BLACK (11 pieces): K on Q 2; Q on K R 2; B on Q B 3, Kt on Q R 3; Rs on K sq and K B 3; Ps on K 3, K R 3, Q 4, Q Kt 4, Q R 4.

White having the move, the continuation was as follows:

- | | | | |
|--------------|--------------|-----------------|----------------|
| 1. R x B | 2. Q x P ch | 3. B-R 4 ch | 4. P-Q Kt 3 ch |
| 1. K x R | 2. K x Q | 3. K-B 5 | 4. K-Q 6 |
| 1. B-Kt 5 ch | 2. R-Kt 4 ch | 3. Kt-K 3, mate | |
| 5. K-K 5 | 6. K-B 4 | 7. K-K 3 | |

If Black (3d) plays K x B, then Kt-B 3 ch, and Kt-Q 2 mate.

White's 6th: It will be observed that since White sacrificed his Queen his Rook has been pinned by the Black Queen. The Rook is now released, and, curious to note, the Black King can not expose check.

—From *The Weekly Courant, Newcastle, Eng.*

Mr. Steinitz Interviewed.

The Times, Hereford, England, tells us that Mr. Steinitz is much amused at some of the criticisms which have been penned on his play in the late tournament. "Because for the first time in my life I have played in a tournament without winning a prize the critics are trying to make out that I am played out," said Mr. Steinitz. "Three years ago, at Buda Pesth, both Tarrasch and Maroczy, in a tourney of thirteen players, won no prizes, but no one ventured to suggest then that those players were used up. I did badly in the late tournament because I threw away game after game which I ought to have won, as other players often do. Whenever a competitor in a tournament begins badly, as I did in this, he is apt to play desperately in the effort to 'pull up,' and loses more in consequence. In more than one game I refused to draw when offered, and lost in trying to win." We venture to remark that in former years it was generally supposed to be one of Mr. Steinitz's strongest points that he never failed to win a won game, or lost a game which

could be drawn. "That is just where people were wrong," said the veteran. "No great player blundered oftener than I have done. I was Champion of the World for twenty-eight years, because I was twenty years ahead of my time. I played on certain principles, which neither Zukertort nor any one else of his time understood. The players of today, such as Lasker, Tarrasch, Pillsbury, Schlechter, and others, have adopted my principles, and, as is only natural, they have improved upon what I began, and that is the whole secret of the matter."

		Resigns.	

Notes (abridged) from *The American Chess Magazine*.

(a) The defense selected in this instance is the one that was generally adopted in reply to the text move throughout the tournament. The attack initiated by Pillsbury's innovation or, rather, revival of an old line can not be said to have proved as effective as the first experiments had promised.

(b) This is without doubt essential to Black's proper development and is the key to his defense.

(c) Quite a novelty and, as such, a great relief from the monotony of the other variations.

(d) Q x Kt here has at least the advantage of not developing the Black Queen.

(e) Doubtless White speculated too much on the strength of his position or the backward character of his opponent's game, as there was absolutely no necessity to lose the K P. Either Q-Q 4 or R 5 was available, with preference for the former, which could be followed by P-B 4.

(f) In the nick of time, and effectually blocks the attack, while at the same time a most dangerous center is formed.

(g) This practically seals White's fate, and from now on he is as putty in the skilful hands of the Parisian.

(h) To prevent the loss of the K P, inasmuch as the Q P was pinned by the previous move.

(i) Of course, if 25 Kt x B, Q x R, and Black will win the adverse Kt at his leisure by R-K sq.

(j) He has no alternative, for if 26 Q x P ch, Q x Q; 27. R x Q, R x P, and a mate in a few moves can not be averted.

Wonders of Chess.

A mathematical Chess-player, according to *The Manchester News*, "has attempted to calculate the number of moves on the Chess-board. He starts with the fact that each player has twenty possible moves from which he must select his first move. He then tells us that the number of possible ways of playing the first four moves only, on each side, would be 318,979,564,000. If, then, any one were to play without cessation at the rate of one set a minute, it would take him more than 600,000 years to go through them all. The number of ways of playing the first ten moves on each side is 169,518,829,100,544,000,000,000,000. These figures are probably in defect, rather than excess, of the actual number. On their basis, however, and considering the population of the whole world to be 1,483,000,000 (Levasseur's estimate), more than 217,000,000,000 years would be needed to go through them all, even if every man, woman and child on the face of the globe played without cessation for that enormous period at the rate of one set per minute, and no set was repeated."

College Chess.

A match between the Chess experts of the University of Pennsylvania and of Harvard will be played early in November. The leader of the Harvard team is the great Southard, while the Pennsylvanians have as their first man Griffith, who played two games with Southard, winning one.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

B.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given**.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

ADMIRAL DEWEY'S RETURN AND THE GERMAN-AMERICANS.

THE German-American papers accord as hearty a reception to Admiral Dewey as those printed in English, but their admiration is for the man rather than the deed which brought him into prominence. The *Staats-Zeitung*, New York (Sunday edition) says:

"The man's countrymen, always prone to exaggerate, have received him as they received no one before. But what one hears and sees of his character supplements and corrects the sketch the newspapers have furnished of his character in a most pleasing manner. What he has done and said since his arrival shows that he himself knows the exact value of his deeds, that he is astonished at the reception given him, and does not wish to be made too much of. This modesty reveals true greatness, and must win the hearts of all. The hour when he lands at his quiet Vermont home will seem more happy to this man of duty than the glare of the New York festivities."

The *Staats-Zeitung* hopes the New Yorkers did not fleece the strangers who visited the city beyond all endurance. "Our country cousins," says the paper, "have a way of revenging themselves at the ballot-box." The Chicago *Staats-Zeitung*, and indeed all the German-American papers, fancy they know of greater men than Dewey in American history. "The exaggeration of the last days was such that actually some contemporaries printed in English did not like it," says the paper. The *Volksblatt*, Cincinnati, says:

"The celebrations receive a curious light from the fact that the very first people who received the returning admiral are of such very different make. If a Croker had any say in the matter, a Dewey would have had no command. An influential politician would take his place, and the American navy would be no better than the Spanish. This lesson should be learned. The honest

administration which prevails in the navy must be introduced in other departments. If the American people celebrate Dewey's return in this spirit, the advantage will be theirs. If we honor again a returning hero, it is to be hoped that he will be received by better men."

The same paper thinks much of New York's enthusiasm was "business enterprise." The *Freie Presse*, Chicago, says:

"Dewey's modesty is, no doubt, partly due to the fact that he judges his exploit from the standpoint of an expert. No one knows better than he that the antiquated Spanish ships which he destroyed in the bay of Manila were altogether unable to oppose his modern vessels to an appreciable extent. The entrance into the bay, indeed, was not without danger, but the Filipinos were then our allies, and from them he learned what mines and batteries were dangerous, and so he could avoid them. Dewey is an able, brave officer, and withal a man possessed of ordinary common sense. Should a more difficult task be demanded of him, he would no doubt succeed, but he evidently does not like being placed in the same category with men like Nelson until he has done a deed worthy of a Nelson."

Even the Socialist papers, like the New York *Volks-Zeitung*, admit that Dewey is a man worthy of respect. But they protest against the "cult of heroes" in this case because the rebellion in Cuba was begun with American money in the interest of American capitalists, because tyranny, not freedom, follows in the footsteps of the American wherever he goes. "We acknowledge the justice of one war only, a war for absolute freedom, a war of conquest cloaked in national 'patriotism,' and serving only the meanest capitalist interests does not deserve our support," says the *Volks-Zeitung*. The New Jersey *Freie Zeitung*, Newark, thinks it would be well if the Americans had as much tact as Major-General Hutton, of the Canadian militia, who refused to let his Highlanders participate in a celebration "of what he rightly considers a glorification of the victory over a power which is diplomatically on good terms with Great Britain." The *Wächter und Anzeiger*, Cleveland, says:

"The *Leader* says: 'Why is Dewey received in such grand style? Simply because he won a decisive victory for the United States—a victory which ended Spain's rule in the Orient and elevated the United States to the rank of a world power. . . . As commander of the American fleet he opened the policy of expansion.' There you are! . . . Dewey is fêted because he inaugurated the policy of expansion, i.e., imperialistic thieving. Not as champion of liberty, but as successful mercenary of banditism is he received with all this row in the 'imperialist' metropolis. By the way, The *Leader* says 'our Government was asked to solve these new questions.' Who asked? Perhaps the word of Creation? The world in general would like to know."

A feature of the New York celebrations most pleasing to the German-American editor was the reception accorded to Schley, whom they consider the real victor of Santiago. Sampson, who, they assert, neither discovered the Spanish fleet's retreat nor destroyed it, and whose rank they think to be due to political intrigue, is not popular among the German-Americans. Moreover, they are inclined to regard Schley's treatment by the Administration as a slight to themselves, and an attempt to glorify a man of English descent at the cost of a more meritorious German-American. The New York *Morgen-Journal*, the German edition of *The Journal*, and which has an influence similar to that of the English edition, says:

"The people have spoken. They have seen Schley and Samp-

son in the same parade, and they have treated the 'pushful one' as coolly as they deified the victor of Santiago. . . . Republican governments may be ungrateful, the sovereign people are not. . . . The people have shown unmistakably and forcibly that, despite all intrigue, despite all machinations of the Administration, not the favorite and sycophant Sampson, but Schley is known to be the hero of Santiago—Schley, the only too modest descendant of a schoolmaster in the Palatinate."—*Translations made for THE LITERARY DIGEST.*

THE PRESIDENT'S TOUR.

SOME comment has been aroused by the trip of the President and his Cabinet on what the opposition papers call a "stumping tour" through the Central and Northwestern States. The Democratic press had been commenting with some acerbity on the supposition that the President's train would make frequent stops in Ohio, and that he would deliver a number of speeches to help the Ohio Republican campaign; but the President, either to take the breeze out of his opponents' sails or for some other reason, went through his home State almost in silence, beginning his series of speeches in Illinois. A picturesque feature of the trip was the meeting of President McKinley and Mr. Bryan at the unveiling of a soldiers' monument in Canton, Ill., where Mr. Bryan sat on the platform while the President spoke, after which the two grasped hands warmly, and Mr. Bryan, by invitation, addressed the same audience.

The tenor of the speeches of the President and the members of his Cabinet has been that of rejoicing over present prosperity, and determination, as the President said at Quincy, Ill., "to uphold at any cost the flag and the honor of the nation." At Peoria, Ill., the President said: "I face to-day the defense of the flag.

That is what we do wherever and whenever that flag is assailed and with us war always stops when the assailants of our flag face Grant's terms, 'Unconditional surrender.'" Attorney-General Griggs said at Quincy, Ill., in reference to the Philippine problem: "The answer that is to be made to those who ask what we are going to do about it is the plain and simple answer that was given in 1861—'If any man attempts to haul down the American flag, shoot him on the spot.'"

The New York *Sun* (Rep.) thinks that the hearty receptions accorded to the President's speeches prove that there is a widespread approbation of his policy. The New York *Times* (Ind.), which has approved the administration hitherto, thinks that "the speech-making is pitched in too high a key," that the exhortation to "stand by the flag" and the feeling that we should "thank God" that the country is "safe" at every railroad station "is not dignified and is not sensible." The New York *Evening Post* (Ind.) suggests that an appropriate motto for the private car of the Presidential party would be, "We are out for the old flag and a renomination." The Springfield *Republican* (Ind.), while making no objection to "Presidential stumping," remarks that President McKinley has indulged in it more than any of his predecessors, and fears that it may make the judicious grieve, and perhaps lose him some of their respect. The Philadelphia *Times* (Ind. Rep.) speaks of it as "the McKinley circus." The Washington *Star* (Ind.) considers such a campaign tour perfectly proper, as the Administration is on trial and should have a chance to speak for itself. The Rochester *Post-Express* (Rep.) says:

"These patriotic speeches have a special significance in connection with the challenge that the Democrats of Ohio, Iowa, and elsewhere have issued. Wherever the followers of the latter have had the courage of their convictions, they have denounced the policy of the Government in the hope that they could thus secure

THE ADMIRAL AS VIEWED BY THE CARTOONISTS.

another lease of power. If they thought that the Administration or the Republican Party would be afraid to accept the challenge, they have only to read the speeches from which we have quoted. The issue is frankly made."

CHARGES OF CORRUPTION AT MANILA.

GRAVE and specific charges of corruption are brought against prominent administrative officers in the Philippines by Private Napoleon E. Guyot, of Company G, First Colorado volunteer infantry, who was detailed at Manila for special duty in the office of the auditor of public accounts, and who has recently returned home after a two-months' illness there. The *Springfield Republican* publishes Mr. Guyot's charges, together with similar charges made by Rev. Peter MacQueen, who has just returned from the Philippines. The *Republican* is vigorously anti-expansionist, but it disclaims any partizan motive in publishing these charges. It says:

"It is with no desire to embarrass the Government that the statements of these men are printed. If men apparently responsible and sincere should come along with like charges against the integrity of the federal official service in New York or Boston or Havana, it would be a public duty to place them before the people and call the attention of the Government to them. Manila is now governed by the United States, and when charges are made against the integrity of the administrative service there the duty of publicity is no less than it would be in other cases nearer home. Inasmuch as no experiment in governing distant dependencies can possibly succeed without the most spotless purity of service by American officials, it is evident that if corruption exists at Manila under American rule, the sooner it is stamped out the better."

Before making public Mr. Guyot's charges, *The Republican* made some investigations as to his reputation for veracity in Pueblo, Colo., his home town, with the following result:

"Mr. Guyot's reputation for veracity is testified to by James W. Coulter, judge of Pueblo county; by Miles G. Saunders, district attorney, also of Pueblo, and by others. Mr. Guyot's charges have been prepared for publication by Henry O. Morris, of Pueblo, whose character for honor and truthfulness is sustained by Messrs. Coulter and Saunders, and also by Pueblo business men."

Mr. Morris's written account of Mr. Guyot's charges proceeds as follows:

"For some reason unknown to Mr. Guyot, Major Kilbourne was succeeded as auditor of public accounts [in Manila] by Lieut.-Col. Charles L. Potter, chief engineer officer of the Eighth Army Corps. The change occurred about November 5, 1898. This man Potter, Mr. Guyot says, is thoroughly dishonest and incompetent, and during the months of October, November, and December, 1898, while Mr. Guyot was connected with the office, its affairs were conducted in a manner well calculated to improve the financial condition of Lieutenant-Colonel Potter.

"But it is in the department of Lieut. David L. Brainard, chief commissary, and Lieut.-Col. James W. Pope, chief quartermaster, that the greatest frauds were manipulated, while Lieut.-Col. Charles L. Potter must have had a complete understanding with his colleagues in crime, else he would never have passed the fraudulent bills, now approved by him and on file in Washington. Mr. Guyot relates that while in the office he repeatedly called the attention of Potter to the most glaring discrepancies in the accounts, but on being 'called down' by Potter he desisted. Such a mass of falsification, duplicating of names on pay-rolls, overcharges for merchandise, etc., Mr. Guyot says he never before saw or dreamed of in all of his experience.

"It is the English mercantile firms that profit most by American occupation of the Philippines. The great English firm of Warner Barnes & Company seems to be the favorite of General Otis and Colonels Brainard and Pope. The commissary supplies purchased in Manila are paid for at rates of from 100 to 200 per cent. above the regular Manila prices. Mr. Guyot says that he recorded one bill for fancy groceries, and on checking it, with the

prices of the same articles in any store in Manila, figured out a net steal of \$5,000. Quantities of high-class wines, groceries, and other articles were bought for the Spanish hospitals. Whether the sick and wounded Spanish prisoners ever received these Mr. Guyot is unable to say, but certainly such things were scarce in American hospitals.

"Hundreds of tons of fresh beef lying in the refrigerators of ships in the bay, ostensibly the property of the United States, would be transferred by condemnation, or other methods, to the ownership of Warner Barnes & Company, to be repurchased in a day or two at an advanced price, and all this without the beef ever leaving the refrigerator ships. Flour was purchased at such a frightful price that Mr. Guyot called the attention of his chief to it, and the bills now on file, unless tampered with, show the extortion. Four ounces per day were taken from each soldier's ration of fresh beef, and inferior rice substituted. A big profit for somebody was made by selling the beef to foreign firms, and paying double price for the rice. The men grew to despise the rice, but their protests were not strong enough to interfere with 'business.'

"Warner Barnes & Company had the contract to keep the Government supplied with cascoes for a term of months. The cascoes are native boats about seventy feet long, and are used in taking goods from vessels to shore and *vice versa*. They are worked mostly by hand power, but sometimes they are towed. This same firm furnished crews, and, by presenting 'fake' bills 'worked' the Government out of thousands of dollars. One day a rudder on a cascoe was broken by the men working under contract with Warner Barnes & Company. This firm sent in a bill for \$50, three times the value of the rudder, hitched to a bill of \$650 for the time the cascoe lay idle. This bill was allowed by the office of the United States auditor of public accounts. The English firm, in fairness, should have paid the Government a penalty for not furnishing an extra cascoe. Mr. Guyot protested against this payment, but was snubbed for his pains.

"One of the biggest steals perpetrated was committed shortly after August 12, 1898, when the siege was raised. A cargo of opium came into the harbor, and the difference between the revenue paid to the Government and what should have been paid made a fortune for a few men in the custom-house. One understrapper who did not get a fair 'divvy' gave this steal away. One official was removed and Lieut.-Col. George H. Colton took his place, while the steal was hushed up by order of General Otis. If the Government wishes to unearth this matter, it can easily be done, notwithstanding the lapse of a year.

"Among the merchants the general understanding is that the revenue office under American rule is a greater den of thieves than under Spanish authority. As one merchant naively puts it, 'When the Spanish were here we only had to "fix" one official, now we have to go down the line from collector to office boy.'

"The archbishop of Manila came out the loser to the extent of several thousand sacks of rice, which 'got lost' between the church, where it was stored in old Manila, and where it was sold by the United States authorities. In this case the officers were generous, giving the archbishop about one half of his dues.

"Ostensibly thirty cents a day per man is paid to each sick soldier; at least that is what is charged up against the people of the United States. But as a matter of fact, not a penny or its equivalent ever reaches the poor devils in the hospitals. Mr. Guyot was sick in the hospital for nearly two months, and discloses that had it not been for the fact that two of his old smelter friends, named Ropp and Englehardt, sent a box of canned food to him, he would have starved. The hospital at Malate, under the control of Captain Keifer, is considered the worst in the lot. Every one there steals, from the captain down. The captain sells the luxuries furnished by the Government, and gives the sick and wounded soldiers hard tack and canned beef. The principal hospital, the 'First reserve,' is not so bad, but a fortune is being made there out of the extra 30 cents per day for each sick man.

"The regular price paid for the use of carabao, or buffalo teams, is \$1.75 a day. Colonel Pope pays Warner Barnes & Company \$8 a day for every carabao furnished by this firm on government work. A contract made with a man named Dr. M. Carmen to furnish water buffalo teams covered an immense field. It provided for the payment to Carmen of \$4 a day for buffalo teams, and for 80 cents a day for each Filipino or Chinese laborer furnished by Carmen. Under this contract, which paid double price in each case, Carmen must have made a fine profit, as hundreds

of teams and thousands of coolies have been employed for months."

Rev. Peter MacQueen, pastor of the Day Street Congregational Church of West Somerville, Mass., who was chaplain of a regiment in the Philippines and who has recently returned, has given out a statement which seems to corroborate Mr. Guyot's charges. "The two views supplement each other," says *The Republican*, "in a curious, even a remarkable, manner. One speaks from inside knowledge, and the other from outside. Each of these witnesses has come forward independently of the other, and at about the same time." Mr. MacQueen says in part:

"The custom-house (at Manila) is a seething abomination and a scum. I always lost everything I had coming through it. Other men paid and got through. It is run by military incompetents. One chief ran it a few months, and then tried to start a bank. People say they are not honest. I know they are not polite. Military men and civilians said to me, 'You dare not tell what you know when you get home.'"

"There are Americans going into Manila who do not represent even the average class of American citizens. Take some of the civilians. There is a Mr. Brown, whose name is Baranski, and a Mr. Carmen associated together in the American commercial company. I have it on the authority of Mr. Kaelin and Timothy W. Coakley of the Philippines-American Company that Carmen and Brown sell tomatoes for \$7.50 per case, whereas the duty on tomatoes is \$8 per case. Mr. Kaelin showed me some correspondence of the War Department in relation to the selling of provisions by the Commissary Department to civilians. One can see, of course, that this would ruin the grocery and provision trade among the civilian population of Manila; but that it is done very widely there is no manner of doubt.

"It is said that Mr. Carmen came to Manila six months ago a penniless man, and that to-day he has a monopoly of the Nipa Thatch and the cascoes for transportation of the Pasig River. Mr. Brown is often seen with American officers, when these officers are intoxicated, taking them to their homes. I have watched him thus again and again; in other words, evidently influencing them in his interest. It is said that Mr. Brown has gone so far as to bribe those in charge of the United States tugs, which tow the cascoes of provisions from the transports to the wharves, and are not examined by the custom-house officials. It is said that some of these tugs tow into the side of the walled city cascoes from merchant ships, discharge their cargo, and never pay customs. Mr. Brown is connected with the saloon business, and that is the business which flourishes best in Manila. Everybody tries to get a saloon; General Otis will not give a license to an ex-soldier. This is good as far as it goes, but it goes such a short way that it only irritates the ex-soldiers. . . .

"I think the impression was growing among the Spaniards and Filipinos, as well as our own people in Manila, when I left, that some of the American civilians and soldiers could give the Spaniards cards and spades and beat them at the game of theft.

"There is no use in any American citizen trying to get into Luzon just now to start a business, because, if he takes in his merchandise honestly through the custom-house, it would be impossible for him to make a living. These things are not pleasant to say, but when your own countrymen all through the city laugh and sneer at such things, there must be some truth in them."

The New York *Tribune* published not long ago a letter bearing on the same subject from a naval officer whom *The Tribune* described as "one of the most intelligent and well-known naval officers of high rank now on the Asiatic station." This officer said that any one in the government employ who can give or procure for a steamer clearance papers to a closed port "can have any amount of money he chooses to ask"; for with such papers the steamer will simply be warned away from the port by our steamers, without them it would be confiscated or sunk. "For this reason," says the officer, "clearances are exceedingly valuable. The temptations are, therefore, notorious. The Spaniards kept very few ports open, and trade with others represented personal emoluments. It was not a question merely of revenue to the state. Men are mortal, even if they are not Spaniards or

'friendly natives,' and unless the matter is handled quickly and sternly and an accounting called for, there will be an administration installed out here which in spots—and large spots—will be as scandalous as anything ever known to Spain. There are already ominous whispers of financial irregularities, but the censor system is all-pervading. Washington should act promptly to prevent demoralization later."

The Boston *Herald*, after noticing some of the evidences of political corruption displayed in this country, says:

"It was natural, with these tendencies existing, that the opportunities afforded at Manila should not be neglected. Here are war operations several thousand miles from home, and with a helpless people to a great extent for the victims of fraud. . . . These charges are so extreme as to seem on their face incredible. Yet they are made by a man who had the best opportunities of knowing with regard to them, who had sustained previously to his enlistment an excellent character, and who is vouched for by the best citizens of his vicinage. . . . If a tithe of what is stated above is true, there is gross incompetency, in which rascality runs riot, and the appeal made to the Government by the army officer quoted can not have too early attention."

INSURANCE SURPLUS AND POLICY-HOLDERS.

THE unanimous decision of the New York State court of appeals against Mr. Emil Greeff—whose suit against the Equitable Life Insurance Company was considered in these columns June 3—is of considerable interest to the large number of people holding endowment life-insurance policies. Unless further developments occur, the companies and not the policy-holders will continue to control the surpluses. According to this decision, the policy-holder is entitled to a share of the surplus, but only such a share as the directors may decide. The decision says:

"We think the principle which controls the disposition of surplus earnings of a stock corporation is applicable here. In these cases it has often been held that until dividends have been declared a stockholder had no right of action at law to recover any part of the fund applicable for that purpose. In a sense, all the funds in the possession of a mutual insurance company, over and above its immediate and present liabilities, may be regarded as surplus; yet it is not for that reason understood as belonging to or to be immediately distributed among the policy-holders, either by them or by the company. The word surplus, like the word liabilities, has a special meaning, which has arisen in this branch of the insurance business. Such surplus could be held by them not only for the protection of their policy-holders, but as an inducement to the public to insure. In the absence of fraud all the acts of the officers are conclusive."

To which the New York *Sun* makes this rejoinder:

"Without disrespect to the decision of the court of appeals or suggesting in any way that it is not good law, it may be questioned whether its analogy of a stockholder in a corporation to a policy-holder in a mutual insurance organization is a just one. The stockholder can sell his shares, receiving therefor a sum which represents a pro rata interest in the undivided and well-known profits of the concern. This is shown in the high market quotations of the stocks of many companies which have never made any distribution of profits whatever. The holder of an insurance policy has no such recourse."

The New York *Evening Post* considers the decision in harmony with the principles of justice:

"The unanimous decision of the court of appeals 'in favor of the Equitable,' as some of the papers state it, is, in reality, in favor of all the assured but Greeff. The decision is not only in conformity to explicit law—it is in harmony with the principles of justice. That permanence which is of prime importance in a corporation, issuing contracts that may run for a generation, would be impossible if Greeff's contention were sustained. If a life-insurance company were to distribute all its surplus, it would become insolvent in the first panic that caused shrinkage in the market value of assets. The policy-holders of the Equitable, and all other companies, who clearly comprehend the character of their contracts, will be gratified with this decision."

THE ANGLO-VENEZUELAN AWARD.

ENGLAND'S victory over Venezuela—for as such the award is generally construed—finds the American press in a mood considerably different from the one exhibited in the closing days of 1895 and the early part of 1896. Where the editorial columns were then filled with extended discussions of the rival claims of England and Venezuela, generally reaching the conclusion that Venezuela's claim was just, we now find the whole matter dismissed with a few paragraphs. The opinion which finds widest expression does not concern itself with the justice of the award at all, but avers that the main feature of the case is the triumph for arbitration. The fact that of the 60,000 square miles claimed by Venezuela she gets only 100, and part of that marsh land, fails to arouse any of the indignation displayed three and a half years ago.

The Washington *Star* thinks that even Venezuela has some reason to congratulate herself, because the boundary has now been fixed permanently, and there is no danger of further British encroachment. The Philadelphia *Press* thinks that the spectacle of England arbitrating under our compulsion is a salutary lesson for Europe. In the twenty years since we first asked England to arbitrate this boundary, says *The Press*, "European powers have acquired over 9,000,000 square miles by conquest; but in all this long course of red-handed acquisition, not a square mile has been seized in North or South America, simply and solely because over them was cast the shadow of the United States. But for this, other American countries would have shared the fate of Venezuela, unable to secure arbitration as to its full claims until the United States spoke." The Boston *Transcript* hopes that this example of arbitration will not be lost upon the diplomats who are handling the complications which have arisen in Alaska and South Africa. "While matters in the latter part of the world have gone so far," says *The Transcript*, "that the prospect of arbitration is hopeless, the Alaskan boundary question remains to be settled, and the example of the successful Venezuelan arbitration ought to open the way plainly for England and the United States to follow." It is not only a triumph for arbitration, says the St. Louis *Globe-Democrat*, but also for the Monroe doctrine, for "the most powerful nation of the Old World, in accepting the advice of the United States to submit the question to a disinterested tribunal, recognized a quasi-guardianship on the part of the United States over the rest of the countries of this continent." The New York *Evening Post* regards the award of most of the gold country to Great Britain as desirable in the interest of civilization. *The Evening Post* continues:

"Those gold-mines, according to all accounts, can be worked at a profit only under a stable government. Not only must the government of the region where they are situated be that of a civilized and enlightened country, but the approaches to it must be under like control. At the time when the United States was in a spasm over this question, and when these gold-mines were figuring in the press as the prize for which Great Britain was chiefly contending, letters came from American miners there, saying that their interests and those of all the gold-producers depended on the continuation and confirmation of British control; that if the region were turned over to Venezuela, their property would be exposed to depredation, spoliation, and confiscation, and that they might as well abandon the country at once. Considerations of this

sort had very little weight in the scale when we were deciding the boundary question for all the parties concerned, but we have Judge Brewer's word for it (if the interview is correct), that 'the present insurrection in Venezuela and the consequent feeling of instability weighed to a certain extent in the balance.' We should hope so."

The Brooklyn *Eagle* takes a similar view, saying that "British possession is better than Venezuelan possession for soil or men. . . . Frequent revolutions attest the instability and wellnigh the barbarism of Venezuelan institutions and make any people there, decreed to be under British control, proper subjects for the congratulation of mankind."

The Baltimore *Sun* gives the following summary and explanation of the award:

"The decision of the Anglo-Venezuelan Boundary Arbitration Commission makes little change of frontiers, confirming for the most part the line between British Guiana and Venezuela shown in maps for fifty years past. Approximately the line sketched by Schomburgk in 1844 is recognized, thus leaving the British and the Venezuelans virtually undisturbed in their respective settlements. Venezuela claimed all territory east of the river Orinoco, up to the river Essequibo, or some 60,000 square miles of the territory included in British Guiana as chartered by Schomburgk. The arbitrators do not award her this, but give her about one fourth of the coast-line claimed by her, and in the interior about 100 square miles south of the river Cuyuni. The British claimed the whole coast-line between the Essequibo and the Orinoco rivers, as far as Point Barima. Under the award they lose, as already stated, about one fourth of the coast. The dividing line leaves the coast at Point Playa, on the Waini River, some miles east of Point Barima. Thence it extends to the Amakuru River and Imataka Mountains, following the natural boundaries chosen by Schomburgk, to the Acarabisi and Cuyuni rivers. The country watered by the Cuyuni has been the principal bone of contention, since gold is abundantly distributed in that region. Here the arbitrators have to some extent effected a compromise, giving to Venezuela a narrow strip of territory south of the river, whereas the British contention would have least confined her to the north bank. The British get the Schomburgk line along the north bank of the Cuyuni as far as its confluence with the river Vanamu. Here the boundary is made to cross to the south side of the Cuyuni to Mount Roraima, while the Schomburgk line continued along the north bank of the Cuyuni to Mount Roraima. All the rest of the boundary of British Guiana, on the western and southern sides, is left by the arbitrators as Schomburgk marked it. As respects the gold-mines, their possession is not materially affected. Venezuela retains the numerous gold-fields she has been working for years past, and the British retain theirs."

REAR-ADMIRAL H. L. HOWISON,
Retired October 10.

CAPT. A. H. MCCORMICK,
Promoted to Rear-Admiral.

REAR-ADMIRALS IN TRANSITION.

THE GERMANS AND THE AMERICANS.

PROF. HUGO MÜNSTERBERG, who came from Germany a few years ago to become a member of the faculty of Harvard University, thinks that a deplorable state of misunderstanding exists between two of the best peoples on earth—the Germans and the Americans—and that it might all be removed if we could be brought to know each other better. The existing state of mind in the two lands, he tells us (in *The Atlantic Monthly*), is dangerous to the world's peace, for in international, like personal, relations the object of a quarrel is insignificant and the mental attitude everything. "If Americans and Germans like each other," he says, "the whole of China will be too small to cause a conflict; but if there is antipathy between them, the tiniest rock in the ocean may suffice to bring on a war which shall set the globe ablaze." Germany and the United States are coming into the same paths in learning, art, commerce, and world-politics, and the importance of mutual good-feeling in their rivalry is becoming more apparent every year. What is the cause of the present mutual dislike? Professor Münsterberg says:

"They do not like each other because they do not regard each other as gentlemen: the American thinks the German servile and reactionary, narrow-minded, and narrow-hearted; the German thinks the American greedy and vulgar, brutal and corrupt. As long as the people feel like that, all the diplomacy of the two governments can merely apply plasters to the wounds, but can never thoroughly heal them. Only one course is open for an organic improvement: the two nations must learn to understand each other and to feel the inner accord of their real natures, or at least to overcome hostile prejudices."

Professor Münsterberg then gives us a picture of the "Dutchman"—according to the American idea—as follows:

"The habits of this Prussian sauerkraut eater are well known. He goes shabbily dressed, never takes a bath, drinks beer at his breakfast, plays skat, smokes a long pipe, wears spectacles, reads books from dirty loan libraries, is rude to the lower classes and slavishly servile to the higher, is innocent of the slightest attempt at good form in society; considering it as his object in life to obey the policeman, to fill blanks with bureaucratic red tape, and to get a title in front of his name. Most of this genus fill their time with training parade step in the barrack courts; the others either make bad lyrical poems, or live immoral lives, or sit in prison on account of daring to say a free word in politics. But their chief characteristic comes out in their relations to women and to the government. With calculating cruelty, they force women to remain uneducated and without rights; in marriage they treat them like silly playthings or servant-girls; a woman with intellectual or esthetic interests is, like everything which suggests progress, a horror to their minds. And lastly, their government: it is hard to understand why, but it is a fact that they insist on living without any constitution, under an absolute autocrat, and it is their chief pride that their monarch is an irresponsible busybody, whose chief aim is to bother his patient subjects."

The German idea of the Yankee is not more flattering:

"In the German language the adjective 'American' is usually connected with but three things. The Germans speak of American stoves, and mean a kind of stove which I have never seen in this country; they speak of American duels, and mean an absurd sort of duel which was certainly never fought on this continent; and finally, they speak of American humbug, and mean by it that kind of humbug which flourishes in Berlin just as in Chicago. But the American man is of course very well known. He is a haggard creature, with vulgar tastes and brutal manners, who drinks whisky and chews tobacco, spits, fights, puts his feet on the table, and habitually rushes along in wild haste, absorbed by a greedy desire for the dollars of his neighbors. He does not care for education or art, for the public welfare or for justice, except so far as they mean money to him. Corrupt from top to toe, he buys legislation and courts and government; and when he wants fun, he lynches innocent negroes on Madison Square in New York, or in the Boston Public Garden. He has his family home usually in a sky-scraper of twenty-four stories; his business is

founded on misleading advertisements; his newspapers are filled with accounts of murders, and his churches swarm with hypocrites."

As a result of these ridiculous conceptions,

"when an English cable agency sends news to Germany that the Americans have fallen upon the poor Cubans to fill the pockets of Senators, and are killing in the Philippines mostly women and children, and sends news to America that the Germans slyly interfere with the navy in Manila, or sell arms to the Filipinos, or stir up the Samoans, is it surprising that the worst finds the readiest belief, and that public opinion in both countries cries, 'How dare they, the rascals!'"

One might at first suppose that the immense amount of modern travel would dissipate these prejudices; but the fact remains that it does not, and Professor Münsterberg, who is a psychologist, explains the failure by the law of the human mind that we usually see whatever we expect to see, so that the American traveler leaves Germany with all the absurd prejudices he carried there. The traveler himself, too, remains unobserved if he is an ordinary American; "but when a puffed-up parvenu from the West comes along, with noisy manners, he is observed, and he alone, tho one among scores, is then 'the American.'" Both parties, in short, mistake the extraordinary for the ordinary, and let the usual go unheeded.

As for the Germans who visit America, the rare tourist sees too little on his flying trip to form any adequate idea of our character, while the German who comes here to live is out of touch with the English-speaking population:

"He feels socially in the background; he is the 'Dutchman,' who, through his bad English, through his habits and manners, through his tastes and pleasures, is different from the majority, and therefore set apart as a citizen of second rank—if not slighted, at least kept in social isolation. On the side of the German, the result of this situation is an entire ignorance of the Anglo-American life: he may go his way here for thirty years without ever breaking bread at the table of any one outside of the German circle; he may even have become rich, and yet he is not quite in the social current."

So, altho New York and Chicago each has more Germans than any German city except Berlin, we do not understand them, and they do not understand us.

What has hurt us most in European eyes is the idea that we are materialistic and commercial, to the exclusion of everything higher and nobler:

"The belief that Americans have no spark of idealism in their souls has done more harm to the relations of continental nations with the United States than any protective tariff or any commercial competition; it has surrounded every act of America with a fringe of selfishness and meanness by which even the most harmless action becomes repugnant to sound feelings, and by which the most guileless man is made a prey to the newspapers of Europe. Granted that an American action can never have idealistic motives, it is not difficult to distort daily occurrences and historical events so that everything appears disgusting to a country which believes itself to have a prior claim upon every sort of idealistic feeling, and this emotion of the crowd then becomes the spring of political reactions. I think this attitude is utterly groundless. More than that, I think the true American is an idealist through and through."

Professor Münsterberg grants that in our domestic politics, when economic and commercial questions are at issue, the American character does not display its ideal side. But in politics in the larger sense, we show our idealism unmistakably:

"Wherever such and similar factors are eliminated, the American in politics proves himself the purest idealist, the best men come to the front, the most sentimental motives dominate, and almost no one dares to damage his cause by appealing to selfish instincts. Recent events have once more proved that beyond question. Whatever the Senators and sugar men may have

thought about it, the people wanted the Cuban war for sentimental reasons; and if the uninformed continental papers maintain that the desire for war had merely selfish reasons, they falsify history. Is not the whole debate over expansion carried on with highly idealistic arguments on both sides? Did not even the Anglo-American alliance get hold of the nation when the masses found an idealistic halo for it, discovering that those Englishmen whom they wanted to fight two years before were of the same blood and the same traditions as themselves? It is not entirely sentimental to use Washington's Farewell Address to-day as a living argument with which to determine practical questions? Even the most natural selfish and practical instinct can be overcome, with the typical American, by a catchy sentimental argument."

Private life in America, too, reveals the same high quality:

"This high spirit of the individual in politics repeats itself much more plainly in private life, where helpfulness and honesty seem to me the most essential characteristics of the American. Helpfulness shows itself in charity, in hospitality, in projects for education or for public improvements, or in the most trivial services of daily life; while silent confidence in the honesty of one's fellow men controls practical relations here in a way which is not known in cautious Europe, and could not have been developed if that confidence were not justified. Add to it the American's gratefulness and generosity, his humor and his fairness; consider the vividness of his religious emotion, his interest in religious and metaphysical speculation, his eagerness always to realize the best results of science, and the purity of the relations of the sexes; in short, look around everywhere without prejudice, and you can not doubt that behind the terrifying mask of the selfish realist breathes the idealist who is controlled by a belief in ethical values."

Many Americans have "the settled opinion that the Germans, the poor, suffering subjects of Emperor William, have no liberty." As to the truth of this view, Professor Münsterberg remarks:

"Moreover, if I consider the outer forms of life, I do not hesitate to maintain that Germany is even in that respect freer than the United States. The right to insult the President, to cross the railroad tracks where it is dangerous, and to ignore the law if a great trust stands behind one, is not freedom, but lack of social development, the survival of a lower civilization, a pseudo-freedom whose symptoms, fortunately, are disappearing from year to year in this country, also. Freedom is not absence of limitations, not licentiousness: freedom and duty are never in opposition, but demand each other. The social intercourse of the well-mannered is not less free than that of ill-bred men, tho they obey many more rules, and the expression of thought is not less free when we obey the laws of good language: no, it is freer than the expression of those who speak slang. That people is freest whose forms of life secure the fullest possible development of each individual, and only the highest differentiation of social prescriptions can bring such true freedom, not the liberty of the primeval forest. Germans live under more complicated and systematized rules than Americans, and for this very reason they have greater freedom than is possible in the less restrained rush of American life."

The German Emperor is so far from being an autocrat that he has less real power than our own rulers.

"Those, however, who maintain that the Emperor is an autocrat do not understand how closely the German monarchy, not only through the constitutional and parliamentary limitations imposed upon it, but still more in its inner forces, is identical with the national will. I do not care to discuss here whether the Spanish war was necessary, whether the annexation of the Philippines was desirable, or whether Alger was a good Minister; I know only that the German Emperor would not have been able to retain a minister for a year against unanimous public opinion, or to make war and to create colonies when but a short time before the public soul had revolted against the idea of war and aggressive annexation. A President with such vast powers, parties in the grasp of bosses, city administrations under the whip of spoils-men, the economic world under the tyranny of trusts, and all together under the autocracy of yellow-press editors—no, I love and admire America, but Germany really seems to me freer."

So much for mistaken ideas on both sides of the water. How are they to be remedied? Professor Münsterberg finds that the corrective force is already at work in both nations, in their policies of expansion:

"Germany must become more democratic, and America more aristocratic. It is, to be sure, not democracy after Bebel's prescriptions, nor aristocracy after Astor's ideas, that is required; we need the democracy which makes every man ethically responsible for himself, and the aristocracy which considers the individual as existing, not for himself, but only in his relation to those public institutions in which the duties and ideals of the nation are centralized. Time will bring the change to both countries, and it is interesting to observe the numerous symptoms which indicate that this reciprocal movement toward aristocratic development here, and toward democratic strengthening there, will be brought about in both countries most directly by the same political means, the policy of expansion. The colonial transmarine development of the German empire is taking away that narrowness of its citizens which too much depressed the spirit of individual initiative; it is widening the horizon, and giving to the individual that increased self-respect which is the noblest endowment of democracy, and which will secure the safest basis to the national monarchy. The expansion policy of America, on the other hand, must reinforce the spirit of public responsibility, must give through its international consequences an absolutely new position to the government and to military life and diplomacy, must stimulate new energies in public service, and so create an aristocratic spirit which may in time bring to us a national art and poetry and science and philosophy, and thus weave the golden thread of greatness into a glorious democracy."

"Whether it takes the short cut through expansion or chooses a longer way, in any case time will bring about the change in Germany as well as in America; but those who know both countries can not fail to see how much this movement would be reinforced, and how much energy would be saved in the process, if the two nations were to influence each other more directly and learn from each other more willingly. They feel it, therefore, their profound duty to help remove the foolish, narrow-minded prejudices on both sides of the ocean, and with them the mood that occasions petty quarrels and unnecessary friction."

TOPICS IN BRIEF.

IT is not so much the Transvaal as the Transvaalians in which England is interested.—*The Boston Transcript*.

THE Boers made their first mistake by settling territory that the British might want some day.—*The Detroit News*.

So long as the Filipinos do not capture Manila General Otis sees no reason to lose hope.—*The Chicago Record*.

HEREAFTER it is probable that youthful republics will hesitate before encouraging English immigration.—*The Detroit News*.

IF General Otis keeps on making blunders his return home will be hailed with almost as loud acclaim as Dewey's.—*The St. Paul Globe*.

COLONEL BRYAN is willing to admit that if he had been in Dewey's place he could not have done any better.—*The Philadelphia Ledger*.

A GREAT many persons are claiming the credit of having discovered Dewey, but Montojo is entitled to part of the honor.—*The Chicago Record*.

DON'T buy any canes made from the log of the *Olympia* unless accompanied by Dewey's signature certifying they are genuine.—*The New York World*.

BACON: "I see they say Dewey descended from some of the old English kings." Egbert: "Well, he seems to have worked up again, all right."—*The Yonkers Statesman*.

CHANCE FOR ATKINSON.—The Filipinos are greatly in need of provisions. Edward Atkinson should send over a cargo of his pamphlets telling how to live on 15 cents a week and an oil-stove.—*The Kansas City Journal*.

POLITICAL REPORTEER.—An imperialistic editor in the aristocracy ridden East sneeringly suggests Bryan and Aguinaldo as the Democratic candidates for the Presidency. That's all right, and what's the matter with McKinley and the sultan of Sulu for the opposing team in the race?—*The Wilcox (Nebr.) Herald*.

ADMIRAL SCHLEY in his article in one of the current magazines may be forgiven for telling the story about Gen. Zachary Taylor and the battle of Buena Vista. After hearing what every one else had said or written about the battle the general came to the conclusion that he wasn't there. Schley feels himself to be in something of the same fix.—*Springfield Republican*.

LETTERS AND ART.

ADMIRAL DEWEY IN LITERATURE AND ART.

APPARENTLY a special alcove in the public libraries will soon have to be reserved for books and articles relating to Admiral Dewey. Among the gifts which he received upon his return to America was an enormous volume, under which several

QUADRIO OF VICTORY ON DEWEY ARCH.

men might well stagger, filled with articles about himself, clipped from the journals; and it is probable that not one tenth of all that has been printed is included in this book.

Besides the special Dewey number of *McClure's* for October and articles in most of the other magazines, a number of volumes upon the admiral have just appeared or are announced for publication shortly. Among the former are Rossiter Johnson's "The Hero of Manila," John Barrett's "Admiral George Dewey," and Frederick Palmer's "George Dewey, Admiral." There is, however, likely to be much embarrassment as to choice of titles. As a writer has recently remarked, the three books just mentioned apparently exhaust the list of possible variations; yet the book-makers still have "Our George," "Cousin George, the Diplomat," and "George, the Terror of the Spaniards."

The following account of "The Dewey Scrap-Book" was given in advance of presentation by Mrs. Frank A. Burrelle, the compiler of the work, in the *Florida Times-Union and Citizen* (September 24):

"The finished book, which is now being bound in solid silver ready for the presentation, weighs 150 pounds, contains upward of 10,000 clippings, and has extracts from almost every newspaper in the country.

"Perhaps the most important page contains facsimiles of the famous autograph letters written by all of the leading members of President McKinley's Cabinet, in which statements of high office, for the first time in journalistic annals, consented to write and sign their views at the request of and for publication in a number of leading papers, whose proprietors and editors, acting in concert, presented the original letters to Admiral Dewey. As these letters attracted national attention, and were one of the greatest, if not the greatest, newspaper triumphs in the matter of recording the sentiments of the nation's foremost men, the newspapers containing them found a conspicuous place in the album.

"As may well be imagined, the work of compiling such a scrap-

book as this was no child's play. After the preliminaries as to the size of the pages and the general appearance of the volume had been agreed upon, I began work by entering into correspondence with all of the newspapers throughout the United States, asking them to forward any pet cartoon or sentiment expressed in their paper regarding Admiral Dewey. The response was a very cordial one, not only from the editors but from authors and artists. Victor Herbert sent the original score of 'The Fight Is Made and Won,' which was dedicated to Dewey; McClure sent an entire page of artist-proof illustrations of one of Oscar King's Manila stories; Margherita Arelina Hamm contributed her 'Hymn to Dewey,' and the closing chapter of her 'Life of Dewey,' with which the volume ends.

"A description of the appearance and size of the book will be interesting. The book has 400 pages, 22 x 26½ inches. This makes a total of 147 inches to the page, or 58,800 running inches of reading matter, equal to 50 entire issues of the *New York Sun*. Above each of the 10,000 clippings is engrossed the name and date of the paper from which the item was taken. The front page is elaborately engrossed with a suitable inscription. Beneath this are the signatures of the members of the Maritime Exchange who present the book. The volume is bound in silver, in the right-hand upper corner of the cover being a handsome design representing the entrance of Dewey's fleet to Manila Bay. Surrounding the picture is a design made up of the palm-trees and cane-brakes of the Philippine Islands, surmounted by the Goddess of War. The lower right-hand corner depicts the victorious squadron entering New York harbor with the Goddess of Peace hovering above. The book rests on a solid oak table, the legs of which are hand-carved American eagles. The ends are ornamented with the prow of the *Olympia* and the United States coat-of-arms.

"The table is so arranged that the top swings around and drops the center to permit of the book being opened with ease, as it is entirely too heavy to be handled in any other way. The book, exclusive of the table, weighs about one hundred and fifty pounds."

One of the finest tributes that art has ever offered to a returning

GENERAL VIEW OF ARCH.

hero is the lofty and dazzling white arch erected in New York. Credit for the conception and general design of this noble work—which all lovers of the beautiful hope will be made a permanent possession of the city—is largely due to Mr. Charles R. Lamb, vice-president of the Architectural League of New York. Mr. J. Q. A. Ward, Mr. Philip Martiny, Mr. Daniel C. French, Mr. Charles H. Niehaus, and Mr. Karl Bitter are the designers of the

five most striking groups of figures, and most of the leading sculptors of the city are also represented by strikingly fine work on the arch or columns. An art critic in the *New York Sun* (September 28) says of this achievement:

"The city may well feel proud of it. It is fine in every respect. It fulfils its purpose as a decorative creation, and it could not have been erected, considering all the conditions, in any other place than in the town where it stands. While shortness of time for execution is one of the evil conditions that confronts American artists in almost all the commissions they are called upon to fill, the brief space of time which has elapsed since it was decided to build this arch and the date when it is finished will no doubt excite admiration on the part of our hurry-loving people. But the arch is a temporary decorative structure. It was not designed as a permanent monument, and whereas, had this been the case, a dozen compromises with accepted artistic canons would have been impossible, it has here been fitting to make them in the efforts to make the arch fit in with certain incongruous surroundings and form a center of decoration in a general plan circumscribed in its scope by numerous unremovable difficulties.

"The arch symbolizes Naval Victory, and is intended in all its attributes, in its groups and portrait statues, to be representative of the power and fame of the United States as a nation that has won honor on the seas. Its design is based on the arch of Titus at Rome, one of the most beautiful of all existing monuments of triumph, and resembles the Arc de Triomphe at Paris in the important feature of having its piers pierced by arches opening through from side to side. It may be said that there is not a single instance where any of the sculptors have failed to reach, in the less important features, the high average set by the principal groups. Looked at from near-by, where details may be carefully studied, the excellence of all the work is simply amazing. Considering that two months ago the Dewey-arch existed only in imagination, its actual presence to-day in Madison Square, complete, imposing, and beautiful, is an achievement for which the designer and sculptors deserve high praise and honor from our citizens, and the city itself should congratulate itself in the thought that nothing of the kind more noteworthy and so admirable has ever been given to it before."

EDWIN MARKHAM WITH A HOE

MR. EDWIN MARKHAM recently paid a visit to the Roycroft Shop, where Mr. Elbert Hubbard, "the sage of East Ansonia, N. Y.," holds court, and where the Roycroft books and other objects of art are made. Mr. Markham has of late been so often accused of being a maligner of the hoe and of the man who uses it that we rejoice with Fra Albertus in his discovery that the poet is himself no stranger to that implement. The sage thus tells the tale (in *The Philistine*, October):

"When Mr. Markham arrived at the shop, Saint Gerome, Sammy the Artist, Ali Baba & I were just starting for the potato-field, each armed with a hoe. Mr. Markham laffs heartily at our appearance and thought it was a planned reception; but it wasn't, it was all purely accidental.

"I sent one of the boys to the barn to find another hoe. Mr. Markham did not shy, & when he was provided we started away. We reached the field, and hoed.

"Mr. Markham is no stranger to a hoe. He is hearty, bronzed, and his white hair and beard quite belie his strong fizeek and boyish spirit. As we hoed we discussed the 'hoe-man.' Probably I know more clearly than Mr. Markham does, himself, just what he had in view when he wrote 'The Man with the Hoe.'

"So I explained to Mr. Markham what he meant. He was grateful.

"The trouble with the hoe-man is too much hoe—it is hoe-congestion.

"The hoe is all right, and all men should hoe.

"If all men hoed a little, no man would have to hoe all the time.

"To hoe all the time slants the brow.

"To never hoe tends to hydrocephalus & nervous prostration.

"Many men never hoe, because, they say, 'I don't have to.' It is a fool's answer.

"Then very many men are not allowed to hoe—the land is needed for game preserves. And in a country called Italy, where the true type of hoe-man is found most abundantly, there is an army of two hundred & fifty thousand fighting men who have to be fed with the things the hoe-man digs out of the ground.

"Wherever there are many soldiers there are also many hoe-men.

"Some one must hoe.

"All food and all wealth are hoed out of the ground.

"If you never hoe, and yet eat, you are slanting the forehead of the hoe-man and adding to that stolid look of God-forsaken hopelessness. If you help the hoe-man hoe, he will then have time to think, and gradually the shape of his head will change, his eye will brighten, the coarse mouth will become expressive, and at times he will take his dumb gaze from the earth and look up at the stars.

"Let us all hoe—a little."

THE DRAMATIC OUTLOOK.

THE opening theatrical season in New York appears full of the promise of an uncommonly interesting, fresh, and varied series of entertainments of the popular order. It is true that in the more seriously interesting classic drama there is an eclipse, partial if not complete, which promises to continue for some time. One of the few openings in the clouds hovering over the legitimate drama is the contemplated production of five plays, selected from the works of Ibsen, Bernard Shaw, Maeterlinck, Hauptmann, and Sudermann, under the direction of Mr. John Blair. The dramatic outlook for the season is thus summed up by an editorial writer in the *New York Evening Post* (September 23):

"The situation can be defined most clearly by a rapid enumeration of the chief new attractions in the theatrical bill of fare. First on the list, by virtue of seniority and past achievement, comes Sir Henry Irving, but this time he will appeal to the popular rather than the cultivated taste, by putting his main reliance upon Sardou's pseudo-historical romantic melodrama, 'Robespierre.' The representation, however, is certain to be noteworthy as an illustration of enlightened stage management, and admittedly enables him to display in vivid fashion his unrivaled power as an interpreter of conflicting emotions and the terrors of remorse. He will be accompanied, of course, by Ellen Terry, an actress whose personal charm is still preeminent. The Kendalls are to be seen in their latest success, 'The Elder Miss Blossom,' a performance which has been praised very warmly by some judicious critics, and, possibly, in two new plays, which have not yet been specified. Later on, at some undetermined date, Eleanora Duse, the greatest of living actresses, is expected to appear, but the details of this important engagement remain to be settled. The return of Mme. Bernhardt, altho uncertain, is among the possibilities. Should she make up her mind to cross the Atlantic, she, presumably, will present her 'Hamlet,' which assuredly will be curious, if not edifying. Mme. Modjeska is also likely to visit New York with a new play.

"Owing to the postponement of Mr. John Hare's visit with 'The Gay Lord Quex,' we shall have nothing new from Mr. Pinero, but Mr. Grundy, one of the brightest, if also one of the most unequal of English dramatists, will be represented by a new piece in which Annie Russell will play the heroine, by 'The Degenerates,' which is prospering in London in spite of much unfavorable press comment, and by 'A Debt of Honor.' H. V. Esmond, who has done some clever and delicate work, is to send 'My Lady's Lord,' which has not been tried, we believe, and 'Brother Officers,' which has enjoyed some measure of success in England. 'Two Kinds of Women' and 'Peg Woffington' are the contributions of J. M. Barrie, whose name justifies pleasurable expectations, and a new piece by Messrs. Parker and Carson, the authors of 'Rosemary,' also will be awaited with interest. Then there are to be dramas by Stanley Weyman, who already has won his spurs, and Eden Philpotts. One of the earliest productions here will be Mr. Zangwill's dramatization of 'The Children of the Ghetto,' which is sure of public attention, and, a little later on, Miss Nethersole will offer a version of Daudet's 'Sapho.' A

play by Riohepin and a farce by Bisson should also be mentioned among the chief novelties on the foreign list. Mere trivialities need not be taken into account."

Among the distinctively American plays, we also have "Peter Stuyvesant," by Bronson Howard and Brander Matthews, and are shortly to have "Sag Harbor," in which Mr. James A. Herne finds a new field for local studies. Besides Miss Marlowe in "Barbara Frietchie," we are promised an adaptation of "David Harum," which will surely attract its thousands and tens of thousands if it possesses an iota of the merit of the book. We have recently mentioned the promised dramatization of Gen. Lew Wallace's "Ben Hur" among the list of special literary dramatization, for the coming season (see *THE LITERARY DIGEST*, September 30).

In spite of these native products, the vast preponderance of plays on the boards for this year will continue to be of foreign origin. It is a rather humiliating fact that the American theater is still substantially an annex of the European stage. In this connection *The Evening Post* says:

"It is worthy of note that we are becoming more and more dependent upon the English stage for leading players, except perhaps in low comedy, for the simple reason, often pointed out in this journal, that we no longer have the training-schools formerly provided by the old system of stock companies. Some of these still exist in England, altho in a modified form, both in London and the provinces, and occasionally turn out qualified actors, capable of actual impersonation. Few such men or women are available here. Our managers, most of whom have the vaguest notions of the art of acting, select leading men mainly on account of their pleasing presence or manners, without much reference to their ability, and permit them to reproduce themselves indefinitely. The consequence is that there is no American actor or actress to-day, of anything like first-class standing, who does not belong to an older generation.

"To this pass have we been brought by the combination system, which has smothered healthy competition at home, shut the stage-door in the face of the American dramatist, paralyzed the development of the American actor, and rendered us almost wholly dependent upon foreign playwrights and players. The only consolation left to us is that the drama has had a sort of revival across the Atlantic, and that we get the benefit of it at second hand."

HOW ONE WOMAN LOVED.

MME. DE STAEL'S fame has somewhat overshadowed that of her mother, Mme. Necker; but one may search far and wide in the world's literature to find love-letters equal to those which Mme. Necker wrote. And these letters do not cease at the point at which most of the imaginary dramas of love cease—at marriage. Mme. Necker's absorbing passion for her husband continued to the end of life, despite her brilliant career as a leader of Parisian society. In *The Nineteenth Century* (August), Marcia C. Maxwell reproduces the story of Mme. Necker's life together with a number of her letters.

Mme. Necker's, or rather Suzanne Curchod's, first love affair was with young Gibbon, the English historian, who, on his return from France to England, broke off the engagement, for the ostensible reason that his father objected. His letter announcing this fact elicited from her the following heart-cry:

"Monsieur,—I blush at the step I am taking; I should wish to hide it from you, as I should wish to hide it from myself. Is it possible, O God! that an innocent heart should abase itself to this point? What a humiliation! . . . I owe this effort to my peace of mind; if I lose the occasion which presents itself there is no longer any tranquillity for me: could I have tasted of it, from the instant that my heart, ingenious in tormenting itself, thought to see in the marks of your coldness only the proof of the delicacy of your feelings. For five whole years have I sacrificed to this chimera by a strange and unique line of conduct; at last my

mind, all romantic as it is, has become convinced of its error; on my knees I ask you to dissuade this foolish heart; set your hand to a complete avowal of your indifference, and my soul will accommodate itself to its position; certainty will produce the tranquillity for which I sigh. You would be the most despicable of men if you refused me this act of frankness, and the God who sees my heart, and who no doubt loves me, tho He makes me suffer the most bitter trials,—that God, I say, will punish you in spite of my prayers, if there is the least dissembling in your answer, or if by your silence you make a plaything of my peace of mind.

"If you ever unveil my unworthy step to whomsoever it might be on earth, were it even to the dearest of my friends, by the horror of my punishment will my fault be judged. I shall look upon it as a terrible crime of which I did not know the atrocity; I already feel that it is an abasement that outrages my modesty, my past conduct, and my actual sentiments."

Two years later, Mlle. Curchod met Jacques Necker, and the acquaintance speedily ripened into love. Here is a letter written by her a few days before their marriage:

"O Jacques, my dear Jacques, do not ask of me the expression of my sentiments; let me enjoy my happiness without reflecting upon it. In contemplating it I fear it may escape, and I can not think of the sweetness of my life without foreseeing the moment which must end it. The trouble of my heart and the dark fancies which agitate it might prevent me from satisfying you. Think at least of the engagement you are about to contract. I fear making you the most ungrateful of men. Ah! if you are not the most tender—stop; turn away your eyes and tear up this letter; it would make you too guilty. Yes, my beloved, you are the chain that unites me to the universe. The instant that you ceased to love me would make me a stranger to all nature. . . . Consider, indeed, in what my joy consists. Is it not the charm of your love that beautifies everything in my eyes? I find in the sweetness of friendship a faint image of our union, in the splendor of fortune the care that you took to acquire it, in the allurements of self-love the confidence of pleasing you more, in intellectual work the hope of captivating your mind and of employing my time so as to repair the losses it will occasion. When I retire to rest, I say to myself, 'He loves me!' and it is in that sweet security that sleep overtakes me. If I awake, my first thought is of heaven; but my soul mingles itself with yours and draws from that union a fresh fervor. My dear friend, do not be satiated with a sentiment that my heart renders inexhaustible. May the moment of my death be the highest point of your love, and it will be the happiest day of my life."

And here is another letter, written by Mme. Necker to a friend of her childhood, shortly after marriage:

"I have married a man who is in my eyes the most perfect of mortals, and I assure you that I am not the only one who considers him so. I liked him as soon as I began to know him, and I should have told you of it if I had been near you, but did not dare to write it. At present I see nothing but my husband in all nature; all my tastes, all my sentiments refer to him; I make no account of other men but according as they approach more or less near to him, and I only compare them in order to have the pleasure of perceiving the difference. . . . The attentions of my husband surpass belief; but I am sensible of nothing but his attachment, and mine for him has so much strength that I see nothing but him in the most agreeable company, and that a man for whom I had some liking was only tiresome to me away from my dear husband. Such is my state, my dear; my life is in the hands of God; I no longer pray to Him to take it away; I do not ask Him to preserve it; I place myself with confidence in the hands of Him who has guided me with so much care and goodness."

As all the world knows, Mme. Necker's *salon* speedily became famous, and her husband became a man of the highest importance in the financial and afterward in the governmental circles of France. One of the first clouds to come into their married life was the frequent separation due to the demands of his business. She became jealous of the French East India Company, and he

became jealous of literature, chiding her for the time she devoted to her writing. This was her reply:

"It seems to me, my dear husband, that I have never loved you so much as I do at present. The sentiment which attaches me to you penetrates my whole soul; I feel sensible of my existence but through you; I never think of myself but as second, and it is always through you that I must pass to arrive at myself. If I did not rather fear the variability of your character, if I imagined that an agitated life were necessary to you, and that sentiment without anxiety could not subsist in your heart, believe me I would make every imaginable sacrifice for you with pleasure. I say this to you from the depths of my heart; if an angel assured me that in a desert you would have for me the same attachment that you show me at Paris, I would follow you there to-morrow without the slightest reluctance, and perhaps even with pleasure. I should wish neither to enjoy nor to breathe but through you, and, by a feeling very different to yours, I can only taste with painful regret the pleasures that do not come to me from you. This is my inmost soul, and I know myself well. This state of mine never varies; it will not leave me till I die. My device on this earth is *Or thou, or nothing!* After that, can you blame me for liking writing? It is no longer, my dear husband, more than the remains of a habit that I think it well to keep because of the activity of my mind and the void left by your absence. But the reproach is becoming too frequent, and, altho that uneasiness may make you perhaps more tender, I prefer—and I hardly dare to say it—I prefer being less loved, and that you should be more happy. Therefore, I make a compact with you; from the moment you abandon for good the East India Company, I promise you, if you require it, to renounce 'Fénelon,' and even promise not to take up my pen on any other subject; and I hope with all my heart that the sacrifice I ask of you may not cost you more than the one which I shall make for you; for, my dear husband, the happiness I enjoy with you is sometimes slightly obscured by my fears. Your character is not so unvarying as mine. Often even you forget yourself. The world and its affairs are necessary to you. You find with me all your pleasures, but not all your wants. Perhaps one day . . . my pen refuses to trace the words. Ah! if I were ever less dear to you, I should not survive the loss of your affection for a moment. As for me, I feel that I have only one mind, and that is yours. I must love you or die."

When M. Necker became Director-General of Finances of France and an idol of the people, who were already beginning to clamor for their rights (the popular indignation over his dismissal later on was the beginning, it may be said, of the French Revolution), his immersion in public affairs was misinterpreted by his wife and called forth the following outburst in her private journal:

"O my God! vouchsafe to calm a soul that adores you! If my heart, filled with a thought of your perfections, has never for an instant wavered between the universe and you; if, in those moments when deluded man thinks he enjoys, I was always ready to leave this life without regret, grant that the inconstancy or the contempt of men may be for me but a source of comparisons to raise myself to heaven. Do not tear from my heart a sentiment which is only too dear, but diminish, if you think proper, the distress it causes there. Permit me to pour out my whole soul, and, if I am mistaken in my suspicions, either reassure my stricken heart or take me away from a life where all is illusion. Precious chimera, perfect and unalterable tenderness, what has become of you? Long I bore your image in my heart; long I thought you realized, like those sick persons who give to objects the color that is fixed in their eyes; it is long, too, since the veil has been torn, and every day makes me perceive more clearly the sad truth. I have lost all, and I thought I had found all. . . ."

Other similar outbursts follow in the journal, and then comes this entry:

"O my husband, pardon me; I thought that you no longer loved me; I outraged you, no doubt; receive my last sigh."

On November 12, 1792, a year and a half before her death, she wrote the following letter to her husband to be read after her death:

"You weep, my beloved one. You think that she who on all

points united her existence to yours lives no more for you. You are mistaken; that God who joined our two hearts, that God, benefactor of all His creatures, who loaded me with His favors, has not annihilated my being. As I write this letter a sentiment that has never deceived me diffuses an unlooked-for calm in my soul; I seem to see that this spirit will still watch over your fate, and that, in the bosom of God—of that God whom I shall never cease to adore, and whom I prefer to all things, even to you—I shall still enjoy your tenderness for me. . . ."

Daily after her death, which occurred May 6, 1794, her husband visited her grave until he too passed away nine years later.

THE MOST WIDELY READ BOOKS OF 1899 IN ENGLAND.

THE tastes of the reading public in England and in America show a marked divergence. The most popular book in this country—"David Harum"—does not find a place in the baker's dozen of leading books shown in the annexed cut from the London *Daily Mail*, reproduced in *The Academy* (September 23).

THE THIRTEEN LEADING BOOKS IN ENGLAND.

The most widely read book there is Miss Ellen Thorneycroft Fowler's "A Double Thread." Mr. Richard Whiteing's "No. 5, John-Street" comes next, with Dr. W. G. Grace's "Recollections" third, C. E. Raimond's "The Open Question" fourth, Mr. Harold Frederic's "The Market-Place" fifth, and Miss Beatrice Harraden's "The Fowler" sixth. Among the remaining books, Fitzgerald's translation of Omar Khayyám (which *The Mail* gives with the curious and apparently cockney spelling of *Khyham*), and Mr. Peter Finley Dunne's "Mr. Dooley"—the only American book in the list—are particularly notable. In the illustration, the position and size of each volume represent as exactly as possible its degree of popularity as ascertained from careful inquiry at the chief circulating libraries of England.

"David Harum" is beginning to sell largely in England, four editions or about fifteen thousand volumes having been lately called for. A large circulating library reports that a number of requests have been received from its readers for copies of "David's Harem," apparently under the conviction that the scene of the story was located somewhere in the dominions of the latest accession to American citizenship, the Sultan of Sulu. *The St. James's Gazette* announces with apparent sobriety of countenance that the novel's popularity in America was due to its "religious interest." Evidently *The Gazette* has a high opinion of

the quality of both David's religion and that of America. We are hardly relieved to find, however, that *The Academy* denies this statement; it states that "the book's fascination lay largely in its pictures of horse-dealing," a subject evidently in its opinion more familiar and fondly appreciated by the native American than the one mentioned by *The St. James's Gazette*.

SOME GERMAN ESTIMATES OF GOETHE.

ENGLISH comments on Goethe's genius (see *THE LITERARY DIGEST*, September 23) touched upon his lack of what is commonly called patriotism. The Germans admit this lack, but they nevertheless claim him as a typical German. *The Vossische Zeitung*, a Liberal paper of the old school, expresses itself, in the main, as follows:

Goethe doubted that the German people could throw off the yoke of the French tyrant, he ridiculed the liberty of the press, and the dream of German unity did not influence him. He shared with Lessing in contempt for patriotism. It would not be well if all men took the same view; but a Goethe and a Lessing may be forgiven. Goethe knew that his people would honor him, and he demanded their gratitude. Statues should be erected to him, he said, as to a commander who has freed the land from an enemy, for he had freed Germany from the bonds of narrow thought. Indeed, but few can appreciate what we owe him. The language has been enriched by him, and many thoughts have by him been formulated for the first time. Not every one has received directly from Goethe's works the ideas which he put into circulation: his thoughts reach the people frequently through other channels. The fact is, people do not know what they owe him, and their ingratitude is unintentional.

The Vorwärts, the mouthpiece of the Social-Democratic Party, says:

"Thus much is certain: of our classics, Goethe does not stand the most in touch with our modern proletariat. Goethe always belonged to the ruling classes, first as the child of the Frankfort patrician, later as Minister of State in Weimar. He did not often mention the 'lowest' classes, and when he did, it was to praise what a modern workman regards as the greatest of crimes—satisfaction with his lot and obedience to his master. . . . It is useless to discuss the vexing question whether he was the greatest poet. Certain it is that neither Homer nor Dante, Cervantes nor Shakespeare, created so rich a world of thought. And that is why we forgive what may appear to be petty in his character. To develop all that is great in human nature is not given to a single individual; only a nation can do that. Had he been as energetic a character as Schiller or Lessing, he would not have enriched civilization with so many great thoughts."

The Deutsche Tages Zeitung, the organ of the Prussian squires, and a representative of German jingoism, says:

"Goethe was a genuine child of his times. Cosmopolitan humanitarianism prevailed in his youth, and he lacked that national feeling which to-day we expect to find in every German. Yet he was German through and through. German are his ideals, German his models. He did not write for the masses, and would be much astonished to find his works popular. But his intellect has influenced the entire nation, each one receiving his share according to his capacity, and we owe him gratitude as one who has done much to form the character of the nation."

The Kölnische Zeitung, which, tho not an official paper, is in touch with government circles and expresses the view of the official classes, speaks as follows:

"However much his name may be in the mouths of the people, Goethe's influence is not yet at its zenith. To him belongs the future. It will yet take some time ere people realize that he is not too high above them to be studied earnestly. The battle with self, the fight for greater purity, for personal perfection, the wrestling of a great spirit with the weaknesses and imperfections of human nature, are depicted by him, and in that he is excessively German. But the man who thought so much of humanity as a whole had no time to tune his lyre to patriotic songs. Yet he has done enough for his country by the services he rendered

her. No other nation has such a master mind, none a figure so powerful to lead in all that is noble and good."

The Weser Zeitung, Bremen, says:

"Goethe is a national prophet and leader without his having intended to become such. He has taught us above all the value of diligence. It is not genius that makes nations great, it is industry. Genius is to be found among all peoples; race does not determine it. We Germans should be proud, not of the many great men we have numbered among us, but of the ceaseless love of work which distinguishes our farmer and mechanic, our scientist and our merchant. In the glorification of this diligence Goethe led, hence we have a right to regard him as a national hero."—*Translations made for THE LITERARY DIGEST*.

An Experiment in Translation.—Emerson, in one of his essays, said that he would as soon think of swimming across every river he met instead of taking the ferry as he would think of laboriously making his way through the classic writers in the original tongues when he had such excellent translations at hand in English. Probably an increasingly large number of people would agree with him; nevertheless, the difference between a work in the original and in a translation is a very tangible one and may even be subjected to scientific test. The following odd experiment is related by a writer in *The Youth's Companion* of an English author:

"He wrote a four-line epigram, asked a friend to translate it into Latin, and sent the Latin to another friend with the request that he turn it back into English. This English version was turned by another into French. The process went on until the lines had passed through Greek, English, German, English, Persian, English. The first English version may be compared with the final translation:

1.
I heard that S. would write my "Life"
When I gave up my breath.
I felt that this indeed would add
A new delight to death. G. S. L.

VI.
He—"Dear, in my song you still shall live,
Tho under earth you lie!"
She—"Ah! had you *now* that grace to give
I should not need to die." O. S.

The Best Books for Children Under Twelve.—The subject of juvenile reading has been lately rather carefully canvassed by the London *Academy*. A vote by a large number of its readers upon the question of what are the best dozen books for children under twelve gave the following result:

Alice in Wonderland, Andersen's Fairy Tales, Struwwelpeter, Grimm's Fairy Tales, Water Babies, Lamb's Tales from Shakespeare, Robinson Crusoe, Arabian Nights, Pilgrim's Progress, Kingsley's Heroes, Stevenson's Child's Garden of Verses, Little Lord Fauntleroy.

The thirteen books receiving the next highest number of votes were the following:

The Jungle Book, Æsop's Fables, Masterman Ready, Through the Looking-Glass, Tom Brown's School-days, Swiss Family Robinson, The Book of Nonsense, Mother Goose, The Rose and the Ring, Jackanapes, Black Beauty, The Blue Fairy Book, The Boy's Own Paper.

The list is, *The Academy* thinks, a very satisfactory one, and generous uncles might safely adopt it as a guide.

NOTES.

SAYS a critic in *The Saturday Review* (London): "The decay of the spirit of poetry in England is one of the most depressing of all the sad signs of the times. No doubt great bards are like the best comets, and only flash across our horizon at long, irregular intervals, but the murkiness of the present outlook bears all the stigmata of permanence, and we find an added hopelessness in the complacency with which our literary public accepts its fate."

It is evident that W. L. Alden does not admire D'Annunzio. Referring to his new book, "The Virgin of the Rocks," he says (in the *New York Times*): "It seems to me to show D'Annunzio at his worst. It is neurotic, erotic, and tedious. . . . What there is to praise in 'The Virgins of the Rocks,' except the occasional beauty of the author's style and the undeniable poetry of certain descriptive passages, I fail to perceive."

SCIENCE AND INVENTION.

YACHT RACES AND OTHER TESTS THAT DO NOT TEST.

THE mania for "making a record" is leading us continually into a great many impractical performances. This complaint is made by Tecumseh Swift in a letter to *The American Machinist* (September 21). In our anxiety to beat the world in some one particular, we build machines for record-breaking purposes, that serve no useful end whatever. Mr. Swift is moved to these considerations first of all by meditating on the meaning of the races for the America's cup. He says:

"The international yacht races for the cup the *America* won a generation and a half ago are just about to come off, and I would have reason to be ashamed of myself if I was not considerably interested, not so much as to who wins as in the means by which the cup is to be held or regained. The designing and the construction of the racing-machines and the manipulation of them are, in every detail, in the line of the mechanic's and the engineer's daily and constant occupation. They embody completely the problem of the application of certain available forces to the accomplishment of a certain purpose. The thing about the whole affair that can be regarded only with dissatisfaction is that the races when finished will have demonstrated or accomplished nothing of any discoverable practical value. The yachts are worthless for pleasure, for the oyster business, or for anything else, and the success of the one or the other will help us not in the least toward the building of better boats for any service. We do not know everything yet about either the building or the sailing of boats in the lines of service where all such available knowledge is most desirable, but these yacht races apparently add nothing to our available knowledge."

Speed tests of all kinds, Mr. Swift says, offer great temptations to ignore practical conditions. Not content with learning the ordinary possibilities of the bicycle, we must suck a cyclist along behind a locomotive at a mile a minute; instead of inquiring how fast a steamboat may go while retaining its usefulness, we throw away all use and try to build boats that are all engine and nothing else. Mr. Swift thus sets the seal of his condemnation on the modern torpedo-boat, which he regards as a case in point:

"I can not but think that our Government, following the lead of other admiralities, is throwing away a lot of good money upon torpedo-boats and torpedo-boat destroyers. The other day I had the pleasure of seeing the completed engines for one of these boats, and also of looking over the hull, not yet launched. No one can realize how far the process of cutting down the weights upon these things has been carried except by a personal inspection. The engines are the perfection of workmanship in every detail, but they suggest also throughout weakness and unsafety, and when these engines break down on trial, as they usually do, and it is lucky if some of the men are not killed, neither the workmanship nor the material is the place to look for the fault. The hull was such as a sight of the engines would suggest. To call it an eggshell is inadequate. Here was a boat about 180 feet long, I think, to carry engines of 4,000 horse-power, and the plating of the hull a trifle over $\frac{1}{8}$ inch thick and not a double shell anywhere. The decks also were single, and a little over $\frac{1}{4}$ inch thick, and buckled under my feet as I walked, and everything in proportion. If anything touches this hull it must be crushed, and it can not take long to rust it through—and then where are we?"

The same impractical foolishness, as he regards it, is to be found also in machine-shop competitive exhibitions and tests. For instance:

"There is the assembling of locomotives that they do sometimes to make a 'record.' One shop does it in 25 hours, another in 16 hours and 50 minutes, and then another in 9 hours and 47 minutes. What does it amount to? What constitutes the 'as-

sembling' of a locomotive, and in what condition is each completed part before the assembling begins? The turning out of so many complete locomotives a year for so many hours of actual work tells us something, but the 'assembling' of one locomotive against time is nothing to brag of.

"Then there is the making of chips. We often have exhibitions of big chips and boasting of the ability of certain tools to make them, when in good practise in these days there is practically little opportunity for a fellow to take big chips, however much he might want to. Of course, it is quite possible to make much bigger chips than have ever been made, and it is a matter of some wonder to me that some fellow has not built a lathe or planer just to show how big a chip he could make. That such a thing has not been done is only to be accounted for upon the assumption that machinists have a little more sense than some other fellows.

"Once where I was we had long chips on the brain, and more than once I have known from half a dozen to a dozen fellows holding up a revolving chip stretching away out through the window and down the yard. We don't have any more of that, because since steel has come into common use, it is found that the only limit to the length of chip that may be produced is the extent of the material. At the Watervliet Arsenal, in turning off the outsides of the guns, they can show chips as long as any one could wish to see.

"We may strain for fine points far beyond the line of profit. There are many things that it is easy enough to get excited about, and in which we try to beat all creation, but after we have done it we often find that it costs more than it comes to. Steam engineers, from what I read, have begun to realize that they have sometimes overdone the matter in their efforts to produce perfect indicator cards and attenuated coal consumption. The practical is seldom allied with any of the so-called 'record' achievements."

THE AUTOMOBILE BICYCLE.

THE ordinary type of "horseless carriage" is at present a luxury for the wealthy, and altho its price will probably fall in the future, it will never, of course, come into as common use as the bicycle. But there are already forms of motor-propelled vehicles—tricycles and bicycles—that are within the reach of the man of moderate means. These have come into use sooner abroad than in this country, but probably we shall before long see them in force on American roads. We translate below an article contributed to *La Nature* (Paris) by M. H. de Graffigny, describing some of the latest types of automobile bicycles. Says the author:

FIG. 1.—M. GIRARDOT ON HIS NAPHTHA BICYCLE.

"A new type of automobiles, or, to be more modest, of motorcycles, has begun to come into use. The bicycle with petroleum motor has had its trial and has shown valuable qualities that insure it a favorable future. It has been recognized that this form of mechanically propelled vehicle presents peculiar advantages, and in consequence many builders have given considerable study to it. . . . Furthermore, the race organized by the journal *Le Velo* for two-wheeled automobile cycles has brought them into prominence.

"Seven systems of motor-bicycles were represented in this contest . . . but at the end it narrowed down to a race between the Werner motorcycles, of which four reached the goal, and the Pernoo bicycle, ridden by Labitte, who was the winner. The speed of this last did not exceed 38 kilometers [23½ miles] an

hour, and that of the Werner motorcycles, 26 kilometers [16 miles], altho their riders pedaled almost continually.

"We may conclude that the motor gave only insignificant aid, for these speeds would have been easily reached and exceeded with ordinary bicycles, operated simply by the legs and ridden by trained cyclists.

"It is certainly unfortunate that the other contestants stopped before the finish, for the results might have been quite different. We therefore hope that the challenge issued to the winners by Messrs. Durey Lamaudière and Labre may lead to something, so that these various systems may have a new trial. And if, as has rightly been stipulated, pedaling after the start is forbidden, we shall then have an exact indication of the real value of each model.

"We shall describe here particularly the Lamaudière-Labre motor-bicycle, which seems to us to unite all the good qualities that may be sought in a device of this kind, and is in our opinion the most perfect system that has yet appeared.

"As shown in Fig. 3, this motor-bicycle (No. 3) . . . does not lack a certain degree of elegance; it has all the proportions of an

FIG. 2.—ALBERT BOYEN'S RACINO BICYCLE.

ordinary bicycle, the motor, carburator, and accessories being of reduced dimensions and located in the frame. . . . The transmission of the motion to the rear wheel is accomplished by means of a leather band passing over two pulleys of unequal size, the larger being fixed directly to the spokes of the motor-wheel. The band passes between the two arms of a slide intended to guide the axis of a stretching pulley which can be operated by the cyclist with

FIG. 3.—1, RICHARD-CHOUBERSKY AUTOMOBILE TANDEM; 2, MECHANISM OF THE GIRARDOT TANDEM; 3, LAMAUDIÈRE-LABRE NAPHTHA BICYCLE.

the aid of a handle. . . . By this means the motor can be at once uncoupled and made independent of the bicycle. . . .

"This automobile bicycle is the lightest that has yet been made. Its predecessors weigh on an average 50 kilograms [60 pounds] while this does not exceed 30 [36 pounds]. With three quarts of naphtha, it can cover 100 kilometers [62 miles]."

At the last exhibition of automobiles, says the same writer,

several other systems of motor-cycles were shown. Figs. 1 and 3 (No. 2) show the Girardot machine.

Fig. 2 shows an automobile bicycle for the training of racers. The motor is $1\frac{3}{4}$ horse-power, and the speed attained has exceeded in several instances 60 kilometers [37 miles] an hour.

Fig. 3 (Nos. 1, and 2) and Fig. 4 show petroleum tandems devised for the purpose of pacing the racers in these contests; but

FIG. 4.—COURET-BOUDIN NAPHTHA TANDEM.

these double machines do not appear more advantageous than the bicycle for this special purpose, for they are heavier and their speed is no greater, because of the greater friction that must be overcome. The writer sums up his conclusions as follows:

"The automobile bicycle, when rationally built, presents undeniable advantages, even over the tricycle now in favor. With the motor placed near the pedals, the center of gravity is lowered and stability is so assured that the handle-bars may be relinquished on a smooth road, as with an ordinary bicycle. Moreover, these machines, having only a single-wheel track, can go everywhere, run in the narrowest foot-paths, and are not confined to broad roads like the tricycle. In case the motor gets out of order, it can be instantly uncoupled and the rider can pedal ahead, which he can not do with the heavy tricycle. Finally, this type is *par excellence* the motor-cycle of the great public, because of its relatively small price, which does not exceed 1,000 francs [\$200], and of its small consumption of naphtha—qualities that are never found united in a three-wheeler. Most of the faults that have been found with the earlier motor-bicycles have been remedied, either partly or wholly, in the latest models, which are, it must in all sincerity be recognized, as convenient as two-wheeled cycles run by carburetted air-motors can well be."—*Translation made for THE LITERARY DIGEST.*

The Labor of Discovering a New Element.—What it means to discover a new chemical element in these days of minute and laborious physical investigation may be seen from the following description given by *The Imperial Institute Journal* (London) of the methods used by Sir William Crookes in bringing to light the substance announced by him last year and then called monium, but since named by him Victorium, in honor of England's Queen. Says this paper:

"The method by which this latest discovery has been made affords an excellent example of the possibilities of modern research, especially in the hands of a man who commands the resources of more than one branch of science, and is able to employ the highest powers of each alternately as need arises. In addition to the chemical operations requiring the highest judgment and much manipulative skill, which were employed to isolate the substance, its identification and investigation were only possible by the application of physical methods still more complicated in their nature. The almost pure element had to be enclosed in a

vacuous bulb, and submitted to molecular bombardment from the negative pole of an induction coil in the manner now familiar by the frequent exhibition of the X-ray bulb. The phosphorescent glow thus obtained was examined through a specially designed spectroscope of extreme power and precision, whose results were recorded by a photographic plate, the rays of special interest being in the ultra-violet part of the spectrum, and, therefore, invisible to the naked eye. For the examination of the negative so obtained a machine capable of measuring directly to the hundredth thousandth of an inch was specially constructed and applied. The pure substance itself was not used in the final investigations, the anhydrous sulfate being employed as obtained by heating the earth with strong sulfuric acid and driving off the excess of acid at red heat. For an account of the more distinctive chemical properties of the new element, the wave-lengths of its distinctive rays when in a phosphorescent condition, and a detailed description of the two-prism spectrograph, reference must be made to the original paper in the Royal Society's proceedings. The diagram attached to the paper exhibits the process of fractional separation, and indicates that nearly one thousand distinct operations were necessary before the element was obtained in a comparatively pure condition."

BALL-LIGHTNING ARTIFICIALLY IMITATED.

THE phenomenon of globular lightning, or "ball-lightning," altho there has been for years plenty of testimony to its occurrence, was long doubted by many scientific men, because its behavior, as reported, was so different from that of the ordinary electric discharge. A luminous globe, floating slowly through the air, or rolling over the ground, and bursting when interfered with, certainly does not behave like an electric discharge. Yet there has been experimental evidence within recent years that under certain conditions the electric discharge does act in just this way. The latest experiments along this line were described by Stephane Leduc to the Paris Academy of Sciences. From an abstract contributed to *Cosmos* by the author, we translate the following:

"When two metallic points, very fine and well polished, connected each to one of the poles of an electrostatic machine, rest perpendicularly on the sensitive face of a photographic plate placed on a sheet of metal, the points being at a distance of about 5 to 10 centimeters [2 to 4 inches] apart, a discharge takes place from the positive point, while around the negative is formed a luminous globule. When this globule has reached sufficient size it is seen to detach itself from the point, which then ceases to be luminous, and to move slowly across the plate, making curves, stopping, and finally reaching the positive point. When it reaches this, the discharge ceases, all luminous phenomena stop, and the machine behaves as if the two poles had been united by a conductor.

"The speed with which the luminous globule moves is very small; it takes one to four minutes to traverse the distance of 2 to 4 inches. Sometimes, before reaching the positive point the globule bursts into two or more, which continue their journey separately toward the positive pole.

"On developing the plate, the route followed by the globule appears plainly, as well as the place of explosion, the paths of the resulting globules, and the discharge from the positive point; finally, if the experiment be interrupted before the globule reaches the positive pole, the photograph gives the path only up to the point where it stopped.

"The globule seems to render its path a conductor. If during the motion of the globule a powdered substance—sulfur, for example—be thrown on the plate, the path of the globule is marked by a line of little plumes, presenting the appearance of a luminous wreath.

"The experiment succeeds on a plate that has been light-struck, which does not communicate to the sensitive layer the conductivity that the luminous globule gives to its path. . . .

"Of all known electric phenomena, this seems to have the greatest similarity to globular lightning."—*Translation made for THE LITERARY DIGEST.*

BOMBARDMENT BY BALLOON.

ABOUT the only article on which all the members of the recent Peace Conference were agreed is the one that forbids the dropping of explosives from balloons. Regarding this prohibition, Leo Dex, writing in *La Science Française* (September 1), remarks somewhat ironically that to forbid an impossibility is a rather useless proceeding. But why should it be impossible to drop explosive shells from a balloon upon the enemy? M. Dex proceeds to show:

"Certainly nothing is simpler and nothing at first sight would seem more logically practical. A free balloon always carries ballast, which ordinarily consists of sifted sand, so that when it is poured out at a height of several hundred feet it turns in its fall to a cloud of impalpable powder and thus can occasion no accident on the earth's surface. Well, then, instead of making the ballast of such material that it will do no harm, why not take care to do the opposite, and make it as injurious as possible for those on whose heads it will fall, thus annihilating the enemy with a shower of projectiles to which he can not reply?"

In answer to this M. Dex analyzes the situation as follows: A balloon must be either dirigible or non-dirigible, manned by aeronauts or empty. Suppose it non-dirigible. If manned by aeronauts, its employment would mean the loss of a valuable balloon and the death or capture of its crew for the sake of dropping a few shells on the enemy; for the aeronauts must wait for a favorable wind and this wind, of course, would continue to carry them further within the enemy's lines. If non-dirigible balloons are used, then they must be cheap hot-air balloons without crews, like the toy balloons sent up on the Fourth of July, only larger. To use such balloons the conditions must be exactly favorable. First, the weather must be fair; then the wind must be toward the enemy, as before. Then, of a dozen balloons sent up, probably not more than one could be expected to let fall its projectile on a point occupied by troops, and if these were on the march they could see it falling and get out of the way, since it would move with comparatively low velocity. Even if they were asleep, not more than twenty would be killed, and in an army of several hundred thousand men that would scarcely cause a panic. There is only one case, M. Dex thinks, where the use of non-dirigible balloons might be successful, and that is in a siege, since in this case the air-ship could pass completely over the besieged place and descend among friends. Says the writer:

"There would be nothing to prevent this balloon from having a crew; its aeronauts could carry explosive projectiles and let them fall on the besieged place whenever and wherever they pleased.

"It seems, *a priori*, as if with a little practise, and with calculations made beforehand, they could land their shells exactly where they wished. . . . In reality, no matter what their knowledge and experience, their fire (if we can use this word of the dropping of a projectile from a balloon) would be extremely uncertain.

"To be out of range from the city, the balloon would have to rise to a height of at least 2,000 meters [6,500 feet]. At this altitude accurate aim would be very difficult. It would be almost impossible to estimate the velocity of the wind, and this estimation is necessary if we are to know the deviation of the projectile in its fall. In its descent the projectile would meet all sorts of variable air-currents moving in different directions. Finally, if the balloon is non-dirigible, one could never be certain that the wind would carry it directly over a point desirable to attack.

"The only thing that such a balloon could do would be to let fall its projectiles at random into the besieged place. They might then strike houses and kill people, but they would rarely hit military works or soldiers."

But if the balloon is dirigible? Its precision of fire would be greater then, M. Dex acknowledges, but it would be far from perfect. Besides, is there such a thing as a really dirigible balloon? The only way to get precision of fire is actually to shoot

the projectiles instead of dropping them; in other words, to mount some kind of cannon on the balloon. This, at present, can not be done, and it does not seem probable that it ever will be, for every air-ship hitherto built or even planned is too light for such treatment. M. Dex concludes:

"It is infinitely more logical to leave to the cannons the task of sending projectiles to a distance and not to make the balloon act any part but that which belongs to it—namely, the observation of the striking-points of projectiles. Its advice will enable the artillerymen to rectify their aim, and the enemy will be reached much more effectively than if the balloon were used both to observe and to fire."—*Translation made for THE LITERARY DIGEST.*

SHALL WE DRINK DISTILLED WATER?

THE recent announcement of a German physician, Dr. Koppe, as quoted in these columns, that distilled water—that is, chemically pure water—is poisonous, has aroused much comment, chiefly adverse. *The National Druggist* announces that it has been quite overwhelmed with letters on the subject, most of them in refutation of Dr. Koppe's views. One of these, from Dr. Homer Wakefield, of Bloomington, Ill., it gives in full as "containing in a condensed form all the arguments advanced in the other articles." Says Dr. Wakefield:

"This remarkable article deduces that distilled water is a 'dangerous protoplasmic poison,' because of the absence of organic contaminations. It should be added here that rain-water, as it falls from the clouds, is aerated distilled water; it is the most healthful known. . . . Physicians know it is the best solvent of inorganic concretions in the body, and engineers know it is the best boiler compound, following the use of hard water and the consequent formation of hard incrustations. While it is true that stagnant rain-water, contained in foul cisterns, full of all kinds of contaminations, is unfit for drinking or cooking, it is also true that there is nothing more wholesome than pure distilled water, tightly corked in clean bottles, protected from contaminations of even impure air. Pure water, well-corked, never gets stale.

"As to the inorganic constituents of ordinary 'hard' drinking-waters much might be said, but suffice it to say that lime and other minerals, in quantities in drinking-water, often prove injurious to the imbibitor, by the formation in the system of insoluble compounds, in the gall-bladder, kidneys, bladder, etc. Nature's demands for bone-forming material is much better satisfied from foods than from water, hard or soft. . . .

"The assertion that pure water taken into the stomach causes complaints of 'weak stomach,' belching, etc., is the purest rot; it is evident that if belching was excited by a drink of water, it was caused either by motor nerve stimulation, from its temperature, or an alkaline (hard) water was taken into an acid-containing stomach, which resulted in effervescence. Mountain streams, when not drinkable, are not pure, as contended, but generally heavily laden with lime and other powerful alkalies.

"It must not be inferred from the above that I am opposed to all alkaline waters—not at all; but pure, not impure, water is the thing to drink, except when in certain cases certain alkalies are demanded by the system; then they may be added to pure water, or otherwise pure water containing them may be used.

"Extreme purity is a virtue, not a fault, of water. Beware of an author who contends that contaminated water is conducive to health."

Comments on Dr. Koppe's paper are not all adverse, however, as witness the following from *The American Kitchen Garden* (July), the writer of which contends that while distilled water may be very well when taken medicinally, it is not a good beverage except for those who are overeating. He says:

"Distilled water taken on an empty stomach would tend to leach out the cells with which it came in contact, and we know that the life of the cell depends upon the maintenance of its contents at a certain standard. This is a well-established fact, and not, as one advertisement implies, a vision of a mad microscop-

ist. The testimony of physicians that the prolonged use of distilled water has a tendency to decrease the body weight shows a lessening of nutritive power in the tissues.

"Most persons eat enough salt on their food to bring up the average, and many persons in middle life and after eat too much of all kinds of food, and drink too little fluid, so that for them a course of distilled water may be most beneficial, carrying away an excess which would be harmful. . . .

"If an individual over forty is living on potatoes pared before cooking, white bread, unsalted butter, cream, fruit, and sugar, then distilled water would be superfluous if not harmful; but if the diet is rich in meat, in cereals, in milk, and abundant at that, it is very probable that distilled water would remove more of the excess than would a hard water taken as a beverage."

Pocket Electricity.—The daily press report that a company has been formed to manufacture what are to be known as "electric capsules," containing in a concentrated form the chemicals for use in an ordinary battery-cell, and requiring only the addition of water to make a powerful battery-fluid. The technical press is inclined to make fun of the somewhat remarkable claims made for the forthcoming capsules. Says *Electricity*:

"If reports are to be believed, electric automobiles need never in the future become stalled. All the automobilist will have to do when starting on a long journey will be to place a few so-called electric capsules in his vest pocket, and drop one as occasion demands into the battery. A company has been formed under the laws of New Jersey to carry on the capsule business. According to the promoters of the enterprise, a combination of chemicals has been invented to be dissolved in the cells of electric batteries. This new combination of chemicals is so powerful, according to the company, that a three-grain capsule put into an ordinary battery-cell will yield enough electricity to run a 16-candle power incandescent light for one hour. The nature of the chemical is secret. The members of the company say that there is that in the combination which makes successful analysis impossible, and that they will not therefore patent it. In this connection it should be remarked that the capsules are not yet on the market, but the stock of the company that owns the secret is."

The matter is treated in a similar vein by *The Electrical Review*, which closes its remarks with the following suggestive paragraph:

"Every farmer, camper, yachtsman, and householder can have his own electric-light plant. All one will have to do, if he lives at the seaside, is to get a capsule, make electricity, extract gold from the sea, buy more capsules with it, and so on *ad infinitum*!"

SCIENCE BREVITIES.

CAUSES OF INEBRIETY.—"Dr. T. D. Crothers is of the opinion," says *Modern Medicine*, "that many cases of inebriety are produced by dietetic errors, bad habits of eating, etc., the deranged digestion finding its relief in alcohol, and this in turn aggravating the conditions, and producing the drink habit. Many cases originate in dietetic delusions; in some of these a systemic starvation exists, due to the peculiar notions held in regard to food. The treatment of this form of inebriety consists essentially in the elimination of toxins and proper nutrition."

THOUGHT TRANSFERENCE.—The ranks of those who see in wireless telegraphy an argument in favor of thought-transference by "brain-waves" have been joined by the editor of *The Medical Times*, who writes as follows in that journal for August: "Marconi has shown that a small electric battery can send waves of energy and intelligence through the ethereal atoms of space for a greater or less distance, according to the elevation, which may be caught up by a sensitive mechanical receiver and its code of signals recorded and interpreted. In the battery a small amount of material is decomposed to produce the electric current. The brain is, to a certain extent, a battery, and the ganglions of the great sympathetic nerve relay batteries to insure a continuous supply of the nervous energy generated in a great measure by the brain. This battery with its relays, by the nourishment supplied to the body, decomposing its own material thus supplied is perpetually in action. Thought is to a certain extent the outcome of cerebral action, the same as electricity is a force evolved from the decomposition of elementary substances. Thought, then, is an entity, a force, something which can travel through space and be caught up by a receiver, however distant which is in tune with its vibrations."

THE RELIGIOUS WORLD.

THE EPISCOPAL CHURCH AND DIVORCE.

FOR some time it has been known that an influential party in the Protestant Episcopal church intended to make another determined attempt to change the canon law of the church relating to divorce. At present this denomination occupies intermediate ground between the absolute prohibition of divorce for any cause—insisted upon by the Roman Catholic church—and the comparatively freer divorce regulations of most of the evangelical denominations, which recognize desertion, cruelty, and other serious crimes as proper ground for dissolving the marriage bond and declaring the marriage to be no longer a sacred ordinance. The canon of the Episcopal church now permits its clergy to solemnize the remarriage of the "innocent party" who has obtained a legal divorce upon the so-called Scriptural ground of adultery (see *THE LITERARY DIGEST*, June 10); but it permits it for no other reason, and forbids remarriage to the "guilty party." It is now proposed, however, to remove even this avenue of escape from a mistaken choice, and to assume a position of unbending prohibition of divorce in any form. Hitherto, the leading advocates of a stricter divorce canon have been the bishops of Albany and of Quincy, Ill.; but at the diocesan convention of the Protestant Episcopal church held in New York the latter part of September, Bishop Potter, who has hitherto stood for liberal views in theology and divorce, in his opening address gave strong evidence that upon the latter subject he is in favor of a return to the canons in force in the English church up to the time of Henry VIII. The "note of alarm" sounded by Bishop Potter is as follows (*New York Times*, September 28):

"Our general convention at its last session gave, as you know, considerable attention to the proposed amendments of our very inadequate canon (as it seems to me) of marriage and divorce. Its councils were, as you are aware, divided upon the question whether that canon could best be amended by withdrawing from it all authorization of remarriage, whether under the sanction of our Lord's words in St. Matthew xix. 9, or otherwise, or by making more stringent the conditions under which it should be competent for the Ordinary to sanction with the authority of these words the remarriage of the innocent party to a divorce. I need not reopen that discussion here. The church will doubtless always be divided as to the authority of those words of Holy Scripture to which I have referred, and no less divided as to the measure of discretion which it is wise to vest in the Ordinary. But meantime the whole subject has gained a new aspect from events to which I need not more particularly refer here, which have undoubtedly awakened in all sober-minded Christian people a profound sense of alarm, and the consensus of opinion among them as to the necessity of legislation which shall prohibit the remarriage of divorced persons under any circumstances whatever has greatly widened and deepened.

"I am by no means sure that such a conclusion is not the wisest that we may reach at present; for undoubtedly it must be owned that, in the face of such a danger as threatens us, the only safe course must be to prohibit absolutely that which, while it might be permissible if we could always be sure that it had a Scriptural justification for it, is only wrong and evil when that justification, existing in fact, exists only because it has been fraudulently obtained. Here the judgment of eminent publicists and legal authorities concur, and some of them of foremost rank as jurists and churchmen have agreed in the opinion that our only safe canon, in view of the tendencies painfully evident among us, is one in which the church refuses remarriage to persons divorced for any cause arising after marriage, absolutely and universally.

"Such a remedy for our present evils would doubtless be, as some of us may think, a very drastic one, but the evil has grown to such proportions, it may justly be answered, that we can meet it with no other. A wider view of the whole subject, however, will disclose to us, I think, the fact that it is not the only remedy.

The bishop then goes on to indicate what that "wider view"

discloses, dwelling upon the progress of individualism in this country and its effects upon "some of the most venerable and sacred traditions of the community and the State." Especially has it affected the institutions and obligations of marriage, until even the least thoughtful have now come to recognize "that the facility with which the marriage relation may be taken on and put off is a menace to the foundations of society and the jest of the civilized world." The church's whole duty will not be done in making divorce increasingly difficult. She must also lift up and safeguard the approaches to marriage.

The High-Church party are naturally jubilant over this accession of the bishop to their ranks. The Rev. Dr. F. M. Clendenin, who recently refused to permit the ordination of Dr. Charles A. Briggs in his parish church, was among those who expressed strong satisfaction over the bishop's position, viewing it as "a hopeful sign."

Altho it is too early as yet to give the comment of the religious press upon these deliverances, we quote some representative opinions *pro* and *con* from the daily papers, which have given an exceptional amount of attention to Bishop Potter's address.

The *New York Press* (October 1) says:

"As Bishop Potter was the leader of the moderate divorce canon party in 1898, when Bishop Doane of Albany tried to get through the triennial general convention of the Episcopal church a strict divorce canon against the remarriage of either party, the former's new ground in favor of the stricter proposition is likely to exert a wide influence, even if it does not crystallize public opinion in his church in favor of such a law at the next general convention in 1901. The latter possibility would plant the Episcopal church beside the Roman Catholic church in favor of the virtual indissolubility of the marriage bond.

"Such a result would be exceedingly far-reaching. Students of social science are everywhere calling attention anew to the fundamental importance of the family as the social molecule, the type, in principle, of what society ought to be in its ultimate and perfected organization. Educators are seeing more clearly every year that they are handicapped until the family is their well-trained ally, instead of being a guerrilla fighter of the foes of the social order. Anything, therefore, that tends to promote the solidity of the family bond is likely to be welcomed in the world of thought as well as that of religion."

The *Philadelphia Press* (October 1), commenting on Dr. Morgan Dix's recent address on this subject, says:

"Dr. Morgan Dix, in his plain talk on divorce in high life, calls a spade a spade, and in a good cause. He goes right to the heart of the evil and holds high life up to view in a way that is not at all likely to give New York's festering four hundred much peace of mind. But, as the doctor points out, scandals of the type he depicts are known elsewhere as well as in New York. And whether the number of divorces increase or not in any one place, what is essential is that society shall not in any way encourage the flagitious cases, nor make itself responsible for a free and easy licentiousness that can have issue only in scandalous divorce cases.

"As to the probable future attitude of the church Dr. Dix represents on the question of the remarriage of divorced persons, it looks as if the drift was toward a complete denial of remarriage. Bishop Potter, who for so long stood by the present canon that in cases of divorces obtained on Scriptural grounds the innocent party may remarry, seems to have accepted the view that a severer canon is now called for. If this be adopted society will begin to see that the crusade is indeed real and not mere pulpit eloquence."

The *New York Sun* (September 29) gives an instructive summary of the history of divorce in the world. It says:

"The justification of divorce, however, goes back, under Christianity, to the Reformation, when the sacramental character of marriage was repudiated. In the pagan world at the time of Christ there was great laxity of divorce. It was especially free among the Jews also. If under the Hebrew law a wife was distasteful to her husband for any reason, he could cast her off, with no other legal requirement than a formal notice to her to leave.

The Roman Catholic church by elevating marriage to a sacrament named it indissoluble for any cause. The Greek church, however, permits divorce for adultery and other causes. The Protestants from the time of the Reformation allowed divorce for adultery and also interpreted the rule of St. Paul permitting divorce for wilful or malicious desertion, and such has since been the legal practise in Protestant countries generally, tho in England full divorce is allowed for adultery only, but with the condition that while in the wife that offense alone is a sufficient cause, in the case of the husband it must be 'coupled with such cruelty as, without adultery, would have entitled her to a divorce *a mensa et thoro*, or adultery coupled with desertion for two years and upward.' In Prussia the divorce laws go beyond the furthest ex-

AMERICAN PRELATES FOR THE WEST INDIES AND THE PHILIPPINES.

AN important factor in the progress of American civilization in our new dependencies in the Antilles and in the far East is the apparent determination of the Roman See not only to make those regions a part of the American ecclesiastical system, but to a large extent to place them under the direct superintendence of American prelates. About a year ago the Most Rev. P. L. Chapelle, Archbishop of New Orleans, was appointed by the Pope apostolic delegate to Cuba and Puerto Rico, an ecclesiastico-diplomatic position of great power, which made him the direct representative of pontifical authority and virtual ruler in all church

PRELATES APPOINTED IN OUR NEW POSSESSIONS AND CUBA.

tre of laxity reached in any American State, making incompatibility, permanent variance, and even mutual consent legal causes.

"When, therefore, Bishop Potter spoke of the 'vicious tendencies' of the 'composite and contradictory legislation' as to divorce in our many States as making us peculiarly 'the jest of the civilized world,' he seemed to indicate that his study of the subject has not been of that thoroughness which the subject demands. In truth, the only great variation in this country, save in South Carolina, where there is no divorce law, is the legislation of New York, which permits full divorce for adultery only. The American rule otherwise follows the Protestant precedent in allowing divorce for wilful desertion, and as we have said, even in the States where the divorce laws are freest, they are not so lax as in Prussia."

THE eighty-third annual report of the American Bible Society makes a book of 230 pages. According to this report, 65,062,505 copies of the Bible have been issued by the Society since its establishment. The issues for last year alone are 1,380,892, distributed in all portions of the globe, a particularly large number, it is said, being distributed in the Chinese empire. The Society is under the control of no one denomination.

affairs. One of his most important acts was the consecration of a new Archbishop of Santiago de Cuba who was in sympathy with American and Cuban ideals, and of an American priest, the Rt. Rev. James H. Blenk, as Bishop of Puerto Rico. The news that now comes from Washington is still more significant. The Pope has named Archbishop Chapelle delegate apostolic of the Philippines. This, in addition to his authority in the West Indies and his position as metropolitan of the great southern province of New Orleans, makes him without doubt the most powerful prelate in the Western hemisphere, unless we except Archbishop Martinelli, the delegate apostolic to the United States. There is scarcely another American who at the present moment has so weighty an influence in determining the trend of future conditions in the new American possessions in two hemispheres, and it is thought that especially in the Philippines the advent of an American prelate will prove a powerful factor in the establishment of better religious and civic conditions.

Monseigneur Chapelle is said to be admirably equipped for his difficult mission. He is master of Spanish and an able church his-

torian and canonist, qualifications very necessary for his work. The appointment is said to be partly a compliment to France in recognition of that country's service in arranging the preliminaries of peace between the United States and Spain. As diplomatic appointees of this character are usually rewarded when successful with the cardinalate, it is likely that Monseigneur Chapelle will in time be the recipient of the red hat.

IS BUDDHISM GAINING GROUND IN CHRISTIAN LANDS?

It can not be denied that Buddhism, as a system of philosophical and religious thought, has secured a much more respectful hearing among the Western peoples than it had a generation ago; and the possibility of a regular Buddhistic missionary propaganda has often been reported, especially since the Parliament of Religions. One of the results of this state of affairs has been the claim that this chief among the ancient Oriental systems had actually made noteworthy inroads among the thinking men in Christian countries and won not a few advocates in the very centers of Christian civilization. An investigation of this claim has been made by the German pastor, Rev. Henry Hoops, and published by him in the leading apologetic journal of Germany, the *Beweis des Glaubens* (No. 9), from which we glean the following particulars:

The material on which to base a reliable computation as to the extent to which Buddhism has found friends within the ranks of the Christian peoples is exceedingly hard to obtain. When the reports published in the periodical press concerning Buddhistic religious meetings and conventions of students of Buddhism are traced to their real source, they as a rule turn out to be chiefly the work of imagination or are gross exaggerations. The statement, for instance, made by so prominent a litterateur as Pastor O. Funcke, to the effect that "the old Buddhistic teachings are being exalted into the heavens and are corrupting the youth of Germany," is not in harmony with facts that can be depended upon. The writer, in the preparation of the present article, applied to a statistical bureau for details, and was informed that neither Germany nor France nor Great Britain do as much as publish the statistics of the Buddhists who are to be found within their borders.

In order to pursue this task with exactness, it is necessary to distinguish between the genuine and the pseudo-Buddhistic agitations of the times. To the latter belong, above all others, the Theosophical Society and its work, founded by Mme. Blavatsky, lately supported by Colonel Olcott. This school claims to teach a kind of esoteric Buddhism, which claim, however, is expressly rejected by the representatives of genuine Buddhism. The evidence to this effect is furnished by the well-known leading German representative of Buddhism, Subhadra Bhikshu, who, in answer to the one hundred and fifty-sixth question of his Buddhistic Catechism, declares that there is no such a thing as a secret esoteric Buddhism which is not published but only traditionally transmitted. Such is one of the reasons why this recognized representative of Buddhism, not content with the phenomenally popular catechism of Olcott, published a Buddhistic catechism of his own, in which, as he states, full justice is done to the traditional tenets of this system.

In Germany, the first and probably the leading representative of the system has been the philosopher Schopenhauer, who adopted Buddhistic atheism and pessimism, including the doctrine of the transmigration of the soul. Other advocates were Feuerbach and K. E. Neumann, the latter best known as a translator of Buddhistic texts, while Comte in France and Lewis in England pursued similar paths. Lectures have been delivered in Germany in advocacy of this system, and the German catechism mentioned has been published in half a dozen editions. The author, Subhadra Bhikshu, speaks hopefully of the prospects of his faith among the Germans and makes a great deal of capital out of the fact that Emperor William II., in his famous allegorical painting, deemed it necessary to warn the nations of Europe against this creed; but the writer can furnish no statistics to substantiate his hopes. In fact, a leading Buddhist has declared

to the writer that "in Germany there are as yet but very few who have accepted the Buddhistic doctrines."

In France things are different in this regard. More than eighteen months ago the *Figaro* reported the particulars of a "Buddhistic mass" which had been held in Paris, in which a number of prominent men, such as Clemenceau, Prince Roland Bonaparte, university professors, members of the Academy, high public officials, and moneyed men took part. For ten years Buddhism has been a fixed fact in the French capital, and a regular congregation of this creed, holding weekly ritualistic meetings, is a prominent feature of the religious kaleidoscope of "isms" found in that metropolis. It is, however, scarcely a matter of doubt that this is simply a fad of fashion, and that this organization can never be the nucleus of a large extension of the system. In fact, outside of Paris there are no French Buddhists. It is claimed that in London and in Cincinnati there are some adherents; but this exhausts the statistics of the inroads made by this Oriental religion in the heart of Christendom. From present indications, Buddhism can not be regarded as a danger to Christian lands.—*Translation made for THE LITERARY DIGEST.*

THE INTERNATIONAL CONGREGATIONAL COUNCIL.

THE second great International Council, which represents the largest cycle of Congregationalism and is world-wide in its scope and *personnel*, met at Boston on September 20. Dr. James B. Angell, president of the University of Michigan, acted as moderator. Among the prominent foreign representatives of Congregationalism were the Rev. Dr. A. M. Fairbairn, principal of Mansfield College, England; the Rev. Dr. Alexander MacKinnon, of Bowden, England; Rev. H. Arnold Thomas, of Bristol; J. Compton Ricket, M.P.; and Rev. Alexander Gosman and Rev. Joseph Robertson, of Australia. The great auditorium of Tremont Temple was thronged by attentive and even enthusiastic audiences.

The Independent (September 30) thus reviews the proceedings of the council:

"It is no mere formality when we say that the addresses were all of an extremely high order, nor is it invidious, perhaps, to add that the most interest was aroused by the paper of Dr. Forsyth, the sermon of Principal Fairbairn, and the whole discussion on the subject of war. There was great difference of opinion concerning the doctrinal positions of Dr. Forsyth, but it is doubtful if any paper on a subject so speculative and theological was ever received with greater favor by an American audience. Dr. Forsyth's style is so fine, his enthusiasm so evident, his genius so genuine and so reverent, that he sweeps all before him. He is a poet as well as a scholar and a theologian, and his mysticism is quite as moving as his attempts at clearer statements of doctrine. He is a curious combination of a liberal and an extreme conservative. Dr. Fairbairn was a revelation to those who knew him only as a philosopher and a profound theologian. The subject of his sermon was 'The Church,' and it is safe to say that no more eloquent or convincing presentation of the Congregational doctrine of the church has been heard in our time. Its emphasis was on the supremacy of Jesus Christ and the universal priesthood of all Christ's people. Dr. Forsyth emphasized the objective efficacy of the work of Christ. Principal Fairbairn showed how Christ organized His own society, and started it on its course

HON. JAMES BURRILL ANGELL,
President of the University of Michigan,
and Moderator of the Council.

of overturning and conquering the regnant and militant selfishness of the world. One fact is already very evident. While the English speakers refuse to dogmatize on many subjects, while they are extremely hospitable to all the newer scientific and critical thinking, the younger men among them, at least, place a much

REV. A. M. FAIRBAIRN, D.D.,
Principal of Mansfield College, Oxford,
England.

stronger emphasis on the expiatory work of Christ than is common in scholarly circles in this country or has yet appeared in the utterances of the older men from the other side. Perhaps it should be said that when these younger Englishmen define their terms, as they do in conversation, it is discovered that some words, at least, mean one thing in England and another in America."

The Congregationalist says of the council:

"It has been constantly evident that the themes of deepest and widest interest to the common people are uppermost to-day in the

minds of Christian scholars. In addresses and discussions Christian principles have been applied to the solution of pressing social problems, to national affairs, and international relations. The sense of responsibility of English-speaking peoples for the welfare of humanity, the affirmation of holy purpose to maintain the rights of civilization and freedom for the people of all nations indicate the directions in which the Christian church is to exercise its leadership in the future.

"The council, then, has shown . . . the essential harmony of the denomination in its attitude toward modern scholarship, in its acceptance of the results of reverent theological study, heightening, not weakening, supreme devotion to Jesus Christ. It has indicated that the current trend is toward simplification of the theology, the appropriation by the religious man of the whole realm of science, of social and civic life to perfect his religious character, and the growth of triumphant faith in God. The council has made positive utterances concerning life and belief, is thoroughly evangelical in its tone, lays its greatest emphasis on the person of Christ, and is optimistic in its outlook into the future."

The Universalist Leader says:

"From beginning to end of the council liberal and advanced thought prevailed. When Governor Wolcott in his address of welcome said: 'I may perhaps shock some of you by saying that to me it is not of vast importance to what denomination a man may belong, providing only that the love of Christ and the willingness to serve Him by serving man is the inspiring force in the individual life,' the vast audience, instead of showing any signs of being shocked, broke into loud and hearty applause. President Angell, of the University of Michigan, showed that his eyes were turned forward and not backward when, referring to the advocates of the new theology, he said: 'Let us not hasten to burn them as heretics, but wait patiently to see if they are not our prophets.'

Harper & Brothers.
REV. GEORGE P. FISHER, D.D., LL.D.,
Professor of Church History in Yale
Theological Seminary.

"The effect of such a gathering of devoted Christian workers must be big with promise for the Church of Christ. The refreshingly open abandonment of the old standards of theology and the applauding reception of every announcement show that among the broad-minded and progressive churches the Congregational easily ranks among the first. Rev. Daniel Jones, of England, let go entirely heaven and hell as notions of salvation; he arose to the higher phase of the Christ life, and then with eloquent emphasis preached Christ. Dr. Fairbairn said the last few years had witnessed the decay of the old doctrine of original sin, and he declared with telling force which brought rounds of cheers, 'It is high time the doctrine of original sin decayed.'

The Christian Register (Unit.) says:

"The council is aggressive in the declaration of its principles and methods, without denunciation of others who are content to walk in other ways. Of course it is a satisfaction to us to see that, even while Unitarianism as a form of faith gets no recognition in the proceedings of the council, Unitarians appear upon the platform and are greeted with applause. It is also pleasant to note the fact that, in treating the essentials of Christianity and dealing with matters of interpretation, all the progress is in the direction of the Unitarian interpretation. While we can not accept all the statements of any of the preachers or essayists as adequate interpretation of the fundamental facts of human nature and its relation to God, we can see that many of the restraints of creed have fallen away, that many false doctrines have dropped out, and that, so far as new ways are concerned, progress has been made toward ideas of human nature and the divine government which are honorable both to God and to man."

Zion's Herald (Meth. Episc.) says:

"From the opening paper on 'Fundamental Principles in Theology,' by President-elect Harris, on through the entire meeting, in the papers on the 'Message of the Old Testament for To-day' by Professor Porter, of Yale, on 'The Historical Method in Theology' by Professor Fisher, of Yale, and notably in the paper by Principal Gosman of Australia on 'Theology and the Order of Nature,' the underlying assumption of the master minds was that the Higher Criticism in its method, if not in all of its results, has won its right to frank welcome by the Christian church, and that the hypothesis of evolution as the mode of creation is the only tenable one in light of what we know of God as revealed in nature and the history of the race. How significant it is that this should be so, in a body which is unquestionably evangelical in the main, it is hardly necessary to point out.

"That such belief is consistent with unyielding belief in the Incarnation and the Atonement would seem to be a fact, for the same men who applauded the utterances of the men above named applauded to the full the superb eulogy of the living Christ as the ultimate source of authority for society and the individual, which was uttered by Rev. Dr. P. T. Forsyth, an utterance which those who heard will scarcely forget readily, combining as it did, to an unusual degree, massiveness of thought, logical development, brilliancy of antithesis and epigram, and a passion of conviction which swept everything before it and roused the audience from their seats to sing with ardor, 'In the cross of Christ I glory.'"

The only antagonistic utterance to the council which we have found in the religious press is the following from *The Interior* (Presb.):

"To sum up the council, we would say that Congregationalism has slipped her anchors, broken the face of her chronometer, and is making her reckonings by pointing her sextant at comets. If we were sportively inclined we would lay a heavy wager that there is not a man in the council who could, to save his soul—if he have any!—tell what Congregationalism now is, where it now is, what is its cargo, or where it is bound. We don't like a storm at sea, but give us a wave-scalper any day in preference to a fog."

Council.

FOREIGN TOPICS.

ON THE EVE OF HOSTILITIES IN SOUTH AFRICA.

THE Boer and the Briton are still busily engaged in completing their armaments as this number of THE LITERARY DIGEST goes to press, and hostilities may begin at any moment. "What awful hypocrites we are!" writes an Uitlander correspondent of the London *Outlook*; "as if we did not know that British

"I'll grind up all the tools. Grinding will suit my present humor well. Joe!" Whirr-r-r.

The grindstone was soon in motion; the sparks were flying off in showers. This was the occupation for his heated spirit. Whirr-r-r-r-r.

"Something will come of this!" said Mr. Tappertit, pausing as if in triumph and wiping his heated face upon his sleeve. "Something will come of this. I hope it mayn't be human gore!"—BARNABY RUDGE, ch. iv.

—*Westminster Gazette*.

presses a similar opinion:

"If the tap of the British army's drum greets the rising sun all around the world, it is because we have imposed our rule upon others wherever ships can swim and troops can march. . . . Let the case be as serious as the croakers think, allow that the Boers are as valiant and capable as their friends assert, that the Orange Free State will strike in, and that the Afrikanders in the Cape will rise, all that will constitute a serious piece of work, and will put us on our mettle. Allow too that foreign nations try to seize the opportunity to play us some trick. We must face this also—because it is only by meeting such danger that we can continue to exist. By surrender we should give up our whole case, and withdrawal before the Boers to-day would only make it more certain that we should have the Mahrattas to deal with to-morrow."

In the same paper a curious petition to the Queen is suggested, from which we take the following:

"As the Boers have become so bold as to oppose Her Majesty's Government, and as they even blasphemously assert that the Almighty will help them in a war against Great Britain,

"Your petitioners humbly pray your Majesty that your Majesty will be graciously pleased: To annul the independence of the Transvaal, to disarm the Boers, divide the Transvaal republic into two separate republics, and place them under military surveillance for the administration of the revenue."

The London *Times* does not think it necessary that Britain should in future specify her demands, as she will now enforce them, and need not argue over detail. "The Boers have been warned, and they have chosen their fate," adds the paper. There is but little said in England on the Boers' side, but that little is very much to the point. In the Newcastle *Weekly Chronicle's* "Open Council," which is filled with letters headed "Down with

the Boers!" "Wipe out the Boers!" etc., one man writes to the following effect:

Impartial consideration of the question seems to be out of the question among the public. This so-called "crisis" has been brought about by vituperative speeches against the Transvaal, and by bellicose articles in the capitalist press. The "Uitlanders" in the Transvaal are a thousand times better off than they ever would have been in this miscalled glorious England of ours. But if they are not content to abide by the laws of the country in which they are foreign residents, let them show the same moral courage as the Boers did when they became disgusted with the treatment accorded them by British officials—let them leave the country.

But, some people say, "look what they would leave behind them." The Boers left all they had in the world behind them, tho the country they left was their own. . . . I have some acquaintances in the Transvaal, and if they have anything to leave in the Transvaal, it is what they never had, or ever were likely to have had, had they remained in England. Every right-thinking man must be filled with indignation when he reads history and becomes acquainted with the shameful manner in which the Boers have ever been treated.

Sir Sidney Shippard, in the September *Nineteenth Century*, declares himself confident that the Boers will not fight for their "imaginary" independence, and that neither the Free State nor the Cape Boers will assist the Transvaal. The latest advices from South Africa seem to make this prediction ridiculous. The *Randpost*, Johannesburg, says:

"The wildest rumors regarding British armaments are abroad, and the most horrible stories regarding the engines of destruction which Great Britain could bring into the field against us are told by Englishmen. We

SALISBURY (to Chamberlain): "Be careful, Joe! don't tease him too much; he has broken loose before." —*Amsterdammer*.

have heard all these things before. These people seem to forget that everything we consider necessary for warlike operations adapted to the conditions of our country we have got. Far from being frightened, the people are confident that they will drive the conceited Briton into the sea. The inferior race must go to the wall."

The Bloemfontein *Express* relates that when the British agent, Mr. Conyng-

ham Greene, presented a message as an ultimatum which must be answered within forty-eight hours, the Transvaal Secretary of State replied: "You had better modify that. To an ultimatum you can have the answer in forty-eight minutes." As further evidence of the spirit among the people the same paper tells of a sick Boer commander who, upon being asked how he felt, declared that he "felt pretty bad, but well enough to shoot *rooiniks*."* Dissatisfaction is expressed among the English with the results of the late activity of the War Office. A careful computation shows that there are now at the Cape (including troops likely to arrive before the end of October) sixteen

* Contemptuous designation for Englishmen.

"DOGS OF WAR."

OOM PAUL: "May I ask if those dogs are intended for any special purpose?" J-E CH-MB-RL-N: "Well, guv'nor, that's as may be! Merely givin' 'em a little gentle exercise!" —*Punch*.

battalions of infantry, six regiments of cavalry, nine batteries of field artillery, one battery of mountain-guns, two batteries of siege-guns, five companies of engineers.

If the plans regarding further reinforcements as revealed by the press are carried out, there will be, within three months, twenty-two battalions of infantry, ten regiments of cavalry, fifteen batteries of field artillery, one battery of mountain-guns, five companies of engineers—in all about 30,000 men, if every regiment has its full complement, which is rarely the case in the British army. The *Militair Wochenblatt*, Berlin, sketches the effective strength of the entire British army as follows:

Total, including volunteers, militia and reserve	720,000
Regular army, which alone counts for service abroad	230,000
Of these in India and other colonies, hence not likely to be employed in South Africa	120,000
In Ireland, and for obvious reasons also not available	30,000
Other home garrisons, including depots	20,000
Hence the most liberal computation gives for service in South Africa, including reserves	60,000

Canada, however, contemplates furnishing a regiment of a thousand men, and *The World*, Toronto, says:

"The concentration of British troops in South Africa from Canada, New Zealand, Australia, India, and the mother country would be something entirely new in history. It would prove to the world that the British empire is no fiction, but a substantial, practical reality. . . . Spontaneous action on the part of the whole British empire may prove the last straw to break the back of Boer obstinacy."

A few thousand irregulars will also be raised, but their fighting value is doubtful.

The forces of the Boers are also largely overrated. A South African at present residing in New Jersey, secretary of the commandant (military governor) of Heidelberg district in 1881, and afterward tutor in that gentleman's family, furnishes us with the following items:

At the call to arms, one man only to each homestead is allowed to remain behind, boys of sixteen and old men of sixty being on the list of the veldcornet as available for active service. As the Boers have large families, and the boys and girls are early trained to look after the cattle, 80 per cent. of the men may thus be called out. Each man is bound to have ready *always* horse, saddle, rifle, sixty rounds of ammunition, and provisions for two weeks. This rule is strictly enforced by fines, and one never knows when the veldcornet (captain) or his lieutenant may arrive for inspection. Hence the entire force is ready for service. If the men are not all needed at once, as many as possible are sent on leave to plow or harvest. At present the Boers are plowing, which may partly explain their apparent hesitation to begin hostilities. The whole force can not be kept together more than six months at a time. The men would desert, not because their courage is dampened, but because they worry about the lambs, the calves, the foals, the harvest which need their attention. About 25 per cent. of the men in camp are therefore always on leave. They return very faithfully when their time is up, or send a substitute. At a pinch, the Boers can keep 60 per cent. of their fighting men in the field for a year, and 40 to 50 per cent. for another year. In a war against the hereditary enemy, however, it is more likely that even the men left behind will volunteer, the women doing all the work.

A conservative estimate gives the Transvaal 50,000 able-bodied men, the Free State 20,000. Another force of 10,000 Boers is thought likely to come from Natal and the Cape Colony. Concerning the German contingent, German papers relate that Colonel Schiel has refused many applications, confining himself to old service men, of whom he has enlisted 1,500. The rest of the volunteers in the service of the Transvaal are likely to be on a par with the British irregulars. The Transvaal mounted police, of which about ten troops will be available, is a well-organized force, largely composed, as are police corps everywhere in the world, of Irishmen. Of artillery the Free State has six batteries

of field guns, one large quick-firing siege-gun, and a battery of Maxims. The Transvaal has ten batteries of field artillery, a howitzer battery, and a battery of Maxims, not including the guns taken from Jameson. An attempt to neutralize the "moral effect" which the dum-dum is expected to produce appears in the following advertisement in the Harrismith *Nieuws*, published by Commandant van Reenen, an immensely wealthy cattle rancher of the Orange Free State:

"Wanted, two absolutely pure-bred Bushmen, man and wife, to make their well-known poison (with which they poison their arrows). Salary, £10 per month. Traveling expenses paid. The above-named poison must be suitable to dip our bullets in, as I would think it very unfortunate if our enemies were shot with bullets not so poisoned."

And Major Albuquerque, the conqueror of Gungunhama, in an interview for the Pretoria *Volkstem*, said:

"Intimate knowledge of the country is absolutely necessary in a South African war, whether the fight is between small detachments or large armies. The Boers have this knowledge. In addition they are brave and have great staying powers. Even if England sends 80,000 or 100,000 men, the chances of the burghers are not bad. The war may have unpleasant surprises in store for the British, and they had best think twice before they begin it."—*Translations made for THE LITERARY DIGEST.*

GERMANY AND HER SMALLER NEIGHBORS.

THE tariff policy of several large empires, by which they are enabled to place smaller countries at a disadvantage, and apprehensions concerning the supposed ambitions of England and America, have led to a remarkable movement in Central Europe. In Switzerland, in Holland, even in Belgium, an agitation is carried on for a customs union with Germany. In Switzerland the agitation is chiefly commercial and industrial. The *Neue Glarner Zeitung* says:

"We must secure free trade with at least one great nation. Our relations with other countries would then be regulated according to the treaties concluded by our big neighbor; but what is good enough for his fifty millions ought to be good enough for our three millions of people. . . . Moreover, the mere beginning of negotiations with a neighboring country may make the others more friendly, as such a customs union would cause them to lose the Swiss market almost entirely, and here or there fear of the political consequences may also be of influence. . . . Economically oppressed as Switzerland is, she need not be ashamed of choosing this mode of redress."

Political considerations, however, seem to be the prime influence in the Dutch agitation for closer relations with Germany. At least the agitation is so construed by the *Staatsbürger Zeitung*, Berlin, which says:

"The Dutch people seem to realize that, if they wish to maintain their independence in the presence of English-speaking disturbers of the peace, they must seek closer relations with the German empire. Both nations would profit, as Germany could participate in the development of the Dutch colonies. Holland must, however, increase her navy. On the other hand, she would obtain a sufficient land force from Germany to defend her colonies. It is to be hoped that some agreement is arrived at ere the English or American beasts of prey attack the Dutch possessions."

In the Dutch West Indies, the Spanish-speaking inhabitants are instigated to rebel by Venezuelans, who believe that the United States will turn these islands over to Venezuela if they can be taken from the Dutch. A correspondent of the Amsterdam *Exportblad* advises the sale of these colonies, but the whole press of Holland is up in arms against such a proposal, which only gives fuel to the pro-German sentiment. But the most important impetus seems to be given to the movement by England's rela-

tions to the Boers. M. Hanotaux, ex-Minister of Foreign Affairs in France, writes to the following effect in the *Journal Paris*:

No European nation has a more glorious past than the brave Dutch people. In philosophy, in literature, in art, politics, naval and military affairs, they have excelled, and such names as Spinoza, Rembrandt, William of Nassau and William of Orange, Tromp, and De Ruyter rank among the first in history. But their greatest deed was the preservation of Protestantism. Without their brave fight, which forever broke the backbone of Spain, then in the zenith of her power, Protestantism might have disappeared. Equally great is their work in the interest of freedom and progress, as well as modern liberalism. And yet it is against this progressive element that the aims of British expansion are directed in South Africa.

Now it can not be denied that the Dutch exercise tremendous moral influence, far beyond their political power, in the civilized world. Hitherto they have been equally content with their two great Protestant neighbors, the one across the Channel and the one on land. The action of Great Britain in South Africa has aroused the entire Dutch element throughout the world, and they are undoubtedly seeking closer relations with Germany. It is impossible to overrate this movement. If Holland emerges from her neutrality, England loses one of her safeguards. This alone should cause the Salisbury cabinet to hesitate.

The great majority of German newspapers nevertheless think that union with the smaller countries, except by alliance treaties, is not feasible. Germany would have to protect them without deriving adequate advantages, as they would exercise more influence in the German federation than is their due. If they refused to obey the dictates of the majority, they would have to be coerced, and as it is considered impossible by German authorities like Bismarck to make a lasting conquest of a civilized race, the game would not be worth the candle.—*Translation made for THE LITERARY DIGEST.*

"THE REFUGE OF POLITICAL CRIPPLES."

SWISS papers lately agitate for a closer union of their country with a more powerful neighbor, and it is not a little remarkable that the Socialist papers, which in France, England, Germany, and the United States ridicule the idea of nationality, appeal to Swiss patriotism to preserve the independence of the country, even at the cost of serious economical losses. This phenomenon is explained by a writer in the *Neuesten Nachrichten*, Berlin, in the following manner:

"L'hôpital des blessés politique," a Geneva alderman recently called his city, and he was right. Everybody who has made himself impossible in his own country goes there. Remarkable is the preponderance of young men of from eighteen to twenty-five years of age among these political refugees—young fellows who can hardly be expected to possess enough experience to understand the needs of their country. Their ignorance they hide by lots of noise and reference to the 'holy fire' which glows within their bosoms. Most of these 'reformers' and malcontents hail from Russia, Servia, Rumania, Bulgaria, Greece, Turkey, etc. They all see no salvation for their several countries unless a republic is established of which they are the head. Germans and French are in the minority. The former wish to establish Socialism according to Prof. Karl Vogt; the latter want a general row, in which the losers are mercilessly subjugated by the winners. This alone, they think, can 'save France.'

"Doubtless some of these people are honest; many, however, are political parasites, who want to live without working. A third class live by blackmail. Among these are especially the Young Turks. They publish articles reviling everything Turkish, and sometimes the Turkish Government is weak enough to buy them off. The Swiss press does not act very wisely in this case. The newspapers forget that 30,000 Swiss went poor to Turkey, and live there now in affluence, peace, and security, despite the supposed misrule of the Mohammedans."—*Translation made for THE LITERARY DIGEST.*

MISCELLANEOUS.

"OOM PAUL'S PEOPLE."

ONE does not read very far into the book bearing the above title, written by Howard C. Hillegas, without finding that the writer's sympathies are very pronounced in favor of the Boers in their struggle with the British. The book has, in fact, somewhat the appearance of a brief for the Dutchman of South Africa, tho in saying this we do not mean to detract from the great interest of the work, nor cast any doubt upon the author's very obvious sincerity in pleading the case he has espoused. At the outset, in the preface, he gives fair warning of his attitude as that of an American "whose pride in the Anglo-Saxon race causes him to wish that there were more justice and less venom" in the "alleged grievances" of the Uitlanders.

Mr. Hillegas draws an interesting parallel between the early history of the Boers and that of our own Pilgrim Fathers. The Dutch and Huguenot refugees who settled at Cape Town made their journey about the same time that the Pilgrim Fathers sailed, and for the same reason. Their experiences with the blacks were similar to those of the first New Englanders with the Indians, and their differences with the Dutch East India Company were similar to those between our colonies and Great Britain. When the Napoleonic wars left the South African colony in the hands of England, the Boers rejoiced as in a deliverance from tyranny; but by reason of the same sort of reckless exploitation that caused our revolt, they were speedily turned into desperate enemies of British rule. In short, Great Britain threw away her opportunity in South Africa just as she did in this country, tho the occasion of the final break was very different. The Boers emancipated their slaves in 1830 on the promise of ample compensation from the British Government; but less than half the promised sum was paid. Several years later, natives overran the Boer settlements stealing large amounts of property. The Boer farmers courageously recovered their live stock, and the British Government compelled them to turn the recovered cattle, their own, over to it without compensation. Then the Boers shook the dust of British soil from their feet and began trekking, one party settling in what is now the Orange Free State, the other in what is now Natal. The latter entered into negotiations with the native chief for the purchase of the land desired, but after the treaty was signed the natives treacherously rose against the Boers, and a series of most heroic encounters ensued, the Boers in one instance defeating 12,000 Zulus with a force of but 460. After finally driving the natives back and conquering a peace, the Boers were rewarded by a British manifesto declaring Natal British territory, and ordering the Boer immigrants to be treated as a conquered race and their arms and ammunition confiscated. Then the Boers again trekked, this time across the Vaal to what is now the South African Republic.

Of the means by which their territory was acquired, President Kruger, in an interesting interview which constitutes one chapter of the book, says this:

"Ever since we left Cape Colony in 1835 we have not taken any territory from the natives by conquest except that of one chief whose murderous maraudings compelled us to drive him away from his country. We bartered and bought every inch of land we now have. England has taken all the land she has in South Africa at the muzzles of repeating-rifles and machine-guns. That is the civilized method of extending the bounds of the empire they talk about so much."

British authority still followed the "trekkers," and declared their new territory a British possession. Then the Boers trekked no farther. After two years of restlessness under the British flag, they made this "declaration of independence":

"We declare before God, who knows the heart, and before the

world, that the people of the South African Republic have never been subjects of Her Majesty, and never will be."

And they took up arms to make the declaration good. Then followed the historic battles of Laing's Nek and Majuba Hill, the latter "won by the Boers against greater odds than have been encountered by any volunteer force in modern times."

Mr. Hillegas gives the following little table of statistics of the different engagements between Boers and British:

Battles.	MEN ENGAGED.		CASUALTIES.	
	British.	Boer.	British.	Boer.
Laing's Nek.....	400	550	190	24
Ingogo.....	300	250	142	17
Majuba Hill.....	600	150	280	5
Bronkhorst.....	250	300	120	1
Jameson raid.....	600	400	100	5

In every one of these engagements the Boers were victorious, the British having triumphed over them in but one battle, that of Bhoomphats, in 1848, when the British had heavy artillery and the Boers nothing better than flintlocks. In the case of Majuba Hill, the British were entrenched in a most formidable position. The result of Laing's Nek and Majuba Hill was a treaty partially restoring the independence of the South African Republic, Great Britain retaining suzerain rights, which were afterward, in subsequent treaties, whittled down to the simple right to veto treaties the Transvaal Government might make with foreign countries.

Of the grievances that exist at the present day, Mr. Hillegas seems to consider that the Boers have their full share. Here is his statement of the commercial relations between the Transvaal and the rest of South Africa:

"The Transvaal, being an inland state, is the feeding-ground of those states which are located between it and the sea. Every ton of foreign freight that enters the Transvaal through Cape Colony is subject to high customs duties and abnormal freight rates. The railway and the customs-house being under the same jurisdiction, it will readily be seen to what extent Cape Colony derives its revenues from the Transvaal commerce. The Orange Free State again taxes the freight before allowing it to pass through its territory. The third tax, which makes the total far greater than the original cost of the freight, is added by the Transvaal Government. Certain classes of freight shipped from Europe are taxed by the steamship line, the Cape Colony Railroad, the Transvaal Railroad, and with Cape Colony, Orange Free State, and Transvaal customs duties.

"This vast expenditure is borne by the consumers in the Transvaal, who are compelled to pay from three to five times as much for rent and food as is paid in England or America. Cape Colony, in particular, has been fattening upon the Transvaal. The government railroads in one year showed a profit of more than eight per cent, upon the capital invested, after accounting for the great losses incurred with unprofitable branch lines, showing that the main line to the Transvaal must have produced a profit of from fifteen to twenty per cent. The customs duties collected by Cape Colony on almost all freight in transit is five per cent. of its value. The inhabitants of the Transvaal are obliged to pay these large amounts, and are so much poorer while the Cape Colony Government preys upon them. The Transvaal Government receives none of this revenue except that from its customs, which is insufficient for its expenses."

In this condition of affairs, which is beyond the control of the Transvaal, may be found reason for some of the grievances complained of in Johannesburg.

The Boer of to-day, we are told, loves solitude above all things. "It is his greatest delight to be alone," to live "out of sight of the smoke of his neighbor's house." His chief recreation is the shooting of game, yet he is not a sportsman who kills for the joy of killing, having plenty of use for all the game he brings down. "It would be difficult to find anywhere else an entire race of such physical giants." The average height of the full-grown males Mr. Hillegas puts at "not less than six feet two inches," and their physique and powers of endurance are marvelously developed. They confidently assert that in time of warfare one Boer equals five Englishmen. The Boer reads nothing but the Bible; his belief in it is indestructible, and his constant references to it are not cant, but are owing to the same reason that makes the sailor speak

the language of the sea—it is a part of his daily life. The two political parties in the Transvaal, even, are divided on religious, not political, grounds, the Progressives being those who sing hymns and the Conservatives those who do not! Krüger is a Conservative.

No more admirable home life exists anywhere than that of Oom Paul's people. It is simple and filled with family affection. They are, nevertheless, hospitable to an astonishing degree, and will give a stranger the best room, the best food, and the use of the best horse—if the stranger be not English. The personal uncleanliness attributed to the Boer may be readily explained by the fact that water is a priceless possession where he lives. The city Boer is not unprogressive, but "compares favorably with other men of South African birth." Of the country Boers, constituting the large majority, of course, Mr. Hillegas says:

"The Boer of to-day is a creature of circumstance. He is outstripped because he has had no opportunities for development. Driven from Cape Colony, where he was rapidly developing a national character, he was compelled to wander into lands that offered no opportunities of any description. He has been cut off for almost a hundred years from an older and more energetic civilization, and even from his neighbors; it is no wonder that he is a century behind the van. No other civilized race on earth has been handicapped in such a manner, and if there had been one it is a matter for conjecture whether it would have held its own, as the Boer has done, or whether it would have fallen to the level of the savage."

Much is said concerning the relations of the Uitlanders to the Transvaal Government. President Krüger, in the interview already mentioned, put the matter of the franchise thus:

"Every man, be he Englishman, Chinaman, or Eskimo, can become a naturalized citizen of our country and have all the privileges of a burgher in nine years. If we should have a war, a foreigner can become a citizen in a minute if he will fight with our army. The difficulty with the Englishmen here is that they want to be burghers and at the same time retain their English citizenship."

Mr. Hillegas makes the following point against the British:

"At the same time the British Parliament was discussing the subject of the alleged injustice under which the English residents of the Transvaal were suffering, the Colonial Secretary was engaged in disposing of grievances which reached him from the Dutch residents of British Guiana, in South America, and which recited conditions parallel to those complained of by the Uitlanders. The grievances were made by foreign residents of English territory, instead of by English subjects in a foreign country, and consequently demanded less serious attention, but their justice was none the less patent. The three thousand native Dutch voters in British Guiana have no voice in the legislative or administrative branches of the colonial government, owing to the peculiar laws which give to the three thousand British-born citizens the complete control of the franchise. The population of the colony is three hundred thousand, yet the three thousand British subjects make and administer the laws for the other two hundred and ninety-seven thousand inhabitants, who compose the mining and agricultural communities and are treated with the same British contempt as the Boers. The Dutch residents have made many appeals for a fuller representation in the Government, but no reforms have been inaugurated or promised."

To a description of the Transvaal's preparations for defense, a chapter of the book is devoted. We quote a single passage:

"Probably no inland country in the world is half so well prepared for war at any time as that little government, which can boast of having less than thirty thousand voters. The military preparation has been so enormous that Great Britain has been compelled, according to the Colonial Secretary's statement to the British Parliament, to expend two and a half million dollars annually in South Africa in order to keep pace with the Boers. Four years ago, when the Transvaal Government learned that the Uitlanders of Johannesburg were planning a revolution, it commenced the military preparations which have ever since continued with unabating vigor. German experts were employed to formulate plans for the defense of the country, and European artillerymen were secured to teach the arts of modern warfare to the men at the head of the Boer army. Several Americans of military training became the instructors in the national military school at Pretoria; and even the women and children became imbued with the necessity of warlike preparation, and learned the use of arms. Several million pounds were annually spent in Europe in the purchase of the armament required by the plans formulated by the experts, and the whole country was placed on a war footing. Every important strategic position was made as impregnable as modern skill and arms could make it, and every farmer's cottage was supplied with arms and ammunition, so that the volunteer army might be mobilized in a day."

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Commercial Agent Hamilton, of Morrisburgh, under date of July 6, 1896, sends the following printed statement of the cost of the canals of Canada and the depth of these water-ways:

"A recent official return shows the depth and cost of the canals and river works forming the connection between the Great Lakes and deep-water navigation at Montreal. The Welland Canal on July 1, 1896, had 13 feet 9 inches of water, and had cost \$23,796,353.41; the Murray Canal, with 14 feet of water, had cost \$1,247,470.26, and the Beauharnais Canal, with 9 feet, \$1,611,690.26. The canals and connected river improvements in course of construction or enlargement on July 1, 1896, had cost as follows: Sault Ste. Marie Canal, \$3,748,011; Galops Canal, \$1,401,365; Rapide Plat Canal, \$1,496,078; Cornwall Canal, \$4,008,039; Soulanges Canal, \$1,275,908; Lachine Canal, \$7,636,439; St. Lawrence River Works, \$1,201,795.

"The contracts awarded since July 1, 1896, are as follows: Lachine Canal, \$18,000; Soulanges Canal, \$2,093,840.42; Galops Canal, \$2,331,888; North Channel, \$700,000; Farran's Point Canal, \$670,000; Galops Rapide, \$125,740; St. Lawrence River, \$65,222; Sault Ste. Marie, \$51,579."

Minister Loomis sends from Caracas a law concerning foreign companies, recently passed by the Venezuelan Congress, as follows:

The Congress of the United States of Venezuela decrees:

ARTICLE 1.

Foreign companies which wish to establish in Venezuela agencies or branches whether they have any operations in the country or not, and whether they have a collective name or there are dormant partners, must comply with the same requirements as national companies, and if they are companies having shares they shall register in the registry of commerce and in the office for registration of the place where the business agency is situated, and shall publish in a newspaper of the same locality the partnership deed and other documents necessary for the constitution of the company, according to the laws of its nationality, and a copy duly certified on the articles referred to of those laws. The statutes of the company shall also be left with the registrar to be filed among his records.

SECTION 1. Foreign companies established in Venezuela shall be bound by the provisions contained in article 26 of the civil code and of those of 101, 102, 103, and 104 of the code of civil procedure.

SEC. 2. Every modification of the partnership

Turkish Baths for 3 Cents.

THE best of all bath cabinets is now sold at maker's prices direct to the user. Sold even lower than the inconvenient affairs that are advertised for this service. A tight, double-walled room, rubber coated inside and outside, and fitted with a door. Made so that merely tipping folds it into a six inch space. Handsome, convenient and strong.

The Racine Cabinet is guaranteed to be the best one on the market. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5. to \$12., express or freight prepaid; alcohol stove, vaporizer and face-steaming attachment included. Send today for our handsome illustrated catalogue, and order from that.

Racine Bath Cabinet Co., Box X, Racine, Wis.

"A model library of reference, embracing the very widest range of topics."

contract shall be registered and published in this manner provided in the former part of this article.

ARTICLE 2.

Insurance companies which enter into business in Venezuela shall establish at least one responsible agency in the capital of the republic, and life-insurance companies shall give good security, equivalent to the total amount of the policies issued in the country. For the purposes of this guaranty the respective agency shall remit half yearly to the ministry of agriculture, industry, and commerce a circumstantial report of the insurances effected and of the amounts expressed in the corresponding policies. The security shall be registered in the subregistry of the district in which the agency is situated.

ARTICLE 3.

The failure to comply with the provisions of articles 1 and 2 by the companies referred to therein shall make personally and substantially liable the administrator's agents, representatives, and all other persons who may contract in their names, for all obligations made in the country.

SECTION. All persons who enter into contracts in the name of insurance companies which have not complied with the provisions of article 2, shall further suffer a fine of from 1,000 to 10,000 bolivars.

ARTICLE 4.

Foreign companies which now have branch agencies or exploitations in Venezuela shall comply with the provisions of article 1 within six months from the promulgation of this law. Life insurance companies shall within the like period comply with the provisions of article 2.

Given at the Federal Palace at Caracas this 4th of April, 1899.

The Department has received from Consul Plumacher, of Maracaibo, under date of June 23, 1899, translation of a recent act of the Venezuelan Government renting the coal-mines, railroads, and wharves of Guanta (state of Bermudez, Bolivar district) to Lanzoni, Martini & Co., of

"LINENE" Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

Rome, Italy. The contract, it appears, is to run for fifteen years, and the company will pay 104,000 bolivars (\$20,012) annually in monthly installments and 50 centimes (9.6 cents) for every ton of coal extracted, this money to be reserved, in order to meet any future claims on the property. The company is not to increase the price of the coal used by the Government on its ships, which price is to be 25 bolivars (\$4.82) per ton. The railway rates are to remain as at present. The Government is to keep closed, during the period of the contract, the port called El Rincon, or Gusman Blanco, except for such articles as earthenware, wood, fish, vegetables, and the like, that can not pay the landing and railway charges. The state of Bermudez and the Government are to have a rebate of 50 per cent. of the passenger tariff for their employees on commission and on freight. Mail is to be carried by the railroad free. Work is to be begun within four months, finished in eight months more. Exemption from duties will be granted to the machinery and articles used in the exploitation of the mines and the railway. Work is not to be suspended for more than six months, under fine of 20,000 bolivars (\$3,860). A guaranty of 50,000 bolivars (\$9,650) is to be deposited in bank by the company, to be forfeited in case of non-execution of contract. The contract can be renewed for a further period of ten years after the expiration of the fifteen years if the company has complied with all the conditions specified. Native labor is to be preferably employed. The enterprise is to be free from taxes and employees are to be exempt from military service.

Tailor-Made Suits

\$5.00

OUR new Fall and Winter Catalogue of tailor-made costumes and cloaks is now ready. We illustrate in it all of the newest Paris styles, and will mail it free, together with samples of materials to select from, to the lady who wishes to dress well at moderate cost. We keep no ready-made garments, but make everything to order, thus giving that touch of individuality and exclusiveness so much to be desired.

Our new Fall and Winter Catalogue illustrates a splendid assortment of suits and cloaks, made according to fashion's latest dictates.

Charming Costumes and Tailor-Made Suits, Faultless in Cut and Finish, \$5 up.

Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up. Jaunty Capes, \$4 up. New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, Etc.

We also make finer garments and send samples of all grades. We pay express charges everywhere. Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. Be sure to say whether you wish samples for cloaks or for suits, and we will then be able to send you a full line of exactly what you desire. Write to-day for Catalogue and Samples; we will send them to you, free, by return mail.

PERSONALS.

"THE only son of a prize-fighter who ever amounted to anything," says Victor Smith, "is the Rt. Hon. William Court Gully, speaker of the British House of Commons. His father John Gully, a butcher and afterward a prize-fighter, grew rich and was a member of Parliament for Pontefract in 1835. Speaker Gully incidentally receives a salary of \$25,000 a year."

JUDGE MARTIN GROVER, of Troy, N. Y., was at one time approached by a young citizen who wished to be nominated to the state assembly. The shrewd old judge had certain doubts about him, which he expressed somewhat freely, and yet he was willing to afford him a trial. He therefore addressed the aspirant in this way: "Young man, if you will give me your word that you won't steal when you get to Albany, I'll see what kin be done about sendin' you there." "Judge Grover," replied the young man, drawing himself up with great dignity, "I go to Albany unpledged, or I don't go at all."

HELEN GOULD has given Maury Sutton, of Baltimore, a law scholarship, which includes books and board in the University of New York. Mr. Sutton, who served in the Cuban war, attracted Miss Gould's favorable attention when in the hospital at Montank Point.

PROFESSOR BUNSEN, the celebrated physicist, who died recently at Heidelberg, was not less esteemed for his moral qualities than for his achievements in science, and among the Germans his good nature, modesty, and extraordinary freedom from pride became proverbial. A friend and welcome guest at many of the European courts, Bunsen possessed a great number of orders and decorations from all countries. A prince or sover-

An Honest Fireplace

not only burns well and looks attractive, but also sends the heat into the room instead of up the chimney. The

Jackson Ventilating Grates

have heat-saving chambers, so that one open fire will warm several rooms on one or different floors in coldest weather. They can be set in any fireplace, and the economy of fuel will soon repay the cost. As health-preservers in the home their value is beyond computation.

We manufacture, import, and sell all kinds of fireplaces, and can reproduce any style, or give new and odd effects. Send to-day for Catalogue "D." It contains many valuable suggestions on economical and sanitary house-heating.

eign rarely passed through Heidelberg but the scientist received a royal invitation to dine. These ceremonial repasts, often prolonged far into the morning, bored him exceedingly, and, bitterly regretting the hours wasted outside of his laboratory, he acquired the habit of pottering with his experiments until the very last moment, then, dressing himself in all haste, he would arrive at the hotel invariably in the nick of time, tho often minus his decorative regalia, a negligence which produced a most deplorable effect. Professor Bunsen's old housekeeper, who was much more concerned than he over these freaks of absent-mindedness which frequently brought him into royal presence without his laurels, conceived the idea of placing once and for all the orders and decorations in her master's dress-clothes pockets so that while on his way to a banquet he might occupy himself with attaching them to his coat. But even this scheme was not always successful. Once when a certain prince of Baden was at Heidelberg, Bunsen arrived in the salon without ever having thought of the orders in his pockets, and was just on the point of stepping up to his royal highness when a friend called his attention to this neglect. Not in the least disconcerted, Bunsen put his hand in his right pocket, and, drawing out a handful of crosses and medals, placed himself before a glass and proceeded to arrange them on his breast, while the guests, all conversation ceasing, regarded him with stupefaction. Hereupon Bunsen, without paying the slightest attention to the astonishment which his conduct was provoking, remarked, "I have as many more in my left pocket," and calmly and silently completed his gala toilet.

ALFRED C. HARMSWORTH may safely be said to be the most successful young man in England, Mr. Harmsworth is not yet 35 years old. He is the proprietor of the London *Daily Mail*, the London *Daily News*, and half a dozen other highly successful newspapers and magazines. Mrs. Harmsworth is one of the beauties of London, and her entertainments have recently been dazzling that city. Their town house is in Berkeley Square, next door to the mansion of Lord Rosebery. At a recent concert given by the Harmsworths Paderewski played and the Coquelins, the younger and the older, Mme. Suzanne Adams, Mlle. St. Andre, Mr. Bispham, and Maurice Parkoa aided in the entertainment of the guests. For Paderewski's services alone Mr. Harmsworth sent a check for \$5,000.

MORE OR LESS PUNGENT.

Shrewd.—MRS. WALKER: "I don't see why the doctors all recommend bicycle-riding. If it makes people healthier, it is a loss to the doctors."

Mr. WALKER: "I know, but they calculate that one sound, healthy rider will disable at least five pedestrians per week."—*Boston Journal*.

His Luck.—THE REPOSEFUL ONE: "My dear, I wish you would not be so energetic. Will you never rest?"

THE FUSSY ONE: "I never expect to be able to

If You Feel "All Played Out"

Take Horsford's Acid Phosphate.

OFFICES IN EVERY CITY IN THE WORLD.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4 1/2 X 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

Sent to any address on receipt of 50 cents.

Postage stamp, or money order preferred

CHAS. C. ELY, - 56 Warren Street, New York

Cooking by Electricity.—MR. JUSTJOINED: "What on earth are you trying to do?"

MRS. JUSTJOINED:—"I was reading about cooking by electricity, so I hung the chops on the electric bell, and I've been pushing the button for half an hour, but it doesn't seem to work."—*Boston Traveler*.

The Wrong Kind of Sponges.—MRS. NEWLYWED: "I was going to have some sponge cake as a surprise for you, dear, but I confess it was a failure."

MR. NEWLYWED: "What was the matter?"
MRS. NEWLYWED: "I don't know for sure, but I think the druggist sent me the wrong kind of sponges."—*Philadelphia Record*

He was Blind.—BOSS: "I don't know whether to discharge that new boy or raise his salary."

MANAGER: "What has he been doing?"
BOSS: "He rushed in my private office this morning, and told me there was a man downstairs who would like to see me."

MANAGER: "Who was it?"
BOSS: "A blind man."—*Chicago News*.

At the "Literary."—At a so-called "literary" in a Georgia settlement a sturdy old farmer obtained the floor and spoke for one hour on corn-raising, fodder-pulling, and cotton-picking. The local preacher was present and arose to a point of order. "I do not see," said he, "what a literary meeting has to do with corn-raising and fodder-pulling."

"Well," replied the old farmer, "its got jest this to do with it: Ef it warn't fer corn, cotton, an' bacon an' greens there wouldn't be a literary man in the whole blame country!"—*Atlanta Constitution*.

Current Events.

Monday, October 2.

—The South African war situation remains unchanged; the hostile forces are still thirty miles apart.

—An American expedition starts from Manila to bombard Orani and raise the gunboat *Urdaneta*; the conference of Filipino envoys with General Otis is fruitless.

—Admiral Dewey arrives in Washington, and is driven to the White House, where he is received by the President, members of the Cabinet, and other officials.

—President McKinley formally accept the invitation to visit the fall festival in Chicago.

—Great mass-meetings are addressed at Dallas, Texas, by W. J. Bryan, ex-Governor Stone, Governor Jones, and others.

Tuesday, October 3.

—The Venezuelan Arbitration Commission at Paris announces its unanimous decision in the boundary dispute, fixing the lines, under which England secures most of the territory claimed by Venezuela.

—The sword voted by Congress is presented to Admiral Dewey at the Capitol in Washington, with addresses by President McKinley and Secretary Long, after which the military and naval escort is reviewed.

—The first race between the *Columbia* and *Shamrock* is declared off, owing to light winds and the expiration of the time limit.

HAVE YOU MADE ANY PROVISIONS FOR YOUR FAMILY?

You can leave a legacy which will be valuable to your family by investing in a lot in the best residence section in New York City. It will cost you only \$1.00 to \$3.00 per week, and we insure your life free for the unpaid balance on the lot. See "Last Public Sale," page 2.

YOUR dealer in lamp-chimneys—what does he get for you?

You can't be an expert in chimneys; but this you can do. Insist on Macbeth's "pearl top" or "pearl glass" whichever shape you require. They are right in all those ways; and they do not break from heat, not one in a hundred. Be willing to pay a nickel more for them.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

THE COOK RESPONSIBLE.

Investigators who have made a study of foods and their proper preparation state that stomach troubles originate in a large number of cases from the improper preparation of the food.

There is a right and a wrong way to prepare each article of diet. How many cooks take the trouble to properly prepare the oatmeal or other breakfast food for the morning meal? In most homes a little water is poured over the cereal and allowed to cook a few minutes and then served. Prepared in this manner, they abound in starch, and form a starchy, sticky mass in the stomach, which is not only difficult to digest, but retards the assimilation of other foods.

To render oatmeal and other cereals easy of digestion and in proper condition for the stomach, the starch must be converted into dextrin. This requires five hours' constant cooking.

The average housewife has not the time or patience to prepare her oatmeal in this manner; and to meet the demand for a palatable and nutritious cereal food that contains all the elements of nutrition in a digestible form, Granola was manufactured.

Granola is thoroughly cooked; the combination of the grains and the process they are submitted to give the food a rich, nutty flavor.

A chemist has analyzed this pre-digested food, and finds that it contains three times the food elements of beef. It only requires a few teaspoonfuls of Granola and the addition of a little milk to make a delicious meal.

All leading grocers can supply Granola. Each package bears the picture of the famous Battle Creek, Mich., Sanitarium.

Representing Over Half a Century of Highest Literary Effort

A Little Library of Peerless Fiction

All of Hugo's Romances,
with Poems,

FREE For
15 Days

The University Edition will satisfy the most exacting admirers of Hugo. It is a better set of books and will present a finer appearance in your library than many editions costing double. It presents all of Hugo's Romances, in the best translation, printed from large, clear type, on fine paper, handsomely and durably bound in semi-deluxe style.

Our Special Offer is certain to make the strongest sort of an appeal to Digest readers desiring to add to their libraries the incomparable novels of that peerless master of fiction, whom Swinburne, the English poet-critic, pronounces "the greatest writer the world has seen since Shakespeare, and the greatest Frenchman of all time."

A limited edition is issued in eight volumes, bound in half leather and in cloth with gilt tops and offered for about half the regular subscription price, our low club prices being \$16 for the half leather and \$13 for the cloth binding. Books may be returned if not satisfactory. We pay expressage.

SPECIAL OFFER, FOR LIMITED TIME ONLY

THE UNIVERSITY SOCIETY,
78 Fifth Avenue, New York.

Gentlemen: Please send me on approval a set of VICTOR HUGO'S NOVELS in half leather binding. If satisfactory, I agree to pay \$1 within fifteen days and \$1 per month thereafter for 15 months; if not satisfactory I agree to return them within 15 days.

If you can't play You can still have Music in the home

Surprising improvements and new features in this instrument for home music make it possible to reproduce at any time the choicest musical selections with such delicate expression, rich harmony, and perfectly modulated volume as to satisfy the most refined and exacting musical tastes and to afford delightful entertainment. None of the mechanical harshness or expressionless "tinkling" noticeable in other instruments are apparent here, but rich, warm tones of perfect quality.

"A wonder to all who hear its sweet music."

The Stella Music Box

It reproduces waltzes, marches, songs, symphonies or hymns as a rich melody written. Its tunes are 20 to 25 per cent longer than those of other boxes. The music is produced from perforated metal sheets without the objectionable pins usually used. The STELLA's marvelous quality of tone is due to its duplex system of keys.

THE SHEETS WILL LAST A LIFETIME
The STELLA Music Boxes are manufactured at Ste. Croix, Switzerland, by a firm with 83 years experience in this business.

"I have tried several sorts of music boxes but the 'Stella' is the best on the market."—Hon. Thomas Watson.

"I had no idea a mere music box could play with such expression."—Chas. E. Murray, Clarendon Springs, Va.

"All remark on its piano-like tones."—John Branch, Hendersonville, Tex.

IDEAL SWISS CYLINDER MUSIC BOXES. Playing from 6 to 600 tunes and changing tunes automatically. From \$28 to \$2,000.

Illustrated catalogue sent free to those who mention this advertisement.

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE WAR IN SOUTH AFRICA.

THE expression of American opinion on the Transvaal struggle is abundant and full of interest; but an unusual hesitation is shown in pronouncing final judgment. The quick and hearty sympathy expressed for Greece in her war with Turkey finds no parallel in the present attitude of our press. The only tendency, indeed, that can be called general is a disposition to think both sides partly right and partly wrong; and while the grievances of the Uitlanders are assumed as real, the Boers are not blamed for making a last desperate stand for their independence. When called upon to choose between Anglo-Saxons fighting against "taxation without representation," and hardy pioneers fighting to retain their independence, the American press shows a disposition to pause and consider. What is perhaps the clearest statement yet presented of the British side of the case is given in the following letter sent to several newspapers by Mr. Thomas G. Shearman, the New York lawyer. (For both sides as presented in the British journals see our Foreign Topics department.) Mr. Shearman considers the real issue to be whether the treatment of the Uitlanders is such as ought to be tolerated by civilized nations. He does not assume to have personal knowledge on this point, but gives statements taken "almost exclusively" from American papers. He says:

"The Transvaal Republic is admitted by its latest advocate, in the current number of *The North American Review*, to be an oligarchy of a few dozen Boers. Its parliament consists of two houses, one of which has no power, and the other is absolutely controlled by the oligarchy. Its courts of justice are entirely at the mercy of the President, who not long since removed the highest judges because they would not decide according to his pleasure. When the independence of the Transvaal was conceded, in 1851, it expressly covenanted to put all foreigners entering the Transvaal upon an equal footing with the Boers them-

selves in every respect except the right of suffrage. So far from doing this the Boers have purposely arranged taxation so that nine tenths of it shall be paid by foreigners; they have taxed foreigners heavily to support schools in which the Dutch language is exclusively used; they have insisted that even private schools, maintained by foreigners at their own expense, should teach Dutch on an equal footing with English; they have maintained a government so corrupt that, according to the statement of an American newspaper friendly to the Boers, President Krüger has amassed \$25,000,000 within the last ten years, altho doing no business; they have maintained a monopoly in dynamite, an indispensable instrument in mining, in the profits of which President Krüger has largely shared; they have kept towns, built exclusively by foreigners, under exclusive Boer control, and have refused to permit decent sanitation, thereby doubling the death-rate; they have prohibited Americans and Englishmen from holding public meetings; they have denied to them even the right of petition; they have removed their own supreme court from office, simply because its decisions rendered some small justice to foreigners; and they have prohibited any Englishman or American from carrying arms of any kind, while furnishing to every Boer boy of sixteen years of age a rifle and a revolver, and surrounding Johannesburg with Krupp guns, the entire cost of which has been taken out of the pockets of Englishmen and Americans.

"Repeated appeals to the Boer Government to remedy these and many other similar acts of oppression have proved entirely futile. At one time the Boers forcibly seized Englishmen and compelled them to serve with their troops in war against native Africans. Against this Great Britain energetically remonstrated; and nothing but the fear of war sufficed to induce the Boers to liberate the Englishmen thus forcibly pressed into service. When the independence of the Transvaal was conceded, in their laws it was provided that foreigners might be naturalized after five years' residence; but as soon as any considerable number of foreigners entered the country, the naturalization laws were entirely repealed. And when, at a somewhat later period, they were in part restored, they only permitted naturalization at the end of fifteen years, with the consent of two thirds of the Boers residing in the district, and also of a military officer, which consent might be refused without any reason. As a condition of naturalization, every Englishman was required to renounce all claim upon England, and every American to renounce all claim upon the United States, for protection against any outrage which might be committed upon him during the next fifteen years; so that an American desiring to vote at the end of fifteen years would be, during that whole period, neither an American nor a Boer, nor a citizen of any country whatever; while at the end of the fifteen years,

GENERAL JOUBERT,
Commanding the Boer forces.

naturalization could be denied to him in the uncontrolled discretion of the military officer commanding his district. And after he had passed through all this ordeal he would only receive the right to vote for the second chamber of the Boer legislature, while all the power of government was exclusively conferred upon the President and the upper chamber. The consequence of this state of things has been that Americans who settled in the Transvaal have always been the most earnest opponents of Boer rule; and in 1895, the very first man arrested for alleged treason and cast into a Boer prison was a distinguished American citizen, John Hays Hammond."

Mr. Shearman goes on to speak of the recent negotiations on the subject of franchise, and characterizes all the offers made by the Boers as "a most transparent sham," as all "made naturalization conditions upon the arbitrary discretion of a Boer military officer." He declares that he has a "perfectly open mind" on the subject, dislikes Mr. Chamberlain, detests Mr. Rhodes, and has no sympathy with imperialistic ideas. He has read the book "Oom Paul's People" (see *THE LITERARY DIGEST*, October 14), but finds nothing therein that contradicts any of the above statements; indeed, he finds the additional information that the original quarrel arose because the British would not permit the Boers to continue the practise of slavery and to massacre the natives.

The *Springfield Republican*, in replying to Mr. Shearman's letter, presents one of the most convincing pleas for the Boer that has yet appeared in this country. *The Republican* says:

"Suppose the Pretoria Government were an oligarchy. It is undeniable that it has the earnest support of all the Boers. They might make Mr. Krüger temporary dictator, as the Romans used to in emergencies, and he well within their rights. If one is to object to an 'oligarchy' at Pretoria, let him also start a crusade against the Czar of Russia and the Emperor of Germany. It is news that when a people have the right of self-government, they must pattern their system after that of any other particular nation. As for the British criticism of the two houses of the Boer legislature, it comes with ill grace from a people who tolerate the hereditary British House of Lords. The facts about the Transvaal high court of justice are that the constitution gives supreme power to the Volksraad in all legislative matters. The judge who was removed not long ago had tried to extend his jurisdiction over the acts of the Volksraad. Such is the statement made by Mr. Hillegas in his book, 'Oom Paul's People.' But, conceding that the courts are entirely at the mercy of Mr. Krüger, what of it? So they are in Russia at the mercy of the Czar. Are you going to war to compel Russia to change her domestic institutions? The Transvaal is as independent in internal affairs as Russia is.

"As for taxation in the Transvaal, the case as stated by Mr. Shearman is very unfair to the Boers. If they derive nine tenths of their revenue from foreigners it is right that they should, since those foreigners are allowed to work the richest gold-mines in the world, mines which now lead in annual output, and which pay dividends running as high as 675 per cent. A very slight tax on such mines, in so small a country, would of course yield to the state the bulk of its revenue. It is a mockery, however, for the alien millionaires to complain of taxation, when, as a matter of fact, the Boer Government levies a tax of but 2.5 per cent. on the profits of the mines. The Canadian Government levies a tax of 10 per cent. on the gold profits in the Klondike! Is there any agitation suggested against Canada? Compare the Transvaal mining laws with those of other countries. The African Gold Recovery Company (English) issued a report to the shareholders, in 1898, which declared: 'The properties (of the company) in South Africa cause less anxiety, because the conditions of holding are free from the burdens which obtain in Western Australia.' A Mr. Henderson, chairman of one of the Transvaal mining companies in England, has declared that the gold laws of the Boers were the best and most liberal in the world. Taxation is uniform upon all classes in the Transvaal, and if one set happens to pay more than others, it is because that set is the richest and deserves the pay the more.

"That the Boer Government is more corrupt than any other government can not be maintained. The Johannesburg millionaires have untold wealth with which to buy their way to anything

they desire. The simple fact that the Boer Government is now in deadly antagonism to them is good evidence that Uitlander money could not bribe Boer officials. The story that Mr. Krüger has dishonestly amassed \$25,000,000 in the last ten years is undoubtedly a slander. If the Boers have insisted that the public schools should use Dutch exclusively, they do only what is done in Massachusetts with English. If they have insisted that private schools, maintained by foreigners, should teach Dutch on an equality with English, they have done only what the Republican Party of Wisconsin tried to do by law ten years ago with English and German. If they have maintained a monopoly in dynamite, they have no more exceeded their rights than England did

in monopolizing the salt of India, or than some countries have in owning all the railroads. If Johannesburg is unsanitary it is less so than many other new mining towns. If public meetings have been prohibited the Boers have done only what is done in Germany and Austria when the security of the state is threatened. If they have prohibited the bearing of arms by aliens and have built forts around Johannesburg, it is because their country four years ago was invaded by armed men under Dr. Jameson, in-

PRESIDENT STEYN,
Of the Orange Free State.

spired by Cecil Rhodes, winked at by Mr. Chamberlain, whose confessed object was to overthrow the South African Republic."

These answers to Mr. Shearman's allegations bring *The Republican* to a statement of the Boers' grievance, which, says *The Republican*, is "greater than any the Uitlanders could show":

"The grievance of the Boers is that their country has been threatened as an autonomous state. Outside observers seem to forget Jameson's raid and the popularity of it in England, which was a convincing demonstration of the real purpose lurking in the British mind."

If every one of the grievances of the Uitlanders were true, says *The Republican*, there would still be no moral justification for war. There is among the Boers a progressive party that has been gaining ground rapidly and which promised at no distant day to effect needed reforms. But now there is only one party in the Transvaal, and every Dutchman in the wide world gives it his support.

Why We Should Favor the British.—"Americans will not fail, moreover, to observe that the British are contending for much the same principles that they themselves and their ancestors have contended for in more than one war. The Outlanders have been protesting against taxation without representation, and Great Britain is backing them up in it. It was to enforce that identical protest that this nation fought its first war. Again, the British are contending that a British subject, wherever he be, is entitled to British protection. Was not that what the United States was fighting for in 1812? Again, it is said Great Britain has refused arbitration and has insisted that the dispute must be settled between her and the Transvaal without alien intervention. Would we have accepted alien intervention in 1861? Or would this country have submitted the settlement of its dispute with Mexico to the arbitration of a European power? Nor, finally, will it escape notice that there is a similarity between the Boer courting of war with Great Britain and the Spanish course

toward the United States. The Boers declare that Great Britain forced the war upon them. So the Spanish complained of the United States. This country can scarcely admit the Boer complaint to be well founded without equally admitting that of Spain. In brief, then, Great Britain is acting precisely as the United States would act in her place, precisely as this country would have to act if it did not wish to repudiate its principles and its record. That is the great, salient, fundamental fact which is likely, as it seems to us, to determine the direction in which the overwhelming mass of American sympathy will be given."—*The New York Tribune*.

England's Course Without Justification.—"The civilized world will not misconstrue the situation and will not blame the Transvaal for assuming the offensive. Had Great Britain intended to make reasonable proposals in her ultimatum; had she contemplated no demand inconsistent with the maintenance of Transvaal independence in internal affairs (an independence to which English honor was pledged), she would have presented her fresh program weeks ago. She knew very well that the Transvaal was in a mood for concessions, and that justice to the Uitlanders would not be refused. She did not need an army of 70,000 men in South Africa to induce the Boer authorities to accept a just settlement of the franchise problem. She was determined to demand the impossible, and she wished to be ready to coerce the Transvaal into signing away its rights and independence by an overwhelming military force. From a military standpoint the Boers have been too patient, perhaps have waited too long. Morally and legally, Great Britain's course is utterly without justification. Every authority on international law in Europe, and the leading authorities in Great Britain herself, have condemned her policy. The Uitlander grievances afforded a pretext; the real object from the beginning has been the annexation of the two Dutch republics. England, as the London *Economist* intimates, has forgotten the lesson of 1776. She is trampling under foot the principles which have made her empire majestic and glorious since. Under the Chamberlains, Milners, Rhodeses, and their fanatical followers she is reverting to the suicidal policy which caused the American war of independence. It is a policy which can not possibly win. It must end in the loss of South Africa, instead of in the establishment of complete British supremacy. The Jameson raid was discreditable and humiliating. The present war is the sequel of that mean and sordid enterprise."—*The Chicago Evening Post*.

Mediation Impossible.—"International mediation is allowable only between absolutely independent sovereign states. Intercession by a foreign power in a controversy between the federal Government and Pennsylvania would be regarded by us as impertinent. Moreover, the status of the Transvaal—whether it be a limited or a complete sovereignty—is the very substance of the dispute. An offer of mediation would be construed by the Boer republic as a recognition by the mediator of its claim to be 'an independent, international state'; and the acceptance of the offer by Great Britain would involve a tacit confirmation of this claim. We are having considerable trouble ourselves with an institution calling itself the republic of the Philippines. The issue between the Filipinos and the United States is exactly the same as that between the Boers and Great Britain. We are asserting our rights as the paramount power in the Philippine archipelago, just as Great Britain is proclaiming her paramountcy in South Africa; the Filipino republic, like the Transvaal, insists upon its status as a 'sovereign international state.' The merits of the two controversies are, perhaps, not to be compared; but in their legal aspect they are identical—and governments proposing mediation are bound to take cognizance of the legal point of view. Would this Government regard a proposal to mediate between it and the Filipinos as a friendly act, or as an impertinence? The answer to this question would exactly define the attitude of any power which should intervene in a case of disputed sovereignty or suzerainty between the imperial Government at London and its quasi dependency in South Africa."—*The Philadelphia Record*.

Effect on the Gold Supply.—"The effect of war in South Africa upon the world's supply of gold is not likely to be seriously felt outside of England, if it is felt there. The Transvaal has become one of the great gold-producing districts of the world, but the yield of other districts has so rapidly grown in recent years that the whole Transvaal product could be eliminated with-

out reducing the net gold product per year within the limits of a few years ago. The official figures of the Mint Bureau put the total production of gold in the world in 1897 at \$237,504,800 and in 1898 at about \$287,000,000. The share of the whole of Africa, mostly Transvaal gold, in 1897, was \$58,306,600, and in 1898 about \$80,000,000. The production of the Transvaal district for 1899, down to the close of August, was 3,502,048 ounces as compared with 2,697,917 ounces for the same eight months of 1898. This is equivalent to about \$63,000,000 this year and \$48,600,000 last year. At this rate the production of the whole year 1899 would reach nearly \$95,000,000. The yield for the last four months of the year will be entirely lost in case of war, except so far as September and early October have already afforded a considerable product which has been laid down for export. If the war is limited to the present calendar year, its effect upon the gold supply will be simply to wipe out a little more than the normal increase in the Transvaal over last year. If the entire product of the district should be lost for the whole of the year 1900 (which is not very probable) and other districts should remain stationary in production, the product of the year throughout the world would be about \$260,000,000. There is no occasion to fear a scarcity of gold in the world at large, even with the entire Transvaal product cut off. A product of \$260,000,000 is far ahead of the production of any year prior to 1898. The yield throughout the world since 1886, with the yield of Africa stated separately, appears in the following table:

WORLD'S PRODUCTION OF GOLD.

Year.	World's Production.	African Production.
1887	\$105,774,955	\$1,919,000
1888	110,196,915	4,500,000
1889	120,971,514	8,586,632
1890	118,149,620	9,887,000
1891	130,650,000	14,199,600
1892	146,297,600	24,232,000
1893	157,494,800	28,943,500
1894	181,567,800	40,271,000
1895	198,763,600	44,728,400
1896	202,682,300	44,581,100
1897	237,504,800	58,306,600
1898	287,000,000	65,000,000
1899	320,000,000*	75,000,000*

* Estimated.

"... It is evident that upon the world at large the constantly increasing product of Australia, the mines of the United States, and the Klondike are contributing a sufficient increment of new gold to maintain the supply, even with the African mines forever closed."—*Washington Correspondence of the New York Journal of Commerce*.

Glass Houses and Stones.—"As Mr. Labouchere says, there are more than 1,000,000 citizens of England who are permanently deprived of the franchise owing to the absurd registration law, while many other citizens have several votes each, and a few hundred peers have the right by inheritance to veto or emasculate any measure passed by the people's representatives. No foreigner can by right secure a vote in Great Britain. The Home Secretary, at his pleasure, may give or withhold his approval. But under the British naturalization laws five years is the least time in which a vote can be obtained, and generally it requires seven years. The demand made on the Transvaal is that foreigners shall be allowed to vote after five years' residence. The Transvaal Government has expressed its willingness to make that concession if Great Britain will agree not to interfere further with the internal affairs of the republic. Great Britain refuses to make such an agreement. . . . The Boer Government is not what it ought to be. But it satisfies the Boers, and there is no sufficient reason under the circumstances for interference by force on the part of the British Government. Mr. Chamberlain declared in Parliament a few years ago that it would take half a century to wipe out the stain on the British escutcheon of such a war. That is as true now as then."—*The Philadelphia Press*.

Tyranny of the Weak.—"For years Great Britain has been tyrannized over by the Boers of the Transvaal, who have had nothing else to protect them than their weakness. They have been oppressive to the British residents in the Transvaal in direct violation of the clearly expressed terms of the 1884 London Convention, which guarantees equal rights to the British residents with the Boers themselves; and they have been insulting to the

British Government. It is well enough known that Great Britain would not have tolerated such maltreatment of British subjects and such a violation of treaty rights from a big nation; France, for example, had to knuckle down very quickly over the Fashoda business when Marchand and his men had infringed Great Britain's rights in the center of Africa. But here we have had the Boers oppressing British subjects and treating them as if they were an inferior race in the Transvaal for quite a number of years, and giving 'sassy' replies to the British Government whenever the British Government have remonstrated with them. And all this Great Britain has borne, only because she did not care to coerce by force of arms a state so much inferior in power to her own. . . . But Great Britain has endured this tyranny of the weak until it has become absolutely intolerable; and now she proposes to compel the Boers by force to fulfil their treaty pledges, which she has failed to induce them to fulfil by gentler diplomatic methods. It has been a genuine tyranny through its weakness, but even such a tyranny can not be allowed to go on forever."—*The New Orleans Times-Democrat*.

One of the Most Pathetic Wars in History.—"Imagine the position of these families of humble country folk, left without the natural protectors and masters of the farms. Wives know that they have none to look to for help except their little boys, their trusty rifles, and their God. Whatever happens, the country is stripped of its strong men. They are on the frontier, singing the psalms which comforted their fathers in the desperate loneliness and peril of the days when Dutch South Africa was won from savage beasts and more savage men. They stand as a thin little line of defenders of their native land against the armies of a mighty empire. They are to do battle against the murderous dum-dum bullets and Lyddite shrapnel shells of the richest and largest realm that the world ever saw. In such a situation the faith of the Boers in the God they worship becomes extremely touching. The men in the camps and the women and children in the scattered farmhouses are relying on the favor of heaven to offset the vast preponderance of the enemy's forces. No people equally calm and sensible would ever have found courage for such a terribly one-sided war if they had been less sincere and simple-minded in their faith. If these conditions in South Africa leave anything wanting to make a complete picture of one of the most pathetic wars in all history, we do not know what it is. A brave, devout, and honest people, only a few thousand families in all, stand at bay in the interior of South Africa. They are cut off from the sea and from outside help. They have staked their whole hope of preserving their independence upon their self-devotion and their faith in God. The good wishes of the world go out to them. But the hard lessons of the past teach that they must go down in ruin and death before the tremendous superiority of their foe in numbers and munitions of war. One of the darkest and saddest tragedies in the long story of our race has begun."—*The Cleveland Leader*.

Better Times, Fewer Convicts.—While sociologists are trying to prove that marriage decreases crime, the *Chicago Times-Herald* comes forward with the claim that busy times for the merchant and manufacturer are the most potent cause of dull days for the turnkey. *The Times-Herald* says:

"The comment is frequently heard that there has been a wonderful decrease during the last two or three years in the number of men who go from door to door in search of work. It is a common remark that it is next to impossible to find any one to do the odd jobs about a house, and each householder reasons from this fact to the conclusion that the demand for labor has multiplied and that this must be accepted as evidence of a return of prosperity. Amid such conditions as those which existed during the hard times the army of the unemployed was sorely tried, and it was only natural that those who lacked moral stamina should take to crime to avoid want.

"That they did so is shown by the statistics of the Joliet Penitentiary, which prove also that there has been a notable change for the better since, and thus strengthen the demonstration of the householder as to the reality of the business revival. It is pointed out that whereas in May, 1895, there were 1,623 convicts in the prison, there are now only 1,278. Moreover, for the first time in the history of this great penal institution a whole month has

passed without the admission of a single new prisoner. That is certainly a remarkable showing and one whose significance can not be mistaken. There has been no transformation in the character of men, but the scourge of grinding poverty has been withheld, and the temptation for the weak is not what it was. The more the comparisons are examined the greater is the evidence of improved conditions. From October 1, 1894, to September 30, 1895, 927 new convicts were received, while from October 1, 1898, to September 30, 1899, the number was only 506. The record for Chicago and Cook county was 485 in 1895 and but 288 during 1897, when the tide of prosperity had begun to set in. Henceforth we may expect that the forces at the penitentiary will be recruited almost exclusively from the distinctly criminal classes. Country and city both have a livelihood to offer to all those who are industrious and honestly inclined."

THE HOPEFUL SIDE OF CHARITY WORK.

THE news that Bishop Potter is about to start for Hawaii and the Philippines, if taken in connection with the first part of an article by him in *Appleton's Popular Science Monthly*, might lead to the belief that he had abandoned America as hopeless, and set out in search of more promising fields of labor. The bishop's article, which is entitled "The Help that Harms," is devoted mainly to recounting instances wherein the quality of mercy, Shakespeare notwithstanding, has been seriously strained, and instead of blessing "him that gives and him that takes," has had the opposite effect. It is unnecessary to recount Bishop Potter's discouraging experiences with fraudulent beggars and charity society officers who are solicitous chiefly about their own salaries; it is more profitable to turn to the bishop's conclusion, which shows that he is not yet in despair, and that no one else need be. After relating an instance of an honest and hard-working young man who was turned into a mendicant, a loafer, and a fraud by a well-meant letter written by the bishop's father, Bishop Potter continues:

"And yet for a sincere and self-sacrificing purpose to help our less fortunate fellowmen there were never so many inspiring and encouraging opportunities. Along with the undeniably increasing complexity of our modern life there have arisen those attractive instrumentalities for a genuine beneficence which find their most impressive illustrations in the improvements of the homes of the poor in college settlements, in young men's and young girls' clubs in connection with our mission churches, in the kindergartens, and in the cooking-schools founded by these and other beneficent agencies, in juvenile societies for teaching handicrafts and encouraging savings, and, best of all, in that resolute purpose to know how the other half live, of which the noble service of Edward Denison in England; of college graduates in England and in America, who have made the college and university settlements their post-graduate courses; of such women here and in Chicago as Miss Jane Addams, and the charming group of gentlewomen living in the House in Henry Street, New York, maintained with such modest munificence by Mr. Jacob Schiff; of such laborious and discerning scrutiny and sympathy as have been shown in the studies and writings of my friend Mr. Jacob Riis—are such noble and enkindling examples. These and such as these are indicating to us the lines along which our best work or the relief of ignorance and suffering and want may to-day be done, and the more closely they are studied, and the more intimately the classes with which they are concerned are known, the more abundantly they will vindicate themselves."

To indicate the hopeful extent to which self-respect and independence prevail among the needy classes, the bishop gives the following interesting bit from his own experience:

"During some six weeks spent, a few years ago, in the most crowded ward in the world, among thousands of people who lived in the narrowest quarter and upon the most scanty wage, I gave six hours every day to receiving anybody and everybody who came to me. During that time I had visits from dilapidated gentlemen from Albany and Jersey City and Philadelphia and the like, who supposed that I was a credulous fool whose money and

himself would be soon parted, and who gave me what they considered many excellent reasons for presenting them with five dollars apiece. But, during that whole period, not one of the many thousands who lived in the crowded tenements all around me, and to hundreds of whom I preached three times a week, asked me for a penny. Not one! They came to me by day and by night, men and women, boys and girls, for counsel, courage, sympathy, admonition, reproof, guidance, and such light as I could give them—but never, one of them, for money. They are my friends to-day, and they know that I am theirs; and, little as that last may mean to the weakest and the worst of them, I believe that, in the case of any man or woman who tries to understand and hearten his fellow, it counts for a thousandfold more than doles, or bread, or institutional relief."

IS WORK A CURSE?

THE conception of work as a penalty inflicted upon mankind for disobedience comes down to us from the Hebrew scriptures. It has behind it, also, historical influence, work and slavery being for many ages nearly synonymous terms. But this conception is as false and mischievous as it is ancient, in the opinion of Charlotte Perkins Stetson. Writing in *The Cosmopolitan* (October), she endeavors to formulate a true conception of work and to define its place in the advanced social organism. Her fundamental idea is brought out in the following passage:

"Men work, and make their cattle work, but a free and independent lower animal does not work. He expends energy in pursuit of his dinner, but we do not call it working."

"The only subhuman creatures we call workers are the ant, the bee, and the beaver. 'He works like a beaver,' we say; 'As busy as a bee,' and, 'Go to the ant, thou sluggard!' Birds spend a great deal of energy in building a nest, but we do not say, 'Working like a bird.'"

"The reason for the distinction is clear: the bee, the ant, and the beaver exert themselves not each for each, not merely parent for child, but all for all. They have common interests and make a common effort to serve those interests; with the result of developing a high degree of prosperity, and also of ability and intelligence."

In other words, work, as Miss Stetson would have it defined, is a collective, not an individual process; "it is something you do for others while others do something for you." And out of this basic fact comes division of labor, specialization, and the whole trend of modern economics:

"It is apparent to any one that the mere existence of society depends on work, that the nature of a given society depends on the nature of its work, that the further progress of society depends on the progress of its work; and, also, that the individual finds his best happiness in his best work—his worst punishment in uncongenial, forced labor, or that last horror—forced idleness; and in the face of these facts we still 'labor under a misconception.'"

"Our main error is in thinking that work is done to gratify our own desires—see the 'want theory' in existing systems of economics. No expression of energy of sufficiently high grade to be called 'work,' is done to gratify oneself. In its very nature as work it is done for some one else."

The individual motive may be a selfish one, but the work is none the less for others, and the individual profits as society profits. Each works for the whole, as the lungs, the heart, the brain, work for the whole body and profit in the body's welfare. Viewed in this light, as social service, the old-time scorn for work is giving way to wise respect.

Another phase of the subject is thus touched upon by Miss Stetson:

"Another radical error as to the nature of work comes from our view of life as a condition of reception. We think the pleasure of living is in receiving sensations—a most mistaken and limited idea. The main pleasures of life come through expression rather than impression. It is more pleasure to paint a picture than to look at it—to sing than to hear."

"Supplied with every conceivable means of gratification, a human being soon exhausts the pleasure of having things; but given right avenues to employ his energies, he never exhausts the pleasure of doing things."

"The receiving power of an organism is not so great as its giving power. Expression is greater than impression. We fondly imagine that it is better to have things than to do them—an error carried to its natural height when the Shah of Persia gazed in wonder at English ladies and gentlemen dancing. 'Can they not hire persons to do it for them?' he said. He supposed that to look at dancing was more pleasurable than to dance. He was wrong."

"Acting under this mistake, we seek to avoid work, and look down upon the worker. The experience of centuries to the contrary does not shake this sublime fallacy."

Miss Stetson traces this fallacy back to the darker periods of the race—the feudal system, the slave system, and, prior to either, the workless system of most of the brute creation. One of the points she aims especially to make is that our prejudice against women as workers also arises from the historic but false conception of work. "To want to work"—that is, to perform other than domestic labor, which is not work at all in Miss Stetson's view—"to wish to develop special talents and use them for the common good, this is deemed quite false to the ideal of womanhood." For this feeling, of course, Miss Stetson finds no logical basis: "she too [woman] is a member of the social organism and must fill her place therein to know the full joy and power of life."

Abandoning Captured Philippine Towns.—The announcement from Washington that the Government has abolished the Philippine censorship gives added interest to a letter published by the *Chicago Record* from John T. McCutcheon, its Philippine correspondent, telling what news General Otis has been suppressing. The most interesting feature of the letter contains news whose publication can not well aid the natives, because it is the very news that they know best—the capture and abandonment of Philippine towns. Those who consider this policy of abandonment a grievous mistake will be glad to note the announcement that in the present forward movement in Luzon all captured towns will be garrisoned and held. "The following partial list," says Mr. McCutcheon, "will show what our troops have done, and will reveal what a world of unnecessary work they have had to do":

"Pasig has been captured three times and abandoned twice. Guadeloupe has been captured four times and abandoned three times. Mariquina has been captured six times and abandoned

FILIPINO VILLAGER: "Mark up another tally, Jojo; we're captured again."
—The Chicago Record.

six times. Canita has been captured twice and abandoned twice. Antipolo has been captured once and abandoned. Morong has been captured twice and abandoned twice. Santa Cruz has been captured once and abandoned. Pagsanjan has been captured once and abandoned. Longos has been captured once and abandoned. Paete has been captured once and abandoned. Novaliches has been captured twice and abandoned twice. San Mateo has been captured once and abandoned. San José has been captured once and abandoned. Norzagaray has been captured once and abandoned. Augot has been captured once and abandoned. San Miguel de Máyuma has been captured once and abandoned. Mexico has been captured twice and abandoned once. Bacolor has been captured twice and abandoned once. Macabebe, the only town friendly to the Americans, was taken and deserted and allowed to be burned by the natives. Quingua was taken twice and abandoned once. Guagna was taken once and abandoned."

ARE POLITICAL PARTIES UNNECESSARY?

MAYOR SAMUEL M. JONES, of Toledo, whose picturesque and successful campaign in that city was described in these columns April 15, and whose candidacy for governor of Ohio was considered October 7, writes an article entitled, "The Needlessness of Political Parties," to prove that the salvation of our country rests with the independent voter. It will be remembered that the "Golden-Rule mayor" was elected as an independent candidate and that his nomination for governor, filed a few days ago, has been made by petition—the petition containing the Scriptural measure of 80,000 names where only 15,000 were required. Mayor Jones, who writes in *The Independent*, argues that political parties are not only unnecessary, but pernicious:

"One important essential to the establishment of free government under our system is the absolute destruction of party machines, and there is one way to accomplish this that is easily within the reach of workmen of this country, and that is through entire independent political action.

"The great political parties in this country have been without a moral issue for the last quarter of a century. . . . They do not differ in their moral purposes. One is as bad as the other, and both are against the best interests of the greatest number. They are greedy for spoils and plunder. They do not care for social conditions. They do not seek to improve society. They foster nothing so much as place-getting. There is a constant evasion of real issues in the platforms and in the resolutions of public assemblages. No mention is made of the appalling condition of distress which exists among the masses in our cities. Not a word is said about the throngs of unemployed men and women, who are tramping the well-beaten road to beggary and crime. Everywhere in the public utterances of party leaders we hear a soothing and pleasant optimism that is wholly unsupported by the facts of our every-day life. . . .

"The only way to prevent bossism is to cultivate the spirit of independence in every voter. As long as men say 'My party, right or wrong,' politics will be controlled by bosses. Even the small Socialist Party which exists in a few cities is as much troubled by bossism as any other, because it lays more emphasis on adherence to party than on devotion to principle. The independent vote is the factor that is always feared by the selfish business man and the politician; it is through independent action in our politics that we are to make progress. Very little can be done by changing parties, or organizing new ones, until the common conception of life is elevated. So long as the 'party' idea dominates us, and our chief endeavor is to get our men in and the other men out, every election will be a source of disappointment. As for an independent party, the history of the nation is crowded thick with such attempts. About forty such organizations have sprung into being, with a result of almost invariable failure. We must conceive of politics as the science of doing good through government, and then machine politics will become as extinct as chattel slavery. When men have so divorced themselves from party fealty that they are ready to ally themselves at any time in free associations, for the purpose of supporting a principle, just as the soldiers of a volunteer army enlist for a campaign, and on its conclusion are mustered out and go back into the general citizenship, unfettered by any chain—when we reach a voting citizenship such as this, any needed reform will be within our reach."

Grand Army Press and Commissioner Evans.—

The approval of Pension Commissioner Evans which is shown by many representatives of the daily press (see THE LITERARY DIGEST, September 23) finds no echo in the columns of the Grand Army organs. *The National Tribune* (Washington) which has led the campaign against the commissioner, keeps it up in the following strain:

"The great grief of Mr. Evans's course is that the veterans and their widows are all so much nearer the grave than they were when he began following up Lochren's 'saving' policy. The march of disease and disability upon their enfeebled frames is inconceivably more rapid. Every day adds to their distress and their need. Ten years ago they could bear with some patience a commissioner's perverseness, his pettifoggish technicalities, his

heart-breaking delays. They would console themselves as they did through Lochren's régime by looking forward to a time when a change would be made. But now the dark clouds of despair settle down deeper and deeper on their narrowing horizon. Thousands of them see the grave much nearer than they do any hope of relief from his persecutions. . . . But inasmuch as there are something like 800,000 veterans alive, and most of them have sons and sons-in-law, we think that the politicians who are calculating that they have 'at last got through with the old soldiers' are liable to awake to their mistake with a shock."

The Grand Army Advocate (Des Moines, Iowa) says:

"The only criticism *The Advocate* has regarding President McKinley's Administration is his conspicuous neglect of his comrades who downed rebellion and made it possible for the Government to do the glorious deeds of the last thirteen months. His silence in all his addresses and messages regarding these Union veterans; and his neglecting to remove their oppressor H. Clay Evans, are our grounds of criticism and we have surely won the right to express ourselves plainly."

An Iowa correspondent of *The Ohio Soldier* (Chillicothe, Ohio) intimates that if the veterans speak by the ballot, the Administration may realize the force of what they say:

"Comrades, throughout Ohio and the West, let each one write his verdict this fall. Then Evans will go. But don't after that allow any one to pull the wool over your eyes again. We all know now that the political schemers are at work here in Iowa to put men in office who have no moral right there. We see it here. That man Evans is secure in his office and don't care a cuss how they get along. Look at six-dollars-per-month issues by him and the two-dollar increases. It's an insult to any fair-minded old soldier. . . . A nod is just as good to a blind horse as a wink."

The Western Veteran (Topeka and Kansas City) says:

"If Commissioner Evans will manifest one half as much desire to discover evidence upon which a pension may be granted as he does to discover some excuse for rejecting a claim he will not be criticized by his comrades and the country so harshly."

TOPICS IN BRIEF.

QUEEN VICTORIA and Oom Paul are both old enough to know better. *The Chicago Record*.

MEN, like eggs, become hard by being kept in hot water.—*The Star of Hope, Sing Sing Prison*.

THE British temperament may be rather slow about seeing a joke, but it can spot gold-mines instantaneously.—*The Washington Star*.

SOME times it's hard to tell whether Mr. McKinley is supporting the old flag, or the old flag is supporting Mr. McKinley.—*The Detroit News*.

ONE difference between Bunker Hill and Majuba Hill is that the former never found it necessary to repeat itself.—*The Philadelphia Ledger*.

IT will be easier for Chicago's rich men to enter the kingdom of heaven, after the tax revisionist get through with them.—*The Washington Post*.

A NEW publication is named "What to Eat." It should be supplemented by another entitled "How to Get It."—*The Star of Hope, Sing Sing Prison*.

IN all his biblical research Oom Paul doesn't appear to have been impressed with the injunction concerning the other cheek.—*The Detroit News*.

"SHALL I Slay My Brother Boer?" is the title of the latest brochure in London. By all means, if he insists upon it, appears to be the most popular answer.—*The Boston Herald*.

LETTERS AND ART.

PRESIDENT KRÜGER AND THE POETS.

IT is apparently a fine bit of jingo politics that Kipling's poem, "The Old Issue," should appear in the *London Times* just after the wildly riotous meeting of the pro-Transvaal faction in Trafalgar Square. That meeting—chiefly characterized by the ancient apples, eggs of unknown antiquity, and other missiles which were hurled at the radical speakers—showed that the Colonial Secretary's appeal to the strong right arm of Britain still commands tumultuous assent from a large portion of the British laboring classes. Kipling's subtle and wondrous intuition appears to guide him here as always to a position in harmony with the sympathies and views of the British multitude. That view already regards South Africa as British territory, and such is the view which a careful reading of the poem will indicate. The poem strikes again the "religious note" which was so conspicuous in "The Reccessional." The verses are somewhat obscure, but it may be premised that "the old King" refers to the opponents of English freedom and progress, whether in political tendencies at home or in the person of President Krüger—"the sloven, sullen, savage, secret, uncontrolled—laying on a new land evils of the old." The new King is apparently the spirit of freedom and parliamentary government. The poem is in part as follows:

The Old Issue.

All we have of freedom—all we use or know—
This our fathers bought for us, long and long ago.
Ancient Right unnoticed as the breath we draw—
Leave to live by no man's leave, underneath the law.
Lance and torch and tumult, steel and gray-goose wing
Wrenched it, inch and ell and all, slowly from the King.
Till our fathers stablished, after bloody years,
How our King is one with us, first among his peers.
So they bought us freedom,—not at little cost—
Wherefore must we watch the King, lest our gain be lost.
Over all things certain, this is sure indeed:
Suffer not the old King; for we know the breed!
Give no ear to bondsmen bidding us endure,
Whining "He is weak and far": crying "Time shall cure."
(Time himself is witness, till the battle joins
Deeper strikes the rottenness in the people's loins.)
Howso' great their clamor, whatso'er their claim,
Suffer not the old King under any name!
Here is naught unproven—here is naught to learn.
It is written what shall fall, if the King return.
He shall mark our goings; question whence we came,
Set his guards about us, all in Freedom's name.
He shall take his tribute, toll of all our ware.
He shall change our gold for arms—arms we may not bear.
Cruel in the shadow, crafty in the sun.
Far beyond his borders shall his teaching run.
Sloven, sullen, savage, secret, uncontrolled—
Laying on a new land evil of the old,
Long-forgotten bondage, dwarfing heart and brain—
All our fathers died to loose he shall bind again.
*Here is naught at venture, random nor untrue—
Swings the wheel full circle, brims the cup anew.*
*Here is naught unproven, here is nothing hid:
Step for step and word for word—so the old Kings did!*
*Step by step and word by word, who is ruled may read,
Suffer not the old Kings—for we know the breed—
All the right they promise—all the wrong they bring.
Stewards of the Judgment, suffer not this King!*

The *Chicago Inter Ocean* calls the poem a very commonplace production, in pursuit of an obscure idea:

"Scarcely anybody save Mr. Kipling will be able to see that Oom Paul Krüger, in repelling every attempt made to undermine the little government his people have created in South Africa, is trying to fix the shackles of the 'old kings' upon his fellow citizens, every one of whom is heart and soul against the concessions

which Great Britain demands. The Boers may be cruel in warfare—in warfare waged for their hearths and homes—but their severest critics have never said or written anything of them which justifies Mr. Kipling in speaking of them as a people, or in speaking of their President, in this manner. . . .

"If he alludes to the grafting of Dutch ideas in Africa he must have forgotten William, the Prince of Orange, and the influence which this Netherlander wielded in determining the later history of the British empire."

The *St. Louis Republic* remarks:

"It is not too much to say that this poem sounds the call for the British advance to the conquest of all South Africa. It is bound to have a tremendous influence on the English mind. It comes at a moment of national excitement that makes its white-hot fervor permissible. It has a refrain that will not die out of the ears or hearts of its hearers. Kipling has confirmed his title of the Poet of Imperialism. He has also probably sung Joe Chamberlain into the Premiership of Great Britain following the crushing of the Boers as the result of Chamberlain's foreign policy."

A poem by Mr. Edward Sydney Tylee in the *London Spectator* gives a very different view of President Krüger, tho still patriotic:

Deep, mournful eyes that seek the ground
The devious path to trace;
The giant form of Lincoln, crowned
By Cromwell's grosser face;
Coarse, rustic garb, of uncouth cut,
That masks each mighty limb;
Its shapeless folds the ready butt
Of Europe's jesters' trim.
So much the crowd can see, the rest
Asks critics clearer-eyed,
So rough a scabbard leaves unguessed
How keen the blade inside.
The trenchant will, the subtle brain
So strangely doomed to wage
With Destiny's still climbing main
The hopeless war of Age
His kindred are a rugged brood
That nurse a dying fire;
The sons of Calvin's bitter mood,
And sterner than their sire.
By faith through trackless deserts steered,
Lost miles of lonely sand,
Far from the intruding world they feared,
They found their Promised Land.
Yet, tho that realm he still sustains,
Against an empire's might,
And with untiring skill maintains
The so unequal fight,
He buys his victories all too dear,
Whose foes have Time for friend;
Each fatal triumph brings more near
The inevitable end.
Haply the hoarse-voiced guns must close
The long debate at last,
Ere the young Future can compose
Its quarrel with the Past;
Nathless, our England, unashamed,
May greet a foeman true
Of her own stubborn metal framed,
For she is iron, too.

The following sonnet by Swinburne, entitled "The Transvaal," appears in the *London Times* (October 11). We reproduce it as cabled to American dailies. The reference in lines 7 and 8 is evidently to the assaults (since denied) by the Boers upon fleeing women at the railway stations

Patience, long sick to death, is dead Too long
Hive sloth and doubt and treason bidden us be
What Cromwell's England was not, when the sea
To him bore witness, given of Blake, how strong
She stood a commonweal that brooked no wrong
From foes less vile than men like wolves set free.
Whose war is waged where none may fight or flee.
With women and with weanlings. Speech and song
Lack utterance now for loathing. Scarce we hear
Foul tongues that blacken God's dishonored name
With prayers turned curses and with praise found shame,
Defy the truth, whose witness now draws near,
To scourge these dogs, agape with jaws afoam,
Down, out of life. Strike, England, and strike home!

The *Hartford Courant* prints a notable poem from Marten Maartens on the Anglo-Boer dispute. His pro-Dutch sympathies,

says *The Courant*, have worked "a temporary paralysis of vision and judgment," and notwithstanding the fact that he writes his novels of Dutch life in English, and is a member of many London clubs, he "idealizes the Dutchman of the Transvaal astonishingly" and "utterly misstates the issue." The poem is in the form of an address to England, and runs as follows:

Greatest of Nations! Chosen Strength of God!
Imperial Servant of divine commands!
Within the tranquil hollows of thy hands
Repose the sphered seas; the changeful lands.
Are thine, and tracts of empire yet untrod!
The sword is thine; its splendor flares abroad.
Thou whom the mighty warrior-dead acclaim,
Wilt thou intrust its unpolluted fame
To smooth-faced pirates whose unspoken aim
Is filthy lucre gained by fouler fraud?
This people, small in number, great in love
Of all thou lovest, sternly set apart
In self-concentrated freedom, as thou art,
Puritans, pure, as thou, in home, and heart,
Owning no master but your Lord above,—
Ere these appeal to Him, our hope is yet
In thee; for thou, awakening, wilt hear
This chink of gold; thy righteous heart will fear
Unrighteous ruin, slowly drawing near.
England, dost thou forget?

NEWSPAPERS FOR LUNATICS.

A LITTLE known but not unimportant branch of journalism is that which comprises newspapers written, printed, and published in lunatic asylums. This lunatic journalism took its rise with a copy of *The New Moon* issued at the Crichton Royal Asylum, Dumfries, Scotland, in 1844. Now many of the leading asylums of both hemispheres have journals. A writer in the *London Mail* gives the following particulars about them:

"These magazines touch the journalistic ideal, as, being written by the readers for their own amusement, they can not fail to hit the popular taste. We find that those mentally deranged like about four ninths of their reading to take the form of travel and heavy prose articles of a strictly theoretical nature. The rest of the contents comes in order of quantity as follows: Humor, local notes, poetry, chiefly in a light vein; special articles on local theatricals, and fiction.

"The most striking feature about these journals is the almost total absence of gloom and melancholia, and we have it on the word of the doctor of one of the leading asylums that this is not owing to such contributions being tabooed. But now and again one comes on a poem or tale drenched with melancholia and morbid insanity. In one of these journals appeared a story written in the first person, about a hero—undoubtedly the writer—who had his head twisted round the wrong way. The consequence was he invariably had to walk in the opposite direction to which he wanted to walk. This terrible fate haunts him right through the story, causing him to lose friends, money, and everything else which man holds dear, and ends up by his in his own mind murdering the girl who was to save him from himself. According to the story, the heroine was standing on the edge of a great precipice. The hero is standing near. Suddenly the heroine becomes giddy and totters on the brink. The hero tries to dash forward and save her, but of course runs the other way. Here comes a break in the narrative, which is finished by the following sentence: 'And the gates of an asylum, for those mentally deranged shut the writer off from his friends in the outer world.'

"Apart from such tragedies as the above, the whole of these journals are saturated with humor. In one we find the following among 'Questions We Want Answered':

"When does the Queen of Sheba intend to recognize the royal rank of the 'Prince of Wales'? Did 'Marie Corelli' really tweak the Doctor's nose? Why did 'Ranji' throw the ball at 'W. G.'s' head during practice at the nets? Perhaps it should be explained that the celebrities referred to above are not those known to the public, but other persons who claim their personalities and are detained in the asylums for that very reason."

The writer gives the following quotation from an unfortunate journalist of *The Fort England Mirror*, detailing these reasons for his detention:

"I met a young widow with a grown stepdaughter, and the widow married me. Then my father, who was a widower, met my stepdaughter and married her. That made my wife the mother-in-law of her father-in-law, and made my stepdaughter my mother and my father my stepson. Then my stepmother, the stepdaughter of my wife, had a son. That boy was, of course, my brother, because he was my father's son. He was also the son of my wife's stepdaughter, and therefore her grandson. That made me grandfather to my stepbrother. Then my wife had a son. My mother-in-law, the stepsister of my son, is also his grandmother, because he is her stepson's child. My father is the brother-in-law of my child, because his stepsister is his wife. I am the brother of my own son, who is also the child of my step-grandmother. I am my mother's brother-in-law, my wife is her own child's aunt, my son is my father's nephew, and I'm my own grandfather. And after trying to explain the relationship in our family some seven times a day to our calling friends for a fortnight, I was brought here—no, came of my own will."

Another writer declares gleefully that he never found rest from his mother-in-law before, and that he intends to continue as long as possible to hoodwink the physicians in their notion that he is insane. Another writes that the fate of all great men has been to be maltreated or overlooked by their contemporaries, and therefore he is now detained: "for the thick-skulls and those of little sense are jealous of my being the first to discover that we could all live forever if we would only walk on our hands instead of our feet."

POE'S STUDENT LIFE AT THE UNIVERSITY OF VIRGINIA.

THE fiftieth anniversary of the death of Poe, and the dedication of a bust in his honor by Zolnay at Charlottesville, Va., the seat of the fine old university founded by Thomas Jefferson, have called attention anew to the singular and often misunderstood character of this perturbed spirit—one of the enigmas of literary history. Poe's college days, while neither long nor marked by any great aberrations, throw some little light on the subsequent growth of his character; and with the purpose of showing that at this period, as later, his faults and idiosyncrasies have been grossly exaggerated, Miss J. B. Dugdale, in *Frank Leslie's Popular Monthly* (October), gives some particulars of Poe's life during his brief university career, drawn from information furnished by the academic authorities. The writer says:

"Every student of Poe's life knows there is much in it that can not be commended or excused; the instances of weakness and error and pitiable failure on his part are not few, but, for that reason, his heroic struggles and such successes as were his should not be overlooked. Because there are strong shadows in the picture the lights should be only the more carefully preserved, and such an involved story as his should be handled with unflinching honesty and with all possible sympathy.

"His admirers must in only too many cases be apologists and defenders, but in others they are able to prove the utter falsity of charges laid at his door. Such has been the work of those at the University of Virginia, who cherish his memory and guard the record of his residence there.

"Against the report of his idle and dissipated life they bring forward the college documents to prove that the year he spent there—from February to December, 1826—was one of quiet and creditable study, and that he won the good opinion of his instructors by careful class work and unsolicited exercises. At the end of the term, instead of being dismissed in disgrace, he completed with distinction the language courses he had been pursuing, and earned honors equal to graduation at the present time. Contrary to the assertion that his student days were spent in brawling and disorder, the official accounts show that he was called before the faculty but once, and then as a witness, while his conduct was never censured, altho the period was one of unusual strictness in the discipline of the college.

"That he contracted bills in the town of Charlottesville and rolled up gambling debts, which were the source of trouble be-

tween him and his patron, Mr. Allan, and led to his leaving at the close of the term, are statements generally accepted without question, but there is good evidence that they have been maliciously exaggerated, and the seekers for truth insist that such wrongdoing, if proven, should not be allowed to overshadow his whole college career."

Poe, while never popular with his fellow students, was liked by some for his interest in what we nowadays would call "athletics." However, his chief recreations were long solitary walks—sometimes extending over several days—among the spurs of the Blue Ridge Mountains surrounding Charlottesville:

"It is pleasant to think of these rambles as among the few wholesome and unalloyed enjoyments that came into his storm-driven life, while the value of this exposure to nature's influence in contrast with the years of city sojourn which were to follow should not be overlooked. A book was his usual and only companion on such excursions, and a list preserved in the University Library shows what kind of reading interested him at this time—Rollin's 'Histoire Ancienne,' 'Histoire Romaine,' Robertson's 'America,' Marshall's 'Washington,' Voltaire's 'Histoire Particulière,' and Dufief's 'Nature Displayed.'"

"He had already essayed original composition, and many of the poems in his first slender volume—'Tamerlane and Other Poems'—published in Boston in 1827, were written at this period.

"About two years ago some members of the university, feeling that 'its most illustrious alumnus' should be fitly commemorated, organized the Poe Memorial Association, and through the efforts of this society the Poe collection in the beautiful new library building will bear eloquent and appropriate witness to his fame. On the frieze of the lofty rotunda are inscribed the names of earth's greatest teachers and singers; the Americans thus honored are few, but Poe is of the number, and the alcove immediately below his name will contain the fine bronze bust recently made by Zolnay. On the adjoining shelves will be collected all the available editions of Poe's works, with commentaries, translations, autographs, prints, and other things of interest in connection with them.

"The date selected for the unveiling of the bust—October 7, 1899—is no less striking and significant an occasion than the fiftieth anniversary of the poet's death.

"Perhaps it is well that this memorial was not sooner set up. It may be that silence solemn and profound, the hush of awe and wonder and pity, was all that could at first follow the passing of

the tempest-tossed soul. It was necessary that years should elapse before so tragic and complex and contradictory a life could be estimated aright. This star of the first magnitude was from horizon to horizon accompanied by black clouds and stormy vapors, and the onlookers who marked its course were either dazzled by its splendor or choked by the mists—calm and clear vision being alike impossible in each case.

"So, for reasons which are not far to seek, never before could America's most original genius come to his own—come to the place truly and lastingly his, when blind and heated partizanship should yield to sane, serene, sympathetic appreciation of his greatness.

"A recent critic has well said, 'One Poe the world needed, and no more. He came to stay. What place do his works occupy for all time? Simply their own; they interfere with no other master's rights; no other works can ever disturb them or rob them of immortality.'"

THE MUSICAL OUTLOOK.

MR. W. J. HENDERSON thinks that at the present moment the higher genius of music is in a condition of suspended animation; or, to use his metaphor, "upon the horizon of music there is not a cloud as big as a man's hand; the era is a vast desert, and there is a host of little things creeping on the sands of time." Aside from the grand old man of Italy—the creator of "Aida" and "Falstaff,"—whose sun

is already setting, there is not a living man recognized by the world as a great composer. Says Mr. Henderson (in *The Music Trade Review*, October 7):

"Johannes Brahms was the last of the Titans. And he followed the lord of all the Russians, the storming Tchaikowsky, into a past where both now sit in the shadow of the fathers, for Beethoven still towers the most majestic figure in the picture which they sought to fill. Who sees a Beethoven in the musical activities of our time? 'If any, speak, for him have I offended.' If there be any composer who in this dull and prosaic time is worthy of a seat beside the mighty, will some good brother please point him out, to the dimming vision of one who is weary with long watching?

"There was a time, and that not long ago, when many of us who were eager for the strength of new blood in our holy art thought that in Mascagni the promise was to be fulfilled. His 'Cavalleria Rusticana' imposed upon the whole round world by the glow of the blood which it showed on its surface. It burned with

the fiery flush of the new romanticism of our time. That romanticism has enriched our literature with a host of petty masterpieces, full of the chronicles of the drum and trumpet, and has enlivened our stage with the clash of the long-forgotten rapier. It has brought us back our D'Artagnan, and it has given us Cyrano and Rudolph Rassendyl. It has written a new lease of life for Flaubert and Dumas, and it has made the wilderness rank 'Ben Hur' as a classic.

"But where is the genius in opera to-day? It is not this blusterer. Nor is it the smart, smug Massenet with his familiar patterns and his unpublished but quite well-known recipe for a grand opera. It is not Pucini with his 'Bohème,' tho the man has a gift of melody quite extraordinary in these days of stertorous phrases and coagulated chords. But something more than a mere tune-maker is required to sit in the seats of the mighty. All these people are trying to reflect us to ourselves, but there is a vast difference in seeing your face in a silver hand-glass and seeing it in the sea."

Mr. Henderson, it will be noted, passes Perosi by with contemptuous silence, not even finding a place for him in this galaxy of *dii minores*. As for the lyric drama, he says, it still smacks of the theater; there is "too much of the musical stage carpenter" in its construction. Still less sign is there of genius in the sphere of orchestral music. Dvorák and Goldmark represent the highest attainment in symphony and in overture respectively:

"It is not a thing on which the round world can felicitate itself and make feasts of rejoicing. Dvorák is a man of extraordinary talent, but he never sweeps the heartstrings as the Russian bard of the horns and bassoons did. Sgambati pleases, but so does Moszkowski. It is not likely that either of these men ever raises a feeling of antagonism in any breast, and no composer who had the Attic salt in his work could fail to do so.

"Yet in all this there is nothing to cause us discouragement. The truth is that, so far as we Americans are concerned, a breathing spell is really needed. New hopes, new aspirations, lie before the exponents of the tone art. When the present unsettled conditions pass and the poise of a perfect understanding comes again, then in the fulness of that time there will arise some new genius to whom the new methods and the new ideals will be the ready material of progress."

THE NOVELS OF GEORGE MEREDITH.

GEORGE MEREDITH has alternately elicited extravagant commendation and sweeping censure from his readers. Stevenson, on the one hand, pays almost fantastic homage to the novelist in his remark that to him "Rhoda Fleming" was "the strongest thing in English letters since Shakespeare," while William Watson gives it as his opinion that "The Egoist" is "the most certainly wearisome book purporting to be a novel" that he had "ever toiled through in his life." Evidently these dicta are not, properly speaking, judgments at all, but expressions of mere personal impressionism and individual taste. A critic of another sort is Mr. Paul Elmer More, who in *The Atlantic Monthly* (October) tries to give a discriminating and judicial judgment of Meredith's work in accordance with the canons of literary criticism. It is perhaps not too early to do this, since a newly revised and complete edition of the novelist's works has just been issued, and his literary product is now practically finished. Mr. More first speaks of the rather irritating subject of Meredith's style:

"Probably the first characteristic of these novels to attract the attention of even the most heedless reader is the peculiar language, employed, one might almost say, with malice prepense. 'Our language is not rich in subtleties for prose. A writer who is not servile, and has insight, must coin from his own mint.' So Mr. Meredith states his case, and it must be admitted he has coined with a liberal hand, not so much in the formation of new words, tho he is apt to prefer a strange word to a common one, as in his distortion of language in order to surcharge it with thought and sensation. It is perhaps this peculiarity of style that

led an eminent critic to declare his chief fault was inability to tell a story—rather a grave charge against a story-teller, if it could be substantiated. The construction of a plot like that of Evan Harrington may be sufficient answer to such a charge, but it may not be so easy to contradict the censure of overcleverness to which his pointed style lays him open.

"Mr. Meredith alludes more than once to his own philosophic intentions, and speaks with some irritation of the necessity of disguising his deeper meaning for fear of seeming obscure. We fancy, however, that it is not profundity of reflection on human life which causes obscurity so much as the refraction of this into innumerable burning points. And herein lies much of the difference between real depth and mere cleverness. In any true sense of the word there is as much depth of reflection in 'Henry Esmond' as in 'The Egoist'; but the earlier novel is less obscure, because the thought is presented in broad masses, so to speak,

GEORGE MEREDITH.
Courtesy of *The Bookman*.

which rest the mind while stimulating it, whereas 'The Egoist' confuses with its endless clashing epigrams. Mr. Meredith, like his own Mrs. Mountstuart, is 'mad for cleverness,' and does not stop often enough to remember his judgment on Sir Austin Feverel: 'A maker of proverbs—what is he but a narrow mind, the mouthpiece of a narrower?' and, 'A proverb is a halfway house to an idea, I conceive.' Now, altho the highest culture must always demand more repose of mind than an epigrammatist can offer, yet the flippant public is readily caught by a superficial sparkling cleverness, as recent popular novels sufficiently attest, and Mr. Meredith might be expected to attract such an audience, were it not for one grave defect. His cleverness is sparkling, but it is by no means superficial, and such cleverness does not make easy reading. Mr. McCarthy, one of his admirers, has said of the novels that 'a man or woman must be really in earnest to care much about them at all.' Really, our author seems to be caught between the devil and the deep sea. Yet criticize his style as you will, there is after all a note of sincerity in it, something so naturally artificial, i. e. the paradox may be pardoned, that we are prone to overlook its extravagances, and can even appreciate its fascination for certain minds. It may be pretty well characterized in his own words as 'the puffing of a giant; a strong wind rather than speech.'"

Mr. More calls attention to the singular fact that few of our English novelists are great stylists, every other class of writers furnishing a far greater number of masters of English prose.

Meredith is not, he says, the least peccant among the brotherhood. In his management of plot and his delineation of character, there is the same "labored ingenuity":

"His characters do not stand forth smoothly or naturally, so that we comprehend them and live with them without effort. We seem to be with the author in his *phrontisterion*, or thinking-shop; there is continual evidence of the intellectual machinery by which his characters are created. To some this creaking of the wheels and pulleys is so offensive that they throw away the books in disgust, while others, themselves professional writers in large part, take an actual pleasure in seeing the whole process of construction laid bare before them. We have in Mr. Meredith's works the analytical novel *par excellence*, and it would be hard to exaggerate the contrast between these and the perceptive novel, or novel of manners, of which Thackeray is the great exemplar. There is undoubtedly a certain legitimate joy of the intellect in pure analysis; yet it should seem that in the novel, as in every other form of art, the true master imitates nature more unconsciously, more objectively, if you will. The actions and thoughts of his characters present themselves to his mind as a concrete reality, and so he reproduces them. It is rather the part of the scientist to evoke a character from conscious analysis of motives. I have heard an eminent critic censure Thackeray as shallow, and extol Meredith for his profundity, without perhaps pausing to reflect that the same logic would condemn Shakespeare. Indeed, such a question would resolve itself into a debate over the respective profundity of art and science—surely the idlest of all possible questions. More to the point is it to observe that the highest pleasure, such as comes with a sense of inner expansion, and which art aims above all things to bestow, is largely dependent on that *sprezzatura* whose lack is felt as much in Mr. Meredith's character study as in his style."

Mr. More thinks that Meredith's novels are dramatic rather than epic in quality, and that they deal with incomplete characters and single problems rather than with life as a whole. Speaking of "Richard Feverel" he says:

"There seems to be but one aspect—the sexual relation—to human life; and this is presented without any of the alleviating circumstances of genuine tragedy. The point is made clear at once by comparison with 'Tom Jones' or 'Pendennis,' where the infinite variety of human activity is unrolled before us. So too in 'The Egoist' a single problem, as the name implies, is studied with unflagging persistence. Not even a complete character, but one predominant trait is made the center about which all the incidents of the book revolve. The novel is unquestionably a most astounding piece of analytical cleverness, yet is it true to nature? Hardly, we think."

Yet in spite of what Mr. More himself admits is his almost wholly destructive criticism, he believes Meredith to be a writer of extraordinary and even fascinating genius:

"If he can not stand with the three great novelists who were almost his contemporaries, this is due rather to perversion than to feebleness of wit; and at the least he ranks far above the common herd. One might say of him, distorting Gray's familiar line—

'Above the good how far—but far beneath the great.'

There are many reasons, and alas that it should be so, for believing that the novel, like other literary forms in the past, has reached its highest perfection and is already declining in excellence. Mr. Meredith, if compared with Thackeray and his peers, shows only too clearly a decadent tendency; yet what a treasure of enjoyment his wit and imagination have left to the world! And so refreshing at times is his obstinate originality that one is almost tempted, when reflecting on the tameness of lesser men, to extol his faults as added virtues."

A Parallel to "The Man with the Hoe."—Literary parallels are always turning up, and it is always an interesting question whether they are due to parallel lines of original thought or to the forgotten suggestion, received by one writer from an

earlier one. This time it is "The Man with the Hoe" which is found to have a double. *Literary Life* (New York) quotes a correspondent from Dayton, Ohio, who calls attention to a poem by Miss Cory A. Chase which appeared in *The Illustrated Californian* (now defunct) in August, 1883. The poem was, like Mr. Markham's, written upon Millet's painting, and reads as follows:

O peasant delving in the stubborn soil,
What solace has this Mother Earth for thee?
Gaining thy bread through years of bitter toil,
Contented, like the cattle, just "to be."
The patience of the yoked ox is thine—
What childlike pathos in thy wondering eyes.
Oh, do they ever note the daisy's shine,
Or turn they ever to the vaulted skies?

If thou could stand upon some lofty height—
A great, fair city lying just below—
And view our progress with its steam-god's might,
Thou couldst not joy, because thou wouldst not know:
But, sore bewildered by the pageant's glare,
Wouldst turn with yearning to thy stubble field.
And the familiar toil which waits thee there—
While Earth still keeps the secrets she would yield.

O knotted hand, canst thou not feel these tears?
That thou art pitiable, thou dost not know.
Kind Mother Nature, guide the closing, years
Of this unlettered child, and help him grow.

WOMEN AND THE GERMAN UNIVERSITIES.

AN important contribution to the solution of one of the leading phases of the "woman question" is furnished by the experience of the German universities that have been in recent years admitting women as "hospilants," or visitors. If woman can satisfy the demands of German universities, it is fair to presume that the question of her capacity for higher education has been practically settled.

Miss Käthe Windscheidl, the head of the Woman's College in Leipsic, and the first woman to receive the degree of Ph.D. in course from a German university (Heidelberg, 1894), delivered an address by special invitation at the Christian Social Congress held at Kiel. After sketching the history of the agitation in behalf of the admission of women into German universities, she thus stated the results of the tests so far made:

"Have the German women shown themselves in character and mental capacity able to meet the demands that such a career can make upon them? A most pronounced answer in the affirmative can be given. The testimony of those university teachers who have admitted women to their lecture courses is absolutely unanimous in this regard. Only a few weeks ago the entire medical faculty of the University of Halle united in a public expression of their conviction that women are fully capable of doing the work in their department. The specter of 'masculine women' and of 'emancipated women' is rapidly evaporating in university circles in view of the fact that women are working enthusiastically and successfully by the side of their brothers in the various university departments. In this regard there are at hand a goodly number of testimonials from men who were originally opposed to the higher education of women, but who have been converted by their experience. The friends of this cause enter most hopefully and sanguinely into the coming twentieth century, feeling assured that it will bring them final and full success."—*Translation made for THE LITERARY DIGEST.*

TOLSTOY'S new novel, "Resurrection," is already making its appearance in London and New York, altho not yet published on this side of the water. It presents a curious apparition, having the look of a little packet of tracts, each packet being made up of six paper booklets wrapped in coarse, buff-colored paper secured by a rubber band. On the covers of the pamphlets is a list of the characters in the story, and on the title-pages are texts from Matthew, John, and Luke. It is published by the Brotherhood Publishing Company in England, and each part is sold there for a penny. Altho the form is new and at first sight odd, the principle in more artistic form might not be a bad one to apply to other books. At least, a portable edition, in several parts which would easily fit into the pocket, would be welcomed by most travelers and by suburban residents who go much by train or ferry.

SCIENCE AND INVENTION.

THE MODERN RACING-YACHT.

THE racing-yacht has developed so fast in the past ten years that it resembles its progenitor of the past decade hardly more than a modern steel steamship resembles the old sailing clipper. The distinctive features of the modern racer are described by Ray Stannard Baker in *McClure's Magazine* (October). Says Mr. Baker:

"A racing-yacht bears much the same relation to a cruising yacht that a high-bred, pampered race-horse does to a family

A DIAGRAM OF THE MODERN RACING YACHT.

dobbin. It is a high-strung, fragile, beautiful creature, bred with the single idea of making speed. It has been called a 'golden eggshell.' In a general way, it may be said that the lighter the yacht and the greater the spread of sail, the faster will be the speed. One well-known designer said, decisively: 'The races will go to the builder who can produce the lightest boat.'

"But a boat too light will not be strong enough to support the necessarily immense sails, and the genius of the designer finds its perfect work in approaching closest to this dead-line ratio between lightness and strength. And the very fact that every portion of the yacht has been pared down to its finest is a broad warning to the racing enthusiast that he must look sharp for accidents; a *Columbia* just from the ways will snap its huge steel mast like a pipe-stem, a broken gaff will douse the mainsail of a *Defender* in the midst of a race.

"To insure the necessary lightness, the designer has built the *Columbia* of a peculiar new alloy somewhat resembling gun-metal and known as Tobin bronze. The thickness of the plating varies from one quarter to three sixteenths of an inch—only a fraction thicker than the cover of a book. One of the ancient mariners who sit waiting, with their memories, on the rotting docks of Marblehead told me that he could easily 'stomp' his heel through the side of 'one of these new-fangled craft.' And he could—almost; altho this 'paper-plating' is very much stronger and tougher than one would imagine. The designer might have built of steel; it would have cost barely two cents a pound where Tobin bronze costs twenty; but he has learned—one of the refinements of experience—that steel fails the first season because a

certain amount of rust is necessary to remove the scale of the rolling-mill and leave a smooth surface for paint. Tobin bronze is not affected by sea-water, and requires no paint; consequently the bottom of the *Columbia* will be as shiny and smooth as a New England copper kettle. The designer might also have built of aluminum, as he did, partially, in the *Defender*. Aluminum, altho exceedingly expensive, weighs only half as much as bronze, and is more than half as strong; but it was found in the *Defender* that salt water caused rapid corrosion and deterioration.

"The *Columbia's* shell of bronze, 131 feet and 2 inches long, and more than twenty-four feet wide, is held rigid with the finest quality of nickel-steel frames, and is decked with yellow pine, the deck being almost the only wooden part in all the yacht. Its weight is known exactly to no one but the builders, but it has been estimated at 70 tons (the *Defender's* hull weighed 60 tons). And yet—and here is one of the wonders of the racing-yacht—this 70-ton body supports a great solid slab on its keel weighing more than 90 tons, to say nothing of 15 or 20 tons of rigging, sails, and live load. This slab is what is known to yachtsmen as the 'lead-mine,' and it is said to put a yacht 'on stilts.'

"No question in yacht building is quite so interesting and important as this one of keel; whether it shall be a centerboard—that is, a loose keel-board which drops down sidewise through a slit in the bottom of the boat; or a fin keel, cutting deep like the fin of a fish; or an ordinary deep cutter keel. The famous old cup-winners, *Volunteer* and *Puritan*, were provided with centerboards, a pet American institution, whereas the later yachts, *Defender* and *Columbia*, and all the English racers, have been deep-keel boats. A number of years ago a racer was ballasted with pigs of lead or iron; but since 1873 the best yachts have all depended on what is called 'outside ballast'; that is, the weight of lead, or the 'lead-mine,' attached to the keel. This weight prevents the yacht from being pried out of the water when the wind strikes her beam or side. For this reason the skipper is enabled to spread a big canvas even in a heavy wind, where a boat of lesser draft and lighter keel load would be overturned and all but blown out of the water."

Another noticeable feature of the modern racing yacht is its "overhang," caused by cutting away a large part of the lower hull at bow and stern. Says Mr. Baker:

"The object of this marvelous 'cutting away' is primarily to reduce the area of friction, altho the 'overhang' has its own special and important purpose. When the yacht is beaten over on one side during the heat of the race, the overhanging portions of the hull come in contact with the water and prevent further tipping."

Passing now to rigging and sails, Mr. Baker describes the great mast, a huge steel tube, measuring, with its topmast and club-topsail pole, no less than 175 feet, 35 feet too high to pass under the Brooklyn Bridge. The rigging is largely of flexible wire rope. As to the sails, Mr. Baker goes on to say:

"It is hard to realize the immense spread of the *Columbia's* canvas. The steel boom which stretches the foot of her mainsail is nearly 110 feet long, exceeding by 20 feet the water-line length of the yacht herself, so that, when 'close-hauled'—that is, when the boom is drawn in until it is nearly parallel with the length of the boat—the tip extends far out over the water to the rear of the yacht. It has been calculated that this mighty piece of canvas—the largest sail, indeed, ever placed on a vessel of any size—would have furnished all the sails of the old *America*, with enough canvas left over to make several jib-topsails and a complete set of sail-covers. The entire stretch of the *Columbia's* canvas is about 15,000 square feet, or more than a third of an acre—enough to supply a complete suit of canvas for a full-rigged ship. All the sails, except the spinnaker and the balloon jib-topsail, are of the very finest cotton duck, costing as high as a dollar a yard. The two sails mentioned, while not of silk (according to general belief), cost almost, if not quite, as much as if they were. The material of which they are made is known as balloon cloth, or sometimes as 'union silk,' a fine quality of cotton fabric treated with a peculiar French preparation which makes it air-tight."

After telling us that the cost of a racing yacht is usually a mystery, but may reach \$100,000, and after describing the crews and their quarters, which are plain and unfurnished, because the

slightest decoration or furniture would add to the yacht's weight, Mr. Baker gives us a few bits of information about the races themselves, as follows:

"Racing-yachts, like racing-horses, have three principal paces. A horse specializes—he is a good trotter, a good runner, or a good pacer, according to his training—but a yacht is expected to be almost equally proficient in all of her paces. The chief of these, and it is unquestionably the finest of all developments in yacht racing, is called 'pointing'; which expresses the ability of a yacht for sailing in the direction from which the wind is blowing. All sailing craft, when the wind is dead ahead of them, are compelled to tack back and forth, and the vessel that can make its course with the fewest tacks—that is, sail straightest toward the wind—will necessarily win the race.

"The next most important pace of the yacht is called 'reaching,' in which she is said to be sailing with 'started sheets.' That is, her boom is allowed to swing a little out-board, at an acute angle with the length of the yacht, so that the mainsail catches a good deal of the breeze. In reaching, the wind is on one side, or beam, of the yacht, or just abaft the beam, that is, toward the stern.

"The third pace of the racer is called 'running,' in which the wind is blowing directly behind the yacht. In this case the sheets are 'eased away,' or let out until the mainsail stands at a broad angle with the length of the boat. It is in running before the wind that the yachtsman 'breaks out' or spreads his spinnaker, the spinnaker being an exceedingly important racing sail, which is set by means of a removable boom, just opposite and balancing the mainsail. It is an enormous sail of light balloon cloth.

"A landlubber is quite likely to think that a yacht makes its best speed when running before the wind—that is, when the wind is exactly on its stern—but that is not the case. The *Columbia*, for instance, can make more speed by several miles an hour when reaching than when running before the wind."

What becomes of the famous racing-yachts? They survive—but not as racers. Mr. Baker tells us in conclusion:

"When the races are over, the day of the racers themselves is done. The *Columbia*, for instance, has been built for the express purpose of developing a speed sufficient to beat the *Shamrock* on a particular occasion. When that occasion is past, her value to a large extent has passed with it. Her owners will do well if they can sell her for \$25,000."

WIRELESS TELEGRAPHY IN NEW YORK BAY.

SIGNOR MARCONI'S work in reporting the Dewey naval parade and the international yacht races by wireless telegraphy has been very successful. One set of instruments was installed on the steamship *Ponce*, an excursion steamer, and another set was placed on the Navesink Highlands, from whence the messages were sent by wire to the New York office. *The Engineering News* tells us that the "army and navy were officially represented at each of the wireless-telegraphy stations, and it is stated that further tests will be made in the interests of the Government." It is said by *Electricity* (October 4) that the first message sent on Friday, September 29, the day of the naval parade, was "probably the first intelligible wireless-telegraphy message ever transmitted over any considerable distance in this country." Lieut. John B. Blish, U. S. N., who was detailed by the Government to watch the experiments, said to a reporter of the New York *Herald*:

"What struck me most forcibly was that the system was prompt, certain, and satisfactory from the beginning. Just as soon as Navesink signaled the messages were received without interruption. The signals, consisting of dots and dashes, were written on the tape with as much regularity as any transmitted by wire circuits. The apparatus appears to be durable, and there seems to be no question of its reliability. Its adaptability for use at sea is certain.

"I don't want to say too much nor to appear too enthusiastic,

but I am convinced that the present system of signaling at sea will soon be a thing of the past. The system of day signals at sea has not been improved upon during the present century. Admiral Sampson used the same system at Santiago that Admiral Dewey used at Manila, and both used the same that Nelson used at Trafalgar. Night signaling has been improved by the use of the powerful searchlight, but, on the other hand, the positions of the individual ships of a fleet are revealed to the enemy by these same lights.

"But here at last is something new. Signor Marconi assures me that he can individualize his machines so that it is possible to

WILLIAM MARCONI.

Courtesy of S. S. McClure Company.

communicate between two ships without others being able to receive or interrupt the messages. In the near future wireless telegraphy will be in general use by the navies of the world. Its value can not be too highly estimated."

The arrangements for transmitting the messages are thus described in *The Electrical Review*, a representative of which accompanied the corps of wireless telegraphers aboard the steamship *Ponce*, which followed the racers:

"The foremast of this ship was lengthened by a spar lashed to it so that its highest point, to which was attached the utter end of the vertical signal wire, was 140 feet above the water. The apparatus aboard consisted of an induction-coil about 12 inches long, having an ordinary hammer interrupter, some thirty or more very large cells of dry battery, a key in the primary circuit of the coil, and the receiving mechanism. The instruments were installed in the chart-house of the ship, a room about 8 by 12 feet, just abaft the pilot-house on the hurricane deck. The vertical circuit consisted of a bare No. 10 copper wire hanging from an insulator on the masthead and running through a section of ordinary rubber hose where it entered the door of the chart-house. The spark employed was about one-half inch long. The terminals of the coil, brass balls about an inch in diameter, were respectively connected to the vertical circuit described above and to the hull of the ship. When signals were to be received the sending apparatus was disconnected and the receiving coherer and its Morse recorder were connected. The instruments worked with great perfection more than 2,000 words of bulletins of the race having been sent without repetition or misunderstanding.

"In the chart-house of the Commercial Cable Company's cable ship *Mackay-Bennett*, which was anchored near the Sandy Hook lightship, a set of Marconi instruments was installed in charge of

Mr. T. Bowden, of London. During the yacht race sixty bulletins were received from the steamship *Ponce*, all of which were acknowledged. Forty-six messages were received without a break at the rate of 15 to 16 words per minute. The one break was due to a mistake of the sending operator and was quickly corrected.

"The longest distance over which transmission was accomplished was 15 miles, a bulletin being received just as the yachts turned the further stake-boat. The performance was a complete success.

The practical success of the Marconi system in New York is specially interesting because American experiments in this line have been attended with so many failures. Says *The Western Electrician* (September 30):

"For some reason all experimenters, as far as is known, who have operated with wireless telegraphy on this side of the water, have only been partly successful in telegraphing distances over a few miles, and in many cases the operators do not hesitate to admit that high buildings and other structures, that are inevitable in every large city, interfere greatly with the tests."

The Italian's experience on this point, as given in an interview published in the same paper, has been very different. He says:

"Another thing we have found out is that mountains, high buildings, steel masts, etc., do not stop communication. We were able, while in Bantry Bay, to talk with a ship lying many miles from us and separated by a chain of hills hundreds of feet high. The message radiated in all directions and was caught by the pole on the other ship. Again, a very valuable point is that fog does not interfere with a wireless-telegraphic message at all. In fact, at times the instruments have appeared to work better in thick weather. With a pole sufficiently high, a message can practically be sent any distance. There was some talk of my attempting to communicate between New York and Chicago, but I do not think I shall make that experiment. I may, however, try it."

Still another interview with the inventor is published in *The Electrical Review*, from which we quote the following:

"Replying to a question as to the nature of the electric waves employed in his system of telegraphy, he said that perhaps the fairest answer was that he did not know. It was evident, he said, after his experiments in connection with the recent British naval maneuvers, where signals had been exchanged at a distance of 66 nautical miles, that they were either sent through a vast dome of sea-water (the curvature of the earth in this distance amounting to several hundred feet), or else they were transmitted through the atmosphere and curved around.

"As sea-water is a good conducting medium, so far as its effect on electric waves is concerned, it may be looked upon almost as a solid," said Mr. Marconi. "I am compelled to believe that it is not the Hertz waves traveling in right lines which are the agencies that effect wireless telegraphy in my system. I have found the vertical circuit to be absolutely essential to success. Another point which experience has fully demonstrated to me is that the sending instrument should be relatively very powerful and the receiving instrument relatively sensitive."

"When asked whether he believed it would be possible to use his system for communication across the Atlantic, Mr. Marconi smiled in a deprecating way and said that certainly there seemed reasonable ground to hope for some such development, but that it was yet too early to do more than hope—certainly too soon to prophesy."

The Fate of the Great Salt Lake.—It is prophesied that before the end of another century the Great Salt Lake will be utterly dried up. In the past year, we are told, its waters have receded a mile. "The cause for this," says *The Irrigation Age*, "is said to be the excessive drain made upon it by the irrigation enterprises of the Mormons. Contrary to the theory which was accepted for a time, this great lake is not fed by underground springs but by the Jordan, Weber, Ogden, and Bear rivers, and when the water of these streams is intercepted for irrigation purposes, it necessarily decreases the water-supply of Salt Lake, leaving it more to the mercy of the sun and the attendant evapo-

ration which is constantly going on and which is slowly but surely drawing the water away until in time only a bed of dry salt will remain. The cause of the saltiness of the water of this mysterious body of water has been a matter of conjecture to scientists for years. The most plausible theory is that the saltiness is due to the high altitude which causes excessive evaporation, while there is practically no outlet to the lake. A scientist, after a number of experiments, has expressed the conviction that if all the salt supply in the entire world were cut off except that found in the bed of the Great Salt Lake, there would still be enough to last the world for ages, so deep is this deposit. Regarding the decadence of the lake, a writer recently said: When the Great Salt Lake is gone it will be missed as a wonder and as a salt factory; for little else. Its waters destroy vegetation instead of nourishing it. Should the fresh waters of Utah Lake, however, be evaporated or disappear into the earth thousands of square miles would cease to be habitable. Some years ago the Utah Lake region was made a government reservation, an act which has kept irrigation companies from drawing water either directly from it or from its feeders."

EFFECT OF ALCOHOL ON PLANTS.

THE general effect of alcohol on the human system is too commonly demonstrated to make special experiment necessary. Plants, however, can not obtain this particular drug so easily, and their behavior when alcoholized must be made a subject of scientific investigation. Such a study has just been made by Louis Adrien Levat, who describes his experiments in the *Revue Scientifique* (September 16). His investigation took place in the gardens of M. Hildebert Richard at Avignon, France, and its result is not such as to warrant the administration of alcoholic liquids to plants, unless it is desired to put a speedy end to their existence. Alcohol, in fact, seems to act on the plant more quickly and fatally than on the man. Says M. Levat, in his report:

"My experiments were made on two adult geranium plants in full leaf and flower, seventeen months old, sprung from the same plant, growing in two pots of the same form and equal dimensions, and containing the same weight of moistened alluvial soil.

"These two plants were first observed on the 10th of August last, after which time they stood in a sheltered place in identical conditions as regards air and light. On that day, at 6 P.M., the plant A, the less vigorous of the two, having several leaves bordered with yellow, was watered with 20 centiliters [about ½ pint] of spring water. The plant B, the more vigorous, with normally green leaves, was watered with 20 centiliters of diluted butylic alcohol.

"On the next day, August 11, the plant B had symptoms of turning yellow in all its leaves, which had a peculiar odor, very different from that of the normal plant, and slightly etheric. The watering was repeated at the same hour.

"On August 12, altho the plant A had grown more vigorous (the yellow border tending to disappear from the leaves, and its stem remaining vertical), the stem of the plant B fell over at right angles, the calyx bending and the flowers touching the edge of the flower-pot. The petals began to drop off and the leaves all turned toward the ground. . . . At the same time melanosis [blackening] appeared on all the leaves. . . .

"On the 13th all the leaves of the plant B, still drooping downward and almost entirely covered with melanosis, folded up and clung stiffly to the stalk. The sepals of the calyx were dried and blackened, and all the red petals had dropped off. The last watering took place the evening of the 13th; and on the following morning, altho the plant A was superbly green and filled with blossoms, the plant B, after absorption of 80 centiliters of alcohol, showed a notable decrease of nutrition and a lethargic aspect approaching coma.

"I did not push the alcoholization further, and after taking up the plant B, I examined sections of the stem, branches, and roots, and found that they had undergone profound modifications. All the tuberous tissue was a dark wine-color, and the whole was impregnated with alcohol. Microscopic examination showed a stoppage of the circulation and modification of the stem with

obliteration of most of the medullary rays. The rootlets, dry and burnt, had turned reddish-black. Some parts had kept green in the main stem, but the stoppage of circulation was complete in the branches.

"The parts that seemed to have suffered most in the organism of the alcoholized plant were the bark, the radicular tunic, the leaves, and the flowers.

"Thus, the experiment shows that the absorption of butylic alcohol at 90° by a full-grown red geranium, to the amount of 80 centiliters, sufficed in four days to affect the plant with alcoholism, which was shown by a notable weakening of the vegetative life and symptoms of poisoning, with a special odor throughout all parts of the plant, partial burning, melanosis, and geotropism of the leaves."—*Translation made for THE LITERARY DIGEST.*

WHAT CAUSES "DOUBLE PERSONALITY"?

CASES of "dual personality" or "double consciousness" have always been fascinating and puzzling to the psychologist. It seems certain that any theory that will explain satisfactorily how one man may have two distinct personalities at different times—changing from one to the other and having no recollection in one state of anything that has happened to him in the other—will throw a flood of light on the whole question of the connection between mind and body. In a recent lecture on this subject, Dr. T. B. Hyslop, medical superintendent of the famous Bethlem Hospital at London, devotes considerable attention to the mechanism of these cases of double consciousness. If memory, he says, depends on facilities of communication from brain-cell to brain-cell, how shall we explain how in one state a man often has to relearn all that he knows in the other state? Does he start with a new brain, or with a fresh area of cells? Dr. Hyslop believes that the key to the problem lies in the conception of the highest brain-centers as groups of units connected in various ways, like a system of electric lights, some of which may fail to light because the current is switched in the wrong direction. Professor Hyslop's lecture is printed in *The British Medical Journal* (September 23). He says:

"Until we have a more rational conception of what constitutes the physical basis of consciousness, we can not grapple with this problem. The more one considers the *pros* and *cons* of the possibility of a diffuse localization of consciousness—by this I mean the diffusion of the elements of consciousness everywhere throughout the brain substratum—the more one is led to believe that there is no supreme center anywhere. Each unit of the highest evolved parts of the sensorium has its own separate element of consciousness, which exhibits itself under certain physical conditions as occurring within that unit.

"I regard the highest evolved centers as being a huge congeries of units or groups of units functionally continuous—under certain conditions of contiguity—with the periphery and with each other. These units may be compared to lamps which give light when their respective electric phenomena are in operation. Provided that the switches and transmitting agents, both peripheral and central, are functionally operative, they light up in turn in response to the stimulus, be it peripheral or central. The study of seriality of thought would appear to require some physical basis on this plan, and each element of conception would require some physical counterpart correlative to the light [derived from the analogy of the lamp]. Carrying this hypothesis further, just as the switches, couplings, or currents may under one series of conditions become functionally inert at one time, leading to inability to produce light in one or several sets of lamps, so under another series of conditions may the same switches, couplings, or currents again become functionally active and determine the existence of light.

"In any case it seems justifiable to assume that the amnesic defects which go so far to constitute what we call double consciousness are due to failure under one set of conditions to switch on the lamps which were lighted under another set of conditions, and which may again be lighted under that other set. This hypothesis would appear to demonstrate how it is that there may be no end to the number of personalities in one individual."

Air-Pumps for Leaking Ships.—When a ship springs a leak, her pumps are set to work to get the water out as fast as it comes in. Instead of this, it is suggested by a correspondent of *The American Machinist* that air-pumps be used to force air into the leaky compartment and so force the water back through the hole where it entered. This plan was suggested by the difficulties encountered recently in getting the *Paris* off the rocks on the coast of Cornwall. Says the writer:

"There is a means of expelling the water from the filled compartments so obvious, and so certainly effective, that it seems unaccountable that some engineer has not suggested it before this. Close the hatches of the flooded compartments and drive the water out by forcing air in. It would not make the slightest difference how big the holes might be in the bottom, as the water would be expelled and kept out on the same principle as in the old-fashioned diving-bell." "This suggestion," says *The Engineering Magazine*, commenting on this plan, "carries with it a much larger and more important one—namely, the use of air-pumps instead of water-pumps to save a leaking ship while afloat. As Mr. Richard well remarks, the work of trying to pump out a leaky ship is not only enormously wasted while it is going on, but it is never finished. If, however, the water leaking into a compartment of a ship be expelled by pumping air into the space, the work is done so soon as the compartment is filled with air down to the level of the leak. After that point is reached the ship is safe, no matter how large the hole, and no further pumping is necessary."

Wireless Telegraphy between Balloons.—"Experiments are being made at Vienna," says *Cosmos* (August 5). "under the direction of Professor Tume, aided by officers of the garrison, on communication between balloons by wireless telegraphy; and they have met with some success. A captive balloon takes the place of the tall mast used by Marconi, and a copper wire is stretched between it and the earth, where the transmitting apparatus is placed. The second balloon, which ascends freely, carries the receiving instrument and is furnished with a wire 60 feet long, hanging downward from the basket. This balloon receives messages very well up to a distance of about 10 kilometers [6 miles] and at a height of 1,600 meters [about 1 mile]. Unfortunately this is but half of the problem, for it has been found impossible at present to establish a transmitting station in a free balloon, both on account of the weight of the necessary apparatus, and because of the danger of discharges from a powerful condenser so near the inflammable gas of the balloon."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

THE feat of making the ascent of Mount Washington in an automobile has just been accomplished by Mr. F. O. Stanley, of Newton, Mass. "The trip from Newton to Pinkham Notch, a distance of about two hundred miles, was made by Mr. and Mrs. Stanley in their automobile at the rate of about eighteen miles an hour," says *The Automobile*, New York, September. "The distance from this point to the summit is something more than ten miles on a rather even grade, which would not be so bad for a short distance, but it ends only at the top. The carriage used by Mr. Stanley is a steam carriage, using gasoline for fuel. Two gallons are said to have been required to make the ascent, which at the usual price of seven or eight cents a gallon would not make the expense very heavy, unless water came high in price, of course, as it has in some sections of the country the past dry season."

"At the excavations now in progress at the Roman Forum, over thirty 'styli,' or bone pens have come out of the mud of two thousand five hundred years," says *Biblia*. "They are in perfect condition. Near by was found the *tholus*, or store-pit which was used as the cornbin of the pontifices. Into it the corn was emptied from the jars in which it arrived. A clerk must have stood by keeping tally of the number of jars received and emptied therein. Occasionally, looking over the edge to see the cavity filling up with grain, the stylus he used to put behind his ear, being of smooth bone, slipped and fell and buried itself in the wheat, until to-day. There was also found here a black bone *tabella*, or writing tablet, six inches by four in size, somewhat worn down at one corner by the thumb of the holder, and still showing scratches where the wax once spread upon it had been penetrated by the sharp point of the stylus. The specimens of the stylus are very beautiful; some are short and stubby; others long and graceful; some have been favorites with their owners, others scarcely used at all."

THE RELIGIOUS WORLD.

THE PAN-PRESBYTERIAN ALLIANCE.

THE seventh council of the Pan-Presbyterian Alliance, representing all the bodies throughout the world which accept the Westminster Confession, was in many respects a remarkable one. Since the meeting in Glasgow five years ago, two hundred thousand members have been added to the churches professing

REV. H. S. BOSMAN.
Pretoria, S. A. R.

the creed of Calvin—a substantial growth certainly, showing that in spite of the losses which Presbyterianism is asserted to have suffered in New York and in other portions of America, it continues to make an attractive appeal to the world.

The larger number of foreign delegates naturally came from Scotland, the birthplace of Knox. Among these was the Rev. J. Marshall Long, the retiring president of the Alliance. Other prominent foreign delegates were the Rev. Dr. Mathews, of London,

the Rev. Dr. Hamill, of Belfast, and the Rev. Dr. Bosman, of the South African Republic. Comparatively few delegates came from England, and these were largely of Scotch stock.

Some effort was made to commit the Alliance to an expression of opinion upon the Transvaal question, but the subject was finally dismissed by means of a non-committal resolution expressing hope that peace would be maintained. The discussion, however, served to bring out some interesting information about South Africa from delegates who were acquainted by residence or through travel with the conditions existing in the South African Republic. For instance, Dr. Mathews, whose position as secretary of the Alliance has taken him to all parts of the world, including the Dark Continent, said, as quoted in the *New York Tribune* (October 10), that Oom Paul argues somewhat in this fashion:

"We know that we can not cope with England, but we are going to fight her. We do not want the Outlanders and we will not have them. We do not care for what you call civilization; it is not comfortable, and it brings with it too many anxieties. What we want is to be allowed to till our fields in peace. We hate your railroads, and we prefer our old ox teams to your farm wagons. England can come and beat us. She can slice us in pieces as we do tomatoes, but she will never conquer the spirit of freedom."

Dr. Bosman, pastor of the Dutch Reformed Church in Pretoria, was called back to his country before the end of the council, going to minister to his people in the impending conflict. "War between England and the South African Republic will mean terrible loss of life and destruction of our property," he said; but added: "The English will be able to take our country only over our bodies and our smoldering homes."

The Independent (non-denom.) gives the following summary of the chief features of the council:

"There was a good deal of restlessness in the council under

what many felt to be the dulness of the meetings. This at length found vigorous expression on the part of the Rev. J. A. MacDonald, of Toronto, editor of *The Westminster*, the organ of the Canadian Presbyterian church. When the place of the next meeting was under discussion he said:

"Something much more important than the time of meeting is the character of the program. If we are to simply thresh over old straw, as we have been doing, and avoid live subjects; if we are to continue to handle old, worn-out themes, once in ten years is too often to meet. I represent many delegates here, and a crowd of visitors, in expressing my dissatisfaction with the discussion of ancient and dual themes. I call on the council to make an effort at least to come within sight of something practical, live and modern."

This met with much applause, and Dr. William Watson promised live subjects when the council shall next convene at Liverpool in 1904.

"The note of antagonism to modern critical scholarship, struck so unfortunately by Dr. De Witt on the opening day, continued to be sounded. The liberal men refrained from replying at length in the council, tho speaking freely outside; one delegate, however, saying on the floor, 'Let the conservatives meet the new scholarship, not with denunciation, but with a better apologetic.'"

Referring to the Rev. Principal Caven, D.D., of Knox College, Toronto, who was chosen president of the Alliance for the next four years, *The Independent* says:

"No man, on either side of the Atlantic, has a wider influence among the constituency of the Alliance; no man's word commands more sincere respect. The Washington council will be memorable, if for no other utterance, certainly for this frank, kind, unmistakable word of Principal Caven on behalf of organic union."

"It will not be memorable for many decidedly great papers or addresses. Not a few were good; some excellent; but scarcely one supremely significant. But the bonds of sympathy and friendship already existing between representatives of scattered churches and distant nations have been strengthened."

The *Baltimore Herald* (October 8) says of the gathering:

"The Pan-Presbyterian Alliance, which concluded its session at Washington last Friday, evidently inclines to the view that the church has not been progressing as rapidly as it should. In the course of last Thursday's deliberations much dissatisfaction was expressed with the Alliance program. . . . This was also the belief of the Rev. Dr. Hays, of Colorado, who deprecated the discussion of Calvin and his labors, and the ignoring of the practical problems of the day. He declared that the future of the Alliance was threatened unless its efforts were directed into more practical channels. A Lancaster (Pa.) delegate protested against narrowness, and the presiding officer counseled giving the proceedings a less academic character."

"No action was taken beyond referring the matter to the program committee. But the ideas advanced reveal the existence of deep-seated discontent. Members feel that the status of the Presbyterian church is not as it should be, and are casting about for ways and means to improve it. Where the ministers seem at a loss to diagnose the trouble, laymen could hardly expect to be more successful. And yet the mind unhampered by tradition often perceives what escapes the professional intellect."

"If the Presbyterian church does not exert that hold upon the

REV. GEORGE D. MATHEWS.
Secretary of the Alliance, London.

masses which exponents of the faith feel it should have, may not failure to recognize the change in modern conditions be responsible? Churches must adjust themselves to the needs of the times. The essential truths of religion remain the same during all ages, but outward forms are subject to constant evolution. A religious organization, in order to command the adherence of the people, must enter into their lives and be able to appreciate their position. Discourses on abstract theological questions at one time constituted a large part of pulpit deliverances. At present these are not held in special esteem."

WHAT AUTHORITY DOES MODERN THEOLOGY ASCRIBE TO THE SCRIPTURES?

THAT the teachings of modern critical research have seriously modified the Protestant view concerning the absolute authority of the Scriptures in matters of faith and life is admitted on all hands. Just to what extent this is the case is now, perhaps, the leading international question of Protestantism. At the recent convention of the Swiss Ministers' Association, composed of representatives of the Protestant churches of the republic, held in Geneva under the auspices of the local Union Chrétienne, it was the chief question of debate. According to the report furnished to the *Chronik*, of Leipsic (No. 37) the line of thought expressed, which is fairly indicative of the trend in critical circles representing the progressive but not the radical school, was as follows:

In the Reformation period the Protestant principle of the authority of the Scriptures was chiefly of a moral and religious kind which did not exclude the objective and historico-critical investigation of these records. This religico-moral recognition of the Scriptures still stands, and only the juridical and legislative authority has been set aside. Altho the latter constituted a part of the reformer's views of the Scriptures, yet it did not equal in importance the principle of justification by faith alone. In the hearts of the reformers the Scriptures secured recognition as authority only because they testified of the way of salvation. And the Biblical theology which accepts the historical character of the revelation of God is accordingly in harmony with the Protestant principle concerning the authority of the Bible.

Modern theology does not place its emphasis upon the infallibility of a book, but upon the person of the historical Christ of whom these Scriptures testify. In brief, the only Protestant principle of authority is the living Christ, the revelation of God; and the special authority of the Scriptures consists in this, that they testify of the normal period of Christianity, of the life of Christ, and of believers. Not what is said of Christ—which criticism must freely examine—but Christ Himself, by taking possession of us, becomes our authority.

Contrasted with the above as an expression of modern theology, we have in the *Kirchenzeitung* (Leipsic, No. 37) an expression on the same subject from a conservative point of view. Here we read in substance:

And what authority has the Scriptures for modern theology? Is it not a special mark of this type of thought that it removes this authority as a rule of faith and seeks to free its disciples from the bondsman's yoke? With decided emphasis we are told that evangelical theology is not first and foremost a reproduction of the teachings of the Scriptures as it was in former generations, but that the Scriptures are no longer the absolute and infallible norm of dogma and doctrines. It must, indeed, be acknowledged, and it has been urged again and again in favor of the newer theology, that largely through its critical researches the authenticity of certain books of the Old and the New Testament which had been seriously endangered by the attacks of radicalism has been restored to a recognized standing in the collections of canonical literature; but the fact has been overlooked that such victories have not brought with them any higher estimate of the religious work or restored the old Protestant principle of Scriptural authority. Only the form of attack on the Scriptures has been changed. Thus while modern theology no longer attacks the Pauline authorship of certain of the New-Testament epistles, the contents of

these letters are all the more sharply criticized by the very school that has been so zealous in defending these writings as productions of an apostolic pen. Both the gospels and the apostolic writings are regarded not as historically correct exhibitions of the original Christianity of Christ, but as modifications and deteriorations of the original and primitive gospel proclamation, and in principle have been placed on the same level with the secondary literature of the post-apostolic period. The canonical books thus cease to be the highest sources of appeal, and it is regarded as an expression of Roman Catholic spirit to rest the faith on the Word alone. It is claimed, too, that Luther originally regarded the Scriptures in a secondary and subordinate light, and that in rejecting an infallible organization he had also rejected an infallible Scripture codex; but that scholastic and other considerations had induced him to adopt what was afterward considered the formal principle of evangelical Protestantism.

The *Kirchenzeitung* then devotes a half-dozen solid columns to a defense of the traditional views, largely on the basis of what is doubtless the ablest work of its kind that has come from a conservative pen for a decade, namely, the "Glaubensregel, Heilige Schrift und Taufe," by Prof. Johannes Kunze, of the University of Leipsic.—*Translations made for THE LITERARY DIGEST.*

THE SEAT OF AUTHORITY IN RELIGION.

A UNITARIAN view of the claims of religion upon man is given by the Rev. E. M. Wheelock. After tracing the various beliefs of mankind in the authority of hierarchies, prophets, and Bibles during the Egyptian, Hebrew, and Christian eras, he says that all the religious wars and individual persecutions have come about through an insistence upon some form of merely intellectual belief supposed to be revealed by divine authority—such questions as whether Jesus was man or God; whether the Holy Spirit proceeded from the Father and the Son, or only from the Son. This latter question is actually one of the main barriers to reunion between the great church of the East and the Latin church to-day. Yet Jesus "never commanded any one to believe any formal propositions about Himself," says Mr. Wheelock. He only said, "By this shall all men know that ye are my disciples, if ye love one another." Says the writer (in *Unity*, September 7):

"All His blessings were pronounced upon those whose *affections* were right—the pure in heart, the peacemakers, the meek, those who hunger and thirst after righteousness; not upon those who profess belief in the creeds and catechisms of men. No man who has not strangled reason and common sense in his religious nature dares to assume that he has attained unto all spiritual truth and knowledge. He knows that each age, each day, even, reveals new truth in science; and he knows that religion has been continually spiritualized and purified by the progress of the ages; why shall the future reveal nothing to him? Why shall he assume that all revelation is a thing of the past? He refuses to assume anything of the sort, and so his creed, whatever it is, is a simple statement of how far he has progressed up to date. He believes in the spiritual evolution of humanity—that the spirit of God is abroad in the hearts of men now, as much as in any past time, and he holds his belief as he does his railway ticket on which is stamped, 'good for this day only.'

"There is no outward standard of authority in religion; no absolute tribunal; no infallible scripture; no certified doctrine; no final word. The sole arbiter is reason; the only prophet insight. The 'Divine Word' in the old beliefs is the Bible, but the true Bible is the universe. The note of authority in religion is gone from our modern world, and vain are all the attempts of the priesthood to coax it back by ecclesiastical pretensions and theological sophistry. Such methods will never call back the lost chord of divine power. The priest and the Christ are now and always at war. Life only can impart life, and we must share the present life of God and feel the power of the inward, spiritual, and living Christ, if we would recover the tone and temper of that lost age. Men tire of the fictioned Christ of the creeds,

made only for a Sunday show, where priests display and wealth enlarges, while minds darken and spirits die! The God that men need now must be not first, but nineteenth, century; man in the neighbor must his God possess.

"The search for some authority which will release us from the exercise of our own reason and conscience is a search for the impossible. God is here or He is nowhere, and we carry our own heaven or hell within us. Wherever we may be and however situated, we are dwelling in the fathomless element of divine being, which is the only absolute life in the universe. Wherever that life of God manifests itself, there is authority; be it in the songs of the Salvation Army, in the prayers of a good Jesuit, or the devout silence of the Quaker. Every church has just as much authority as it has truth—not an atom more. There is no authority higher than truth.

"It is the life of God within us that gives us power, and the life is as wide and deep as the needs of man. It can not be patented, or shut up in the keeping of any churchly corporation or bench of bishops, nor can it be squeezed into any sacrament, rite, catechism, or creed. God is the God of the living, and we must nourish our spiritual life on the words He is speaking to us now, not vainly try to live on the echo of words He spoke to men dead centuries ago."

CARDINAL VAUGHAN, THE CATHOLIC CHURCH, AND THE DREYFUS AFFAIR.

PUBLIC opinion in England, as in all other countries outside of France, has been overwhelmingly in favor of Dreyfus, and the Rennes verdict has called forth a tempest of disapproval and amazement, especially from the leaders of religious opinion. Roman Catholic laymen have not been less outspoken than Protestants, in spite of the fact that the accusation has very frequently been made in English journals that the Roman Catholic church in France, as represented by the clerical party, was directly involved in the persecution of Dreyfus and in an attempt to inaugurate a general anti-Jewish crusade. Among others, an Anglo-Parisian correspondent of the London *Daily Chronicle* makes repeated charges that the Gallic Clericals, and even the Holy See itself, were the secret inspirers of the anti-Dreyfusard campaign, which was a deep-laid scheme "to acquire the whip-hand over the republic." Thus he says (in *The Daily Chronicle*, September 23):

"For this purpose the enormous wealth of the congregations was employed to capture the educational machinery of the country, and push forward the pupils of the priests so that they might secure the higher commands in the army and navy. In this struggle the competition of Jews, Protestants, and agnostics had to be overcome; and especially was it necessary to prevent anti-Clericals gaining access to the general staff. Hence the attempt to make an example of Dreyfus, and thus prevent other anti-Clericals from seeking to gain admission among those who ruled the army. By holding the army in its hands the Clerical Party might well hope to overawe the republic, restore a monarchy if necessary, and, in any case, prevent anti-Clerical legislation. . .

"The fact is that a certain number of Jews have abandoned mere money-making as their sole ambition, and are anxious to distinguish themselves in other walks of life, and even in the army. As in the matter of education especially they are a particularly gifted race, this seriously menaced the monopoly the Clericals sought to establish over the higher grades of the army. Hence, again, the absolute necessity of making an example of Dreyfus, so as to discourage all other Jew aspirants to military honors. To gain public opinion in favor of this policy, the *Libre Parole* and other similar organs went even further than the Inquisitors. The latter accepted Jews who embraced the Christian faith, but the *Libre Parole*, adopting a modern scientific tone, argued that a Jew was ethnologically incapable of becoming a Frenchman. This argument, it is true, could not be applied against the French Protestant; but, just as the Catholic places his church before his country, and first owes allegiance to Rome, so also was the Protestant likely to betray the interests of Catholic France in favor of Protestant Germany or England."

The writer asserts that the Jesuits are especially responsible for suggesting this line of policy, and instances, as proof of this statement, the fact that both the *Libre Parole* and the *Civiltà Cattolica*, the two most bitter anti-Jewish papers, were founded by the Jesuit agent, M. Odélin. The latter journal, in its issue of February 3, 1898, claimed, says the writer, that "it was better not to kill or expel the Jews, but that they ought not to possess any political rights, and should not be allowed to occupy any public function."

Notwithstanding much expression of lay Roman Catholic opinion in England in favor of Dreyfus, until a few days after the Rennes verdict no prominent Catholic ecclesiastic had made any pronouncement, and more than once it was remarked that, had Cardinal Manning been living, a vigorous and candid expression of sympathy would long ago have been made voicing the feelings of the Catholic party in England. On September 18, however, Cardinal Vaughan broke his silence by a rather lengthy letter to the *London Times*. He said:

"The unprecedented tornado of feeling which in the name of justice has not unnaturally been sweeping through the English press, like all hurricanes, is apt to be indiscriminating and to destroy much that should be left standing. It may perhaps be vain to speak in the midst of a storm; nevertheless I offer the following observations:

"First, it is unjust to identify the Catholic church with the act of injustice whereby Dreyfus was condemned at Rennes without clear evidence of guilt.

"The Catholic church has had nothing to do with the various trials that have taken place; and I learn on reliable authority that all, or nearly all, the generals and persons concerned in the trials had not been pupils of the Jesuit or Catholic colleges, as has been said, but of the state lycées, and that I was in error when I spoke even of Colonel Picquart as a Catholic. It has been from beginning to end a state affair, an affair of military interests and of state treason, in which the church has had no place. The bishops, therefore, rightly made no attempt to interfere in a matter that belonged to the secular power. But it is urged that they did not control the opinions of the clergy and faithful, and are therefore deserving of censure. But for years the case was at least doubtful, and there was *prima-facie* presumption of guilt against Dreyfus. Men of undoubted candor and intelligence were found on either side, and nothing was certain until the full evidence was published. What would be said in England if, in a debatable matter of great public interest, the bishops sought to impose silence or their own opinion upon a people priding themselves on their freedom of opinion? And where is the freedom of opinion if a man is to be branded with ignominy unless he adopt the judgment prescribed for him by another? The French people are as free as we are to hold what opinion they think right or the most likely to be right. That on one side or the other there should have been violent and passionate feelings is only to say that the French are formed of the same clay as ourselves and are swayed by feeling as well as by reason. But when there was a danger of disturbance, as at Rennes, we see that the church spoke through the cardinal archbishop, counseling calm and moderation.

"An attempt has been made to drag in the Holy See. But the Holy See has taken no side, and I say of my own knowledge that the Holy See declined to intervene in a matter that fell so clearly within the competence of the state. If the Holy Father had advice to offer to the Government, he has his accredited representative in Paris and would have spoken through him, not through the press. . . .

"The other point on which I would say a word is that the Catholic church condemns the persecution of the Jews, and of every other race. If Jews or Christians practise usury and extortion, or do any other hurtful thing, let laws be passed, not against Jews, but against the malpractices complained of; and let the law strike Jew or Gentile with equal severity when guilty.

"And if in one country or another Jews are persecuted by Christians, this must no more be put down as a charge against the Catholic church than drunkenness, rioting, or any of the crimes that disgrace Christian communities. The Catholic church may here or there fail in her mission—sometimes by the human

frailties from which churchmen are not always exempt, sometimes by the fact that her free action is impeded, and that she has to work, as Archbishop Whateley said of himself, with one hand, and that the best, tied behind her. But I say fearlessly that the popes and the Catholic church have been the defenders of the race of Israel, and that, whatever inter-racial antipathies may arise, the church will always seek to moderate and in the end subdue them."

The cardinal goes on to say that he shares the indignation expressed against the verdict, because it "was unjustified by the evidence," and was therefore "infamous." Nevertheless, he points out that France is Britain's next-door neighbor in Asia and Africa as well as in Europe, and that self-interest demands that friendly relations be cultivated and that the feelings of a highly sensitive people be not stung by a culpable lack of self-restraint in the expression of English disapproval of the French court's verdict.

Upon this letter *The Times* remarks editorially:

"The attitude of the Roman Catholic church toward a question in which, to dispassionate observers, seem involved principles of truth and justice that are of eternal and universal obligation has been, to say the least, equivocal. The letter which we publish to-day from Cardinal Vaughan does not by any means meet—indeed, it scarcely addresses itself to—the real charges brought against the Roman Catholic church in this connection. It was open to the heads of the church in France and to their superiors at the Vatican to counsel neutrality where political issues were at stake. It was open to them to keep silence, at the risk of seeming indifferent to right, on the ground that the better part of valor was discretion, and that truth and justice might, in an excited state of public opinion, be imperiled by ecclesiastical interference. It was open to them to believe in the guilt of Dreyfus, because they felt it impossible that French officers could stain the honor of their uniform by falsehood and forgery. But few could have expected, and fewer still will be prepared to condone, the outburst of vindictive and scurrilous animosity with which the prisoner at Rennes and all who espoused his cause have been assailed, and the worst passions of an inflammable populace stimulated, by a section of the so-called religious press of France, if not under the direct control, at least with the indirect sanction, of the Catholic clergy. Silence gives consent. No French bishop, so far as we know, has uttered a public protest; no voice from Rome has denounced what our correspondent 'Verax' described as the 'odious garbage' widely circulated among French Catholics by newspapers priding themselves upon the avowed patronage of the Catholic hierarchy. It is, we fear, impossible to acquit the church in France of acquiescence in an unscrupulous campaign for unworthy ends, conducted in a spirit of which, as several of our correspondents point out, the Roman Catholic ecclesiastics of England must feel heartily ashamed. The indictment against the Roman church is not that it has believed in the guilt of Dreyfus. That is—or was, before the full publication of the case against him—a possible view, honestly held by Englishmen as well as by Frenchmen. The charge is—and we would call Cardinal Vaughan's special attention to the point—that those who claim to speak on behalf of the church have taken up and unscrupulously utilized the anti-Dreyfusard agitation, with the nationalist and antisemitic feelings imported into it, for their own ends of overthrowing the republic and establishing upon the ruins some form of government dependent upon the church and the army, under which the church might hope to regain her lost political, educational, and spiritual hegemony over the French nation; and that, compared with these objects, truth and justice have in their eyes been as nothing in the balance."

The correspondent "Verax" returns to the charge with another long letter directed against Cardinal Vaughan's statements. He says (September 20):

"The main charge I brought, and now bring once more, against those in authority in the Catholic church is that they have allowed the mind of the Catholic people of France to be systematically poisoned by a Catholic press which has itself done just what Cardinal Vaughan protests against—*i.e.*, it has sought by every means 'to identify the Catholic church with the act of injustice

whereby Dreyfus was condemned at Rennes without clear evidence of guilt.'"

He then speaks of the "worst offender"—*La Croix*—which, he says, is read by millions of French Catholics, and has had papal blessings, and archiepiscopal and episcopal letters of approval, but has been filled with bitter racial denunciations, and greeted the verdict with the words—concluding a column of invective—"As Frenchmen we rejoice over it. As Catholics we praise God for it." He asks Cardinal Vaughan what he thinks of a priest who writes in this journal that he intends to say five masses ("gratuitement") for the triumph of the army "before the Rennes trial begins."

A "Catholic Journalist," writing in *The Times* of October 21, says he regrets that Cardinal Vaughan's letter does not touch the real issue, and that while he thoroughly agrees with him that it is no part of the church to interfere in French politics, he does contend that some action should have been taken "to put a stop to the encouragement by French priests of one of the most shocking manifestations of race hatred which has been seen in Europe within living memory." Other Catholics write in the same strain. For instance, Mr. Walter Bagot, from whose article in the *Nuova Antologia* on the prospects of the Roman Catholic church in England we recently quoted (see THE LITERARY DIGEST, September 16) remarks that his coreligionists will probably agree with him when he says that "the recent unfortunate position in which the Roman Catholic church has placed itself before the civilized world will assuredly not increase its popularity among the Anglo-Saxon races," and that "Roman Catholicism is becoming engulfed in Vaticanism." Mr. Wilfrid Ward, however, writes an extended letter in defense of his church. He says:

"It is well known to those who have conversed with French anti-Dreyfusards on the subject—laity or clergy—that the motives they have consistently alleged for their attitude are exactly the opposite to those assigned to them in the accusation before us. 'We believe Dreyfus to be guilty; but even if he is innocent it is better that one man should suffer unjustly than that we should side with anarchists and revolutionists, destroy the credit of military tribunals, and upset the existing government.' This has been the defense urged from the very beginning of the agitation for revision, and the fact that the large majority of educated Frenchmen, including representative ecclesiastics, concurred in a plea so contrary to our English ideas of justice was a matter of regret and astonishment to Englishmen, Protestants, and Catholics alike. But apparently true facts, tho they may be damaging, are quite insufficient to satisfy the appetite of those who feel toward the Roman Catholic church that strange animosity which no other institution seems to arouse. It may be enough to say against Frenchmen in general that they put the supposed welfare of the community and the preservation of order above the duty of justice to an individual. But this is not a bad enough accusation when Catholicism is in question. The church must not be allowed to have at heart the interests of order; her aim must be anarchy. She can not be admitted to desire, however mistakenly, the welfare of France; she cares only for her own ascendancy. 'She sets,' we are told, 'the so-called welfare of the church above even the eternal verities of truth and justice.' And even this can not be regarded as an isolated deviation from an habitually high standard. It witnesses to the inherent corruption of the existing Roman system. An account—very questionable as to its accuracy—of the attitude of the Pope toward Americanism is invoked in confirmation of this view. And the whole Catholic system is condemned on this exhaustive evidence. 'How long,' we are asked, 'can such a system keep its hold on the consciences of men?'.

"The world appears to be continuing in its accustomed course, and we are now witnessing the curious spectacle of a self-righteous condemnation of unjust and irrational antisemitism among our neighbors, under the not very persuasive form of an unjust and irrational 'No-popery' agitation among ourselves."

FOREIGN TOPICS.

THE BOER VERSUS THE BRITON.

THE intense interest aroused in so many lands by the Dreyfus case was taken as significant of the closer bonds of human sympathy that are drawing all nations closer and closer together. The dispute between the Boers and the Britons is another signal illustration of the same thing. Even less than in the Dreyfus case have other nations any direct interest other than sympathetic in the Transvaal trouble. Yet the reports from most of the European countries indicate an intense feeling, and at least three governments—Germany, Holland, and our own—have been appealed to to intercede in the quarrel.

In England, most of the writing and talking on this subject during the last few weeks has been done, naturally enough, by those who are dissatisfied rather than by those who are satisfied with the trend of events. In consequence the anti-British side has, even in the *London Times*, been set forth more strongly than the other. The Duke of Devonshire and Mr. Balfour have indeed spoken, tho bnt briefly, in defense of the Government; but the heavier Conservative guns are reserving their fire. On the other hand, Sir William Vernon-Harcourt and Henry Morley—but especially the former—have thrown themselves earnestly into the fight against the Government's course, followed by the official head of the Liberal Party—Sir Henry Campbell-Bannerman—and, so far as appearances go, by almost the entire Liberal Party. This statement is made of the situation before the ultimatum was issued.

The most important declaration made for the Boer side is that by Sir William Vernon-Harcourt, who was a member of Mr. Gladstone's cabinet when the conventions of 1881 and 1884 were made. In a speech published in full in the *London Times* (September 21), he delivered himself as follows on the subject of the conventions of 1881 and 1884, and the claim of English suzerainty:

"Now, I must ask you to bear with me patiently while I endeavor to explain to you what was the limit of the independence which was then [1884] granted, regranted I should say, to the Transvaal state. Now, it was considered then, and it is considered now, that the Transvaal state ought not to enter into foreign relations by treaty with other countries without the consent of the British Government. In my opinion that was a proper and just principle. That convention, as it was called, of 1881, reserved to Great Britain the right of veto upon treaties with foreign states. Secondly, in regard to its internal administration, it limited, in a certain degree, the internal government and autonomy of the Transvaal state, but, as Lord Derby, who was then Colonial Secretary, stated (I give his words), 'in all other respects entire freedom of action was accorded not inconsistent with the rights expressly reserved,' so that in the convention of 1881—follow me here—it was in that first convention of 1881 the independence so limited was expressed by the word *suzerainty*, a vague word, but one which was employed in that convention of 1881. . . . Then as for the new convention. You have a convention in which the word '*suzerainty*' has disappeared. You have a reservation of the control of this country over the treaty relations of the Transvaal, and what was the result of that new convention? The result of that new convention was stated by Lord Derby; and now this is a very important statement. He said:

"By the omission of those articles in the convention of 1881 which assigned to her Majesty and the British Government certain specific powers and functions connected with the internal government and the foreign relations, your Government will be left free to govern the country without interference, to conduct its diplomatic intercourse and shape its foreign policy, subject only to the requirements embodied in the fourth article of the new draft that any treaty with a foreign state shall not have effect without the approval of the Queen."

"Therefore I think you may take it with absolute certainty that the new convention of 1884 was this: it kept the control of foreign affairs under the veto of the British Government, and in respect of their internal affairs struck out the word '*suzerainty*,' leaving or giving to the people of the Transvaal absolute inter-

nal authority—home rule, in fact, for themselves. I should say that Lord Derby had also in that speech said: 'We have kept the substance'—and he explained what the substance was—a controlling power which gives us the right of veto over a treaty with foreign powers.' That was the substance. He did not say—on the contrary, he said exactly the opposite—he did not say they had kept the control of the internal affairs which was given to the Government of the Transvaal. Lord Cairns and Lord Salisbury had argued with great force that where you did not keep control over the internal affairs the word '*suzerainty*' was not appropriate, because that meant a general authority over all affairs; and that is the ambiguity under which we are now suffering. The word '*suzerainty*' was obliterated, and the matter, as I say, remained upon that footing."

The claim has been set up, however, in reference to suzerainty, that tho it does not reappear in the convention of 1884, it does

"OOM PAUL."

(A photograph which is greatly admired by the patriotic Boers, because it represents Mr. Kruger resting his hand on the head of one of the recumbent lions in a manner which suggests the physical superiority of the Boers over the British.)

appear in the preamble of the convention of 1881, and this *preamble* was readopted in 1884. On this Sir William said:

"Why should we copy an old preamble in a new convention? In the preamble of 1884 the word '*suzerainty*' disappears, and it is not found in any of the articles of that convention. This may seem rather technical to you, but it really lies at the bottom of what is at issue to-day. When this question arose the Government of the Transvaal put forward their arguments against this claim of general suzerainty. . . . I have read that argument of theirs, and all I can say, remembering all the facts of the case, and reading them now by the light of what has since occurred, I can see no valid answer to that argument of theirs. . . ."

"It was written in February, 1890, with reference to a question regarding the international affairs of the Transvaal—viz., the franchise of British subjects—and whether the imperial Government was entitled to interfere. That was a question which in 1890 was pressed upon the Government of Lord Salisbury then, and you will hear the statement by Mr. W. H. Smith, who was the respected leader of the House of Commons, as the representative of that Government.' And he said this: 'The convention of London made in 1884 between her Majesty and the South African Republic contains no express reservation of the Queen's right of suzerainty, and tho her Majesty retains under the con-

vention the power of refusing to sanction treaties made by the South African Republic with foreign states and nations and with certain native tribes, the cardinal principle of that settlement '—mark this—'was that the internal government and legislation of the South African Republic shall not be interfered with.' What is the use of talking of the existence of suzerainty over their international affairs reserved in the preamble of the convention of 1881 which was done away with by the convention of 1884? Mr. Buxton, speaking on behalf of the late Government—and I was then the leader of the Government in the House of Commons, and the statement was made in my presence and with my authority, and it was a statement which bound the British crown and the British nation—said: 'That was an interpretation of the existing relations between England and the Transvaal which he thought very clearly laid down the principles which guided our conduct in the matter. Tho they might differ from the way in which the Transvaal carried out their principles of administration, he did not see that under existing circumstances the Government had a right forcibly to interfere with regard to those questions.' "

As to the franchise proposition, Sir William Vernon-Harcourt here also sustains the action of the Boers as entirely reasonable. He says:

"They offered in August, in the first place, a five-years' qualification, which Sir Alfred Milner had demanded at Bloemfontein, and made an offer as liberal, or more liberal, than that which we ourselves had proposed in June. I do not see either the obstinacy or the delay in that. You began your controversy in June, and in August you get a practical acceptance of the terms you yourselves had proposed two months before. As to the sufficiency of the franchise in the offer, there is not, and can not be, any dispute, but it is to be observed that the Transvaal made that offer subject to two conditions, and it is upon those conditions that the matter has gone off. It was rejected by the British Government. As regards the franchise, her Majesty's Government do not deny that it was a perfectly good proposal. Let us then examine these conditions, because they will determine the whole question. Were the conditions such as ought to have involved the rejection of that final proposal of President Krüger's? In my opinion they were not. That the last proposal of a five-years' qualification has not been carried through is, I think, a great disappointment and a great disaster. What we ought to do is to see if the offer is true, and if it is, the Uitlanders will get all that ever has been asked for them, and they will secure that voice in the government of the Transvaal which we all desire for them. Why was this offer rejected? These were the two conditions. The Transvaal Government said they made that offer on the condition that the present intervention should not be made a precedent for similar action in the future, that no interference with the internal affairs of the republic should take place, and that her Majesty's Government should not further insist upon the assertion of the suzerainty, but that the subject should be allowed to drop. What was there unreasonable in that? Here you have a special interference with their franchise on the proposal of the Transvaal Government itself. What they ask is, 'Don't use this as a precedent for everything else, and in the future no interference with the internal affairs of the republic shall take place.' That is not unreasonable. That is the convention of 1884, and both parties contend that they stand upon the convention. Then they go on to ask that her Majesty's Government will not further insist upon the suzerainty, that this subject shall be allowed to drop. It was allowed to drop in 1884. That is exactly what did happen; the claim to suzerainty did drop then; and I do not understand why such conditions as these are to be regarded as impossible, and to be rejected."

The *London Times*, in replying editorially to Sir William, declared that the discussion of suzerainty had become "one of those academic discussions which are seldom helpful for the solution of the practical problems of statesmanship." It takes up, however, an admission made by Sir William that the Boer Government was wrong when in the recent negotiations it based its claim to independence not upon the convention of 1884 but upon the inherent right of the republic as a sovereign state. *The Times* says:

"Even if it [this claim] were now withdrawn in the amplest

terms, the mere fact that it has been made introduces a new and very serious element into our controversy with the Transvaal. It shows what is in the mind of the Boer Government, and it shows the theory they might seek to realize at our expense, should European complications ever appear to give them a favorable opportunity. But, in fact, it has not been withdrawn. It is the claim with which we are now confronted, and it is a claim which we can not be content with repudiating ourselves. We are bound in self-protection to insist that those who advanced it shall repudiate it too. As Mr. Compton Rickett, the Radical member for Scarborough, remarks in his letter on the South African crisis, one of the objects of our policy must be to prevent the establishment of an independent Boer state in South Africa hostile to England. The Boer pretension to be a sovereign international state runs directly counter to that policy, and we must take adequate guaranties that it shall not be repeated."

In all the mass of controversial material published in the last few weeks on the subject in English papers, we have looked in vain for a statement of the grievances of the Uitlanders. These grievances are constantly referred to, but for a statement of them we are compelled to resort to an American writer, Thomas G. Shearman, the well-known controversialist on sociologic topics, whose statement of that side of the case is given in a preceding department (Topics of the Day) of this paper. This statement is not authoritative, being made admittedly on newspaper authority alone, but it is the best we find. One writer in the *London Times* does indeed make quotations from a Boer commission appointed April 5, 1897, to investigate the Uitlanders' grievances. The commission found that two at least of these grievances call for redress, one relating to the monopoly in explosives and the other relating to the sale of liquor contrary to law to the native workers in the mines. On the monopoly the commission reported as follows:

"It has, we consider, been clearly proved that the price paid by the miners for explosives of all kinds is unreasonably high. . . .

"That the principal explosives used here (blasting gelatin and, to a small extent, dynamite) can be purchased in Europe, and delivered here at a price far below the present cost to the mines, has been proved to us by the evidence of many witnesses competent to speak on the subject; and when we bear in mind that the excess charge of 40s. to 45s. per case does not benefit the state, but serves to enrich individuals for the most part resident in Europe, the injustice of such a tax on the staple industry becomes more apparent and demands immediate removal. The mining industry has thus to bear a burden which does not enrich the state or bring any benefit in return, and this fact must always prove a source of irritation and annoyance to those who, while willing to contribute to just taxation for the general good, can not acquiesce in an impost of the nature complained of."

This monopoly has not, however, been abolished. As to the extent of taxation imposed by this means upon the gold-mines, we find no statement; but the "Statesman's Year-Book" for 1899 gives the Transvaal Government's receipts for 1897 from "explosives" as £300,000 (\$1,500,000), which was equivalent to about three and one half per cent. on the value of the gold production for that year—very considerably less than the Canadian Government places upon American gold production in the Klondike. In the case of any monopoly, however, the Government's revenue therefrom can not be taken as a full measure of what the consumer has to pay.

Of the general statements made in defense of the British Government's course in the recent negotiations, the following from the Duke of Devonshire, lord president of the Council, is the most important. He said in part (shortly before open hostilities began):

"The obstacle which seems to stand in the way of a peaceful settlement of our difficulties with the South African Republic appears to be in the rooted conviction they have that in the demands which we have made we cherish some designs hostile to their independence and self-government. That any such apprehensions on their part are absolutely unfounded has been asserted as strongly as it can be asserted, both officially in our despatches and unofficially by members of the Government, and nothing which I can say can add to the force of those assertions. President Krüger and his Government are entitled, if they think fit, to disbelieve those assertions—tho I do not believe that a single soul in this country disbelieves those assertions; they are entitled, if they think fit, to refuse to believe in our sincerity, and to take those measures which they may think necessary for the protection of their own interests. The susceptibility of their leaders, their unfounded suspicions, can not relieve us from the duty of taking

those measures which we feel bound to take for the protection of our fellow subjects and in the interests of peace, order, and good government. The stage of negotiations which we have at present reached is that we see no longer any advantage in pressing further the proposals we have made in regard to the franchise and the admission of the Uitlanders to a share in the assembly which governs the affairs of the South African Republic. Those proposals have never been an essential point of difference between us and the South African Republic. They were made on the suggestion of Sir Alfred Milner as a means by which the tension between the two governments might be relieved, and as a means by which the grievances—the undoubted grievances—under which our fellow subjects suffer might be redressed without the necessity of any irritating interference on the part of the British Government. Those proposals have not been received in a spirit which leads us, or can lead us, to hope that they will lead to a solution of the question. We have, therefore, been driven back to the necessity of formulating ourselves the requirements which we consider ourselves entitled to make, not only under the conventions, but in virtue of the inherent duty of every state to protect its own citizens, and for the maintenance of peace and good order in South Africa."

The Home Secretary, Sir Matthew White Ridley, recently spoke as follows on the subject of the Uitlanders' grievances:

"The question of the franchise had been raised, not as an end in itself, but as a means of securing justice for our British fellow subjects, and it was quite time that was secured. He believed there was no difference of opinion in any part of the country as to the absolute necessity for England to insist upon the redress of the grievances existing in the Transvaal, and that the exercise of equal civil rights should be given to our British fellow subjects there. We knew how serious were those grievances, and that there was no man in this country who did not believe the position intolerable to his sense of justice if we allowed our British subjects there to cease to have the protection of this empire and to put them in a sort of halfway-house position in the Transvaal. . . . He hoped we should not be compelled to use more forcible measures. There had been some talk about the Government desiring to establish the supremacy of the British race in South Africa, but it was not true. We had not got equality of justice for British subjects in the Transvaal. We might have it in the Orange Free State, but in the Transvaal no equality existed. There was equality of civil rights for Dutch in the Cape Colony where the British flag flew, and if the conventions of 1881 and 1884 had been kept in spirit and letter nobody would have heard a word of the present quarrel."

Mr. William T. Stead, tho his voice does not always carry weight, is a man who can always count on a wide hearing. In a recent pamphlet he expressed himself as follows:

"In the opinion of our continental neighbors the Briton is just as insufferable as the Boer. He is the modern Pharisee, who has looted the world, and for a pretense makes long prayers. He never ceases to boast that he whipped France at Waterloo and Trafalgar, and bested the whole continent in the game of grab. But we should hardly regard these things as sufficient justification for an onslaught on Britain by a European coalition in order to teach us a lesson in humility and good manners. . . . I am no extreme partizan of peace at any price. I am certainly no eulogist of the Boers. I recognize the sacred right of insurrection. I believe that taxation without representation is tyranny, and I have defended and excused Mr. Rhodes and Mr. Chamberlain for their preparations to secure the success of the anticipated insurrection in Johannesburg, and which were so lamentably marred by the rash precipitation of Dr. Jameson, but I can not, I dare not, I will not, follow their lead on the present occasion. With all my endeavors to force my conscience to acquiesce in the policy which Sir Alfred Milner recommends, I can not do it. Sore at heart, and with deep regret, I feel myself bound not merely to sever myself from my old comrade, but to do my uttermost to evoke such an expression of public opinion in this country as will peremptorily bar the way to war. For the war with which we are threatened has no justification in the laws of God or man—a war impolitic, unnecessary, and unjust."

For an expression from South Africa, we take the following from a letter written by Olive Schreiner and published in the *Manchester Guardian*:

"The generous arrangement made by the people of the Transvaal for admitting foreigners to the citizenship of their little state has exceeded all that was anticipated. If their advances are not being met in the same spirit, the conviction is being forced on them that the men for the hour in authority in England have determined to goad them into war and take their land from them. The story of wrong in 1895 gives strength to this conviction.

"By ceaseless misrepresentation and exactions which would mean the surrender of their land, we are to-day driving one of the bravest and most heroic little Teutonic folk the world has

seen to despair. We are setting them with their back to the wall and offering them this choice: 'Your land or destruction.'"

Hollandia, a weekly published at The Hague chiefly for Dutchmen resident in other lands than Holland, declares that the situation of the white miners in the Transvaal will be made worse, not better, by British control, and refers in proof to the condition of the Kimberley mines in South Africa. It says:

"The natives are housed near the pit of the mines in huts, surrounded by a high wall. In this pit-kraal they live; in this pit-kraal they have to stay. When the hour comes to start work in the mines, they have to go down; when they are let out of the mines, they enter their kraal and have to remain there till the next working-day. Of course this is not slavery; slavery is not allowed under the British flag, that waves over Kimberley after it was snatched away from the Free-State Boers. It is only the compound system, thought out to benefit both the diamond industry and the natives. For now they can not give themselves up to drink and deteriorate too quickly, which, seeing that they represent valuable cheap labor, would be disagreeable for the white owners of the diamond-fields. And they are also prevented from stealing diamonds, which is a dangerous proceeding at Kimberley, a special law putting a fixed tariff of five years' hard labor on diamond stealing, however light. And so both the natives and the diamond industry are protected.

"Now, the Boers are not given to too much tenderheartedness toward the blacks. They want to keep them well in hand. Yet up till now the Transvaal Government, having promised to treat them properly, and not as slaves, has refused the introduction of the compound system on the Rand—at which refusal the gold industry is not overpleased."

The following summary of the situation, made in the *Handelsblad* (Amsterdam), gives us a Dutch interpretation of the case:

The British case may be summed up as follows: A race of herdsmen, of European descent, but speaking a language different from English, developed within the sphere of British influence. In a few successful skirmishes they convinced Great Britain that, to conquer them, more blood and treasure would have to be expended than their arid territory is worth. But gold was discovered in the Transvaal, and foreigners flocked there. The Boers fancy they have a right to impose laws upon these foreigners. Unfortunately the majority of them are Britons, a race superior to any other and therefore destined by Providence to rule all others. Britons can not afford to accept the dictates of such people as the Boers. They endeavored to obtain possession of the country which Providence has thrown in their way by peaceable means. They were willing to decide the case by ballot. But the obnoxious oath of allegiance, to which no true Britons will submit, prevents them from exercising that power which is necessary to bring about the result foreordained by heaven—to make the Transvaal British territory by a majority of votes. Hence Great Britain is forced to interfere. The Boers, sinning against civilization and heaven, must be forced to submit to the superior race, and the rest of the Uitlanders are in duty bound to welcome the opportunity which makes Englishmen their masters.

The Boers, however, argue as follows: We have generously permitted these foreigners to dig the gold they covet within our boundaries. We tax them less than any other power would, and all except the British are peaceable and satisfied. The British, smarting under the just punishment to which we have subjected them, endeavor to rob us of our home and freedom by underhand means. We are a peaceable people, we trust in God, but we do not believe that Providence has destined to be our masters a race which we have found inferior, morally, intellectually, and physically, whenever we have come in contact with them.

The Bloemfontein *Express*, Orange Free State, gives the reasons for the attitude taken by that state as follows:

"Life, limb, and property never were sater in any community than in the Rand gold-fields, if we take into consideration the quality of the population gathered there. Diggers never were taxed less. Despite the lawlessness of the British element, the liquor laws, which alone protect the natives, are fairly well carried out. There is absolutely no reason for complaint strong enough to justify this war. The Transvaal Government is willing to grant a fairly short term of residence before the exercise of the franchise; but what Englishman wants to become a citizen? It is merely a question of supremacy. Were the Free State to stand aside in this struggle, its independence would be attacked as soon as the Transvaal has been conquered. South Africa is asked to submit to a race which claims to benefit the entire civilized world, but whose conduct is such that all who are threatened with this beneficent rule rush to arms to oppose it. Nothing could be more supremely ridiculous than the picture of Germans, Frenchmen, Americans defending themselves, at the risk of their lives, against the tender mercies of British 'civilization.'—*Translations made for THE LITERARY DIGEST.*

Masterpieces of American Art

THE AMERICAN ART PUBLISHING CO. recently succeeded in making arrangements with AMERICA'S GREATEST ARTISTS for the reproduction of their MASTERPIECES in the finest photogravure process.

These photogravures represent paintings that have been sold for thousands of dollars and others that are fresh from the artists' brush.

These reproductions would sell rapidly at any art store at \$5.00 each, but they cannot be purchased except directly from us, as we absolutely control the copyrights.

Beautify Your Home

You have read about many of these paintings and the enormous prices paid for them, but, doubtless, never even dreamed that you could obtain a perfect facsimile in elegant form and at a nominal price to adorn your parlor or drawing-room.

These photogravures are 16 x 20 inches (*note the size*), printed from the finest plates that modern workmanship can produce, on extra heavy paper made expressly for this work. Twenty-five of them are placed in a beautiful Portfolio, and so arranged that they can be conveniently removed for framing without injury to either the picture or Portfolio.

The masterpieces of twenty-five of America's Greatest Artists are now for the first time available in a single collection.

An Art Educator

This Portfolio, besides being a beautiful ornament to any home, is also an Art Educator and will at once stimulate a desire for the artistic.

Accompanying each picture is given a description of the painting, also a portrait and biographical sketch of the artist, an interesting account of his early studies, how he was led to take up art as a profession, in what schools and under what masters he received his instruction. It describes his trips and sojourns abroad, where and when his paintings were first exhibited and the honors they received both in Europe and America. The titles of the artist's most notable paintings are also given and where they now are. All of this information is not only interesting but exceedingly instructive.

Our Special Proposition

To all who make application this month, the price will be less than one-fifth the regular price and on very easy monthly payments. The Portfolio will be sent on examination with the privilege of returning if not entirely satisfactory.

Tailor-Made Suits, \$5.

If you wish something decidedly new in a dress or cloak, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits and cloaks, but we are the only house making fashionable garments to order at moderate price.

Our Catalogue illustrates an exquisite line of Ladies' costumes and cloaks, selected from the newest Paris models. Our designs are exclusive, and are shown by no other firm, and the fabrics from which we make our garments comprise only the very latest novelties. Our Catalogue illustrates: Charming Costumes and Tailor-Made

Suits, faultless in cut and finish, \$5 up. Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up. Jaunty Capes, \$4 up. New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, Riding Habits, Rainy-Day Suits, etc.

WE PAY EXPRESS CHARGES TO ANY PART OF THE WORLD. If when writing to us you will kindly state whether you wish samples for suits or for cloaks, we will be able to send you a full line of exactly what you desire. In addition to our regular line of samples we have special lines of black goods and fabrics for second mourning.

Write to-day for Catalogue and Samples; you will get them by return mail. They will be sent Free to any lady who wishes to dress well at moderate cost.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Bordewich, of Christiania, under date of June 26, 1899, informs the Department of recent failures in that city. Five of the largest manufacturers of paper and cellulose have failed, and the value of nearly all classes of stock has declined. The Norwegian output of wood pulp, adds the consul, will in all probability be reduced for some time to come.

Minister Finch writes from Montevideo, May 12, 1899, in regard to the proposed harbor improvements at that place. The Minister of Public Works, it appears, has matured a scheme for providing the necessary funds to pay the cost of construction and has approved plans and specifications, on which intending bidders shall base proposals. The Congress of Uruguay has these plans under consideration, and as soon as adopted copies will be sent to the Department. The expenditure involved will not be less than \$15,000,000, and possibly as much as \$20,000,000. The vice-consul at Montevideo, Mr. Howard, urges that a representative of some United States firm be sent at once, equipped with documents bearing official indorsement, to satisfy President Cuestas and his ministers of the financial ability and the skill and capacity of the parties whom he represents to carry out the work in accordance with the plans and specifications. French and English representatives, says Mr. Howard, will be in the city provided with the necessary indorsements. They have already given notice that the money is available, and promise that the work shall be prosecuted and completed under the direction of the most skillful engineers. Minister Finch says that an American sent to Montevideo on this mission, with suitable indorsements, will be shown every courtesy. The contract will yield a substantial profit, and Americans should make every effort to secure it.

PERSONALS.

ADMIRAL DEWEY dislikes society in its ordinary sense very much. He is not any more fond of the women to-day as a man than he was of the girls as a young boy, nor does he care for the round of social gaieties any more than he did in the early days in Montpeller, when wild horses could not drag him to a dance, church festival, or any merry-making. Yet Dewey has gained the reputation of being a great social man, because one sees him at every high social function in Washington and in foreign capitals. He goes because it is his idea of duty. Altho a thorough disciplinarian, Dewey loves his men, and his devotion to them was made apparent when disaster came to the old *Mississippi* in 1863. Dewey was then a lieutenant. He was the last man to leave the vessel, and was hardly out of swimming reach of the ship when the magazine exploded. Dewey could have escaped easily, as he was a bold, powerful swimmer, but he was too unselfish to think of himself so long as any of his comrades were in danger. Not far from him he spied a seaman who was trying his best to keep above water after his right arm had been paralyzed by a bullet. Dewey struck out for him and gave him a lift till they reached a floating spar. Then the wounded man was towed ashore in safety.

DR. MAHAFFY, the famous professor of Trinity College, Dublin, is famed for his many and varied accomplishments. He is one of the leading historians and Greek and Latin scholars in the United Kingdom, he speaks French and German like an interpreter, and not only plays the piano and violin better than most professionals, but possesses such an intimate knowledge of harmony and the theory of music that he is one of the examiners for the musical degree in the university.

DR. EDWARD EVERETT HALE recently preached his last sermon as active pastor of the South Church of Boston. Dr. Hale took charge of this

Ladies' Mahogany Desk

The Very Queen of Gifts for a Lady

\$9.75 buys this dainty desk direct from the factory, freight prepaid, sent "On Approval," to be returned at our expense if not positively the best ladies' desk ever sold at so low a price. A dainty birthday, wedding or Christmas gift.

FRONT is figured mahogany, tastily inlaid with pearl and white bolly. Has French legs both back and front, two locks. Small drawer inside, plane for paper, pen, ink, etc. Bottom of large drawer is of pretty bird's-eye maple. Trim-mings are all solid polished brass. This desk is polished like a piano, and from a dealer will cost \$15.00 to \$20.00.

Morris Chair

A Splendid Gift for A Gentleman

\$19.50 buys this excellent Morris Chair direct from the factory, freight prepaid and shipped on approval. Covered with best quality of leather and wood work is selected oak elegantly finished. This chair at retail would cost \$25.00 to \$35.00. Ask for catalogue No. "P."

We Prepay Freight to all points east of the Mississippi and north of South Carolina. (Points beyond on an equal basis.)

for Birthday, Wedding or Anniversary—a pair of these handsome Military Hair Brushes. They are of the very finest quality; have rich ebonized backs with dainty sterling silver ornaments, and the best stiff white Russia bristles. They are a brush that will please any man of refined tastes. We will send you a pair with initials (three or less) engraved on each in script, direct from the factory, by express prepaid, for only \$2.50. At retail they would cost \$5.00 to \$6.00. If they are not absolutely satisfactory, return them at our expense, and we will send back your money in full. For each initial over three add 10c. extra—for monogram, 50c. extra. THE BONDY MFG. CO., 64 Iowa St., Grand Rapids, Mich.

church forty-three years ago, and during the period since then he has been connected with many great forward movements in this country. He was born in Boston in 1830, and graduated from Harvard in 1856 at the remarkably early age of seventeen years. He was a leader in the anti-slavery agitation, and in Bellamy's Nationalist movement; he has taken a great interest in the Chautauqua society, and has done hard work as a journalist and magazine writer. Dr. Hale is probably best known by his books, among which "A Man Without a Country" attained the greatest popularity.

HENRY SAVAGE LANDOR has nearly recovered from the effects of the torture inflicted upon him while a captive in Tibet and has regained his usual number of pounds in weight. Mr. Landor set out for Tibet active, strong, a typical, wiry, young Englishman; he returned broken in health, physically disabled, weary and old. He attempted to reach the sacred city of Lhasa from the Indian frontier. In spite of the most elaborate preparations his secret leaked out and got into the hands of the Tibetan authorities, who did all in their power to frustrate his plans. He was taken captive and subjected to a series of tortures the like of which have probably been experienced by no other man since the days of the Spanish Inquisition. His life was spared because, on examination, the natives found that his fingers were webbed higher than is usual, and that is highly thought of in Tibet.

QUEEN VICTORIA was greatly interested with Lord Kitchener when he was in England, and asked him in the course of a private interview if what she had heard of him was true—that he did not care for any woman. He replied that it was true, with one exception. The Queen asked for the name of the exception, and was much amused when the Sirdar replied, "Your Majesty."

WILLIAM DEAN HOWELLS begins a lecturing season in October. This is his first essay in this line. In addition to his lectures Mr. Howells will read from his own works.

"FIGHTING BOB" Evans tells this story: "When Enlate, the commander of the *Viscaya*, got on board the *Iowa* I took him into my cabin and gave him the best I had. Through the open port he saw his vessel beached and burning. Tears trickled down his cheeks. I felt very sorry for the poor fellow as he moaned, 'Adios, *Viscaya*! Adios, my noble ship!' After he had composed himself a bit I offered him a cigar—the best on the *Iowa*—a 5-center. He looked at it, thanked me, straightened up, laid back his shoulders, and, running his hand inside his coat, brought forth an 'invincible' that couldn't be bought in New York for less than a dollar. 'And, captain,' he said, emotionally, 'will you have the goodness to try one of mine?' It was the best smoke I ever had."

Current Events.

Monday, October 9.

—The corner-stone of the new Federal building at Chicago is laid by President McKinley; a banquet is held in the evening, at which the President, Premier Laurier of Canada, and Vice-President Mariscal of Mexico make addresses.

—It is announced that the press censorship at Manila has been removed.

—General Schwan's column advances south of Manila and encamps within sight of San Francisco de Malabon, a Filipino stronghold.

—The German Socialists meet in Berlin and make arrangements for an International Socialist Congress, to be held in Paris in 1900.

Tuesday, October 10.

—The Transvaal Government sends an ultimatum through Sir Alfred Milner to Mr. Chamberlain; arbitration and the withdrawal of troops are demanded.

—General Schwan's forces enter San Francisco de Malabon without opposition, the insurgents having fled from the town.

—The President leaves Chicago for Evansville,

FREE TRIAL OF THE SLAYTON INSULATION CURE FOR

Rheumatism, Sleeplessness, Etc.

If you suffer with these ailments or from Neuralgia, Sciatica, Pains in Muscles or Bones, Nervous Weakness or Lessened Vitality, we urge you to try—FREE—our new treatment. It is based on the discovery of the famous physician, Dr. Brown-Sequard, that these ills arise from an excessive flow of electricity from the body to the earth, and the best treatment is to stop this flow by insulation. This is the action of the

Slayton Electric Switch Glass Casters, and Slayton Insulating Insoles.

It seems too simple a method to give benefit, but many thousand sets have been sold in the past eight months, and paid for only after proving their merit. Could there be stronger proof of excellence? Is it not worth your while to try this treatment free?

FOX CHASE, Philadelphia, June 28, 1899.

THE SLAYTON ELECTRIC CASTER CO.

Gentlemen:—Having tried your Electric Casters for the past few weeks I feel constrained, without solicitation on your part, to express satisfaction with them. I think they are all you claim for them. Mrs. Wood and myself are both past the meridian of life, and like most persons advanced in life, have had our wakeful nights and nervous spells for the past few years. But, since using the Casters, all this has disappeared. We now sleep the night through and enjoy refreshing slumber. Besides, we have not been troubled with rheumatism or neuralgia since using them. You are at liberty to refer to us.

Yours truly, Wm. B. WOOD, D. D.

FREE TRIAL FOR ONE WEEK. We will gladly send you one full set of the SLAYTON ELECTRIC SWITCH CASTERS and SLAYTON INSULATING INSOLES on receipt of 25c. for postage and packing, or separately, 17c. for the Casters and 8c. for the Insoles. Try them for one week according to directions. If they do not help you, return them by mail and no charge will be made. If they do help you (and they almost certainly will), send us \$3 for the Casters and \$2 for the Insoles. These articles can be used separately with great benefit, but to secure the greatest relief both should be used. Be sure to state whether Casters are to be placed on iron, brass or wooden bedsteads, and the size of shoes Insoles are to fit.

THE SLAYTON ELECTRIC CASTER CO., Ltd., 25 High Street, Tecumseh, Mich.

\$10.00

buys this fine *Security FILING CABINET* (patented), direct from the factory, freight prepaid to any point east of the Mississippi and north of South Carolina (more distant points equalized) to be returned at our expense if not entirely satisfactory.

THIS CABINET has paneled ends of quarter sawed oak, rubbed and hand-polished; paneled back and top of selected white oak, and twelve extra strong filing cases large enough for legal cap paper. The only filing system not requiring transfer cases—a great saving. It is fitted with our patent locking device; a turn locking or unlocking all the cases. No troublesome roll-front needed. Attached to a desk, lowering and raising the curtain locks and unlocks the cabinet automatically.

Send for Catalogue describing our desk and wall cabinets, and giving factory-to-user prices on office furniture.

NOTE.—Our goods are especially valuable to Ministers and Lawyers.

FASOLDT BROS., 44 Division Street, GRAND RAPIDS, MICH.

THE LEONARD SOFA BED

A Luxurious Sofa, couch length, instantly convertible into a large, soft, hair-mattress bed, with receptacle for bedding or dresses. 10 styles, any length. Freight prepaid. Catalog free. Returnable if not entirely satisfactory. There is but One Leonard Sofa Bed.

You get a new one without charge in case of accident of any kind. Best for Ladies' Shirts-Waists and Children's Dresses. The Story of a Collar Button gives all particulars. Postal us for it. All jewelers sell Krementz buttons.

KREMENTZ & CO., 63 Chestnut St., Newark, N. J.

Ind., after a busy day of receptions, dinners, and speech-making.

—Admiral Dewey arrives at Shelburne, Vt.

—A sword is presented to Captain Chaitwick of the cruiser *New York*, at Morgantown, W. Va.

Wednesday, October 11.

—Reports from South Africa state that the Boers have crossed the border into Natal.

—The President addresses veterans at Evansville, Ind., and also speaks at Vincennes.

—Samuel Spencer, president of the Southern Railway, testifies before the Industrial Commission at Washington.

—George Harris is inaugurated as president of Amherst College, Mass.

—A mass-meeting to advocate the cause of the Boers is held in Carnegie Hall, New York, at which Bourke Cockran is the principal speaker.

Thursday, October 12.

—War is declared between Great Britain and the Transvaal; the Boers invade Natal; the British reply to the Transvaal's ultimatum is made public, being a curt refusal to discuss the Boer demands.

—Canada's consent is given to a temporary arrangement of the Alaskan boundary dispute, based on points suggested by the United States.

—Four thousand persons are killed by an earthquake shock in one of the Molucca Islands.

—President McKinley welcomes the Minnesota volunteers, at Minneapolis, upon their return from the Philippines, defending the policy of expansion.

Friday, October 13.

—The Boers wreck and shell an armored train on the railway south of Mafeking, killing fifteen British soldiers; the advancing Boers in Natal are reported to be within twenty miles of Ladysmith, the British camp.

—The President and his party reach Fargo, N. D.

—Admiral Dewey lays the cornerstone of a new building to be erected in his honor at Northfield, Vt., the orator of the occasion being Senator Deane.

—Another postponement of the America's Cup races is caused by lack of wind.

—A citizens' committee is formed in New York to make the Dewey arch permanent, and elects officers.

Saturday, October 14.

—The Boers capture and wreck another armored train, and Spitzkop, near Newcastle, is occupied by Boer forces. Fighting around Mafeking results in heavy losses on both sides.

—The President welcomes the South Dakota volunteers at Aberdeen, and goes to Sioux City, Iowa.

—Boston welcomes Admiral Dewey with a magnificent celebration.

—The Bridgeport line steamer *Nutmeg State* is burned in Long Island Sound, with heavy loss of life.

Sunday, October 15.

—Kimberley is besieged by the Boers. The Boers cut the railway at Belmont, seize the Spitsfontein railway station, and construct fortified earthworks.

—General Otis cables that Schwan's movement south of Manila was very successful, inflicting heavy loss on the Filipinos.

—Special honor is conferred upon ex-President Harrison during his stay at Berlin by Emperor William.

Compressing the felt
Pin-the and
closing the
tick by
hand.

It seems strange to us that every one who reads our advertisements does not send for our free book, "The Test of Time." Our correspondence shows that some people think our claims exaggerated.

We can always sell an **Ostermoor Patent Elastic Felt Mattress, \$15**, to these people after they get our book—if they want a mattress. Would you like to examine "The Test of Time"? We mail it free on request.

The price is \$15. (6 ft. 3 in. by 4 ft. 6 in.) If made in two parts, 50c. extra. Smaller sizes at smaller prices. Express prepaid. Sleep on it 30 nights, and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can get your money back by return mail, no questions asked.

Take Care! Don't be Deceived! There is not a single store in the country that carries our mattress; almost every store now has an imitation so-called "felt" which is kept in stock to sell on our advertising. Our name and guarantee is on every mattress. Can be bought only direct from us.

OSTERMOOR & CO., 119 Elizabeth Street, New York.

Send for our book, "Church Cushions." We have cushioned 25,000 churches.

A PECULIAR REMEDY

Something About the New Discovery
For Curing Dyspepsia.

(From Mich. Christian Advocate.)

The Rev. F. I. Bell, a highly esteemed minister residing in Weedsport, Cayuga Co., N. Y., in a recent letter writes as follows: "There has never been anything that I have taken that has relieved the Dyspepsia from which I have suffered for ten years except the new remedy called Stuart's Dyspepsia Tablets. Since taking them I have had no distress at all after eating and again after long years can sleep well. Rev. F. I. Bell, Weedsport, N. Y., formerly Idalia, Colo."

Stuart's Dyspepsia Tablets is a remarkable remedy, not only because it is a certain cure for all forms of indigestion but because it seems to act as thoroughly in old chronic cases of Dyspepsia as well as in mild attacks of indigestion or biliousness. A person has dyspepsia simply because the stomach is overworked, all it wants is a harmless vegetable remedy to digest the food and thus give it the much needed rest.

This is the secret of the success of this peculiar remedy. No matter how weak or how much disordered the digestion may be, Stuart's Dyspepsia Tablets will digest the food whether the stomach works or not. New life and energy is given not only to the stomach but to every organ and nerve in the body.

A trial of this splendid medicine will convince the most skeptical that Dyspepsia and all stomach troubles can be cured. Send for little book on Stomach Mailed free by addressing F. A. Stuart Co., Marshall, Mich. So popular has the remedy become that Stuart's Dyspepsia Tablets can now be obtained at any drug store at 50c. per package.

YOU cannot afford to take chances in painting when, by exercising a little care and common sense, the use of mixtures of unknown composition and questionable value can be avoided and the best materials (and, as you will find, by far the cheapest) can be obtained.

The best materials are Pure White Lead and Pure Linseed Oil. The brands named in margin are genuine.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

nearly the prettiest I have solved"—S. M. M.; "Thoroughly good work"—A. K.; T. R. D. solved 413; H. W. B., Mr. and Mrs. J. V. S., 414 and 415; J. L. L., J. R. W., J. G. L., O. F. B., and Miss K. Winston, Richmond College, Va., 414; F. L. Hitchcock, Scranton, Pa., 415; F. R., 412; W. H. H. C., Canadian, Tex., 412 and 415.

"The Classic Epigram."

As a sample of problem-composing of the last century, we give what was considered the most famous two-mover:

WHITE (4 pieces): K on KB 5; Q on QB 3; Kt on K 5; R on Q B 8.
BLACK (4 pieces): K on Q 4; Q on Q 8; R on Q R 5; P on Q 3.

White mates in two moves.

Errata.

In problem 421, the Black Q should be White. In "Fine Chess," game between Tietz and Kamish, the B on Q Kt 6 should be a Black B.

Has the Attack an Advantage?

It is a generally received opinion that the player having the first move has the advantage. Reicheim has, in the following table, given the various Openings and results of the games played in the London Tournament:

Opening.	Att.	Def.	Dr.	Opening.	Att.	Def.	Dr.
P to Q 4.....	14	24	2	K's Def.....	0	1	2
Ruy Lopez.....	12	14	3	Giucco.....	2	2	0
French.....	10	8	5	Staunton.....	3	0	0
Sicilian.....	1	5	0	Evans.....	0	2	0
4 Kts.....	1	1	0	K's Bishop.....	0	1	0
Scotch.....	1	1	3	K's Gambit.....	1	2	0
Hampe.....	1	1	1	Caro-Kann.....	4	0	2
Philidor.....	0	7	0	All other.....	4	3	5
Petroff.....	1	1	1				
Totals.....	44	70	38	Totals.....	14	11	9

This shows that the Defense won 81 times, while the Attack won only 55 times.

Is a Stalemate a Draw?

An esteemed correspondent writes: "Do you not think that the rule that a stalemate shall be

IF YOU EARN,
YOU CAN SAVE.

IF YOU SAVE,
YOU CAN INVEST.

IF YOU INVEST,
YOU CAN "GET AHEAD."

Provided, of course, you invest in something that is safe.

No matter how small your savings, provided you can save regularly, we can by our plan invest them profitably and safely.

We show salaried people how to invest their savings so that they will increase. We reduce the chance of loss to a minimum.

We number among our clients, bankers, merchants, physicians, college professors, ministers, and capitalists.

Write us for full particulars, and at the same time state how much cash you have on hand for an investment, and how much you could save a month.

considered a Draw is unjust? It always seemed to me that a player is as surely and as badly beaten when stalemated as when mated any other way. Why not?"

The rule may be unjust, but it obtains the world over. On the other hand, can it not be urged that a player is not beaten until he is actually mated? His opponent *does not mate* him when a stalemate position is brought about, but he, by his own ingenuity, saves himself from an actual mate. In some instances, players agree that a stalemate shall be counted a win for the player forcing the stalemate. The reason given is that if a player with superior force permits his adversary to escape by a stalemate, it shows that the player making the stalemate is the stronger, and deserves the game by the ingenious play necessary to ward off the mate. We shall be glad to hear from all those who are interested in this subject.

Notes from *The Weekly Mercury, Birmingham, England.*

(a) A crotchet of Tschigorin, who alone plays this variation. The analysts condemn everything but the regular Berlin defense.

(b) Another crotchet of Tschigorin, who prefers Knights to Bishops. Paulsen had a marked preference the other way, and, Potter in his "Minor Principles," declares for two Bs as against two Kts.

(c) Apparently hazardous in the extreme, as taking the most powerful piece out of play at the moment a K-side attack is threatened.

(d) As poor Zukertort used to say, "Dis becomes solemn!" White has, however, as Staunton used to say, "a highly ingenious move in reserve."

(e) As Bird often remarks, "the threatened combination was too thin."

(f) Respectfully but firmly pressing his claims to attention.

(g) To make room for the Bishop, and as there is no defense to the threat of B to B 4 ch, Tschigorin gives in at once. As usual he lost by premature advance, and by attacking when he should have kept on the defense. His play is ingenious and interesting, but not deep enough to provide for or foresee every contingency. No player more frequently loses through a reply which he has overlooked.

Coe's Eozoma Cure \$1 at drug stores. The world's surest cure for all skin diseases. Samples free by mail. Coe Chem. Co., Cleveland, O.

The Literary Digest

VOL. XIX., No. 18

NEW YORK, OCTOBER 28, 1899.

WHOLE NUMBER, 497

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

SYMPATHIES AND FACTS IN THE SOUTH AFRICAN WAR.

NEITHER Briton nor Boer, if we may judge from the attitude of the press, has yet won the complete sympathy of any large proportion of the American people. Many of the press content themselves with a mere statement of both sides of the case; and of the papers which do declare for one or the other few take a very aggressive attitude. The division, too, where it does occur, does not seem to follow the lines of party cleavage. Some might expect our anti-expansion press to feel as much sympathy for the Boer as for the Filipino, and while this is indeed the rule, yet the *New York Evening Post*, the *Hartford Times*, the *New Orleans Times-Democrat* and *Picayune*, and the *Florida Times-Union*, all anti-expansionist, look with favor upon the British attempt to absorb the Transvaal Republic; while of the expansion press, on the other hand, the *New York Sun*, the *Cleveland Leader*, the *Philadelphia Ledger*, the *Chicago Evening Post* and *Inter Ocean*, the *Boston Journal*, the *Detroit Journal*, and the *Rochester Post-Express* justify the Boers in their fight for independence. The sympathies of some of the other leading dailies may be seen from the list given below. It will be seen that aside from the exceptions noted above, the expansionist papers very generally favor the British, and the anti-expansionist favor the Boers. Some of the leading papers have not expressed enough sympathy with either side to find a place in the list.

Afrikaner Constitutions.—"Now that the two Dutch states of South Africa have staked their very existence in an unequal struggle with the British empire, it will be interesting to note on what principles of government they are founded and what types of civil polity they have endeavored to perpetuate. This will be the more interesting for the reason that their constitutions were not evolved from earlier systems in those lands, nor in any degree borrowed from other lands, but were the original conceptions and creations of the emigrant farmers who founded those states.

"The Orange constitution is a brief and explicit document of liberal tone. It grants citizenship on equal and easy terms to all white men, makes all citizens eligible to office, guarantees freedom of speech, of the press, and of public meeting, establishes religious freedom and equality, and makes the courts independent of the legislative and executive departments of government. The legislature consists of one chamber, elected by the people, and it has power to amend the constitution by three-fourths majorities in two annual sessions and to impeach the President by a three-fourths majority. The President is elected by all the people. He has no veto power, and his own acts and orders may be reversed by the legislature.

"The Transvaal constitution is much longer, much involved and obscure in meaning. It welcomes all comers to the republic, but declares that equality between the white and colored races shall not be tolerated either in state or church. It forbids the existence within the republic of any Roman Catholic churches or of any churches whatever save such as teach the doctrines of the Heidelberg Catechism. It is said that this prohibition has to

PRESIDENT KRUGER IN A CHARACTERISTIC ATTITUDE.

some extent been tacitly ignored, so that a few churches of other than the Dutch faith are now tolerated. To this day, however, it is unlawful for a Dutch minister to baptize a negro, to administer the Eucharist to him, or to perform the marriage ceremony over a negro couple, the Boer belief being that the negroes have no souls. The supreme authority is nominally vested in a legislative body, elected, but not in a representative manner, to which only members of the Reformed Dutch church are eligible. This legislature may alter or amend the constitution at any time at will. All laws must, however, be proposed to it by the President of the republic, who is elected by popular vote, and who must,

DR. LEYDS,
European representative of the Transvaal.

of course, be a member of the Reformed Dutch church. All members of the cabinet, as indeed all government officers, must belong to that church. There is a second legislative chamber, with no real power whatever. The courts were originally independent, but have now been made subordinate to the executive, and have been forbidden to interpret or to pass upon the constitutionality of laws. No person who is of negro blood or whose parents in any of four generations back belonged to a native race can own land or enjoy civil rights.

"It will be seen from this brief review that the Transvaal constitution is as illiberal and bigoted as that of the Orange State is liberal and generous. This difference may have had, and proba-

bly did have, its origin in the difference between the dispositions and purposes of the two communities. It has doubtless had its effect upon the development and progress of the two states, and goes far toward accounting for the peaceful and prosperous career of the Orange State and the stormy and disastrous career of the Transvaal. If now the two states are merged in the British domain the change of governmental system will seem revolutionary to the Boers of the Transvaal, while to their kinsmen of the Orange State it will be scarcely perceptible."—*The New York Tribune*.

Black Races in South Africa.—"Both British and Boers have reason to fear the attitude of the blacks in the war. There is a native question in South Africa that grows more perplexing as the Kafirs thrive and multiply. Their districts and reservations are the most densely peopled parts of South Africa. In Cape Colony they outnumber the whites five to one, and in Natal fifteen to one. In Basutoland there are only 600 whites to 218,000 natives. In spite of the large influx of white men in the Transvaal, the blacks of that country were estimated, in 1896, to outnumber the whites three to one. The Orange Free State alone has no native question of a serious nature, the Afrikanders equaling the blacks in numbers. But the state has had frequent trouble with the natives outside its frontiers, and particularly with the Basutos.
